cepted, but Virginia gladly received him, and authorized him to raise a regiment. On Jan. 12, 1776, he was appointed lieutenant-colonel of the 5th Virginia, and on Oct. 11th, by act of congress, colonel of the 7th regiment, Virginia battalion, his commission to be dated Aug. 14th. He took part in the battles and skirmishes on Long Island and the retreat through New Jersey; crossed the Delaware with Washington; fought at Trenton, Princeton, Brandywine and Germantown, and did efficient work at the head of a detachment of scouts in the effort to keep the British out of Philadelphia. In November, 1777, he was sent to Pittsburgh to take command under Brig.-Gen. Hand, of the Continental troops and militia in the western department. In the spring of 1778 he superintended the erection of a fort on the Allegheny, which was given his name, and for the greater part of three years was in command at this post. He was unable, though invited, to join Gen. George Rogers Clark in his secret expedition against the British posts between the Ohio and Mississippi, but assisted the general in many ways, and in the fall of 1778 aided him in building forts McIntosh and Laurens, the latter the first in what is now Ohio. In 1780 he visited congress to obtain larger supplies and appropriations for frontier defense. In 1781 he was retired, and returned to his farm, but he still held his commission, and in 1782 Gen. Washington and Gen. Irvine urged him to lead an expedition against the Wyandot and Delaware Indians, who were keeping up their warfare on the frontier. The expedition left Mingo bottom, near Steubenville, O., May 25th, and on June 4th reached a spot since known as Battle Island, a few miles northeast of the present town of Sandusky. There they were met by a large force of Indians and British soldiers, who on the following day were reinforced from Detroit. The frontiersmen had the advantage, and in a hot fight lasting all that day were victorious, but did little damage on the 5th, and were so outnumbered that Crawford ordered a retreat. This was begun about nine o'clock at night, but was discovered by the enemy, and in the confusion which followed, a number of volunteers became separated from the main body, as did Col. Crawford in attempting to find his son, John, and other relatives. On the afternoon of the 7th, together with Dr. Knight, surgeon of one of the companies, he was captured by a party of Delawares, and with other prisoners, was taken to a spot a short distance northeast of Crawfordsville, Wyandot co., on the east bank of Tymochter creek. Here, on June 11th, after several hours of excruciating torture, heroically borne, he was burned to death. Dr. Knight also was doomed, but escaped from his keeper, and after wandering in the wilderness for three weeks, reached Fort Pitt. Crawford's nephew, William Crawford, and his son-in-law, Maj. William Harrison, were captured elsewhere during the retreat, and also were tortured to death. On Aug. 3, 1877, a monument to Col. Crawford was erected on the spot where he met his fate, by the Pioneer Association of Wyandot county. His children were John, Sarah (Mrs. Harrison) and Anne (Mrs. Connell).

**TAYLOR, John**, missionary, was born in Fauquier county, Va., in 1752. He joined the Baptist denomination in 1772, and having been licensed to preach almost immediately after, labored for nearly seven years in western Virginia. In 1779 he removed to Kentucky, and during the greater part of his ministry there, of nearly sixty years, supported himself by pioneer farming. He located first in

Woodford county, where, in 1785, a large revival resulted in the foundation of Clear Creek Church, of which he was pastor for the next ten years. In 1795 he became settled over a church at Bullittsburg, Boone co., where he remained for seven years, and then removing to Trimble county, assumed charge of the Corn Creek Church, organized by him in 1800. He gathered a church at Frankfort in 1816; another at Buck Run in 1818, and during the remainder of his life traveled in all parts of Kentucky, holding revivals and forming societies. He was pastor at Clear Creek (1792-95). He wrote "History of Ten Baptist Missions" (1826), and "Thoughts on Missions," a pamphlet. He died in Franklin county, Ky., in 1833.

**HITCHCOCK, Enos**, clergyman, was born in Springfield, Mass., March 7, 1744. He was graduated at Harvard College, in the class of 1767, and immediately thereafter began his theological studies, being licensed to preach in 1769. In 1771 he was ordained, and became colleague with Rev. Mr. Chipman, pastor of the Second Congregational Church of Beverly, Mass., there continuing until early in the revolutionary war, when he offered his services as a chaplain in the army. Before his formal discharge in 1783, he preached in Providence, where during a period of one or two years, he performed occasional services. On Oct. 3, 1783, he was installed as pastor of the Benevolent Congregational Church of Providence, in which office he continued for twenty years. As a good citizen, as well as a religious teacher, he endeavored to promote the social and moral welfare of the town, making himself especially conspicuous for the deep interest he took in the cause of popular education, working not only in person, but by his pen endeavoring to form and control public sentiment on a matter of such vital importance to the welfare of the community. To his efforts it was largely owing that the elegant house of worship on Benefit street was erected. Towards the establishment of a fund for the support of the ministry in this church he bequeathed the sum of \$2,500. Brown University conferred on him the honorary degree of D.D. in 1788, and he was chosen a fellow of the university in 1785. He was author of "A Treatise on Education" (1790); "Catechetical Instructions and Forms of Devotions for Children and Youth" (1798), and "Sermons, with an Essay on the Lord's Supper" (1800). He died in Providence, R. I., Feb. 27, 1803.

**DRAKE, Sir Francis**, explorer and vice-admiral of the English navy, was born on the banks of the Tavy, Devonshire, England, the date being given by various authorities as 1539, 1545 and 1546, with the weight of evidence in favor of 1545. Doubt also hangs over his parentage, as he is said variously to have been the son of a yeoman, of a sailor and of a clergyman. There is reason for believing that he was the son of a partially educated man, who fell into a line of work bringing him in contact with seafaring men. It is, however, certain, that he was a kinsman of Sir John Hawkins, the celebrated navigator, at whose expense he was educated, and whose exploits gave him his first incentive to exploring foreign seas and countries. While still a lad, he was apprenticed to the master of a bark, with whom he made voyages to the coasts of France and Zealand. When he was eighteen years of age his master died, bequeathing his bark to him; and, thus equipped, he undertook longer voyages, combining with them commercial speculations. In 1567, having accumulated a considerable sum in savings, he sold his bark, and, with the money at his command, joined Capt. Hawkins in an expedition to the coast of Mexico. The fleet comprised five vessels, of which Drake commanded the *Judith*, and distinguished himself by his gallantry in the harbor of San Juan de Ulloa,

fighting against the Spaniards. The expedition, failing to meet with the success anticipated for it, returned to England, with both Hawkins and Drake much poorer for their experience, having also lost three of their vessels. Nothing daunted, however, Drake succeeded in obtaining enough money to fit out a vessel, with which he made several voyages to the West Indies and the Spanish Main, with fair results. On one of these voyages, in 1572, he plundered the Spanish settlements in Central America, and crossing the isthmus of Darien obtained a sight of the Pacific Ocean. In his hostilities against the Spaniards he was assisted by the natives; and it is related that to one of their chiefs he made a present of a fine cutlass, receiving in return four large wedges of solid gold, which, however, he insisted on turning in to the general fund, sharing it with his crew. On Aug. 9, 1573, he entered Plymouth harbor, his vessel laden with the spoils he had obtained. Soon after his return, having become

very wealthy, he fitted out three frigates, and joined the earl of Essex in an expedition against Ireland, in course of which he proved himself equally able as a soldier and a sailor. On his return to England, Drake was presented to Queen Elizabeth, who took him at once under her protection. Thus favored, he was enabled to organize the great undertaking which he had long contemplated. He formed an expedition consisting of five vessels, manned by a total of 164 men, and sailed from Plymouth Dec. 15, 1577, for a voyage to the Pacific. He entered the Straits of Magellan Aug. 20, 1578, and passed them Sept. 25th following, having then only his own ship, the *Pelican*. He had transferred to this vessel the provisions from two of the others, which he then destroyed; and his vice-admiral, Capt. Winter, had returned to England with the others. He now continued his voyages along the coasts of Chili and Peru, capturing and pillaging Spanish ships, and attacking their coast settlements; until, sated with his plunder, he thought to return home by way of a passage from the Pacific to the Atlantic, which he made sure of finding. In this hope he was, of course, disappointed; and, after having coasted north as far as 48 degrees north latitude the severe cold forced him to change his plan, which was to attempt a passage through Behring strait. While on his way north he put in at San Francisco, where he refitted, and took possession of the country in the name of Queen Elizabeth, calling it "New Albion."

The results of this expedition had distanced Drake's most sanguine expectations. Besides other enormous booty, he had captured a Spanish galleon, laden with precious metals and gems, whose value proved to be about £600,000 sterling. With this hitherto unheard-of cargo he crossed the Pacific, passed through the Indian Ocean, successfully rounded the Cape of Good Hope, and arrived in Plymouth harbor Nov. 4, 1580, after having gone quite around the world within a few weeks of three years. His return with the immense wealth he had amassed excited all England, and so aroused the anger of the Spaniards that a demand was made upon Queen Elizabeth that Drake should be surrendered to them as a pirate. This was refused, and, instead, the queen showered favors upon him. On April 4, 1581, she dined on board his vessel at Deptford, conferring on him the honor of knighthood, then more highly esteemed than now, and gave orders that his ship should be preserved as a monument to his own and his country's glory. Of his gains, Drake devoted no small portion to good purposes, one of these being the introduction, at great cost, of pure drinking water into the city of Plymouth, thus repairing a want which had hitherto been most grievously felt. In 1585 he sailed with a large fleet for the coast of South America and the West Indies, capturing the cities of San Jago, San Domingo and Carthagen, and returning with Sir Walter Raleigh's surviving colonists in Virginia, whom he picked up on his way. In 1587 he sailed for Lisbon with a fleet of thirty sail, but, hearing of the assembling of many vessels in the bay of Cadiz, which were to be a part of the celebrated "Armada," then preparing, he sailed for that port, where he burned upwards of 10,000 tons of shipping. In 1588 Sir Francis was appointed vice-admiral, and assigned to a command in the fleet under Lord Howard, which, aided by the elements, destroyed the Armada, and completely broke the existing naval supremacy of Spain. In 1589 he attacked, with great success, the coast ports of Spain; and on his return was elected a member of parliament, in which he continued through 1592-93. In 1595 he made an expedition to America with Hawkins with a fleet of twenty-six vessels, but disagreement between the two commanders rendered this movement abortive. When Hawkins died, or was killed, in Porto Rico, Drake continued the expedition, and destroyed and plundered several towns, but later met with severe reverses and losses, which preyed seriously upon his mind and weakened his body. In this condition he fell a victim to an epidemic disease, which decimated his crews, and died on board his own ship. His remains were enclosed in a metal casket, and buried in the harbor of Puerto Cabello, Venezuela. In 1871 considerable time, labor and money were expended by members of the Drake family in the United States in a vain endeavor to trace their lineage back to Sir Francis. The occasion of this was the rumor that the fortune of the great admiral, increased by nearly three centuries of interest compounded, until it was estimated to amount to \$125,000,000, was held in the Bank of England awaiting the production of heirs supposed to be living in America. A commission appointed by the numerous Drake's in this country visited England in their behalf, but were unable to establish the validity of their claims or the existence of the fortune. Sir Francis Drake died Dec. 27, 1595.

**TAYLOR, John Louis**, jurist, was born in London, England, March 1, 1769, of Irish descent. At the age of twelve years he was brought to this country by his elder brother, James, and by his assistance obtained a classical education at William and Mary College, Virginia, an eminent institution in those days, from which went out four presidents—Jeffer-

son, Madison, Monroe and Tyler—Chief-Justice Marshall, Gen. Winfield Scott and many other distinguished men. He was compelled to leave college before graduation, and after reading law without preceptor or guide, he was admitted to the bar at the age of nineteen, and located in Fayetteville. During 1792-95 he was a member of the legislature from Fayetteville, and in 1794 he was a candidate before the general assembly for the office of attorney-general, but was defeated by Blake Baker. He removed to Newbern in 1796, and in 1798 he was elected a judge of the superior court. In 1818 he had held that office consecutively twenty years, during ten of which he had been chief-justice of the court held by the judges of the superior court in conference. In 1818 he was elected to the supreme court of North Carolina as its first chief-justice. In 1802 he published "Taylor's Reports," which now form a part of *1. North Carolina Reports*; in 1814 he published the first volume of the "North Carolina Law Repository," and in 1816 the second volume of the same, and in 1818 "Taylor's Term Reports," these three volumes being now united in one, and known as the *IV. North Carolina Reports*. As originally printed, the "Repository" contained much interesting matter which has been omitted in the reprint. In 1817 he was appointed by the general assembly jointly with Judge Henry Potter of the U. S. district court for North Carolina to publish a revision of the statute law of the state. This book, known as "Potter's Revisal," was issued in 1821. In 1825 he published a continuation of this work, including the acts of 1825, and known as "Taylor's Revisal." He also published a "Treatise on Executors and Administrators." Judge Taylor possessed a singular aptitude for literature and would have excelled in composition if his "jealous mistress," the law, had given him opportunity. His elocution was the admiration of all who heard him, and his style of writing, as preserved to us in his opinions, are in beauty of diction unsurpassed by any of his successors. He became chief-justice at the age of forty-nine, and during the ten years he presided in the new court he uttered a succession of brilliant and memorable opinions. They are to be found in *Murphy's* and *Hawks'* reports (VII. to XI. North Carolina Reports inclusive) and in part of XVI. North Carolina; his opinions before his elevation are to be found in volumes I. to VI. An estimate of his character as a man was recorded by his associates as follows: "Of the chief-justice, we are unwilling to trust ourselves to speak as we feel. We loved him too well and too long to make the public the depository of our cherished affections. If there ever heaved a kinder heart in human bosom, it has not fallen to our lot to meet with it. If ever man was more faithful to friendship, more disinterested, humane and charitable, we have not been so fortunate as to know him." Judge Taylor was twice married. By his wife, Julia Rowan, he had one daughter, who became the wife of Maj. Junius Sneed, of Salisbury. A son of theirs, John Louis Taylor Sneed, became attorney-general of Tennessee. His second wife was Jane Gaston, sister of Judge Gaston, by whom, also, he had a daughter, who was married to David E. Sumner, of Gates county, and left descendants in Tennessee. He had another son who died without issue. Judge Taylor died at Raleigh, N. C., Jan. 29, 1829.

**THOMSON, William**, soldier, was born at Maghera, county Derry, Ireland, or, according to

another account, in Pennsylvania, in 1726 or 1727. It is uncertain whether he was a brother or a cousin of Charles Thomson, patriot, Continental congressman and author (1729-1824). He settled on the South Carolina frontier in youth, gained note as a marksman, and in March, 1771, commanded a regiment, under Gov. Tryon, to suppress the outbreak of the so-called "regulators." The next year he was sheriff of Orangeburgh, S. C., and soon after a member of the provincial legislature and of the first convention of the new state. As colonel of the South Carolina rangers, from June, 1775, he was active in suppressing the Tories under Cunningham. In June, 1776, he earned the thanks of congress and of Gov. Rutledge by repelling the attack on Sullivan's island. He took part in the operations against Savannah in 1779, under Count D'Estaing and Gen. Benjamin Lincoln; was taken prisoner in 1780 after the fall of Charleston, and on his release did good service under Greene. After the war he was again sheriff of Orangeburgh, residing on his indigo plantation. He was in the convention which framed the South Carolina constitution. While trying to recruit his broken health, he died at Sweet Springs, Va., Nov. 22, 1796.

**ALLEN, Joseph Henry**, clergyman, educator and author, was born in Northborough, Worcester co., Mass., Aug. 21, 1829, son of Joseph and Lucy Clark (Ware) Allen. His father came of a Scotch family, which was among the earliest settled at Medfield, Mass., and which still holds the old farm bought from the Indians. His mother was a daughter of the older and a sister of the younger Henry Ware, both professors in the Harvard Divinity School, and among the earlier Unitarian leaders. Her mother was a daughter of Jonas Clark, who was the minister at Lexington, Mass., at the outbreak of the American revolution, and it was to his house that Paul Revere made his famous ride on the eve of the battle, to warn Adams and Hancock, who were visiting there, the latter being a cousin of Mrs. Clark. Joseph H. Allen traced back ten generations of

ministers, finding in the seventh generation Peter Bulkley, of Concord, from whom Ralph Waldo Emerson also descended. His father, like most country ministers of that time, combined the two callings of farmer and minister, and Joseph H. Allen was consequently trained to physical toil as well as to habits of study. He was graduated second in his class at Harvard College in 1849, afterwards entering the Harvard Divinity School, from which he was graduated in 1843. He was settled in his first parish in 1843 at Jamaica Plain, now a part of Boston, leaving this in 1847 to take charge of the Unitarian church in Washington, D. C. He afterwards preached

several years in Bangor, Me., which was his last settled parish, though, in later years, he was sent by the American Unitarian Association to short terms of service in Ann Arbor, Mich.; Ithaca, N. Y., and San Diego, Cal. At the time of the civil war he was editor of the "Christian Examiner" for a few years, and during 1887-91 of the "Unitarian Review." He also taught for many years, and for several years lectured on ecclesiastical history at the Harvard Divinity School. In August, 1881, he was delegate of the American and of the British and Foreign Unitarian associations, at the session of the supreme consistory of the Unitarian churches of Hungary, held in Kolozsvar (Klausenburg), Transylvania; and in July, 1890, he was a member of the Universal Peace Con-

gress in London. Besides fugitive addresses and reviews, including a series of articles on national questions written for the "Christian Examiner" during the civil war, his published volumes are: "Ten Discourses on Orthodoxy" (1849, 2d ed. 1889); "Memorial of Hiram Withington" (1849); "The Great Controversy of States and People" (1851); "Hebrew Men and Times, from the Patriarchs to the Messiah" (1861, 2d ed., with critical introduction, 1879); "Fragments of Christian History to the Founding of the Holy Roman Empire" (1880); "Our Liberal Movement in Theology" (1882); "Christian History in its Three Great Periods" (3 vols., 1883); "Outline of Christian History, A. D. 50-1880" (1884); "Allen and Greenough Classical Series," and "Positive Religion, Essays, Fragments and Hints," etc. He received the degree of D. D. from Harvard University in 1891. Prof. Allen was married at Jamaica Plain, in 1845, to Anna Minot Weld, a descendant of Thomas Welde, first minister of Roxbury, and sister of the late Hon. Stephen M. Weld. She survived him with five children. He died March 20, 1898.

**MAYNARD, Horace**, statesman and diplomat, was born at Westboro, Mass., Aug. 30, 1814, son of Ephraim and Diana (Cogswell) Maynard. He was descended on both sides from Massachusetts colonial stock. His original American ancestor, Sir John Maynard, came from England, and settled at Sudbury in 1638. From him the line of descent runs through six generations with John, David, Ebenezer, Jonathan, Ephraim and Horace Maynard. His maternal ancestor, John Cogswell, came from London in 1635. From him the line runs through William, William 2d, Emerson, James Cogswell and Diana Cogswell Maynard. James Cogswell was a soldier in Capt. Flint's company of militia from Weston, Mass., in the revolution, and was at the battles of Crown Point, Ticonderoga and Dorchester Heights; he died in 1837. Horace Maynard was educated in the town schools of Westboro, and was graduated at Amherst College as class valedictorian in 1838. During the next three years he was tutor and principal of the preparatory department of East Tennessee University, Knoxville, and in 1842-43 was professor of mathematics and mechanical philosophy in the collegiate department. He was admitted to the bar in 1844, and settled in practice at Knoxville. In 1852 he was Whig candidate for district elector; in 1853 was candidate for congress from the 2d district of Tennessee, and in 1856 was state elector on the Fillmore ticket. For six years (1857-63) he was congressman from the 2d district, being distinguished as a vigorous advocate of the Federal cause throughout the civil war. He was attorney-general for Tennessee in 1863-65, and for seven years thereafter was again representative in congress for the 2d district. He was representative-at-large in 1872-74, and in 1874 was Republican candidate for governor of Tennessee against James D. Porter. In 1875 he was appointed by Pres. Grant U. S. minister to Turkey, and held the position for five years, being then appointed postmaster-general in Pres. Hayes' cabinet and serving until the close of his term. Mr. Maynard was graduated LL. D. by Amherst College in 1860. The town of Maynardville, in Union co., Tenn., was named in his honor. He was prominently identified with the Presbyterian church in his state; was elder in the Second Church, Knoxville, from 1849, and trustee of the East Tennessee University from 1865. On Aug. 30, 1840, he was married to Laura Anne, daughter of Asel Washburn, of Amherst, Mass. They had seven children, of whom four grew to maturity and three still survive. His son, Edward, enlisted in the 1st Tennessee volunteers on the outbreak of the civil war, was later promoted lieutenant-colonel of the 6th Tennes-

see, and in 1866 was appointed U. S. consul to Turk's Island, W. I., where he died in 1868. Horace Maynard died at Knoxville, Tenn., May 3, 1882.

**CHURCHMAN, John**, scientist, was born in East Nottingham, Chester co., Pa., May 29, 1753, son of George and Hannah Gainor (James) Churchman, grandson of John and Margaret (Brown) Churchman, and great-grandson of John and Hannah (Corie) Churchman, who were married in 1696, and were among the first settlers of Nottingham, Chester co. His grandfather, John, 2d, was an eminent preacher of the Society of Friends, and traveled extensively in the United States and Europe. Of the ten children of George Churchman, several were surveyors, but John was considered the most ingenious of them all. He conceived a design of improving magnetic observations, and notwithstanding repeated opposition on the part of eminent and learned men, who could not appreciate a self-taught genius, he diligently pursued his investigations. He succeeded in interesting Sir Joseph Banks, president of the Royal Society of London; H. Parker, secretary of the Commission of Longitude; and other learned men and societies, at Hamburg, St. Petersburg, Copenhagen, Lisbon, Cambridge and Paris; and several prominent men of America, among them, George Washington and Thomas Jefferson, with whom he corresponded. That he might further his researches and also be able to test his scheme for finding the longitude at sea, he sailed for England in 1792. This visit was brought about by an invitation from the Royal Society of London, through Sir Joseph Banks. He returned home in 1796. In 1804 he again went to Europe, visiting Copenhagen, and going thence to St. Petersburg, Russia, where he was well received by the authorities. He spent the winter in that high latitude perfecting his observations and corresponding with several European philosophers, the main object with all being the discovery of the law governing the constant variation, dip and declination of the magnetic needle in different parts of the earth. His published works were a "Map of the Peninsula Between the Bays of Delaware and Chesapeake" (1778); "The Magnetic Atlas; or, Variation Charts of the Whole Terraqueous Globe; Comprising a System of the Variation and Dip of the Needle, by which, the Observations being Truly Made, the Longitude may be Ascertained" (London, 1794; 3d ed., 1800). The latter work was first published in 1790, in the United States, in the form of a map of the world, accompanied by a book of explanations, and under a different title. He visited England for the third time, about 1803, and while in London suffered an attack of paralysis. When sufficiently recovered he sailed for home in 1805, in the William Murdock. This ship encountered violent storms, in which much of the cargo had to be thrown overboard, and it is supposed that in the confusion his papers were lost. He died during this voyage; July 17, 1805, and was buried at sea.

**RIDGAWAY, Henry Bascom**, clergyman, was born in Talbot county, Md., Sept. 7, 1830. After attending the high school in Baltimore, he entered Dickinson College, Carlisle, Pa., and was graduated in 1849. From childhood he had desired to enter the ministry, and prior to his graduation he was licensed to preach. On leaving college he taught for several months, and then in the fall of 1849 began his regular ministry in the Summerfield circuit, Baltimore county. He was received on trial in the itinerancy in the Baltimore conference in 1850, and appointed to the Winchester circuit. In 1851-54 he labored in the Loudon, Summerfield and north Baltimore circuits, and in the spring of 1855 became second preacher of the north Baltimore station. His next position was at the High Street Church,

Baltimore, the richest in the city, and there he became known as one of the most able preachers in the denomination. Two years later, at the unanimous call of the Chestnut Street Church, Portland, Me., the leading one in the state, he was transferred to that city, and labored there for two years, when he was invited to St. Paul's Church, New York city, and in the spring of 1861 was transferred. He next served St. Paul's in the same city and St. James', Harlem; labored at Sing Sing and Kingston, N. Y., and at Cincinnati, where he served two churches. Before his second pastorate ended he was chosen professor of historical theology in Garrett Biblical Institute, Evanston, Ill., and took the chair in 1882. In 1884 he was transferred to the chair of practical theology and was made president of the institution; positions held by him until his death. He was fraternal delegate to the Methodist Episcopal church, South, in 1882, and was one of the regular speakers at the centennial conference at Baltimore in 1881. The degrees of D.D. and LL.D. were conferred upon him by Dickinson College. Dr. Ridgaway was a vigorous and eloquent preacher, showed a great power of analysis and keenness of reasoning, and was endowed with remarkable powers of memory. He was the author of "Life of Alfred Cookman" (1871); "The Lord's Land; A Narrative of Travels in Sinai and Palestine in 1873-74" (1876); "Life of Bishop Edward S. James" (1882); "Bishop Beverly Waugh" (1883); "Bishop Matthew Simpson" (1885). He contributed frequently to the columns of "The Methodist." He was married at Carlisle, Pa., in February, 1855, to Rosamond U., daughter of Prof. Merritt Caldwell, of Dickinson College. In 1892-93 they made a tour of the world, visiting the principal missions of the church in India and China. Upon reaching Japan, he was stricken with fever, contracted in China, and was detained many weeks at the Doshisha Hospital in Kioto. He recovered so as to spend one more year in the work to which he was devoted. His health was never fully restored, and he died in Evanston, Ill., March 30, 1895.

**FROST, Edwin Brant**, astronomer, was born at Brattleboro, Windham co., Vt., July 14, 1866, son of Carlton Pennington and Eliza Ann (Du Bois) Frost, the latter a native of West Randolph, Vt. On his father's side he is of English and Dutch stock; on his mother's, of French (Huguenot) and Danish. His maternal great-grandfather, Brant, was an officer of the regular army and continued to serve after the war closed. His father, who was surgeon of the 15th Vermont volunteers in the civil war, became, in 1871, professor in the medical school at Dartmouth and was a member of its faculty for fifteen years. Edwin Frost was graduated at Dartmouth in 1886, and received from that institution the degree of A.M. in 1889. After four years of teaching, partly in the college, and additional study, he spent two years in Germany, studying first at the University of Strasburg, and for the last eight months holding the position of assistant in the Prussian Royal Astrophysical Observatory at Potsdam. In 1892 he was appointed professor in Dartmouth, serving until 1898, when he became professor of astrophysics in the University of Chicago, stationed at the Yerkes observatory. In 1894 he published "Astronomical Spectroscopy," a revision and trans-

*Henry Bascom Ridgaway*

lation of an important work by Dr. J. Scheiner. Prof. Frost's researches have been chiefly devoted to the astrophysical side of astronomy, as his contributions to scientific journals show. He is also assistant editor of the "Astrophysical Journal," published by the University of Chicago. He is a member of the American Association for the Advancement of Science and of the Astronomische Gesellschaft (Germany). He was married in Boston, Mass., Nov. 19, 1896, to Mary E., daughter of Marshall Hazard, Ph.D., and Mrs. Elizabeth (Wynman) Adams Hazard.

**STRONG, Theodore**, mathematician, was born at South Hadley, Hampshire co., Mass., July 26, 1790, second son of Joseph and Sophia (Woodbridge) Strong. His father and grandfather were Congregational ministers, and were descended from John Strong, a settler of Dorchester, Mass., in 1630, and later a resident of Northampton. His mother was the daughter of Rev. John Woodbridge, of South Hadley, of the ninth successive generation of ministers bearing the same name, the first having come to Massachusetts in 1634. Theodore Strong was educated by his uncle, Col. Woodbridge, and at the age of eighteen entered Yale College, where he took a high stand in mathematics, and at graduation, in 1812, was awarded a prize for proficiency.

He had planned to devote himself to the positive sciences, especially chemistry, but this intention was defeated by an almost immediate call to Hamilton College, where, after four years as tutor of mathematics, he was appointed professor of mathematics and natural philosophy. In 1825 and 1826 he declined calls to the chair of mathematics in Queen's College (afterwards Rutgers), Columbia College, New York city, and the University of Pennsylvania; but in December, 1827, having received a second invitation to Rutgers, he concluded to accept. He was an active member of the faculty until made professor emeritus, and was vice-president of the college from 1839 until 1863, when he severed his connection. He became eminent as early as 1813, in which year he made a demonstration of Matthew Stewart's propositions respecting the circle; considered a great feat of mathematical skill. At the time he settled in New Jersey his ability was so generally recognized that a prominent mathematician in New York city who about that time published a series of difficult problems, which "he challenged all the mathematicians in America to solve, expressly excepting Dr. Bowditch, Prof. Strong 'and one other.'" The last named, who contributed a memoir of his friend to "Biographical Memoirs, National Academy of Sciences" (Vol. II.), said: "In pure mathematical science Prof. Strong was a very giant. Other stars of great brilliancy and splendor have since risen in our scientific hemisphere; but in his day he had hardly a peer in grasp and power of intellect. If Dr. Bowditch, on account of his age and great attainments, was regarded as *princeps* among the mathematicians of this country, to him alone Prof. Strong stood *secundus* in the public estimation." In 1859 he published his "Treatise on Elementary and Higher Algebra," a remarkable work, in which, for the first time, was given a rigidly logical solution of Cardan's irreducible case of cubic equations. In

Theodore Strong

1869 appeared his "Treatise on the Differential and Integral Calculus." In this "the infinitesimal method of Leibnitz and the method of limiting ratios of Newton are shown to be unnecessary in a proper conception of the science. In the appendix to this work was reprinted a contribution to the 'Mathematical Diary,' namely, a solution of the 'boat problem,' considered to be one of the most difficult and elusive that can be attacked by the ordinary analytical processes." Prof. Strong was elected a member of the Connecticut Academy in 1815; an honorary member of the American Philosophical Society of Philadelphia, in 1844; was a member of the American Academy of Arts and Sciences of Boston, and one of the corporate members of the National Academy of Arts and Sciences. He contributed to their "Proceedings" and to various scientific periodicals, especially to the "American Journal of Science" (1818-45), and the "Mathematical Miscellany." Many of the papers in the "Journal of Science," it is said, threw light on points left obscure by the great authors whose works he was studying. Among the memoirs read before the National Academy of Sciences were: "Notes on the Parallelogram of Forces and on Virtual Velocities" (1864); "On the Integration of Differential Equations of the First Order and Higher Degrees" (1864); "New Theory of the First Principles of the Differential Calculus" (1865); "New Theory of Planetary Motion" (1865), and "On a Process of Integration Used in the Case of a Planet's Orbit Disturbed by Small Forces" (1867). The honorary degree of A.M. was conferred upon him by Hamilton in 1815, and that of LL.D. by Rutgers in 1835. "In the course of a long life," as testified one of his associates at Rutgers, "I have met with few men whose characters have exhibited more admirable traits or fewer blemishes to mar their worth." In September, 1818, Prof. Strong was married to Lucy, daughter of Capt. John Dix, of Boston, a woman of strong intellect and congenial tastes. She bore him two sons, one of whom, Theodore, died of fever while serving in the Federal army during the civil war, and five daughters. He died at New Brunswick, N. J., Feb. 1, 1869.

**BOGARDUS, Everardus**, clergyman, was born in Holland, about 1600. He was the second established clergyman in New Amsterdam, whither he came in 1633, in company with Wouter van Twiller. His claim to fame rests, first, upon his marriage with Annetje Jansen, owner of what has since been known as the Bogardus estate, and second, upon his opposition to the local government, of which he himself, as servant of the Holland Company, was independent. His devotion to the cause of right and religion was illustrated when he called Gov. Wouter van Twiller "a child of the devil," and threatened to denounce him from the pulpit if he did not behave himself. He boldly denounced Kieft, his successor, for his rapacity and cruelty in causing the Indian war of Pavonia in 1643. Kieft retorted with charges of drunkenness and of his dishonoring the pulpit with sermons that were nothing but the "rattling of old wives' stories drawn out from a distaff." The dispute was finally adjusted through the intercession of mutual friends before Bogardus was brought to trial. In his later years Pastor Bogardus became blind, and resigning his church, was succeeded by Rev. Samuel Megapolensis. His activity in opposing the governors of the colony would seem to have led to charges against him before the classis of Amsterdam, of which he was a member, and in 1647 he set sail for Holland on the same ship with Gov. Kieft. They were wrecked in the Bristol channel, England, Sept. 27, 1647, and Bogardus lost his life, with eighty of his fellow passengers.

**JOHNSON, Thomas**, first state governor of Maryland (1777-79), was born in Calvert county, Nov. 4, 1732, son of Thomas and Dorcas (Sedgwick) Johnson and grandson of Thomas Johnson, of Yarmouth, who emigrated to Maryland in 1660. He was a descendant of Sir Thomas Johnson, of Great Yarmouth, whose family had been members of parliament since 1585. Thomas Johnson's mother was the daughter of Joshua Sedgwick, whose granddaughter became the wife of John Quincy Adams. After attending school in Frederick county, whither his parents had removed, Thomas Johnson at an early age was sent to Annapolis, and was employed in the office of the provincial court, where he studied law under Mr. Bordley. He soon rose to distinction. He was a member of the first Continental congress, and was upon almost every important committee. His speeches against the Stamp Act, full of patriotism, carried conviction. Upon his motion, George Washington was made commander-in-chief of the American forces in the united colonies. He served upon the committee of the constitution until Nov. 9, 1776; was appointed by congress brigadier-general of the Frederick militia, which was with Washington in the Jerseys, and, while still in the field, was elected governor, Feb. 13, 1777, to succeed the council of safety. He was inaugurated, March 21, 1777, at the state house, Annapolis, as the first Republican governor of Maryland, before a great concourse of patriotic witnesses. Three volleys were fired by the soldiers, followed by a salute of thirteen guns, after which were given a sumptuous dinner and a ball at night. Gov. Johnson's first proclamation, calling out the state militia, contained these words: "To defend our liberties requires our exertions; our wives, our children and our country implore our assistance—motives amply sufficient to arm every one who can be called a man." The interior counties answered promptly. The "Maryland line" was then engaged at Staten Island. Busy times had now dawned, and Gov. Johnson had almost dictatorial authority. The severe winter at Valley Forge having exhausted both magazines and supplies, to keep up the quartermaster's department required the utmost energy of the governor; yet by the middle of June the "Mary-

land line" had received its complement. "To promote the recruiting service"; "to expedite the march of troops in and through this state"; "to make the bills of credit issued by congress" and "the bills of credit emitted by the assembly legal tender in all cases"; "an act for quartering soldiers"—all these measures gave to Gov. Johnson's term a military and exciting character. In addition to these cares, Maryland had her share of Tories, who had organized under the title of "Associated Loyalists of America." In Somerset and Worcester counties these loyalists offered resistance, and Gen. Smallwood, who had been detached to Maryland to aid in organizing recruits, was sent with a force to put them down. This led to the organization of the "Whig Club," which ordered the editor of the "Maryland Journal" in Baltimore to leave the town. Upon the editor's appeal to Gov. Johnson, the latter issued a proclamation commanding such an organization to disperse. In March, 1779, Gov. Johnson wrote to the Maryland representatives in congress complaining that a large number of Maryland soldiers had been enlisted in the regiments of other states, for which the state received no credit. Up to that time the state, independent of these, had furnished over 12,000 regulars. In 1779 "the address of the officers of the Maryland forces" to Gov. Johnson gave a gloomy picture of their lack of means, owing to the depreciation of Continental currency. In answer, the legislature by act provided "four good shirts and a complete uniform, suitable to each officer's station," and also fixed a regular ration of provisions. During Gov. Johnson's second term, this depreciation of the currency led to a heated contest between the two houses of the assembly. The house was anxious for higher pay; the senate, represented by Charles Carroll, of Carrollton, opposed it; but the urgency of the occasion won a victory for the house. During his last term, also, the first naturalization laws were passed. At the close of his second term, the limit of his eligibility, Gov. Johnson was succeeded by Thomas Sim Lee, in 1779. Upon his retirement, the general assembly transmitted to Gov. Johnson the following address: "The prudence, assiduity, firmness and integrity with which you have discharged,

in times most critical, the duties of your late important station, have a just claim to our warm acknowledgment and sincere thanks." Gov. Johnson retired to Fredericktown, but was soon returned to the house of delegates; was again elected governor, but declined; was appointed chief judge of the general court, and afterward associate justice of the supreme court of the United States, which he resigned in 1793 because of ill-health, and for the same reason declined a position in Pres. Washington's cabinet; but did accept the office of commissioner of Washington city, in which he laid out the plans and fixed the site of the capitol, president's house and other buildings. He afterward retired to "Rosehill," near Frederick. His wife, to whom he was married in 1766, was Ann, daughter of Thomas Jennings, a distinguished citizen of Annapolis. She died early, leaving five children. His daughter, Ann Jennings Johnson, became Mrs. Col. John Grahame, and with her he spent his declining days. Mrs. Col. Dennis, of Frederick, is one of his descendants. Gen. Bradley Johnson, of Confederate fame, is a descendant of Col. Baker Johnson, a brother of the governor. In 1800 Gov. Johnson performed his last public act—the delivery of a eulogy upon his friend, Gen. Washington, at Frederick. He was of middle stature, slender in person, with keen, penetrating eyes and intelligent countenance. He had a warm, generous heart, and was a kind husband and father. He died at "Rosehill," Oct. 26, 1819.

**LEE, Thomas Sim**, second and seventh governor of Maryland (1779-82; 1792-94), was born in Prince George county, Md., in 1745, son of Thomas and Christiana (Sim) Lee. His mother was a daughter of Dr. Patrick Sim and his wife, Mary Brooke, a descendant of Thomas Brooke, of Brookfield. He was descended from a Norman family established in England at the Conquest; in America it is well known through the patriotism of Richard Henry Lee (Light-horse Harry) and Gen. Robert E. Lee, of Arlington. In England the Lees ranked among the gentry. As early as 1192 Lionel Lee, with his selected company of cavaliers, accompanied Richard Cœur de Léon in the third crusade, and was created earl of Litchfield for his gallant conduct at the siege of Acre. The pioneer of the family in America was Richard Lee, a cavalier from Shropshire, who, "sometime in the reign of Charles I., went over to the colony of Virginia as secretary and one of the king's privy council. He and Sir William Berkeley kept the colony to its allegiance during the civil war between Charles I. and Cromwell. While Charles II. was at Breda, Richard Lee went over and had a private conference with him in regard to the colony. On his return, he and Berkeley succeeded in having

Charles II. proclaimed king of England, France, Scotland, Ireland and Virginia. In gratitude for his

loyalty, on the restoration Charles ordered the arms of Virginia to be added to those of England." Philip Lee, the second son of this gentleman, crossed over into Maryland, and became the founder of that branch of the family known as the Maryland Lees. He was the grandfather of Thomas Sim Lee. The latter, on Oct. 27, 1771, was married to Mary Digges, the daughter of the proprietor of the princely estate of "Melwood Park," in Prince George county, Md. At the opening of the revolutionary war Thomas Sim Lee was an ardent supporter of the cause, and on Nov. 8, 1779, was elected governor, to succeed Gov. Thomas Johnson. His opponent was Edward Lloyd. He entered at a critical era. His first proclamation was for collecting provisions for the army, then

threatening to disband; and his next, for recruiting the quota of the state for the Continental army, by which act the state gave a bounty of fifty acres of land. Both calls were answered. A legislative act was recorded for a supply of clothing for each man of the brigade; quit rents were abolished; French subjects were allowed to enjoy the same rights as citizens of the state. The circulating currency had reached so low a standard that contracts made in gold and silver were paid in the same coin. By means of the bank act, the assembly and patriotic citizens came to the governor's aid in supplying the needs of the army. Upon another demand for troops, backed by a letter from Gen. Washington to the governor, the patriotic reply of the general assembly was: "We propose to exert our utmost efforts to raise 2,000 regulars to serve during the war." A letter was sent out by that assembly which deserves to be written in gold. The answer to that appeal was the desired recruits, provisions and supplies, with 2,065 men added to the Continental army. Mrs. Mary Lee was at work also, with other patriotic women, and Gen. Washington, in reply to her letter asking what was most needed, replied: "Shirts and black stocks for the use of the troops in the Southern army." Gov. Lee entertained and encouraged Gen. Greene on his way South to relieve Gates. Gov. Lee having failed to secure any aid from congress to prevent depredations upon the Chesapeake, the legislature came to the rescue in its "act for protection." The Tories of southern Maryland still continuing their opposition, "an act to seize, confiscate and appropriate all British property within the state" was passed. The debt had now increased \$10,000,000, yet Gov. Lee's pen was constantly urging new sacrifices in order to keep the state up to its requirements. In February, 1781, Lafayette arrived at the head of the Elk, and Gov. Lee ordered every vessel in the state to transport him and his army to Annapolis; dispatched messengers and established beacon-signals and a chain of post-riders to communicate with the expected fleet of the French. The delay of the fleet, the return of Lafayette to the Elk and his march again to Baltimore, required still greater sacrifices, all of which were cheerfully made by the governor, the legislature and the private citizens of Baltimore. "We will supply them," was the reply of a Baltimore lady to Lafayette's lament over his troops; and the ragged force of the marquis left Elk Ridge newly clothed and with new hopes. Gov. Lee entertained the French officers and reviewed the troops. The retreat of Lafayette before Cornwallis in Virginia called again for aid from Maryland's governor. His pen again was urging assistance from congress to send recruits to Lafayette. He appealed again to the counties. The militia came pouring in from every section, and with these unarmed men at his back Lafayette turned upon Cornwallis and drove him in a retreat which was to end in his surrender. In the meantime, 7,000 men were to be fed as they passed from the head of the Elk to Virginia. It required 5,000 cattle and all the vessels of the state to transport troops and provisions, and both were furnished. Gov. Lee, as the tried and trusted friend of Washington, had knowledge of the plan that was to entrap Cornwallis at Yorktown, and, buoyed by such hopes, strained every exertion to its accomplishment. To Gov. Lee and the Maryland assembly much of the success of Gen. Greene, Gen. Otho Williams and Col. John Eager Howard in the South was due. The governor was asked to urge congress to devote a portion of the special tax toward paying the Maryland troops, and Lee made the appeal as one of the closing acts of his administration. Having served two terms, Gov. Lee declined a third nomination. He was a delegate in the Continental congress in 1783 and 1784; was a

*Thos. Sim Lee*

member of the state convention which ratified the Federal constitution of 1788; and in 1792 was one of the presidential electors, and voted for Washington in the second presidential election. In 1792 he was again elected governor by the state legislature. During his second term he reorganized the state militia and took an active part in the suppression of the whiskey insurrection in western Pennsylvania and Maryland. Soon after his marriage, Gov. Lee removed to what is now known as the Petersville district of Frederick county, Md., where he purchased over 1,500 acres of land, and became a very large and successful farmer. At the close of his official life, in 1794, he established his winter home in Georgetown, D. C., where his house became the headquarters of the Federal party, of which he was a prominent member. In November, 1798, he was again unanimously elected governor by the general assembly, but declined the honor, and, thereafter, he remained closely at "Needwood," managing his estate with his 200 well-trained slaves. The descendants of Gov. Lee and Charles Carroll, of Carrollton, intermarried several times, thus cementing by a more intimate connection the friendship of their ancestors. The Lees are also connected by marriage with the families of the Chews, of Germantown, Pa.; the Howards, of Maryland; Madame Bonaparte (*née* Patterson); the Marquis of Wellesley, viceroy of Ireland and elder brother to the Duke of Wellington; Lady Stafford, the Duchess of Leeds, and many of the most distinguished families of Europe and America. Gov. Lee left no portrait of himself, but it is said he was a remarkably handsome man, standing six feet four inches, and magnificently proportioned. His sons were all fine looking men, none of them being under six feet. His granddaughter, Mary Digges Lee, was the mother of Gov. John Lee Carroll; another granddaughter, Eliza, daughter of Thomas Sim Lee, Jr., was married to Hon. Outerbridge Horsey, U. S. senator from Delaware. The old homestead is still in possession of the Lee family, represented by Thomas Sim Lee, who was married to a daughter of Columbus O'Donell. Gov. Lee died, Nov. 9, 1819, at the age of seventy-four, leaving four sons and six daughters.

**PACA, William**, signer of the Declaration of Independence and third governor of Maryland (1782-85), was born at "Wye Hall," his father's seat, in Harford county, Md., Oct. 31, 1740. He was the second son of John Paca, an early settler of the province. He was graduated B.A. at Philadelphia College (the germ of the University of Pennsylvania) in 1758, and was afterward admitted to the Middle Temple, London. Returning in 1766, he settled in Annapolis, began the practice of law, and became prominent in his resistance to the oppressive measures of the ministry and to the proprietary government of the province. This course he steadily pursued while in the assembly of 1771-74, and continued it in congress; but public opinion in Maryland then was conservative, and his colleagues had instructions which held them to that course. In 1774 William Paca was appointed a member of the committee of correspondence, and in 1775 he was in the council of safety. He remained in congress until 1779, and on Aug. 2, 1776, his instructions having been rescinded, he affixed his signature to the Declaration of Independence. On Aug. 17, 1776, he was elected on the committee "to prepare a declaration and charter of rights and a form of government for Maryland." Upon the organization of the state, he was elected to its first senate. In March, 1778, he was appointed chief judge of the general court of Maryland which position he held until 1781; subsequently, he was chief judge of the court of appeals and admiralty. In November, 1782, he was elected the third governor of Maryland, to succeed Thomas

Sim Lee, the war governor, and during his early administration came the dawn of peace. Like Gov. Lee, Gov. Paca was aided by a patriotic assembly, and this body issued a flattering address to Gen. Greene upon his masterly campaign. The army was still in the field in extreme want, and the prospect of an early peace was welcome news. On April 12, 1783, Robert R. Livingston wrote to Gov. Paca asking his support to the stipulation of the treaty, and on April 22d the latter issued his proclamation declaring a cessation of arms by sea and land, enjoining obedience to the treaty. On Nov. 25th he addressed the sheriffs, requiring them to read the treaty in public places. On May 6, 1783, Gov. Paca placed before the general assembly the articles of peace, and congratulated them upon the return of peace, paying therein a touching tribute to the army. The old Maryland line, 500 strong, now returned in rags, with Brig. Gen. Gist in command. Gen. Greene, upon his return, again repeated to Gov. Paca his high compliment to the Maryland line. His diary of Sept. 26th mentioned: "Dined with Gov. Paca, who is a very polite character and a great friend of the army. We drank several toasts, which were accompanied by the discharge of thirteen cannon." In December, 1783, congress assembled in Annapolis by invitation of the governor and the general assembly. The governor gave up his house to the president of congress. On Dec. 19th Gen. Washington arrived in Annapolis, where he was welcomed by Gov. Paca and tendered a public reception. On Dec. 23, 1783, in the old senate chamber, in the presence of Gov. Paca, the general assembly and the Continental congress, Gen. Washington resigned his commission. On Jan. 14, 1784, Gov. Paca proclaimed the treaty as ratified by congress. Gov. Paca was a delegate to the council which organized the Order of the Cincinnati. Two ex-governors of the proprietary now returned, and Gov. Eden, mistaking his powers, began to issue patents for lands that had been surveyed under his administration. Gov. Paca calling him to explain, matters were satisfactorily arranged. In 1781, to carry out the act granting a bounty of fifty acres to each soldier enlisted under Gov. Lee's call, Gov. Paca appointed Francis Deakins to locate the lots west of Fort Cumberland. The cause of securing educational institutions also found in Gov. Paca a warm advocate. He secured the charter rights of Washington College. Upon the expiration of his term of office, he was succeeded by Gen. William Smallwood. In 1784 Gov. Paca was elected vice-president of the Society of the Cincinnati and a member of the Maryland convention that ratified the Constitution of the United States. In December 1789, he was appointed by Washington judge of the U. S. court of the district of Maryland, and served until his death, in 1799. Gov. Paca's first wife was Mary, daughter of Benjamin Chew and Henrietta Maria Lloyd. Her sister, Henrietta Maria, became the wife of Capt. Edward Dorsey, of the house of burgesses, from Frederick county, and son of Caleb Dorsey and Elinor Warfield, of Richard. One of Gov. Paca's daughters was married to Consul Roubelle, a coadjutor of Napoleon. Their son bore such a striking likeness to the accepted ideals of our Saviour, he was often called upon to pose as a model. Gov. Paca's son, John, was married to Juliana Tilghman, now represented by the Rasin family of Kent county.

Wm Paca

In 1777 Gov. Paca was married to Anne Harrison, of Philadelphia, who died in 1780, leaving no issue. Gov. Paca built the house on Prince George street, near East Annapolis, afterward the home of Chancellor Theodoric Bland. It has two wings, and is still well preserved. A striking portrait of Gov. Paca hangs in the state house at Annapolis. He died at his birthplace in 1799, a pure and zealous patriot, with a character that was spotless.

**SMALLWOOD, William**, revolutionary soldier and fourth governor of Maryland (1785-88), was born in Kent county, Md., 1732, son of Bayne and Priscilla (Heberd) Smallwood. His father was a merchant and large planter, presiding officer in the court of common pleas and member of the house of burgesses; his mother was a native of Virginia and a lady of family and fortune. At an early age he was sent to school in England; his first teacher was Thomas Rebaske, of Kendale, Westmoreland. He was afterward a student at Eton, where he completed his studies. It is related that after his return, he was in the French and Indian war. On April 24, 1775, Col. William Smallwood, with a command of 1,444 men, left Annapolis for Boston. He was placed in Lord Stirling's brigade, and was at the battle of Long Island, where 400 of his Maryland line, under Maj. Gist, made five charges with bayonets against

Cornwallis' brigade, outnumbering them ten to one. Upon the sixth charge the British brigade recoiled in confusion. Assaulted by Hessians in front and a British brigade in the rear, Lord Stirling with a portion surrendered; but three companies cut their way through the British ranks, swam the creek, and came out with a loss of 256 officers and men. In commemoration of that heroic charge, the Sons of the Revolution have recently erected upon the spot a memorial shaft. Two days after this charge, Smallwood's men were, at Fort Putnam, within 250 yards of the enemy's line, and, at Washington's request, Smallwood covered his withdrawal into the lines below Fort Washington, when they attacked the enemy, drove them from their position, and were in full pursuit when recalled. Smallwood met the Hessians, under Rawle, at White Plains. Under the fire of British cannon he was wounded, but his men fell back in good order. The Maryland line was at Princeton and Trenton, and Washington there recorded: "Smallwood's troops had been reduced to a mere handful of men, but they took part in the engagement with their usual gallantry, and won great renown." In the next campaign the state added 4,000 more to the army,—one-tenth of the whole force,—and in October of that year the Maryland line was increased by 2,000 more. In August, 1777, Smallwood's first brigade was at Staten Island, and took 141 British prisoners. At Brandywine and Germantown they advanced with such resolution they drove the British light infantry from the field, took their camp, and received the highest encomiums. The gallant defense of Fort Mifflin closed the year. Smallwood's men that winter were stationed at Wilmington, and there captured a British brig laden with provisions. In 1779, with Gen. St. Clair and the Pennsylvania forces, Smallwood set out for Elizabethtown to aid Gen. Maxwell, when the enemy retreated. Smallwood was at Monmouth when the British were driven back with a loss of 300 killed, and Sir Henry Clinton retreated to New York. In 1779 Smallwood and the Maryland line met the British at Scotch Plains, and drove them back. In 1780 the Maryland line marched to the South. At

Camden Gist's men "were firm as a rock, and Williams' regiment, with Howard at its head, broke upon the enemy and severed his front, driving the opposing corps before them." Smallwood received the thanks of congress for his Camden campaign. Returning to Maryland, in ten days he secured 700 non-commissioned officers and men. Upon the death of Baron de Kalb, Smallwood was promoted to the command of a division, and Gist and Williams to that of two brigades. Entitled to a major-general and two brigadiers, Marylanders submitted long to be led by strangers, which brought on some friction between Col. Smallwood and Baron Steuben. In 1785 Gen. Smallwood was elected to congress, and in November of that year was made governor, to succeed William Paca. During his administration King William's School was consolidated with St. John's College; and in 1784 the first movement for the improvement of the Potomac river was begun, resulting in running a steamboat, the conception of James Rumsey, from Shepherdstown to Harper's Ferry, in 1786. Other administrative acts were: methods of paying the national debt, the claim of British creditors creating the most violent opposition, not only in the Maryland senate, but through newspaper controversy. The joint navigation of the Chesapeake and Potomac brought out a discussion which developed into a convention at Annapolis in 1786, representing five states, to revise the Federal constitution. The united action of Maryland and Virginia resulted in calling a convention at Philadelphia, which framed the new constitution. In 1788 Gov. Smallwood was succeeded by Gov. John Eager Howard, and retired to his home in Prince George county, now embraced in Charles county, Md. His old colonial homestead, built of English brick, though unoccupied and dilapidated, still stands upon a high promontory. He named it "Mattawoman," from a neighboring creek. On July 4, 1898, the Sons of the American Revolution erected over his long unmarked grave, within full view of his old homestead, a granite shaft as a memorial of his military achievements. Gen. Smallwood was never married. His only sister became the wife of Col. William Grayson, of Virginia. In 1827 it was found that Col. William Grayson, eldest son of William Grayson, was entitled by entail to the whole estate of Gen. Smallwood, no transfer having been made. In private life Gov. Smallwood, as an obituary notice said of him, "was highly esteemed for the enduring ardor and steadfastness of his friendships and his candid deportment toward all." He died in Prince George co., Md., Feb. 14, 1792.

**HOWARD, John Eager**, revolutionary soldier and fifth governor of Maryland (1788-91), was born near Baltimore, June 4, 1752, son of Cornelius and Ruth (Eager) Howard. His mother was the daughter of John and Jemima (Murray) Eager. He was a grandson of Joshua Howard, of Manchester, England, an officer in the army of the Duke of York during the Monmouth rebellion, who was married to Joanna O'Carroll, of Ireland, and going to Maryland in 1667, took up a tract of land in Baltimore county. John Eager Howard was educated by private tutors. Coming to manhood at the beginning of the revolution, he was offered a colonel's commission, but preferred to accept a commission as captain of a company of Col. Carvil Hall's "Flying Camp." He was at the battle of White Plains, Oct. 28, 1776; commissioned major in the 4th regiment of Maryland, he was at Germantown and Monmouth. In 1780 Maryland's 1st brigade, under Gen. de Kalb, marched south to defend North Carolina from British invasion. As Lieut.-Col. Howard, he was in the 5th Maryland regiment at Camden, first under Gen. Gates, and afterward under Gen. Greene. There Gist's Maryland regiment and Williams' regiment,

with Howard at its head, broke upon the enemy and drove him before them. In 1781, 400 of the Maryland line were placed under Col. Howard and consolidated with Gen. Morgan's command. At the battle of Cowpens the British trooper, Tarleton, having called out his reserves endangered Howard's right, and Gen. Morgan ordered Col. Howard to retreat toward the cavalry and assume a new front. He had not reached that position when Tarleton ordered a charge. Suddenly facing the enemy, Col. Howard poured in upon his astonished line a close and murderous fire. Tarleton's ranks recoiled, when Col. Howard, ordering his men forward, charged upon the British with fixed bayonets. It was a terrible but decisive conflict. The day was won, and the whole British infantry were either captured or killed, Tarleton himself, after a conflict with Col. Washington, narrowly escaping. Gen. Morgan rode up to Col. Howard and said: "You have done well, for you are successful; had you failed, I would have shot you," Col. Howard replied: "Had I failed, there would have been no need of shooting me." At that moment Col. Howard held the swords of seven British officers. Congress voted him a silver medal. Col. Howard was with Gen. Greene on his retreat at Guilford Court House, March 15, 1781. At Hobkirk's Hill, April 15th, he succeeded to the command of the 2d Maryland regiment. At Eutaw Springs, the fiercest contest of the war, Sept. 8, 1781, Howard's regiment met "The Buffs," an Irish corps of Rawdon's army. Neither would yield, but crossing bayonets, their ranks mingled together; opposing files sank down, each pierced with the bayonet of his antagonist. They were found grappled in death and transfixed together upon the battlefield. The officers fought hand to hand. The British line, having at last given away, "The Buffs," unable to stand, broke and fled. Col. Howard came out of that contest the only surviving officer, and his command was reduced to thirty men. Upon a final charge he was wounded. Gen. Greene was so delighted he rode up and complimented the Marylanders in the midst of action. Three hundred British prisoners were taken,

in the face of a murderous fire of artillery and musketry. Each corps engaged received a vote of thanks from congress. Amos Cummings has said: "The Old Guard occupied no higher station in the French army than that held by the Maryland line in the Continental army." Col. Howard was a member of the Continental congress in 1787-88, and in the latter year was elected governor, to succeed William Smallwood. During his term Maryland cast her six electoral votes for Gen. Washington as the first president of the United States, with Robert Hanson Harrison, of Maryland, for vice-president. On Dec. 23, 1788, the assembly of Maryland voted to cede

to congress a district ten miles square for the seat of the government of the United States. In 1789, the legislature of Virginia having voted a loan of \$120,000 to the government to assist in erection of public buildings at the seat of government, at the following session Maryland voted a loan of \$72,000 for the same, and authorized the sale of its public lands to meet it. In 1790 the legislature passed an act "for the better administration of justice in the several counties of the state," and Gov. Howard and his council appointed some of the leading men of the state as associate justices. This was because Charles Carroll, of Carrollton, and John Henry, the first senators of Maryland, had urged him to present the state's claim in the ablest manner, as there was a strong

probability of the government's willingness to assume the debts of the states. Gov. Howard and Charles Carroll, of Carrollton, drafted the militia law passed by the legislature. In 1791 Gov. Howard was succeeded by Hon. George Plater. Four years later (1795) he was sent to the Maryland senate, and in 1796 was elected U. S. senator, *vice* Mr. Poits, and was re-elected for the full term, to 1803. Retiring to his beautiful homestead, "Belvedere," where he had entertained Washington and Lafayette, this revolutionary patriot spent his honored, declining days. When the news of the capture of Washington by the British, in 1814, reached Gov. Howard, with the suggestion that it would be wise to capitulate, the old hero said: "I have as much property at stake as most persons, and I have four sons in the field; but sooner would I see my sons weltering in their blood and my property reduced to ashes than so far disgrace the country." "At this critical period, besides contributing liberally to the common defense, he raised a troop of aged men and rendered important service in the field." Col. Howard was married, May 18, 1787, to Margaret, daughter of Benjamin Chew, of Philadelphia, and granddaughter of Dr. Samuel Chew, a distinguished physician and judge and a member of the Society of Friends. Col. Samuel, father of Dr. Samuel, emigrated to Maryland from Chewtown, Somersetshire, England, in 1671. John son of John Eager and Margaret (Chew) Howard, was married to Cornelia Arabella Read; George, another son, was married to Prudence Gough Ridgely; Benjamin Chew Howard, to Jane Grant Gilmor, William, to Rebecca Key; Charles, to Elizabeth P. Key. His daughters were Mrs. John McHenry and Mrs. George Reed. Mrs. Howard died in 1824. His health gradually declining from that time, he died in Baltimore county, Md., Oct. 12, 1827.

**PLATER, George**, sixth governor of Maryland (1791-92), was born at "Sattorly," near Leonardtown, St. Mary's co., Nov. 8, 1735, and was third of the name. His grandparents are said to have been blood relatives. The estate of "Sattorly" was named in honor of the Plater homestead in Suffolk county, England, a history of which, with the family coat-of-arms, is found in Suckling's "History of Suffolk." His father, Col. George Plater, was married, in 1729, to Mrs. Rebecca (Addison) Bowles, widow of James Bowles and daughter of Col. Thomas Addison, a gentleman of considerable fortune. He was married a second time to Mrs. Elizabeth Carpenter. In 1750 the "Annals of Annapolis" showed the prevailing pastime of that period in the following notice: "Sept. 20th, a race was run on the race course between Gov. Ogle's bay gelding and Col. Plater's gray stallion, which was won by the former." The "Maryland Gazette" of May 22, 1755, gives this review of Col. Plater's life: "Saturday last died at his seat in St. Mary's, aged upward of sixty years, the Honourable George Plater, Esq., who was for many years one of his Lordship's Council of State, naval officer of the Patuxent, and lately appointed secretary of the province; a gentleman eminent for every social virtue which could render him truly valuable. He was, as Horace says, '*ad unguem factus homo.*' As his life was a pleasure, so was his death a grief to every one that knew him." His children were Rebecca, wife of John Tayloe, of Virginia; Ann, George, afterward governor; Thomas Addison and Elizabeth. George Plater, the son, was graduated at William and Mary College in 1753; studied law, and upon being admitted to the bar took an active part in the discussions preceding the revolution. He was chosen a member of the convention which assembled in Annapolis, May 8, 1776, and invited Gov. Eden to vacate; was appointed, May 26, 1776, one of the council of safety; was appointed to represent St. Mary's county in the convention in Annapo-

John E. Howard

lis, Aug. 14, 1776, and was appointed, Aug. 17th, a member of the committee "to prepare a declaration and charter of rights and a form of government" for Maryland. From 1778 until 1781 he was in congress, and in 1788 was president of the Maryland convention that ratified the Constitution of the United

*Geo Plater*  
1770-1800

States. He opposed the amendment to Article IX. of the Articles of Confederation, which sought to ascertain and restrict the boundaries of states; which amendment was defeated by six states, including Maryland. In 1791 he was elected governor of Maryland, to succeed John Eager Howard. His administration secured the location of the national seat of government by ceding the District of Columbia, which had been accepted by congress. In 1791 Gen. St. Clair having been defeated by certain Indian tribes, Col. Otho H. Williams, with additional troops, was sent out in 1792. On Dec. 5, 1792, the Maryland electors assembled at Annapolis and cast their vote for George Washington and John Adams for a second term of four years. Gov. Plater was twice married: first, to Hannah, daughter of Hon. Richard Lee—she died in 1763; and second, on July 19, 1764, to Elizabeth, daughter of John and Ann (Frisby) Ronsby and granddaughter of John Ronsby and Ann, widow of the first George Plater. Her great-grandparents were John and Barbara Ronsby, of "Ronsby Hall." Gov. Plater's children were: Rebecca, wife of Philip Barton Key; George was married to Cecilia Brown Bond; Judge John Ronsby Plater was married to Elizabeth Tootell (a revolutionary name now extinct); Thomas was married to Evelina Buchanan, and Ann became the wife of Gen. Uriah Forrest, of Maryland. Gov. Plater's health became impaired early in his term. He died in Annapolis, Md., Feb. 10, 1792, and was buried at "Sotterly."

**STONE, John Hoskins**, eighth governor of Maryland (1794-97), was born in Charles county, Md., in 1745, son of David Stone and Elizabeth Jenifer, daughter of Dr. Daniel Jenifer. He was a descendant of Gov. William Stone, the younger brother of Thomas Stone, a signer of the Declaration of Independence. He received a fair education in the private schools of the county, and then took up the profession of law. In November, 1764, he was one of the committee from Charles county, Md., to carry out the resolutions of congress, and was one of the committee of correspondence for the county. He was one of the Association of Freemen of Maryland in 1775; on Jan. 14, 1776, was elected captain of Col. William Smallwood's 1st Maryland regiment, and in December following was appointed colonel. He fought with distinction at Long Island, White Plains, Princeton, and at Germantown, where he was

*J. H. Stone*  
1745-1800

shot through the ankle, receiving a life-long injury. He resigned, Aug. 1, 1779, and in November was chosen one of the governor's council. In 1781 he was employed by Robert K. Livingstone in the foreign affairs office. In 1786 he was a member of the house of delegates from Charles county, Md., and

was one of the committee to recommend "revising the confederation of the United States"; and was one of the conference committee to prepare instructions for the commissioners for the Philadelphia federal convention which framed the Constitution of the United States. From 1794 to 1797 he was governor of Maryland, and was the first to introduce the present custom of sending to the legislature at the beginning of each session a message calling attention to such matters as deserve legislative consideration. At the request of Pres. Washington, Gov. Stone loaned the government \$250,000, on behalf of the state, for the erection of the public buildings at Washington. In 1795 Gov. Stone wrote to Gen. Washington, conveying the resolves of the Maryland assembly, in reply to the calumnies which had been heaped upon that great patriot. In reply, the general expressed his appreciation of the confidence so well expressed by the assembly. Gov. Stone, in his message, asked for a modification of the prevailing method of electing presidential electors, suggesting that the state be divided into ten districts, with one delegate chosen from each. Gov. Stone was a member of the Society of the Cincinnati, and his commission is still in possession of his grandson, Nathaniel Pope Causin. Gov. Stone's wife was Miss Conden, a Scotch lady. Their daughter, Eliza, was married to Dr. Nathaniel Pope Causin, whose son, Nathaniel Pope Causin, of Port Tobacco, was married to Eliza Maetier, daughter of Daniel and Nancy (Maetier) Warfield, of Baltimore. His brother, Michael Jenifer Stone, was in congress in 1789-91, and judge of the circuit court of Charles county. Gov. Stone died at his residence in Annapolis, Md., Oct. 5, 1804.

**HENRY, John**, first senator and ninth governor of Maryland (1797-98), was born at "Weston," Somerset co., in November, 1750, son of Col. John and Dorothy (Rider) Henry. His paternal grandfather was Rev. John Henry, a Presbyterian minister, who came from England in 1700, and settled first near Rehoboth, on the Pocomoke river, Somerset co. His wife, Mary, widow of Col. Francis Jenkins, brought him the immense estate of her late husband. She was the daughter of Sir Robert King, an Irish baronet. On the decease of Mr. Henry, she was married to Rev. John Lampton, another Presbyterian minister, and was thereafter known as Madame Hampton. Her sons by Rev. John Henry were Francis Jenkins and Col. John. The latter's wife, Gov. Henry's mother, was the daughter of Col. John and Anne (Hicks) Rider. Col. Rider was the son of John Rider, of England, who, while going to school in his native country, was married to the only daughter of Col. Charles Hutchins, an early settler of Somerset county, and lived at Weston, afterwards the home of John Henry. John Henry was prepared for college at West Nottingham Academy, Cecil. He went to Princeton, and was graduated in 1769; studied law in the Temple, London; was there a member of the Robin Hood Club, and in their discussions defended the colonies. He left England in 1775, a thoroughly educated, popular and attractive young man, and was soon elected to the legislature of Maryland. In 1777 he was sent to the Continental congress, and remained, by successive elections, until the adoption of the constitution. He opposed Jay's treaty with Spain, in which our right to navigate the Mississippi was surrendered for the small benefit that would come to the eastern states. In 1787 he was appointed upon the committee to prepare an ordinance for the government of the northwest territory. Upon the adoption of the constitution, Mr. Henry was, with Charles Carroll, of Carrollton, elected the first senator from the eastern shore. He voted to locate the seat of government on the Potomac. His term in the senate began in 1795, and he resigned it in 1797, to accept the office of gov-

error, succeeding Thomas H. Stone. In 1780 the British, after plundering the town of Vienna, destroyed Col. Henry's house and furniture, but having been apprised of their approach, he had removed his plate and most valuable papers. During the election for president, to succeed Washington, John Henry received two votes in the electoral college at Annapolis, 1783. Maryland's quota for the impending war with France, in 1798, was four regiments. The citizens of Annapolis appointed a committee for collecting aid in erecting a battery and mounting a number of cannon, while those of Baltimore raised \$10,000 forequipping two sloops-of-war to be offered to the government. Gen. Washington, regretting Maryland's lack of officers, requested Col. John Eager Howard and Gen. Lloyd to make a selection of officers for the Maryland regiments, and both declined the honor; but the general assembly of Maryland having endorsed the vigorous course of Pres. Adams, which prevented an impending war, received the president's acknowledgment in the following tribute: "There is no state in this Union whose public affairs upon all great national occasions have been conducted with more method, wisdom and decision than those of the state of Maryland." Gov. Henry was married, March 6, 1787, to Margaret, daughter of John and Elizabeth (Goldsborough) Campbell, of Caroline county. He left two sons, John Campbell and Francis Jenkins. The former was married to Mary Nevett Steele, sister of I. Nevett Steele, the distinguished attorney of Baltimore. Mrs. Winder Townsend, in her memoirs, thus describes Gov. Henry: "His manners were easy, engaging, and in person he was graceful and elegant." He directed the education of his nephew, William Henry Winder, afterward commander of the American forces at Bladensburg, in 1814. There is no portrait of him, because of the fire which destroyed the homestead, "Weston," in which were many of his papers. The original letter from Thomas Jefferson to Gov. Henry upon the authenticity of "Logan's speech" was, however, preserved. Gov. Henry's granddaughter, "Kitty," daughter of John Campbell Henry, was married to Daniel, youngest son of Gov. Edward Lloyd. She became the mother of Gov. Henry Lloyd, who succeeded Gov. Robert McLane. Gov. Henry died in November, 1798.

**OGLE, Benjamin**, tenth governor of Maryland (1798-1801), was born in Annapolis, Feb. 7, 1746, in the house built by his father, corner of King George street and College avenue, afterward the residence of Gov. Pratt and Judge John Thompson Mason. He was the son of Gov. Samuel Ogle and Ann, daughter of Gov. Benjamin Tasker, and grandson of Samuel Ogle, of Northumberland county, England, who died in 1718. In 1732 Samuel Ogle received his first appointment, followed by two other commissions, to represent the Calvert family in Maryland. His last administration was in troublous times. William Penn's heirs were claiming a large area of the Calvert grant, and sending settlers into the disputed territory. Gov. Ogle's efforts to dispossess them caused serious encounters, which led finally to the boundary line of Mason and Dixon. For refusing to support the invasion of Canada, Gov. Ogle dissolved the assembly of the province. His proclamation upon officer's fees led to an exciting and long continued controversy between Daniel Dulany, in support of the government, and Charles Carroll, of Carrollton, in defense of the people's rights. Gov. Ogle's report of the resources and expenses of the province was as comprehensive as a modern census. Samuel Ogle died in 1752, at the early age of fifty-eight, and was succeeded by his father-in-law, Hon. Benjamin Tasker. Benjamin Ogle was educated in England. Upon his return he became a member of the council, and was upon the committee of observation for

Frederick county. He was a personal friend of Pres. Washington, by whom he was frequently consulted. In 1798 he was elected by the assembly the tenth governor of Maryland. His administration was in the midst of the violent excitement following the death of Pres. Washington, in 1799. His proclamation, issued Feb. 11, 1800, called upon the people of Maryland to observe the day "as a day of mourning, humiliation and prayer for the deceased," a precedent still observed under the "new style" on Feb. 22d each year. The political contest during his administration between Pres. Adams and the Republican, Thomas Jefferson, equally divided the voters of Maryland, and brought out much rancor, not only in the electoral college which failed to elect, but in the house of representatives, where a seven-days' contest resulted in the election of Thomas Jefferson. Gov. Ogle's estate of "Belair"

was one of the early homesteads of Gov. Benjamin Tasker, his maternal grandfather. Gov. Ogle was twice married: his first wife was Rebecca Stillely. Their daughter, Elizabeth, became the wife of Michael Thomas, son of Christian Thomas, of Frederick county, whose grandson, David Ogle Thomas, came into possession of "Rose Hill," the former estate of Gov. Thomas Johnson. It is still held by his daughter, Mrs. Cecillius Warfield, of Baltimore. Judge Ogle was married the second time to Henrietta Margaret, daughter of Henry Hill and Mary, daughter of Philip and Ann (Chew) Thomas of West River. Their son, Benjamin Ogle, was married to Anna Maria Cooke, and left twelve children. The old homestead is now in possession of James T. Woodward, president of the Hanover Bank, New York city. Gov. Ogle died at "Belair," July 6, 1809.

**MERCER, John Francis**, soldier and eleventh governor of Maryland (1801-03) was born at Marlboro, Stafford co., Va., May 17, 1759, son of John and Ann (Roy) Mercer. He descended from Robert and Ann (Smith) Mercer, of Castle Aldie, Scotland, afterwards of Noel, Chester, England. Their son, Robert Mercer, was married to Eleanor Reynolds, whose son, born in Dublin, was married to Grace Fenton. He went to Virginia in 1720, and became secretary of the Ohio Co.; was an eminent crown lawyer; published two editions of the laws of Virginia, called "Mercer's Abridgment," and wrote the first tract in Virginia in opposition to the Stamp Act. He lived at Marlboro, and died in 1768. His grandson, John Francis Mercer, was educated at William and Mary College, Virginia, and was graduated in 1775. In 1776 he entered the 3d Virginia regiment as lieutenant, and was made captain June 27, 1777. He served as aide to Gen. Charles Lee until the battle of Monmouth, N. J., when his sympathy for that officer in his disgrace led him to resign. Returning to his own state, he equipped, at his own expense, a troop of horse, of which he was commissioned lieutenant-colonel. He joined Gen. Robert Lawson's brigade, and served with it at Guilford, N. C., and elsewhere until its disbandment. He then attached his command to the forces of Gen. Lafayette in his Virginia campaign against Lord Cornwallis, with whom he remained during Lafayette's retreat and final successful advance until the surrender of Yorktown. His correspondence during the war placed him among the leaders of that struggle. At the conclusion of the war Col. Mercer studied law with Thomas Jefferson. In 1782-85 he was one of the Virginia delegates to the Continental congress. His wife had inherited the estate of "Cedar Park," West

River, from her father, and he now removed thither, and became prominent in political affairs. He was sent as a delegate to the convention which framed the Constitution of the United States, and took a leading part in the discussions in opposition to its adoption. He was, with Luther Martin, a strong opponent to those provisions which tended to centralize individual state rights in the federal government. Seeing that all opposition to its adoption was useless, he withdrew from the convention, because he was not willing to endorse the report as drafted. He afterward served in the Maryland legislature for several sessions, and was in congress from 1792 to 1794, during which time the permanent location of the capitol was the exciting question of discussion. He was with the Southern members in urging its location upon the Potomac. When he came to the office of governor, in 1801, the capitol had been erected and the national government transferred to Washington. His friendship with Thomas Jefferson, his former teacher, gave him considerable influence in both national and state legislation, which was shown in the exciting election contest, which lasted seven days, in deciding Pres. Jefferson's claim to the office. In 1801 the chief controversy of Gov. Mercer's term was the repeal of the property qualification necessary to entitle a vote. The repeal was

urged by the Democrats, and was carried early in the session of 1801, and in 1802 the confirmatory act was passed. Up to this time all voters must possess a freehold of fifty acres of land. In 1803 Gov. Mercer was succeeded by Robert Bowie. Retiring to his handsome estate at "Cedar Park," he was again called to the legislature. Col. Mercer drew up a petition, intending it to be signed by the freeholders and inhabitants, asking congress, with temperate, forcible and clear reasoning, to prevent the declaration of war in 1812. Col. Mercer's wife, Sophia, daughter of Richard and Margaret (Caile) Sprigg, was the granddaughter of John and Rebecca (Ennalls) Caile, of England. Mrs. Mercer descended from the fourth Thomas Sprigg and Elizabeth Gallo-way. The first Thomas Sprigg, the immigrant of 1661, settled in Calvert county, of which he was high sheriff, also commissioner for trial of causes. Gov. Mercer's son, Col. John Francis Mercer, was married to Mary Scott, daughter of Thomas and Jane (Byrd) Swann, and granddaughter of William Byrd, of "Westover," member of the council; of the house of burgesses; receiver-general of the colony. His wife was Jane, daughter of Mann Page and Mary Mason, descendant of Col. George Mason, 3d. Richard Sprigg Mercer, son of Col. John Francis Mercer, Jr., was married to Miss E. E. Coxe, of Philadelphia. Their daughter, Margaret, now in Paris, presided over Gov. Thomas Swann's house when he was a member of congress. Their daughter, Ella Mercer, now Mrs. Edwin J. Farber, of Baltimore, is a member of the Society of Colonial Dames. Their son, Col. Richard Sprigg Mercer, is now living in New York. Gov. Mercer's daughter, Margaret, was the author of "Studies for Bible Classes," "Ethics," and a "Series of Lectures for Young Ladies." She became noted for her sacrifice in freeing her slaves and sending them to Liberia, and was called the "Hannah More of America." Gov. Mercer, after a protracted illness, died in Philadelphia, Pa., Aug. 30, 1821.

**BOWIE, Robert**, twelfth and fifteenth governor of Maryland (1803-06; 1811-12), was born near Nottingham, Prince George co., in 1749, son of Capt. William Bowie and his wife, Margaret, daughter of

Edward Sprigg, chief-justice of the provincial court. He was of Scotch descent. He attended the school of Rev. John Eversfield, in the neighborhood of his home, and when in his nineteenth year was married to Priscilla, daughter of James John Mitchell, of Calvert county, Md., she being in her fifteenth year. He resided in the village of Nottingham until after his father's death, in 1791, when he alternated his residence, living at his late father's home, "Mattaponi," during summers, and in Nottingham in winter. At a meeting of the freeholders, at Upper Marlboro, in 1774, he was placed on the committee to carry into effect the resolutions of the Continental congress. In February, 1776, a military company was organized in Nottingham, and he was commissioned its first lieutenant. On June 21st following he was made captain of the 2d battalion of Maryland flying artillery, and took an active part in the battle of White Plains, where he was wounded in the skull. He represented Prince George county, Md., in the legislature during the years 1785-86, 1788-90 and 1801-03. In January, 1793, he was commissioned a major of militia, and in the same year was made justice of the peace in his county. While a member of the legislature, in 1803, he was elected governor of the state, and continued to serve by re-election until 1806. During his first term charges were brought against Judge Samuel Chase by John Randolph, of Roanoke. His defense of Luther Martin and acquittal upon most of the charges which led to his impeachment were the culmination of a political rancor between Federalists and Democrats. During Gov. Bowie's term the second election of Thomas Jefferson was celebrated by a popular inauguration. It was the beginning of depredations upon American commerce; and Baltimore merchants, on Jan. 21, 1806, drafted a series of resolutions and presented them to congress. This led to the Embargo Act, which the people of Annapolis, in 1807, in mass meeting endorsed. In 1809 Gov. Bowie was a presidential elector, voting for James Madison; and in 1810 was one of the directors of the first state bank incorporated in Annapolis. In 1811 he was again elected governor. The war fever had now widely separated the Federalist, or "peace party," from the Democratic, or "war party." The able editor of the "Federal Republican," Alexander Contee Hanson, son of Chancellor Hanson, and in 1816 a senator from Maryland, had gathered around his party the leading men of that day. His attack upon the war proclamation led to a forcible suspension of his journal, and when once more permitted to resume, his attacks upon the governor led to a mob, which destroyed his paper and killed many of his defenders. Bowie and the senate were in sympathy with the war, while in the house resolutions opposing the war were passed; but the members pledged their "lives and fortunes to the public service" in the common defense. On April 12, 1812, the president was required to request the governors to organize and equip 100,000 militia, and \$1,000,000 was appropriated to the expense. Gov. Bowie, on June 15, 1812, convened the legislature, which appropriated \$20,000 and called out 6,000 militia. The city of Baltimore, which was Democratic, eagerly filled the quota; but at the next election throughout the counties the effect

*Robt Bowie*

of the Baltimore mob resulted in an increased Federalist majority, which secured the election of Gov. Levin Winder. Gov. Bowie was a large landed proprietor, and wealthy for that day. He was devoted to the raising of blooded stock, and especially fond of racing, owning some fine horses. He died, Jan. 8, 1818, at Nottingham, and is buried in the yard at "Mattaponi," where are also interred his parents and his wife, who survived him four years. Five of his children arrived at maturity, two sons and three daughters.

**WRIGHT, Robert**, thirteenth governor of Maryland (1806-09), was born in Kent county, Md., about 1765, son of Judge Solomon and Mary (Tidmarsh) Wright. He was the grandson of Justice Solomon and Anna Wright, and great-grandson of John Wright, the immigrant from England, in 1666, who settled in Queen Anne county. Judge Solomon Wright was a member of the Maryland conventions of 1771, 1773, 1774, 1775 and 1776; was a member of the association of freemen, and signer of the declaration of freemen of Maryland; was chairman of the committee of correspondence for Queen Anne county in 1775; was appointed judge in the provincial court, but resigned; was special judge for the eastern shore during the revolution. Upon the state's organization, he was appointed judge of the first court of appeals, and served until his death. Capt. Robert Wright served as private in Capt. James Kent's company of Queen Anne minute-men against Lord Drummond's Tories of the eastern shore of Virginia, Feb. 3, 1776. He was captain of a company in the Maryland line, and was at Paoli and Brandywine; was in Col. Richardson's battalion. His commission was dated July 7, 1777, and was embodied under a resolution of congress. Having been educated at the public schools and Washington College, Robert Wright studied law, and practiced in Queenstown, Md. In 1801 he was elected as a Democratic member of the U. S. senate, where he continued until 1806, when he resigned, to accept the office of governor. The Embargo Act followed by the Enforcement Act, created, in Maryland, considerable discussion, and Gov. Wright presided at a meeting in Annapolis, which endorsed the administrative policy. Resolutions were also passed urging Pres. Jefferson to withdraw his declination of a third term. Gov. Wright, under the militia law, enacted within his term, appointed Samuel Tarbutt Wright adjutant-general of the state militia, who issued an order commanding vigilant guardance against all violations of the president's proclamation. On July 6, 1807, the governor was authorized to equip 5,863 men as Maryland's quota of the government's call, to take the field upon a moment's notice. Though the Embargo Act had reduced Maryland exports from \$14,000,000 to \$2,000,000, the legislature and governor still endorsed the administration; but the effect of such a heavy loss to commercial interests was the election of a Federalist majority in the house of delegates, which made Edward Lloyd his successor. In 1810 Gov. Wright was sent to congress, and continued a member of that body until March 3, 1817. In 1821 he was returned to congress for two years, when he was appointed district judge of Kent county, which position he held until his death. His descendants are still prominent in the politics of Queen Anne county. Capt. Wright, of the tax department at Annapolis, and Dr. Pembroke Thom, of Baltimore, are among his descendants. Gov. Wright died in Queenstown, Md., Sept. 7, 1826.

**LLOYD, Edward**, fourteenth governor of Maryland (1809-11), was born at "Wye House," Talbot county, Md., July 22, 1779. He was the son of the revolutionary Edward Lloyd, the fourth in line from the commander of Anne Arundel. The fourth Edward Lloyd, who was married to Elizabeth Tayloe, held

many positions under provincial, state and Continental governments. In 1771-74 he was a member of the lower house of the assembly and afterward a member of the provincial convention of 1775, called together under the constitution, taking his seat in that body in January, 1776. In 1775 he was a member of the council of safety for the eastern shore, continuing in the councils of the executives of the first, second and third administrations. In 1780, under the new government, he was a delegate to the lower assembly, and one of the state senators in 1781, 1786, 1791; he was a delegate from Maryland in the Continental congress during 1783 and 1784, and a member of the state convention, in 1788, for the ratification of the constitution. Col. Edward Lloyd, of the revolution, was a large planter, his estate being assessed, in 1783, as 11,884½ acres. Located within easy reach of the enemy's fleet, in 1781 his loss of plate, jewelry, negroes, clothing and cash money amounted to a small fortune. A writer thus describes him: "With Maryland and North American interests at heart and at stake, ingrained through full five generations, prior to 1776, Edward Lloyd, of 'Wye House,' had an honest claim upon the confidence of his constituents. His business fact in caring for the industrial interests of the province, promoted by regular immigration in certain English shires, gave importance to his election in 1774-76. Along with Matthew Tilghman, James Lloyd Chamberlaine and Pollard Edmondson, families of ample means, he rode at times in a coach-and-four. He had also quite a large tract of land for a deer park, and he let his friends and his guests rejoice in horses and hounds. To the convention of 1776 he was not originally returned, but in a few weeks took his place among the leading men on the Whig side, after the expulsion of a blatant demagogue, full of idle doubts about trusting rich landed proprietors.

After the burning of 'Wye House' by a predatory band, he rebuilt it, with a town-house in Annapolis, that stands still sufficiently high to overtop the neighboring ones and give an outlook toward the eastern bay of the Chesapeake and the mouth of Wye river. In 1792, when Gov. Lee was in his last service, John Edmondson, with Joseph H. Nicholson, the Democratic leader, moved to have the property qualification removed from the statutes. Mr. Edward Lloyd, the largest holder, revived this measure, which gave him additional political eclat." Edward Lloyd, 5th, known as the governor of 1809, was a gentleman of respectable talents, large wealth, and an honorable politician. He was a delegate to the legislature from 1800 to 1805; a member of congress from 1806 to 1809, and governor from 1809 to 1811. His congressional career covered the exciting enactment of the Embargo Act, and while governor, that act was repealed, and the Non-Intercourse Act substituted. The Free Ballot Act, repealing  *viva voce* vote and all property qualifications, introduced in the legislature by John Hanson Thomas, was confirmed by the act of 1809. In 1811 Gov. Lloyd was succeeded by Col. Robert W. Bowie, Democrat, and was returned to the senate of Maryland in 1811, when he offered a series of resolutions endorsing the course of Pres. Madison toward England, and condemning the measures of Great Britain as destructive of our interests. Gov. Lloyd was a presidential elector in 1812, and voted for Pres. Madison. In 1819 he was U. S. senator. With Charles Carroll, of Carrollton, and Daniel Carroll, he was opposed to the report of Samuel Chase upon bank stock. Senator Lloyd resigned in 1826, and

retired to his Annapolis house, known since as the Chase house, the only three-story colonial house in Annapolis. His wife was Sallie Scott, daughter of Dr. James Murray, of Annapolis, and a connection and descendant of "Caleb Dorsey, of Belmont." Their daughter, Elizabeth Tayloe Lloyd, was married to Edward Stoughton, son of Gov. Levin Winder. The third daughter was married to Adm. Franklin Buchanan. Their youngest son, Daniel, was the father of Gov. Henry Lloyd. His sisters, Ann and Eleanor, were married to two brothers, Richard Tasker Lowndes, and Charles Lowndes, of the U. S. navy, grandfather of Gov. Lloyd Lowndes. Edward Lloyd, 6th, of "Wye House," whose wife was Alicia McBlair, of Baltimore, was on the Van Buren electoral ticket, in 1836 and 1840. In 1850 he was a senator from Talbot and a member of the convention which, in 1851, completed the new constitution. His son, Edward Lloyd, 7th, the present owner of "Wye House," has also been a representative in the Maryland assembly, a member of the senate, and president of that body. He was married, in 1851, to Mary Lloyd, daughter of Charles and Phebe (Key) Howard, and died in Annapolis, Md., June, 1834.

**WINDER, Levin**, sixteenth governor of Maryland (1812-15), was born in Somerset county, Md., Sept. 4, 1757, son of William and Esther (Gillis) Winder, grandson of John and Jane (Dashiel) Winder, and great-grandson of John Winder, of Cumberland, England, officer of the colonial army, justice of the peace, and lieutenant-colonel in 1697. He was a brother of William Winder, who was married to a daughter of Gov. John Henry, and uncle of Brig-Gen. William Henry Winder, who commanded the American forces at Bladensburg, in 1814. Levin Winder began the study of law, but abandoned it upon the outbreak of the revolution, and entered the army. On Jan. 14, 1776, he was appointed by the convention of Maryland first lieutenant of the 5th company of Capt. Nathaniel Ramsay's command of Col. William Smallwood's battalion. On April 17, 1777, he was made major of the 4th regiment of the Maryland line, and at the close of the war was lieutenant-colonel. At the conclusion of the war he engaged in agricultural pursuits in southern Maryland, near Princess Anne. From there he was several times elected to the house of delegates of Maryland, serving as speaker. In 1812 the Federalists, though a Democratic senate remained over, had a substantial majority in the lower house, thus defeating Gov. Robert Bowie and electing Levin Winder. His election was due to the extreme disgust created throughout the state by the unwarrantable barbarity of the Baltimore mob against the freedom of the press. The death of Gen. Lingan, a revolutionary soldier, and the wounding of Gen. Henry Lee, who had led Lee's legion to the southern front, and again was the hero of the "whiskey rebellion"; the wounding of Dr. Peregrine Warfield, son of "the Heroe of the Peggy Stewart"—men who had fought for freedom, yet were ready to defend the freedom of the press—brought on an intense excitement, which was not for

restore the power of the opposing party. Gov. Winder, though opposed to the war, immediately sought the assistance of the general government to put Baltimore in a state of defense. He wrote to the secretary of war, detailing the lack of protection at Annapolis, Easton and other towns upon the bay. After repeated demands for assistance, which did not come, though Virginia and other states were protected by militia, paid by the general government, brought out the Federalist criticisms: "Virginia has but to ask, and she receives; but Maryland, for her political disobedience, is denied." Calling an extra session of the legislature, the governor laid before it his correspondence with the general government, claiming in his message the right to demand protection from the government. A committee upon the governor's message indorsed his position, and the sum of \$100,000 was appropriated, to be applied by the governor to defray the expenses of the militia already called out. The governor had also equipped and sent forward to the front Maryland's quota for the general defense. Capt. Nathan Towson, with an artillery company, had joined Col. Winfield Scott in the North, and a number of other companies had tendered their services to the president, who would not accept them unless the state would pay them. Baltimore sent forward Col. William Henry Winder, nephew of the governor, with ample funds from private subscriptions. A portion of the middle of the state was called upon to garrison the forts of Baltimore and Annapolis, all paid for by the state. On the arrival of the enemy's fleet in the Chesapeake, the governor again appealed for aid to protect Easton, where the public records and a U. S. armory were kept. The reply was: "Remove the armory—the government cannot protect it." At this time a number of citizens in the unprotected districts, unable to bear the burdens of defense, abandoned their estates, and set out for new settlements in the West. At the next gubernatorial election, owing to a close vote in one of the counties, which gave a Federalist majority, seventeen members of the legislature refused to vote, but Gov. Winder was declared elected. In his next message he stated: "If the expenses of a war waged by the national authorities are to be borne by the state, it is not difficult to foresee the state treasury will soon be exhausted, and the annihilation of the state government must soon follow." After recommending the amendment of the militia law "to compel the services of those who, on any sudden emergency, are unwilling to assist in the defense of the country," and the organization of volunteer companies of mounted infantry, he submitted to the legislature "the propriety of adopting a system of general education." In the gubernatorial election of 1814 Gov. Winder received forty-eight votes against twenty-three for Robert Bowie. The state was now decidedly Federal; yet the Federalists never refused their aid to the war, appropriating \$450,000, with \$1,000,000 more as a contribution from the city of Baltimore, to carry on the defense of her citizens. The governor's nephew, Gen. William Henry Winder, commander of the military district of Maryland and Virginia, led the American forces at the battle of Bladensburg, and was court-martialed for their defeat. The trial, however, resulted in a report of commendation for having heroically done his duty under circumstances beyond his control. Maryland contributed 42,636 soldiers to the war of 1812. Her claim against the government for the expenses of that war, though met in part, was the beginning of a debt which harassed her legislators for many years. Gov. Winder retired to his farm, and in 1816 was returned to the senate of Maryland. He became a prominent Mason, and in 1814-15 was grand master. At the time of his death he was senior major-

*Levin Winder*

many years forgotten. It was the chief cause of the prevailing subsequent objections to the increase of Baltimore representatives in the assembly of Maryland. Immediately after the Baltimore riot, petitions from the counties were presented to Gov. Bowie, demanding a suppression of such lawless attacks. These were answered by Gov. Bowie in a card calling upon the people, "when our country is engaged in an open and declared war with one of the most powerful nations of Europe, to cultivate a spirit of harmony," and repelling the charges that the officials of Baltimore had not done their duty in quelling the riot. This helped to defeat Gov. Bowie and

general of the state militia. In person and presence he was very firm, moral and gentlemanly. As a speaker, he was eloquent. Of him an opponent said: "Gen. Winder was incapable of misstatement; his spirit could not possibly bear its own reproach of anything that was disingenuous." Gov. Winder was married to Mary Sloss, who bore him three children: William Sydney, Mary Anne Stoughton and Edward Stoughton, who was married to Elizabeth Tayloe, daughter of Gov. Edward Lloyd. Their daughter, Elizabeth Tayloe Winder, became the wife of Charles Josias Pennington, whose son is Josias Pennington, of Baldwin & Pennington, architects, of Baltimore. Gov. Winder died in Baltimore, July 1, 1819.

**RIDGELY, Charles Carnan**, seventeenth governor of Maryland (1815-18), was born in Baltimore county, Md., Dec. 6, 1762, son of Capt. Charles R. Carnan, a distinguished Irish officer in the revolution, and Achsah, daughter of Col. Charles and Rachel (Howard) Ridgely. He was great-grandson of Charles and Deborah (Dorsey) Ridgely, and great-great-grandson of Robert Ridgely, secretary of Lord Baltimore's council. Deborah Dorsey was the only daughter of Hon. John Dorsey, of the "upper house," brother of Maj. Edward Dorsey, field officer of the provincial forces of Anne Arundel and judge of the high court of chancery. One of the most celebrated trials in that court of chancery in later days was the contest of Ridgely vs. Griffith, for a division of "Howard's timber neck," now in the centre of Baltimore city, jointly entailed to Capt. John Howard's daughter, Rachel, by his marriage to Mary Warfield, of Richard, and Katherine Howard, by his marriage to Katherine (Greenberry) Ridgely, widow of Col. Henry and daughter of Gov. Nicholas Greenberry. Rachel Howard became the wife of Col. Charles Ridgely, and Katherine Howard the wife of Orlando Griffith. Capt. Charles Ridgely represented the Ridgely heirs, and Hon. Henry Griffith the Griffith heirs. After a contest between the best legal talent of the state, the decision was in favor of the former. Capt. Charles Ridgely was the founder of Hampton. He was in the house of burgesses in 1773-89, and took up 10,000 acres, upon which he erected a colonial mansion, which was seven years in construction. He was married to Rebecca Dorsey, daughter of "Caleb of Belmont," proprietor of a colonial estate more extensive than Hampton, and son of Caleb and Elinor (Warfield) Dorsey. Capt. Ridgely had no children. Charles Ridgely Carnan, son of his sister, Achsah, by his will, was placed at the head of Hampton, under a legislative enactment, as Charles Carnan Ridgely. He was married to Priscilla Dorsey, daughter of "Caleb of Belmont," and became a brother-in-law of his uncle. He was frequently sent to the legislature of Maryland, and served for five years in the senate. He was a Federalist, as were most of the large landed proprietors of that time, and in 1815 became a candidate for governor. His opponent of the Democratic party was Col. Robert Bowie, who had twice been honored by his party. Gov. Ridgely was elected by two votes, one more than the Federalist majority. In 1816 in his message to the legislature he announced that he had ceded Forts Washington and McHenry, together with all the ground upon which they stood, to the national government. He urged, further, the necessity of taking steps for collecting Maryland's claim against the government, and suggested the appointment of an agent to represent the state in urging congress to refund the amount expended during the late war in defending the border from invasion. He urged, also, a revision of the militia law of the state. He placed the state's claim against the government in the hands of Robert H. Goldsborough, representative in congress, who indorsed the governor's action, and promised

to secure its speedy settlement. Of that claim Pres. Madison had said: "The claim of Maryland for her expenditures during the war stood upon higher ground than those of any other state of the Union." Yet, only a portion was ever collected, while much of her reserve fund was exhausted. During Gov. Ridgely's first term attention was first called to the fact that seven counties and two cities of the state, with a popular majority of 9,000 voters, were entitled to send only thirty-two representatives to the assembly of Maryland, while twelve counties in the minority sent forty-eight representatives—the result of the growing population of Baltimore city. This fact now became a political factor, which led to the long and exciting contests of subsequent administrations. In 1816, Gen. Robert Goodloe Harper having resigned his seat in the U. S. senate, the vacancy was filled by the election of Alexander Contee Hanson, editor of the "Federal Republican," son of Chancellor Hanson. He was still the able and fearless spokesman of the Federalists of Maryland; but Pres. Monroe was now at the head of the government, and "the era of good feeling," induced by peace and his peaceful methods, was about to dawn. In 1817 Pres. Monroe began his tour throughout the Union; stopping in Baltimore, he attended to the gallant defense of that city, which "shed great lustre on the American name." As a result of his administration, the Federalist strength in the state was decreased, but still strong enough to elect Charles Goldsborough as successor to Gov. Ridgely. Rebecca, daughter of Gov. Ridgely, became the wife of Judge Charles Wallace Hanson. John Carnan Ridgely was the first child born at "Hampton." He was married, first, to Prudence Gough Carroll, and second, to Eliza Eichelberger. Their son, Capt. Charles Ridgely, was married to Margaret Sophia, daughter of James, son of Gov. John Eager Howard. Capt. Ridgely died in Rome, in 1872. His son, Capt. John Ridgely, now of "Hampton," was married to Helen West Stewart, author of "Old Brick Churches of Maryland." Prudence, second daughter of Gov. Ridgely, became the wife of Gov. George Howard; Mary Puc Ridgely was married to Col. Charles S. W. Dorsey, whose daughter became the wife of Col. George R. Gaither, of the 5th regiment veteran corps. Gov. Ridgely died at "Hampton," Baltimore county, July 17, 1829.

**GOLDSBOROUGH, Charles**, eighteenth governor of Maryland (1818-19), was born at Hunting creek, Dorchester co., July 15, 1765, son of Charles and Anna Maria (Tilghman) Goldsborough, and grandson of Charles, born in 1707. The progenitor of the family in Maryland was Nicholas Goldsborough, born at Malcolm Regis, near Weymouth, England, in 1641. He emigrated to Barbadoes, thence to New England, and finally settled on Kent island in 1670. By his wife Margaret Howes, of Newbury, Berks, England, he had two sons and a daughter. Charles Goldsborough, the governor, was a Federalist member of congress from Dec. 2, 1805, until 1817, and was, therefore, a participant in all the legislation leading to and closing the war of 1812. In 1818 he was elected governor of Maryland for one term by a decreased majority. The opposing party made an attempt to increase the representation of Baltimore city. This demand had now become a serious one. Two representatives could not attend to the business representing one-fifth of the population, one-fourth of the wealth and two-thirds of the floating capital of the state. The city claimed a fifth

part of the legislation, or sixteen members of the eighty members of the house, and a proportional part of the senate. The arguments in favor of the city were gaining strength. It was the market for the state's produce; it furnished loans for the state in a few hours which could never have been secured in the counties; it contained one-half of the increase of the population of the state. The governor and his legislature failed to listen to, or profit by, these arguments, and once more defeated the city's claim. The city had, by its gallant defence, regained much of the respect which had been lost by the action of its mob, and that influence was felt in the next election in the counties, which resulted in a Democratic victory in its return of members of the lower house. The senate having been elected for five years, still held a Federal majority—but on joint ballot Mr. Goldsborough's re-election was defeated by the young champion of Democracy, Gen. Sprigg, of Prince George county. Another mistake made by the Federalists was the defeat of the "Jew bill," which had been pressed by this growing element of the city. The governor urged the repeal of imprisonment for debt, and it was passed. His report upon the only internal improvements at that time, the turnpike roads to Frederick, York and Reisterstown, showed considerable benefit to the state, although not much assistance had been received from the state. In 1819 Gov. Goldsborough's term was marked by the establishment of the first lodge of Odd Fellows in the United States. It was organized in Baltimore by Thomas Wilday. The election of 1819 was bitterly partisan, and resulted in a Democratic victory. Gov. Goldsborough was twice married: first, Sept. 22, 1793, to Elizabeth, daughter of Judge Robert Goldsborough and Mary Emerson Trippe, of Myrtle Grove, Talbot co., Md., thus uniting two families known as the eastern shore and western shore Goldsboroughs. She bore him two daughters; the eldest, Elizabeth Greenberry, was married to Hon. John Leeds Kerr; Anna Maria Sarah became the wife of William Henry Fitzhugh. On May 22, 1804, Charles Goldsborough was married to Sarah Yerbury, daughter of Charles Goldsborough and Williamina Smith, of Horn's Point. Her father was the eldest son of Charles Goldsborough, of Cambridge. By her he had nine sons and five daughters. His son, William Tilghman, was "a gentleman of the old school." He served three years as state senator from Dorchester; was a member of the peace commission of 1861, and of the constitutional convention of 1867. His wife was Eleanor, daughter of Gov. Edward Lloyd; their son, Charles, served in the Confederate navy and army. Charles F., another son of Gov. Goldsborough, was a graduate of St. John's College, a member of the bar, and of the legislature. His wife was Charlotte, youngest daughter of John Campbell Henry, and granddaughter of Gov. John Henry. Coms. Louis Malesherbes and John Rodgers Goldsborough, U. S. N., were sons of a cousin, Charles Washington Goldsborough. Gov. Goldsborough died in Dorchester county, Md., Dec. 13, 1834.

**SPRIGG, Samuel**, nineteenth governor of Maryland (1819-22), was a native of Prince George county, Md. He was a descendant of Thomas Sprigg, born in 1636, who emigrated to Calvert county, Md., in 1661, becoming a commissioner for trial of causes, and "high sheriff" of Calvert in 1664. He removed to Prince George county and died there. His son was Col. Thomas Sprigg, the second. His son, Thomas Sprigg, third, left Thomas Sprigg, the fourth, who was married to Elizabeth Galloway, and became the father of Samuel. Col. Edward Sprigg, Osborn Sprigg and Judge Richard Sprigg, were all prominent members of committees of correspondence and observation in 1774-75.

Their family connections were with Gov. John Francis Mercer, the Stocketts and Harwoods, of Anne Arundel, the Dorseys and Carrolls, of Elk Ridge, and the Bowies, of Prince George county. Samuel Sprigg was the young Democratic nominee of the Maryland assembly in 1819, during a campaign of extreme partisan excitement. The Democrats secured a slight majority on joint ballot. Proscription was the watchword throughout the campaign, and Gov. Sprigg made many changes in the office holders. A new council was elected, composed of Democrats. The existing controversy was based upon the inequality in the legislative representation throughout the state. The growing city of Baltimore now demanded increased representation, but the senate, composed of large landed proprietors, was determined to hold the country against the encroachments of a city with a great foreign element. Though the city's demand was passed by the house it was defeated in the senate. The first attempt to give the people at large a choice in selecting their governor was made during Gov. Sprigg's term. The Federalists bitterly opposed it, and urged that Baltimore city would control the state government if such a change were made, and it was defeated by the senate. The city of Baltimore again attempted to gain additional representatives, but in that was also defeated. A resolution asking the Maryland representatives in congress to admit Missouri without conditions was passed by the legislature. The seeming neglect which had attended Pres. Madison's administration of the late war in protecting the interests of Maryland, whereby many hundreds of her citizens, unable to bear the drains for sustaining the militia, had deserted the state for better protection in the West, still gave the Federalists of Maryland a strong power in the state, but at the next election the Democrats secured a majority, and again honored Gov. Sprigg by an election, in which he received a majority of fifty-seven votes, which was made unanimous.

The next question of advancement in Maryland was also begun in Gov. Sprigg's term. It was a joint commission of Virginia and Maryland "to examine the affairs of the Potomac Co., the state of navigation of the Potomac river, its susceptibility of improvement, and to make report whether said company had complied with its charter, granted by the two states, and its ability to comply within a reasonable time, and whether any, or what aid should be given to said company, and what would be the best means of effecting an improvement in the navigation of said river." That report, made to a subsequent legislature, was the origin of the movement of the Chesapeake and Ohio canal. Within the last twenty years congress had expended \$3,000,000 in laying out "the great national road" through Cumberland to the Ohio river. Over it the advance guard of civilization had passed to the West. Gov. Sprigg's third election, in 1821, was unanimous, for his vigorous course had healed many sores in party politics and helped to bring on the era of good feeling.

**STEVENS, Samuel, Jr.**, twentieth governor of Maryland, (1822-26), was born in Talbot county, Md., in 1778, son of Samuel Stevens, whose family had, in 1679, taken up "Stevens' plains" and "Stevens' lott," and "Stevens." He was not a college graduate, but became, early in life, a political aspirant, and, as a Democrat, succeeded Gov. Samuel Sprigg, by a majority of sixty-

nine votes, on joint ballot. In 1823 Gov. Stevens reported the action of the committee authorized by a previous legislature to investigate the affairs of the Potomac Co., which had been chartered during Gov. Smallwood's term. That report resulted in the organization of the Chesapeake and Ohio Canal Co., which was made a stock company with \$6,000,000 capital, and contemplated a connection by a side canal with Baltimore city. During Gov. Stevens' administration another canal, connecting Baltimore with the Susquehanna river, was attempted, and Theodore Bland was employed to make the surveys. The completion of the great national road to Cumberland during Pres. Monroe's term, and prevailing peace, brought on the "era of good feeling," and it culminated in the return of Lafayette, in 1824, as a guest of the young nation he had materially aided to establish. When he reached Annapolis, he was tendered an ovation as he entered the senate chamber, in which his companion in arms had laid down his commission. There Gov. Stevens and the assembled legislature welcomed and feted him. Gen. Lafayette traveled over the newly finished national highway which opened up the great West. In 1824 the "era of good feeling" was further celebrated by the passage of the enfranchising act, which made Jews citizens of Maryland. Gov. Stevens was re-elected in 1825. He was married, June 2, 1804, to Eliza May, of Chester county, Pa. Gov. Stevens died near Trappe, Md., in 1860.

**KENT, Joseph**, physician and statesman, and twenty-first governor of Maryland (1826-28), was born in Calvert county, Md., Jan. 14, 1779. He was the son of Daniel Kent, and received an academical education. He studied medicine, was admitted to practice, and in May, 1799, became professionally associated with Dr. Parran, of Lower Marlborough, Prince George co., Md.; but in September, 1801, dissolved partnership and continued to practice upon his own account. In 1807 he removed to near Bladensburg, Prince George county, where he combined agriculture with his profession. Under the state government he was surgeon's mate, surgeon, major, lieutenant-colonel and colonel of cavalry, and presided at the first public meeting assembled at Washington city for the organization of the Chesapeake and Ohio canal, and was a director for several years. He soon entered into politics, and was elected a representative from Maryland in the 12th congress as a

chosen an elector on the Democratic ticket, and in the electoral college cast his vote for James Monroe and Daniel Tompkins. He was elected to the 16th congress, and re-elected to the 17th, 18th and 19th, serving from Dec. 6, 1819, to Jan. 6, 1826, when he resigned, having been elected governor of Maryland. Gov. Kent's administration was chiefly noted for the organization of the Baltimore and Ohio railroad, in 1827, the outgrowth of many attempts to secure water communication with the West. Gov. Kent had presided at the convention of 1823 in Washington, which appointed committees to secure a charter for a canal connecting Baltimore with the Potomac canal to Cumberland. Subsequent surveys had developed the impracticability of such a connection, when, at a meeting of citizens of Baltimore, on

Feb. 12, 1827, the idea of a railroad was developed. On the 19th of that same month a committee reported "that measures be taken to construct a double track railroad between the city of Baltimore and some point on the Ohio river by the most eligible and direct route." It was unanimously adopted. Charles Carroll, of Carrollton, and Charles Ridgely, of Hampton, with others, were appointed to petition the legislature for a charter. On Feb. 28, 1827, the charter was promptly granted. On April 1, 1827, stock was subscribed, and on April 28th the company was organized by the election of Philip Evan Thomas as president. On July 4, 1828, the corner-stone was laid by Charles Carroll, of Carrollton, with grand civic and military ceremonies. In his message, Gov. Kent urged support to both rivals, the Chesapeake and Ohio canal, which was destined to stop at Georgetown, and the Baltimore and Ohio railroad, which had sprung from a failure of all attempts to bring the canal to Baltimore. Gov. Kent urged the necessity of securing from the government Maryland's distributive share of the public lands to be devoted, as by the Western states, to educational development. He suggested the propriety of changing the mode of electing the president and vice-president; urged the legislature to dispose of the three per cent. U. S. stock, worth then eighty per cent., the proceeds to be invested in a sinking fund. A legislative act was passed abolishing imprisonment of females. Having served the usual limit, Gov. Kent was succeeded by Daniel Martin. In December, 1831, the National Republican,

*Jos. Kent*

or Whig party, composed principally of the friends of John Quincy Adams and those who were dissatisfied with the course of Gen. Andrew Jackson, was organized and held its national convention in Baltimore; of this Dr. Kent was elected a vice-president. After a bitter contest at the ensuing election he was elected U. S. senator by the Whigs, and served four years, from Dec. 2, 1833. Dr. Kent was twice married: first to Eleanor Lee, eldest daughter of Dr. Michael and Eleanor Lee (Contee) Wallace and granddaughter of Thomas and Sarah Contee, of Prince George county, Md. By her Dr. Kent had ten children. She died in 1826, and Dr. Kent was married the second time to Alice Lee Contee, of Charles county; but had no children by her. Dr. Kent died at the family residence, Rose Mount, near Bladensburg, Nov. 24, 1837.

**MARTIN, Daniel**, twenty-second and twenty-fourth governor of Maryland (1828-29; 1830-31), was born in Talbot county, Md., in 1780. He was the son of Nicholas and Hannah Martin, and grandson of Tri-tram Martin and Mary Oldham, daughter of John Oldham, whose wife was Ann, daughter of Nicholas and Ann Goldsborough. Daniel Martin was highly educated. At the time of his official career the absorbing question was that of internal improvement. He succeeded Gov. Kent in 1828, and in that year the first spade of earth in the Chesapeake and Ohio canal was removed by Pres. John Quincy Adams. It was organized by a subscription of \$1,000,000 by the United States, \$1,000,000 by Washington city, and \$500,000 by Maryland. In 1829 Gov. Martin reported the completion of twelve miles of the Washington Turnpike Co. road. He was one of the charter members of the Baltimore and Ohio railroad in 1827. Gov. Martin was an earnest and able advocate of educational institu-

tions; an advocate of penitentiary manufactures, and urged the employment of but few officers in state departments, and would hold them to strict accountability. He said: "To preserve the simplicity of our institutions is a deep concern; to guard them as far as possible from innovations, is a sacred duty." The national contest between Jackson and anti-Jackson parties in 1829 resulted in the election of Thomas King Carroll, Democrat, on a joint ballot of seven votes, but at the next election the anti-Jackson party regained their majority and re-elected Gov. Martin by a majority of forty-one votes. Gov. Martin was married, Feb. 6, 1816, to Mary Clare Maccubbin, of Annapolis. On the occasion of his death the trustees of the Maryland Agricultural Society of the Eastern Shore, of which he was an honored member, met and passed a series of resolutions commemorating his life and services in the cause of agricultural interests. At a special meeting, held July 20, 1831, in the council chamber at Annapolis, Mr. Worthington offered as a testimony of their high esteem for the frank, manly and benevolent disposition of the late Gov. Martin, in all of his official relations: "Resolved, that the armorer cause nineteen minute guns to be fired on Thursday morning at sunrise and nineteen at sunset, and that the state flag be hoisted half as funeral honors to the deceased." Similar resolutions were offered in both the upper and lower house and a special message by his successor was sent to both houses. The distinguished Dr. Ennalls Martin, of Talbot county, was a great uncle of Gov. Martin; and Hon. James Lloyd Martin, deputy attorney-general, of Talbot, and an elector upon the ticket of Breckinridge and Lane, was a nephew. Robert Nichols Martin, son of Judge William Bond Martin, of the court of appeals, was also a relative of Gov. Martin. He was elected to congress in 1825; was chosen judge in 1845, and professor in the law school. Gov. Martin died, July 11, 1831, and was buried on his estate upon the Choptank.

**CARROLL, Thomas King**, twenty-third governor of Maryland (1829-30), was born in St. Mary's county in 1792. He was a son of Col. Henry James Carroll, of St. Mary's, a connection of Charles Carroll, of Carrollton, through whom his inheritance was entailed. Although Col. Carroll was a Roman Catholic, his children were educated in the faith of their mother, Elizabeth Barnes King, of Somerset. She was the only daughter and sole heiress of Col. Thomas King, of Somerset, a descendant of Sir Robert King, baronet, who emigrated from the north of Ireland to Virginia, and whose descendants settled in Somerset, where, at Rehoboth, in 1691, they built the first Presbyterian church erected in America, which is still standing. Thomas King Carroll, was graduated at Princeton with highest honors, at the age of seventeen, and at the age of twenty was married to Juliana, daughter of Dr. Henry Stevenson, brother of Dr. John Stevenson, of Baltimore, the builder of the wooden Presbyterian church upon the site of the present U. S. court house. The first hospital for small-pox in Baltimore was in the residence of Dr. Henry Stevenson, which he yielded for the purpose. Early in life Mr. Carroll became a Mason. He opposed slavery, advocated colonization, and organized a society for that purpose and became its president. In 1824 he was appointed inspector for Somerset. He was barely of age when elected to the legislature. He acquired marked power as a speaker, but would not seek the nomination for any office, and when chosen governor his surprise was great. During his administration there was much discussion upon the mode of revising presidential elections. He laid before the legislature the list of committees representing the different states in a convention for changing

the prevailing law. In 1829 he reported the beginning of the track laying of the first railroad in the United States, upon which, in 1830, the first locomotive made in the United States was used. It was built by Peter Cooper in his car works at Canton, Baltimore, and erected at Mt. Clare works upon the property of Dr. Charles Carroll, a relative of the governor. Within that same year the right of way for the Chesapeake and Ohio canal was secured, and the work of construction finally begun. Gov. Carroll suggested the establishment of an educational system, advocated the penitentiary as a good reformatory institution, but disapproved promiscuous social intercourse; advocated the cessation of prevailing militia displays, because they drew large crowds from their daily business and led to dissipation; urged an appropriation from congress for copying revolutionary records then in the archives of Great Britain; recommended the adoption of some relief for revolutionary soldiers; indorsed the movement to improve the collegiate department of the University of Maryland. In the election of 1830, the anti-Jackson party recovered its usual majority, and re-elected Gov. Carroll's predecessor, Gov. Daniel Martin. Gov. Carroll retired to his large estate, near Church creek, Dorchester, and lived, respected by all, to an advanced age, and died Oct. 3, 1873. His daughter, Anna Ella, became the noted campaign strategist of the civil war—on the Federal side.

**HOWARD, George**, twenty-fifth governor of Maryland (1831-33) was born at "Belvedere," Baltimore, Nov. 21, 1789, son of Gen. John Eager and Margaret (Chew) Howard, and brother of Gen. Benjamin Chew Howard. He was a grandson of Cornelius and Ruth (Eager) Howard, and great-grandson of Joshua and Joanna (O'Carroll) Howard, who were immigrants of 1687. Gov. John Eager Howard left a record which stated that Manchester, England, was the birthplace of his grandfather, Joshua, who, having served in the army at the time of Monmouth's invasion, incurred the displeasure of his father. As

a result, he sought Miss O'Carroll, of the distinguished family of Ireland, and married her, and both came to America. He obtained a grant in Baltimore county much of which is still held by the family. The mother of Gov. George Howard was "Peggy," the fascinating Tory daughter of Chief Justice Benjamin Chew, descendant of the Chews of Chewtown, England. As the wife of Gov. John Eager Howard, she made "Belvedere" the central home of attraction. Their son, George Howard, was educated by private tutors. Taking a foremost rank in the Federal party, upon the death of Gov. Daniel Martin, in July, 1831, he was appointed to succeed. His first message contained a feeling allusion to the death of his distinguished predecessor. Early in his administration, and continuing throughout it, began the triangular contest of the "Jackson party," "Whigs" and "Anti-Masons," with William Wirt, the distinguished and only Marylander on a presidential ticket, in opposition to Henry Clay, the Federalist, who was called "the high priest of Masons." Andrew Jackson won the presidency, but Maryland,

having elected Gov. Martin by forty-one majority, now again honored Gov. Howard by an increased majority of forty-nine. The Federalist issues of the campaign were the maintenance of the United States bank, the encouragement of internal improvements, and a high tariff. In 1833 James Thomas, the National Republican, was elected as successor to Gov. Howard, who, in 1837 and in 1841, was a presidential elector, voting upon both occasions for William Henry Harrison. Gov. Howard, still later, presided at a meeting of farmers to take action in protecting their slaves under "the fugitive slave law." On Dec. 26, 1811, he was married to Prudence Gough, daughter of Gov. Charles Carnan Ridgely, of "Hampton," and Priscilla Dorsey, of "Belmont." They had eight sons and five daughters, whose descendants are numerous. Gov. Howard's large estate, "Waverly," was situated near Woodstock, Howard district of Anne Arundel, now Howard county. It has passed from the family. His brother, Benjamin Chew, was a candidate for governor against Augustus W. Bradford in 1861. Gov. Howard died at "Waverly," Aug. 2, 1846.

**THOMAS, James**, twenty-sixth governor of Maryland (1833-35), was born at "De la Brooke manor," St. Mary's county, March 11, 1785, son of William and Catharine (Boarman) Thomas. His father was the youngest son of John Thomas, of Charles county, a member of the house of delegates, captain and major of the militia, and member of the committee of safety. He was married to Elizabeth Reeves, of Thomas. Catherine (Boarman) Thomas was a granddaughter of Roger Brooke, a prominent descendant of Com. Robert Brooke, of the Patuxent, who, in 1650, came over with forty servants as his body-guard and built first "De la Brooke," but afterward removed to "Brooke place." James Thomas was graduated at Charlotte Hall Academy, St. Mary's, in 1804, and at Philadelphia Medical College in 1807. Returning to his native county, he practiced his profession with marked success. He was commissioned major of the 4th Maryland cavalry in 1812, and rendered such valuable service in the war, which began that year, that he was subsequently brevetted major-general. In 1820 he was elected to the legislature of Maryland as a Democrat; was re-elected six times to the same body, and from 1833 to 1835, was governor. Gov. Thomas was the Maryland representative of the National Republican party, composed of the friends of Mr. Adams and those dissatisfied with Jackson. His administration was in the midst of disasters. The cholera had raged through many cities; fires devastated Cumberland and Snow hill, entailing much loss, which was met, in part, by generous citizens. The financial disasters induced by Gen. Jackson's withdrawal of the government funds from the national bank, causing thereby the failures of many banks, especially the Bank of Maryland, which held the savings of many poor people, led to great excitement in Baltimore, and much criticism of the bank officers, which finally resulted in the "bank mob." Gov. Thomas called out the state guards and applied to the president for aid, which was promptly sent. During his administration there was much excitement also from the "Nat Turner" negro insurrection at Southampton, Va. In his message to the legislature he announced the completion of the Baltimore and Ohio railroad to Harper's Ferry, and the construction of the main-stem road between Baltimore and Washington nearly completed. At his suggestion the legislature granted a loan to the Baltimore and Ohio railroad of \$2,000,000, and \$1,000,000 to the Susquehanna, or Northern Central railroad. Profiting from his experience at the recent riots, he urged the enrollment of a militia, and urged the general government to apportion the

state's share of the public lands. In the political contest during Gov. Thomas' term, the Whigs gained a majority of 2,248 votes in a total of 50,102 votes cast. On Jan. 26, 1808, he was married to Elizabeth, daughter of Maj. William and Elizabeth (Thomas) Coates. Dr. Thomas, of St. Mary's, late a prominent member of the state grange, and Prof. Thomas, principal of Charlotte Hall, are descendants of Gov. Thomas. Richard, brother of Gov. Thomas, was a member of the house of representatives and also speaker of the same; president of the senate and president of the Maryland Colonization Society. Gov. Thomas' sister, Catherine, was married to William D. Merrick, of Charles county, U. S. senator. Gov. Thomas died at Deep Falls, St. Mary's co., Dec. 25, 1845.

**VEAZEY, Thomas Ward**, twenty-seventh governor of Maryland (1835-38), was born at Veazey's Neck, Cecil co., Md., Jan. 31, 1774, son of Edward and Elizabeth (De Coursey) Veazey. His family was of Norman origin, the name originally being De Veazie. John, of "Cherry grove," first of the line in this country, settled in Kent county prior to 1670, and received a grant of land on Elk and Bohemia rivers, known as Veazey's Neck, now in Cecil county. His will of Feb. 28, 1697, named a son James, who was married to Mary Mercer. Their son, Capt. Edward Veazey, was of the 7th regiment of the Maryland line, and was killed at Long Island in 1776. Thomas Ward Veazey, son of Edward, was colonel of militia in the war of 1812, and made a gallant defence of Fredericktown against Adm. Cockburn. He was a member of the Maryland legislature during several sessions; was a presidential elector in 1807, and in 1813, when he voted for Pres. Madison. He was elected governor in 1835, at a time when a strong executive head was needed. He grasped the situation by yielding, while executing. The reform movement, long delayed, now forced itself to the front—nineteen Van Buren electors chosen to select the senate of Maryland, claiming to represent a population of 205,922, addressed the Whig colleagues, numbering twenty-one, but representing only 85,179 of the people, demanding the nomination of eight members of the senate to be chosen, or they would refuse to enter the college. The Whigs made no reply, and they refused to enter, but organized a "reform convention," and demanded the election of a governor by the people and the abolition of the council; the election of one senator from each county and the city of Baltimore by the people; the reapportionment of the house of delegates; the abolition of all life offices; the election of clerks and registers by the people. Gov. Veazey, by proclamation, recalled the old senate, but in the meantime the defeat of Van Buren and the firmness of the governor induced the rebellious nineteen to enter the college and the senate was elected. Fearing to go before the people without a compromise, the legislature, at his suggestion, enacted the very reforms demanded, and Gov. Veazey was the last governor chosen by the senate. Baltimore city not only was granted increased representation, but also by the enactment of the "\$8,000,000 loan," which gave \$3,000,000 to the Baltimore and Ohio railroad; \$3,000,000 to the canal, and \$2,000,000 to other works of internal improvements, was so overjoyed, its citizens celebrated the event by a public dinner to the governor and the legislature, followed by bonfires. Having thus met the popular demand, the convention of reformers never met, and Gov. Veazey held his party together until the election under the reform consti-

tution of 1838. In addition to all other demands, the legislature, as an indemnity for the personal loss by the "bank mob," paid the city's claim for \$200,000. Gov. Veazey was thrice married: first to Sarah Worrell, of Kent, by whom he had one daughter, Sarah; his second wife was Mary Veazey, who bore him four children; his third, was Mary, daughter of Joseph and Elizabeth (Black) Wallace, to whom he was married in 1812. By her he had five children. He was succeeded by William Grason, and retired to his estate, where he died, June 30, 1848.

**GRASON, William**, twenty-eighth governor of Maryland (1838-41), was born in that state in 1786. He was a planter in Queen Anne county, and served in both branches of the legislature, being a member of the house of delegates in 1837. A Federalist of the old school, a Jackson Democrat in after years, he was warmly attached to the principles of his party. He was a leader of his party, and was an active

worker in the political struggle from 1836 to 1838 in favor of a new constitution for Maryland, and was the first governor under it, serving with great distinction from 1838 to 1841. Gov. Grason, the reform candidate and Democrat, after the most exciting campaign, in which there was much personal violence, was declared elected by some 300 majority. In his message, which was mainly directed to the financial embarrassments bequeathed to his administration, he said: "The \$8,000,000 loan of 1835 was made when better prospects were at hand; when money was plentiful and securities in demand. It is now changed, and it is impossible to sell bonds." "Neither the canal nor railroads can pay any interest to the state until finished. Annual revenues are barely sufficient to pay ordinary expenses; the public debt is now nearly \$15,000,000." He charged all this debt "to the wild spirit of internal improvements." He urged rigid economy in all expenses; urged a moderate tax for increasing the revenues, to be levied upon real and personal property; urged a change in the constitution, curtailing the legislative power—"ours is a constitution for the judiciary and executive, but not for the legislative branch of the government of the state." Gov. Grason's letter to Pres. Van Buren, under a resolution of the assembly, asking the United States to deliver its stock in the canal company to Maryland, was an able one. His condemnation of the wholesale hypothecation of the bonds of the state by the Baltimore and Ohio railroad, brought out a reply from its president, Louis McLane. In 1840 Gov. Grason showed an increase of \$1,000,000 more of debt. He showed that all expectation of realizing any benefit from the state's interest in the public lands would prove futile, and the state would have to look elsewhere for means to pay its debt. He reported the Susquehanna and Elk Ridge roads finished. Reports having come to the legislature that the canal was being made a political means for advancing the interests of its president, an investigation was ordered, which brought forth an exhaustive report from Pres. Francis Thomas, showing a total canal cost of \$9,500,000. The result of the legislative investigation and the effect of Mr. Thomas' report, made him the successful candidate and successor of Gov. Grason. In a caucus of his party he was chosen to represent Maryland in the U. S. senate, which was only prevented from being consummated by the refusal of the senate to go into the election.

He was a member of the constitutional convention of 1851 from Queen Anne county. He was known as the "Queen Anne's farmer." His wife was a daughter of Dr. James Sulivane, of Dorchester county, Md. Their son, Richard, born in Queen Anne county, April 4, 1820, was educated at Cambridge Academy, Dorchester county, and at St. John's College, Annapolis. He was admitted to the bar in April, 1841, and removed to Elkton, Cecil co., where he was appointed deputy attorney for the county, which he held until the adoption of the state constitution of 1851, when he was elected state's attorney for that county. He was re-elected, but resigned in 1867, and removed to Towson, Baltimore co. In 1864 he was elected judge of the circuit court, but was unseated by the legislature after a contest for alleged disloyalty. Under the state constitution of 1867, he was elected chief judge of the third judicial circuit of Maryland for fifteen years. In 1847 he was married to the eldest daughter of Gen. Charles Sterret Ridgely, of Howard county. He died of paralysis at Towson, Baltimore co., Sept. 21, 1893. Gov. Grason died on his plantation July 2, 1868.

**THOMAS, Francis**, twenty-ninth governor of Maryland (1841-44), was born in Frederick county, Feb. 3, 1799, son of Francis and Grace (Metcalf) Thomas, grandson of William, great-grandson of Hugh and Betty (Edwards) Thomas of "Montevue"—descendant of the same stock as Bishop William Thomas of Caermarthens, who went from Wales to Pennsylvania. Gov. Francis Thomas was the seventh child. He entered St. John's College, Annapolis, as early as 1811, but as there were no classes from that date until 1822, was not graduated. He was admitted to the bar in 1820, and settled in Frankville, Md., to practice. He was a member of the state house of representatives in 1822, 1827 and 1829, and in the last year was speaker. From Dec. 5, 1831, until March 3, 1841, he was a member of the national house of representatives. He was president of the Chesapeake and Ohio canal in 1839-40. He became a candidate for governor to succeed Gov. Grason, and during the campaign, in which he took an active part, fought a duel with William Price. He was the second governor to hold office under the provision of the new constitution, making elections triennial. His first annual message began: "The public debt, destroying public credit, has been our burden; met by your predecessors in a public spirit, the means are yet inadequate; a decided course is needed. Baltimore city has borrowed \$5,000,000 and the state owes \$15,000,000. In seven years our state debt has been increased \$12,000,000 for internal improvements. With a territory of 10,000 square miles, and a population of 318,194, we are struggling with a debt that would task the resources of Great Britain. The glorious nineteen Van Buren electors accomplished good results in modifying the prevailing difficulties of a minority ruling the majority, but even now a minority of the senate can defeat the will of a two-third majority of the state." He urged the necessity of improving the tax system; urged the exchange of the state's bank stock in paying the debt; reported the state's share of the public lands to be \$15,000, against which the government held claims on Maryland amounting to \$20,000. In his message of 1844 the state debt had reached \$16,000,000, and the resources of the state

Francis Thomas

were still inadequate to meet current expenses. The governor combated repudiation, but it became the issue in the next campaign, and defeated the party he represented, and under the vigorous direction of Gov. Pratt, was forever buried. In 1850 Gov. Thomas was elected a delegate to the state constitutional convention, and it was partly due to his fight against the "minority ruling the majority," and his masterly gift of eloquence and pleasing manners, which had carried him as a Jackson champion into the governor's chair—that the constitution of 1851 curtailed the power of the slave-holding counties and increased the strength of Baltimore city and the western counties. On the outbreak of the war of 1861, Gov. Thomas, from his mountain home, aroused the Federal sentiment of Western Maryland, and gathered around him a volunteer regiment of 3,000 for the war, but left the command to younger men. He accepted the nomination for congress, in 1861, remaining throughout the war. In 1867, when an attempt was made to take the Naval Academy from Annapolis on account of its atmosphere of "disloyalty," Gov. Thomas joined Mr. Phelps in an eloquent defence, which had its effect; but when the people of Maryland were trying to adopt the constitution of 1867, he introduced a resolution asking congress to give Maryland a Republican form of government, saying: "I utterly deny here—I have denied it for thirty years of my life—that there is a Republican government in Maryland." Congress failed to pass his resolution, though many petitions poured in from the Federal men of Maryland in its support, but his efforts, aided by a peaceful election, resulted in the constitution of 1867. In 1866 Gov. Thomas was a delegate to the loyalist convention in Philadelphia, and became a strong opposer of Pres. Johnson's policy of reconstruction. In April, 1870, Gov. Thomas was appointed collector of internal revenue for the Cumberland district, and served until March 25, 1872, when he was appointed minister to Peru. He resigned this position July 9, 1875, and returned to his home in the mountains, "Montevue," near Frankville. His wife was Sallie Campbell Preston, daughter of Gov. James McDowell, of Virginia. Gov. Thomas was fearless, active, exerting a remarkable influence in every public sphere. While walking on a railroad track he was killed by a locomotive, Jan. 22, 1876.

**PRATT, Thomas George**, thirtieth governor of Maryland (1844-47), was born in Washington, Feb. 18, 1804, a descendant of Thomas Pratt, of Prince George county, Md., who was married to Eleanor Magruder. Thomas G. Pratt was educated at Georgetown College; studied law, and after his admission to the bar, began practice in Upper Marlboro, Prince George co., Md., in 1823. He was a member of the Maryland house of delegates in 1832-35. In 1836 he became a member of the state electoral college for the selection of a senate; in the same year was president of the last executive council of Maryland, and in 1838 was elected to the state senate for six years. In 1844, after an exciting campaign against James Carroll, on a ticket opposed to repudiation, he was elected as a "Whig." His vigorous message called on the legislature for power to enforce the laws already existing for the collection of taxes; attributed the difficulties of his predecessor to the fact that the laws were not enforced, and presented a tax system that would, if carried out, enable the state to meet its obligations. Said he: "From an abundant harvest now at hand, this is the time to pay our debts." He proposed the reenactment of revenue laws; called for a new assessment and the collection of bank taxes; advised a return to the "stamp tax," though still odious; urged the extension of the Baltimore and Ohio railroad to the Ohio river. His message of 1847 reported that

Vol. IX.—20.

his resumption law had improved the finances, raising the bonds of the state from \$35 to par. He referred to the valuable service of Mr. George Peabody in enabling the state to borrow and sell in foreign markets; condemned the course of the governor of Pennsylvania in his action against the fugitive slave law. The biennial assembly act of 1845, saved the state \$30,000 annually; referred the question of a new constitution back to the people; reduced the salaries of the governor and secretary of state; abolished the chancery court. In the election of 1846 the governor and legislature were sustained by large Whig gains. In 1846 Gov. Pratt called for two regiments of infantry as Maryland's quota to the Mexican war, saying: "The sons of Maryland have always obeyed the call of patriotism, and will now sustain the honor of the state." Volunteers came from every section, but the government only accepted one battalion of Maryland and District of Columbia volunteers. Many independent companies were organized, making a total of 2,500 men. Resuming his practice in Annapolis, Gov. Pratt, in 1849, was elected U. S. senator, to fill the unexpired term of Reverdy Johnson, who went into Pres. Taylor's cabinet, and was elected in 1850 for the full term, which ended March 3, 1857. He was an intimate friend of Henry Clay, but upon the election of James Buchanan, in 1856, he joined the Democratic conservative party. Upon the expiration of his term of office, he returned to Annapolis and remained until 1864, when he removed to Baltimore. During the war he was a supporter of the Confederacy, and was confined for a few weeks in Fortress Monroe. In 1864 Gov. Pratt was a delegate to the Chicago national Democratic convention, and in 1866 to the Union convention in Philadelphia. Gov. Pratt was married to Adelaide, daughter of Gov. Joseph Kent. She, with several children, survived him. He bought the old colonial residence of Gov. Samuel Ogle, in Annapolis, which was afterward sold to Judge John Thompson Mason. Gov. Pratt died in Baltimore, Nov. 9, 1869. At a meeting of the bar, on Nov. 11th, Judge Mason offered a resolution pointing with pride "to the noble disregard of personal popularity which marked the official course of our lamented brother; when the executive of the state, he linked his name forever with the establishment of good faith." Gov. Pratt's remains were conveyed to Annapolis, attended by Gov. Bowie and his staff. The funeral was held at St. Ann's Church, and his burial was in the cemetery of that church. Gov. Pratt's presence and figure were distinguished, and as a speaker his arguments showed force and ability.

**THOMAS, Philip F.**, thirty-first governor of Maryland (1847-50). (See Vol. V., p. 6.)

**LOWE, Enoch Louis**, thirty-second governor of Maryland (1850-53), was born at "The Hermitage," Frederick county, Md., a fine estate of 1,000 acres, owned by his family, about three miles from the town, on the Monocacy river, Aug. 10, 1820, son of Lieut. Bradley S. A. Lowe, a graduate of West Point, who served through the war of 1812, and also in the Florida war, and Adelaide Bellumeau de la Vincendiere. Lieut. Bradley Lowe was the son of Lloyd M. and Rebecca (MacCubbin) Lowe, and grandson of Michael and Ann (Magruder) Lowe, all of western Maryland. Enoch Louis Lowe was entered at St. John's School, Frederick, and from there went to a

Roman Catholic college near Dublin, and to the Roman Catholic College of Stonyhurst, Lancashire, England, where he remained until 1839. He was admitted to the bar in 1842. In 1845 he was elected to the house of delegates and became at once an able and eloquent champion of Democracy in western Maryland. In 1850, though very young, he was elected governor. It was during the discussion of the new constitution urged by Gov. Philip Francis Thomas, that Gov. Lowe suggested amendments to the election laws; a revision of the criminal code in regard to the inequality of punishments, pardons and remissions of fines; urged a modification of the tax on civil commissions; urged an ascertainment of the number of, and salaries of, deputy clerks; and an entirely new system of issuing licenses. He announced with profound pleasure the completion of the Baltimore and Ohio railroad. It had at last reached the Ohio river, but the rival canal company, owing to spring freshets, had been greatly damaged; he urged the reduction of forty per cent. in taxes, and the continuance of the sinking fund; he suggested private execution of criminals. During Gov. Lowe's term two national conventions met in Baltimore—one nominated Franklin Pierce, the other Millard Fillmore, from the defeat of whom grew the Know-nothing party. In 1845 Gov. Lowe delivered at Mount St. Mary's College, near Emmittsburg, Md., a discourse upon the "Landing of the Pilgrims." In 1857 Gov. Lowe was offered, but declined, the position of minister extraordinary and plenipotentiary to China. He was a Democratic elector in 1860, and spoke for and voted for John Cabel Breckinridge. He was also present when Gov. T. Holliday Hicks assented to the burning of the bridges surrounding Baltimore to

prevent the passage of northern troops through the city. In 1861 Gov. Lowe went south and remained during the civil war. In 1866 he removed to Brooklyn and practiced law. Gov. Lowe was married May 29, 1844, to Esther Winder, daughter of Col. James and Anna Maria (Stuart) Polk, of Princess Anne. Her grandfather was Judge William Polk, of the court of appeals, a cousin of Pres. Polk. Mrs. Anna Maria (Stuart) Polk, was the daughter of Dr. Alexander Stuart, of Delaware. Gov. Lowe had eleven children. Two of his daughters were married in Baltimore to Edmund Austin Jenkins and

his brother, Francis de Sales Jenkins. His sons are in New York, Chicago and California. Gov. Lowe was a genial, handsome and social gentleman. He died in Brooklyn, Aug. 23, 1892.

**LIGON, Thomas Watkins**, statesman and thirty-third governor of Maryland (1854-58), was born in Prince Edward county, Va., in 1812, son of Thomas D. and — (Watkins) Ligon. His male ancestors, by both his father's and mother's lines, were engaged in the revolutionary war. Col. Thomas Watkins, his grandfather on the maternal side, was an officer under Gen. Washington, and in command of a troop of horse raised by his own exertions in Prince Edward county, and took an active part in the battle of Guilford, N. C. His father, an intelligent farmer, died young, leaving Thomas Watkins and James, his two sons, to the care of their mother. At an early age Thomas Watkins Ligon was sent to Hampden-Sidney College, where he was graduated. He completed his education at the University of Virginia, and then entered Yale Law

School, where he remained eighteen months. After graduation he returned to Virginia, and upon admission to the bar, when twenty-three years of age, went to Baltimore to practice his profession. In 1840 he removed to the vicinity of Ellicott's mills. He was an enthusiastic Democrat, and in 1843 was elected a member of the legislature. He was elected a representative from Maryland to the 29th congress as a Democrat, and was re-elected to the 30th congress, serving from Dec. 1, 1845, to March 3, 1849. In 1853 he was elected governor, and under the new constitution, making elections quadrennial, held office until 1858. He was called upon, in 1857, to exercise authority vested in him for suppression of a railroad riot, and also to intervene for the rescue of the city of Baltimore when it was under the Know-nothing régime. Though not successful in protecting the elective franchise of the citizens, he yet took such a stand as to leave the impress of his sound principles on the records of his administration. His vigorous attack upon the Know-nothing party, which controlled the legislature, was begun in his first message, viz.: "All history warns us that a war of races, or sects, is the deadliest curse that can afflict a nation." A committee appointed by the legislature to consider and report upon the governor's attack, resulted in a majority report refusing to investigate the charges, and a minority report which sustained the governor. The governor's decisive action in the election riots of Baltimore, led to the reform movement, which secured a new police bill and a reform mayor. Retiring to his large estate in Howard, Gov.

Ligon resumed farming, and took an active part in the advancement of all institutions of learning and religious improvement. He was president of the Patapsco Female Institute, and also connected with several charitable institutions up to the time of his death. Gov. Ligon was twice married. His first wife was Sallie, daughter of Charles Worthington and Mary Tolly (Worthington) Dorsey. Her grandfather, Caleb Dorsey, was the eldest son of Thomas Beale Dorsey, youngest son of Caleb and Elinor (Warfield) Dorsey, of "Stockley." Her mother, grandmother and great-grandmother, were Worthingtons, descendants of Capt. John. Gov. Ligon's second wife was Mary Tolly Dorsey, sister of his first wife. The latter with a son and two daughters survived him. He died at his residence near Ellicott city, Jan. 12, 1881.

**HICKS, Thomas Holliday**, thirty-fourth governor of Maryland (1858-62), was born about four miles from East New Market, Dorchester co., Md., Sept. 2, 1798. He was a son of Henry C. and Mary (Sewell) Hicks; the latter, a relative of Gen. Sewell, of the American army; both were members of the Methodist church. They had eleven children. Thomas Holliday Hicks attended school near home. In 1824 he was elected sheriff. Purchasing a farm on the Chopbank, from there he was sent to the legislature. In 1833 he removed to Vienna, and became a merchant, running a line of boats to Baltimore. In 1836 he was elected a member of the state electoral college, which then had the election of the state senate, governor and his council. The election was a deadlock, owing to the refusal of nineteen Van Buren electors to enter the college without a promise by the remaining twenty-one

*Ligon, Lowe*

Whig electors to give them eight members of the new senate. The refusal of the Whig electors to bind themselves by such a promise, brought on considerable excitement, which lasted two months. While at Annapolis Mr. Hicks was elected a member of the legislature which voted for the reforms demanded by the nineteen Van Buren electors, viz.: to make the senate and governor elective. In 1837 he was a member of the governor's council. In 1838 Gov. Veazey appointed him register of wills for Dorchester county, and he so continued by reappointment until 1851, when the office was made elective. In 1857 Mr. Hicks was nominated and elected governor by the American party from January, 1858, for four years. There he won reputation in a period more momentous than any previously experienced. It was the time of "plug-uglies" and other rowdy organizations which had grown up with the new party he represented. Gov. Hicks determined to put them down, and he refused to pardon those who had been convicted of murder. His position throughout the excitement of 1860 and 1861 was a trying one. He was with the city authorities in asking the government after the conflict in the streets of Baltimore, to allow no more troops to pass through the city, and gave his consent to the burning of the bridges. Gov. Hicks tried to be conservative, and to hold the

southern states together, but was severely criticised by leading citizens of the state in convention assembled, for refusing to call the legislature together to decide the course Maryland should take. He still held correspondence with other southern states, and was anxious that Maryland should not be made the battle-ground of a conflict which, as a Southerner and slave holder, he did not indorse. He called the legislature in special session at Annapolis, Friday, April 26, 1861, but "for safety" a change was made, and Frederick was named as the place of assembling, on the 24th, "to take such measures as in their wisdom they may deem fit to maintain peace." The legislature, composed of representatives of the

Democratic conservatives of the city, chosen by special election to fill the vacancies created by the expulsion of the illegally elected Know-nothings, by a vote of fifty-three to twelve declared against secession. Gov. Hicks having failed to influence a change in the Federal government's determination to place Maryland under military rule, the legislature was, after several sessions and adjournments, in September, 1861, broken up by arrests, and its members confined in several forts as prisoners. During that same year a Maryland Union convention, ignoring party lines, assembled in Baltimore. It was composed of the leading citizens of the state, and it organized the Union party in Maryland that was to exist during the war. It authorized a state convention for Aug. 15th, at which Augustus W. Bradford was nominated for governor. This was followed on Sept. 10th by a state peace convention, which nominated Gen. Benjamin Chew Howard, son of Gov. John Eager Howard. Gov. Bradford was elected, and ten days thereafter Gov. Hicks convened the legislature in special session "to consider and determine the steps necessary to be taken to enable the state of Maryland to take her place with the other loyal states in defence of the constitution and the union." His message was a brief review of the circumstances attending the position of Maryland since the commencement of the war. On Jan. 8,

1862, Gov. Bradford was inaugurated. At the close of his term Gov. Bradford appointed Mr. Hicks U. S. senator to fill the unexpired term of James Alfred Pierce, and his selection was ratified at the next annual election. He had now become a thorough Republican and a member of the Union League. Although a slaveholder, he had voted for the constitution of 1864. Gov. Hicks was married three times. His first wife was Ann Thompson, of Dorchester; his second, Sarah Raleigh, of Dorchester; his third, Mrs. Mary Wilcox, widow of his cousin, Henry Wilcox. B. Chapin Hicks, of Baltimore, is his only living son. Gov. Hicks sprained a leg in 1863, and erysipelas having set in necessitated amputation, from the effects of which he died in Washington, D. C., Feb. 13, 1865. A large and expressive portrait of him now hangs in the state house, Annapolis.

**BRADFORD, Augustus Williamson**, thirty-fifth governor of Maryland (1862-66), was born at Belair, Harford co., Jan. 9, 1806, son of Samuel and Jane (Bond) Bradford, both of English parentage, dating back to a period before the revolution. He received a good English education, and after his course at the Belair Academy became a surveyor. He afterward took a course at St. Mary's College, being graduated in 1824; then studied law with Otho Scott, and was admitted to the bar in 1827. In 1831 he removed to Baltimore, where he became a prominent member of the Whig party. He was an elector on the Clay ticket of 1844, but took no prominent part in political discussions until 1860. In 1845 he was the clerk of Baltimore county, under the appointment of Gov. Pratt. Upon retiring from that office the court officials bore testimony of his efficiency. In 1861 he was appointed by Gov. Hicks one of the peace commissioners who assembled in Washington. Upon the first ballot of the gubernatorial convention of 1861 Mr. Bradford was nominated for governor. His majority, aided by the soldiers, who were allowed to come home to vote, was 31,000. His inaugural address was full of denunciations of secession, and to the utmost degree in favor of the Union. His legislature, though it reflected his opinions, by resolutions viewed with disapproval certain indications at the seat of government, with evidences too well displayed, of an intention to interfere with slavery, declaring: "This war is prosecuted by the nation with but one object, that, namely, the restoration of the Union just as it was when the rebellion broke out." A vote of confidence in Pres. Lincoln and a declaration of Maryland's readiness to fulfill all of her constitutional obligations as a loyal state, were passed. The special legislative act of 1862 was the "treason bill," which forbade, on penalty of death, the levying of "war against this state," or "giving aid or comfort within this state or elsewhere" to persons so engaged. It also appropriated \$7,000 "for the relief of the families of those belonging to the 6th regiment of Massachusetts who were killed or disabled by wounds received in the riot of the 19th of April in Baltimore." Lieut.-Col. Morris, of Gov. Bradford's staff, was, upon the dedication of the Ladd and Whitney monument in Massachusetts, 1865, the Maryland representative who presented to Gov. Andrew a U. S. flag of silk wrought by ladies of Baltimore. On its staff was a carved eagle holding in its talons thunderbolts, and in its beak an olive branch. The staff also bore a silver plate bearing an engraving of the arms of Maryland and Massachusetts, and the words: "Maryland to Massachusetts, April 19, 1865. May the union and friendship of the future obliterate the anguish of the past." That sentiment was still further developed in Baltimore city when the historic Massachusetts regiment passed through to join in the Spanish war in 1898. Amid the plaudits of the entire city the 6th Massachusetts regiment acknowl-

*Ho. H. Hicks*

edged that the above sentiment had shut out all future criticism upon the citizens of Baltimore. The history of Gov. Bradford's administration is the history of the civil war. Abundantly able and willing to aid the government in all necessary obligations, he resented military interference with the elections, but presided at a large war meeting at which the president was instructed to order an oath of allegiance to be administered. A resolution was passed which Gen. Wool declared would send "20,000 men to swell the army of Jeff. Davis." The invasion of Maryland by Gen. Lee's army in 1862 caused Gov. Bradford to issue a proclamation calling upon the citizens to enroll themselves in military organizations, which would not be required to join the Federal army without their consent. This proclamation was promptly answered by volunteers and organizations. In 1863, upon a second invasion of Maryland, Gov. Bradford called for 10,000 volunteers. On June 17 he determined to arm and equip all volunteers as they were received, in companies, without waiting for regimental organizations; and many aged men, not subject to military draft, offered their services for home defense, and were accepted by the governor, who complimented their spirit. On June 21, 1863, Gov. Bradford, not receiving the desired volunteers before called for, issued another appeal which was answered by the formation of three regi-

ments. After the battle of Gettysburg and the defeat of Gen. Lee's army, Gov. Bradford appointed by proclamation a day of prayer for deliverance and the hope of a speedy peace. In November, 1863, Gov. Bradford wrote to Pres. Lincoln upon the rumors that troops were to be sent to the polls on the day of election with orders to carry out certain restrictions upon voters, and pretested against such interference, claiming that the state was loyal, and prayed the president would issue orders to prevent any such intrusion. The president's reply was not favorable. The governor then, on Nov. 2, 1863, issued a proclamation in opposition to the military orders of Gen. Schenck, and declaring that whatever power the state possessed should be exerted to support the proper officers in their duties. Thereupon Pres. Lincoln revoked a portion of the military orders, which was still unsatisfactory to Gov. Bradford, and his proclamation was issued, but before it could be printed Gen. Schenck issued orders to all the papers, commanding them not to publish the governor's proclamation until further orders. After issuing a counter proclamation, the two were issued too late for circulation throughout the state. The result of that election is summed up in these words by Gov. Bradford in his message to the legislature, which was largely in favor of the abolition of slavery: "I have caused copies of the certificates of

judges of elections to be transmitted to you. They present a humiliating record, such as I never expected to be called upon to read, still less in a loyal state like this. A part of the army was on that day engaged in stifling the freedom of election in a faithful state, intimidating its sworn officers and obstructing the usual channels of communication between them and their executive." At the January session of the legislature Gov. Bradford reviewed the question of Federal interference with slaves of Maryland by carrying them off at night, and his efforts to have such proceedings discontinued. He had complained to Pres. Lincoln and had understood that no authority had been given for such proceedings. At a session of the legislature of 1864, the question of negro emancipation was discussed, and one of his first acts was the calling of a state convention with a view of abolishing slavery, said convention to meet in Annapolis, April, 1864. The members were required to take an iron-clad oath to support the state and United States and its constitution. The law further declared that if any armed force of the United States should appear in any election district, the governor would be empowered to call a new election. After voting themselves \$100 each for extra expenses, the legislature adjourned March 10, 1864. Gov. Bradford had now to contend with a new military officer, Gen. Lewis Wallace, who wrote that persons disloyal to the government were candidates for the constitutional convention. To this the governor replied at length, explaining that the law just passed enabled the judges to question the voters; and to aid the judges, he drew up a series of questions to be asked at that election. The result was that many were turned away without a vote, and a constitutional convention was ordered, which adopted the constitution of 1864, abolishing slavery and disfranchising all who sympathized with the "rebellion." It further provided that soldiers in the field could cast their votes before judges specially appointed. After a legal fight against the provisions of that constitution it was defeated by the people of the state by over 2,000 votes, but the soldiers' vote of 2,633 votes in favor, gave the slight majority of 375 votes. By this act emancipation, involving the loss of millions of property and the disfranchisement of the owners of that property, was accomplished. In the midst of this transition the Confederate forces, having pushed on to Frederick, and won at Monocacy, were threatening Baltimore. Gov. Bradford, by proclamation, again called all the men that could be raised to the defense of the city. His own house, furniture and valuable library were burnt, perhaps in retaliation for the destruction of Gov. Letcher's residence in Virginia. Gov. Bradford attended the convention of loyal governors at Altoona. After his term of office, Pres. Johnson, in 1867, appointed him surveyor of the port of Baltimore, which he held until 1869, when Pres. Grant removed him. He was married to Elizabeth, daughter of Judge Kell, of Baltimore, and of the third judicial district. They had seven children. Augustus W. Bradford, Jr., and Thomas Kell Bradford are in business in Baltimore. Gov. Bradford died in Baltimore, Md., March 1, 1881.

**SWANN, Thomas**, thirty-sixth governor of Maryland (1865-69), was born in Alexandria, Va., in 1806, son of Thomas Swann and Jane Byrd Page, daughter of Mann Page and Mary Mason, descendants of Col. George Mason, 3d. Thomas Swann, Sr., was a prominent lawyer, of Washington, and under Pres. Monroe was U. S. attorney for the District of Columbia. Thomas Swann, Jr., was educated at the University of Virginia, and became a law student under his father. He was appointed by Pres. Jackson secretary of the U. S. commission to Naples. Mr. Swann removed from Wash-

ington to Baltimore in 1845; became director in the Baltimore and Ohio railroad; and in two years was elected its president, succeeding Louis McLane. He remained president until the completion of the road to the Ohio river, in 1853, and received the thanks of the directors for his able administration.

John Swann

He then became president of the Northwestern railroad from Baltimore to Parkersburg. In 1856 he was elected mayor of Baltimore city, and again in 1858. He introduced the fire department, the police and fire alarm telegraph, the water from Jones Falls, the street car system, and opened Druid Hill park. The imposition of what is known as the "park tax" on street railways as compensation for their franchises, which has enabled the city to maintain its parks without cost to the taxpayers, is among the measures that will cause his name to be remembered in Baltimore. He was the representative head of the Know-nothing party, and, during his administration, held considerable correspond-

ence with Gov. Ligon upon the relative powers of the governor and mayor. In 1861 he took strong ground against secession, and was in favor of maintaining the Union. In 1863 he was elected president of the First National Bank. In 1864 he was elected by the Union party governor of Maryland, and in January, 1865, succeeded Gov. Bradford. Gov. Swann supported Pres. Lincoln, and was with Pres. Johnson in his reconstruction measures; then renouncing Republicanism, he joined the Democratic party and so remained to the end of his term. In 1866 Gov. Swann, with other distinguished Republicans, deeming war measures no longer needed, joined a large body of Maryland Democrats in an effort to remove the disfranchisements of the constitution of 1864. When the police commissioners of Baltimore refused to allow a single Democrat to be placed as a judge of election, Gov. Swann removed them and appointed other Union commissioners. These, under a bench warrant issued by Judge Bond, were arrested and thrown into prison, but under habeas corpus were brought before Judge Bartol, who decided that they were legally appointed. The attending excitement and resistance of the old board induced Gov. Swann to call on Pres. Johnson for military aid. Gen. Grant was sent to Baltimore to investigate, but decided against military interference. The appointment of conservative registers by Gov. Swann enabled the Democrats at the next election, without a single Democratic judge of election, to triumph in securing a legislature which immediately set to work to overthrow the constitution of 1864 and adopt that of 1867. Early in that session, for his valuable service rendered during the preliminaries of the recent election, Gov. Swann was elected U. S. senator as successor to Hon. John A. J. Cresswell. After consultation with leading Marylanders, Gov. Swann sent a message to the assembly announcing his determination not to accept the position of U. S. senator, which message was indorsed by the legislature. A convention bill was passed and indorsed by the people, notwithstanding the appeals to congress for aid in upholding the war measures of 1864. Gov. Swann was indorsed by the Democratic city convention "for having unmasked the fallacy of the radical faction in this state; for the zealous support of the president's policy, and for the spirit of impartial justice he has manifested in regard to

the execution of the registry law." In his message to the legislature of 1867, he reviewed, at length, his action in removing the police commissioners, and in moderate and conciliatory terms dealt with many important practical questions, favoring a convention of the people to revise the constitution, and admitted the right of the legislature to give the citizens of Baltimore an immediate opportunity of establishing a municipal government that really represented them. Among the first bills of that session was one introduced by Hon. Philip Francis Thomas, of Talbot, "to restore to full citizenship and the right to vote and hold office, all persons who may be deprived thereof by the fourth section of the first article of the constitution." Upon the adoption of the constitution of 1867, Gov. Oden Bowie, who had acted as chairman of the Democratic conservative party during its fight for recognition, was nominated and elected as Gov. Swann's successor; but as the new constitution had lengthened the term of office to four years, Swann remained in the chair until January, 1869. In 1868, after an exciting campaign, in which the Republicans made a special effort to defeat him, Gov. Swann was elected a representative of the fourth election district in congress. He was returned in 1872, in 1874 and in 1876, becoming chairman of the committee on foreign relations, in which he held a prominent position upon all the leading questions of that exciting period. In 1834 Mr. Swann was married to Elizabeth Gilmer Sherlock, granddaughter of Robert Gilmer. Their daughter, Louise, became Mrs. Ferdinand C. Latrobe. Gov. Swann was married again June 20, 1878, to a daughter of Gen. Aaron Ward, of Sing Sing, N. Y., who distinguished himself in the Mexican war. As Josephine Ward she was a belle in society, and having married John R. Thompson, who afterwards became U. S. senator from New Jersey, she was one of the most popular leaders of Washington society. Gov. Swann died near Leesburg, Loudoun co., Va., July 24, 1883.

**BOWIE, Oden**, thirty-seventh governor of Maryland (1869-72). (See Vol. III., p. 260.)

**WHYTE, William Pinkney**, thirty-eighth governor of Maryland (1872-74), was born in Baltimore, Aug. 9, 1824, son of Joseph White, who was born in Ireland, and Isabella Pinkney, born in Annapolis, and grandson of Dr. John Campbell White and Elizabeth, his wife. His mother's paternal progenitor was William Pinkney, who was married to Ann Maria Rodgers. William Pinkney Whyte was educated at Baltimore College and by private tutors, and studied law at Harvard University. He was a member of the legislature of Maryland in 1847-48; comptroller of the treasury in 1854-55, and a delegate to the national convention of 1863. In 1851 he was nominated by the Democrats for congress, but was defeated by T. Yates Walsh, Whig candidate, by a very small majority. Again, in 1857, he was a Democratic candidate for congress against J. Morrison Harris, and contested the seat, but was defeated in the house by a small majority. He refused to claim any pay as a contestant, although the report of the committee on elections was against the sitting member. In 1858 he was appointed U. S. senator, to fill the unexpired term of Reverly Johnson; in

Wm Pinkney Whyte

1871 he was elected governor of Maryland, which position, upon being elected U. S. senator, he resigned in 1874. He served as senator until 1881, during which service he was appointed by congress upon the commission to select a site for the naval observatory in 1878; and was also upon the commission to frame a code of laws for the government of the District of Columbia, which code was accepted by Pres. Harrison. He was, in 1882 and in 1883, mayor of Baltimore. In 1888 he was elected attorney-general of the state, and in 1889 was one of ten delegates to an American conference with representatives of Hayti, San Domingo and Brazil, to secure the enlargement of commercial interests. Gov. Whyte, though in his seventy-fifth year, is (1899) actively engaged in a large legal practice, and upon urgent occasions still employs his pen and voice in the cause of good government. The degree of LL.D. was conferred upon him in 1874 by the University of Maryland. He was married, in Baltimore, Dec. 7, 1847, to Louisa D., daughter of Levi Hollingsworth, a prominent merchant. She died, leaving three sons. Gov. Whyte was again married, April 22, 1892, to Mary (McDonald) Thomas, daughter of William McDonald and widow of Raleigh Thomas.

**GROOME, James Black**, thirty-ninth governor of Maryland (1874-76), was born at Elkton, Cecil co., Md., April 4, 1838, son of Col. John Charles

Groome, attorney-at-law, of Elkton, and Elizabeth Riddle Black, a lady of rare culture and daughter of James Rice Black, of New Castle, Del., district judge of the superior court of that state. Col. John Charles Groome, nominated as an opposing candidate for governor in the Know-nothing campaign which elected Thomas Holliday Hicks, was a son of John Groome, of Kent county, Md., who was the grandson of Samuel Groome, a distinguished citizen and church warden of St. Paul's parish, in 1736. James Black Groome went first to Tennent School, Hartsville, Pa., to prepare for Princeton College, but on account of an affection of his eyes had to relinquish a college course. He studied law with his

father, and was admitted to the bar in 1861. He immediately became a favorite on account of his social and personal attractions. In 1867 he was elected a member of the reform convention for reporting a new constitution for the state. His first speech was upon usury laws. In 1871 he was elected a delegate to the legislature of Maryland, and at the session received a number of votes for U. S. senator, withdrawing his name in favor of an eastern shore candidate. At the close of that session he had made a reputation as a leading man. He was opposed to the nomination of Horace Greeley for president, but accepted a place in the electoral college. In 1873 he was again elected to the house of delegates, and was chosen chairman of ways and means. Upon Gov. Whyte's resignation to accept a seat in the U. S. senate, Mr. Groome became a candidate for the governorship, and received sixty votes out of seventy-two, though opposed by many of the leading men of Maryland. Except in the case of Enoch L. Lowe, the state had never before had so young a chief magistrate. He was inaugurated March 4, 1874. The contest over the election of attorney-general fell to Gov. Groome for a solution; viz., the contest of Severn Tenckle Wallis, which was decided in favor of Attorney-Gen. Gwinn. During his term the executive mansion was the scene of truly representa-

tive Maryland hospitality. At the last session of the legislature, in 1878, Gov. Groome was elected U. S. senator from March 4, 1879. His competitors were again many of the foremost men of Maryland; but at the age of forty-one years he was honored. He was made collector of the port of Baltimore during Pres. Cleveland's first term, Feb. 17, 1886. Upon retiring from that office, he continued to reside in Baltimore, at 2 East Preston street. In an obituary notice a Baltimore newspaper said: "Cecil county loses her most famed son, the state of Maryland an eminent citizen, society a useful member, his associates a true and loyal friend, his family an honored and loving husband, a fond father and a dutiful son. The annals of the county record no instance where honors were more generously bestowed and more unsought, and public opinion concords in the verdict that in no instance were these marks of distinction and respect more genuinely merited. In his public career he was a success. But it was in his social intercourse that he was most remarkable. While inheriting the qualifications to adorn society, he possessed to a wonderful degree that rare faculty of being able to affiliate with dignity and ease with all grades and classes of society. The humblest citizen, under any and all circumstances, was as cordially recognized and received by him as was the most distinguished statesman, and it was this peculiar trait of character that brought him so closely in touch with the masses and won for him their respect and support." On Feb. 29, 1876, immediately after his term as governor had expired, he was married to Alice Leigh, daughter of Col. Horace Leeds Edmondson, of Talbot county. Gov. Groome had one daughter, Maria Edmondson, who now resides with her mother, the wife of P. F. Young, of Philadelphia, a cousin of Gov. Groome. His sisters are: Mrs. Maria G. Knight, wife of Hon. William M. Knight, only son of William and Rebecca (Ringgold) Knight, who was a delegate and senator from Cecil during Gov. Groome's term; Mrs. Elizabeth Constable, wife of Albert Constable, of Cecil county; and Mrs. J. J. Black, wife of Dr. John J. Black, of New Castle, Del. Gov. Groome had been a sufferer from ill-health during his most active career, which caused his death in the prime of early manhood, on Oct. 4, 1893. His remains were buried in the Presbyterian cemetery of Elkton.

**CARROLL, John Lee**, fortieth governor of Maryland (1876-80), was born at "Homewood," the Carroll estate, upon Charles street, Baltimore county, now the Country School for Boys, Sept. 30, 1830. He is the second son of Col. Charles and Mary Digges (Lee) Carroll. His mother was the granddaughter of Thomas Sim Lee, governor of Maryland in 1779-82. He is a descendant in the fourth generation of Charles Carroll, of Carrollton, his grandfather being the only son of the statesman. When John Lee Carroll was three years of age his father came into possession of "Doughoragan Manor," and removed thither. The son was sent to Mount St. Mary's at ten years; to Emmitsburg Seminary, and thence to Georgetown College, and finally to St. Mary's, in Baltimore, intending to make law his profession, he entered Harvard Law School in 1849. Returning to Baltimore, he entered the office of Brown & Brown, and was admitted to the bar in 1852, after which he went to Europe and spent a year in traveling. In 1855 he was nominated for the legislature of Maryland, in opposition to the Know-nothings, but was defeated. In the fall he went to New York, and met Anita, daughter of Royal Phelps, a merchant, whose wife was a Spanish lady of South American birth. Mr. Carroll was married to her, April 24, 1856. In 1858 he removed to New York city, intending to practice law, but in 1861 returned to Maryland to care for his father, whose health was declining. His father died in 1862, leaving him

*James B. Groome*

sole executor of his estate. In 1866 he purchased the inheritance of his brother, Charles, the homestead, and has since made it his home. In 1867 he was nominated and elected to the state senate, was re-elected in 1872, and again in 1874, when he became president of the senate. In 1873 his wife died, and in 1874 he went to Europe to place his daughters in the Convent of the Sacred Heart in Paris and his sons in the Jesuits' College. He returned in 1875, and in July was nominated for governor. On Jan. 12, 1876, he was inaugurated. With his staff and the militia of Maryland, under the command of Brig.-Gen. James R. Herbert, Gov. Carroll represented Maryland at the Centennial exposition in Philadelphia, and there received marked attention as the great-grandson of the Maryland patriot "who signed his post-office address to the Declaration of Independence." In 1877 occurred the great railroad strike upon the Baltimore and Ohio railroad, and Gov. Carroll called out the militia to proceed at once to Cumberland. In carrying out that order, the 6th regiment was attacked by a mob in sympathy with the strikers. Camden station was set on fire when the U. S. troops were sent from Washington; but in

the meantime Gov. Carroll, aided by the police force of Baltimore, had quelled the riot in Maryland. Gov. Carroll tendered his thanks to the police board for the efficient service, in which two-thirds of the force were on their feet for forty-eight hours without rest. This disturbance was the birth of the "Workingman's party." Since retiring from official life Gov. Carroll has spent much time in Europe, visiting his country estate at Doughoragan in summer and spending his winters in Washington. In several important political crises he has been solicited to become a candidate for congress, but has declined. In

1890 he was elected general president of the National Society of the Sons of the Revolution, and has four times been re-elected to that office. He is a member of several of the clubs of New York, Baltimore and Washington. By his first wife he had four daughters and five sons. In April, 1877, he was married, for the second time, to Mary Carter, daughter of Judge Lucas Thompson, of Staunton, Va., by whom he has one child, a son.

**HAMILTON, William Tiffany,** forty-first governor of Maryland (1880-84), was born at Hagerstown, Sept. 8, 1820, son of Henry and Anna Mary M. (Hess) Hamilton. His father was a native of Boonsboro, Md., and a brother of Rev. William Hamilton, of the Methodist Episcopal church. His mother died when he was six years old, and his father about two years later. He was brought up by an uncle, who was of the old Jefferson school of politics, and was educated chiefly at Hagerstown Academy and Jefferson College, Cannonsburg, Pa. He entered the law office of Hon. John Thompson Mason at Hagerstown, and in 1843 was admitted to the bar. In 1846 he was elected to the house of delegates, but was defeated in 1847; in 1848 was upon the Cass electoral ticket; in 1849 was elected to congress, where he advocated and voted for the Clay compromise bill; in 1851 was re-elected to congress, and in 1853 received a larger majority than ever before. He supported Pres. Pierce, and was chosen chairman of the committee upon the District of Columbia; was instrumental in bringing water into the city of Washington from "the great falls"; in

1855 was again a candidate for congress, but was defeated by the candidate of the Know-nothing party. He then formed a partnership with Richard H. Alvey, afterwards judge of the court of appeals. In 1861 he was urged to become a candidate for the governorship of Maryland, but declined. In 1868 he was elected U. S. senator, succeeding Wm. Pinkney Whyte, in which position he took a leading part. In 1875, at the expiration of his term, he became a candidate for governor, but was defeated by John Lee Carroll; but in 1879 was the unanimous choice of the convention, and was elected by a majority of 22,000 over James A. Gary. His inauguration was an ovation. His administration was a reform in many former usages. He advocated the abolishment of many offices, including the insurance department and the fishery force, which he considered a signal failure. The land office, he considered, had survived its usefulness, and he advised abolishing it and giving its records to the court of appeals. The expenditure in public printing, he thought, was too large, and the legislative expenses ought to be reduced. He advised that all taxes be fairly imposed, and suggested, as an economy in collecting them, the employment of only one collector for each county. Hon. Francis Thomas, as an independent candidate for congress, met Mr. Hamilton in joint discussion, but was defeated. Gov. Hamilton's practice frequently brought him before the court of appeals. No man in Maryland was more favorably known and respected for high courage and thorough honesty. In all places of trust, and at all times, he was the unyielding advocate of what he thought was right, and the fight he made against the corruption of machine politics was magnificent. He was known as the "farmer governor," and during his term took much interest in the work of the Agricultural College. He owned considerable real estate in the neighborhood of Hagerstown, and took great pride in keeping up with agricultural progress. He was a most substantial citizen of his native town and the promoter of many of its improvements. He secured for it a new charter, improved streets, electric lights, new water-works and the hotel bearing his name. He was at the time of his death president of the

Hagerstown Bank, the Washington County Water Co., the board of street commissioners, the Hagerstown board of trade, the Rose Hill Cemetery Co., the Maryland Farmers' Association, and a director in the Hagerstown Steam Engine and Machine Co. and in the Mutual Insurance Co. Indeed, every enterprise tending to the development of the town and county received the support of his influence and means. Gov. Hamilton was married, Sept. 8, 1850, to Clara, daughter of Col. Richard Jenness, of Portsmouth, N. H. Their children are: Wm. T. Hamilton, Jr., Richard Jenness Hamilton, Misses Clara and Leonore Hamilton, Mrs. Eames and Mrs. Josephine Maxim, wife of Hiram Percy Maxim, son of the inventor of the Maxim gun. Gov. Hamilton died at Hagerstown, Md., Oct. 26, 1888, and was buried in Rose Hill cemetery.

**McLANE, Robert Milligan,** forty-second governor of Maryland (1884-85), was born in Wilmington, Del., June 23, 1815, the eldest son of Louis and Catharine Mary (Milligan) McLane. His father, after twenty years' distinguished service as representative in congress, senator, minister to Great Britain, secretary of the treasury and secretary of

Andrew Carroll

William T. Hamilton

state, retired in 1837, and settled in Maryland as president of the Baltimore and Ohio railroad. Col. Allan McLane, of Delaware, grandfather of Hon. Robert McLane, was an officer of distinction in the revolution and a friend of Washington. The mother of Hon. Robert McLane, was the daughter of Robert and Sally (Jones) Milligan, of Cecil, and was a connection of the Baldwins and Larkins and the families of Judges Samuel and Jeremiah Townley Chase. Young Robert McLane was educated partly at home, at St. Mary's College, partly in Paris, studying there while his father was in England. There he enjoyed the friendship of Lafayette. On his return to the United States he was appointed a cadet in the Military Academy at West Point, at which institution he was graduated in 1837, being then appointed second lieutenant in the U. S. army, and proceeded immediately to Florida. He served in the Seminole war, in the 1st regiment of artillery, until he was transferred to the topographical engineer corps, in which corps he served until the autumn of 1843. As an officer of this corps, he visited Europe, under order of the government, to examine the dikes in Holland and the Pontine marshes in Italy. In the latter part of 1843 he resigned from the army, and was admitted to the bar in Baltimore, Md., where he practiced law and took

an active part in the politics of his state and nation. In 1845 he was selected by the Democratic party in Baltimore city as one of their candidates to the state legislature, and was elected. In 1847 he was selected by the Democratic party in the same city as a candidate for congress; was elected, and was re-elected in 1849, thus completing two terms of congressional service. During this period he practiced his profession assiduously, and was very successful both in his professional and congressional life. In the latter he was recognized as a Democrat of the Jackson school, and was one of the most trusted friends of the

Democratic administration, the president, Mr. Polk, having confided to him a mission of a very delicate nature to Gen. Taylor, then commanding the army on the Rio Grande frontier. The president at that time was very generally reproached for making war on Mexico without the authority of congress, whereas Mr. McLane insisted that congress, and not the president, had made the war by annexing Texas and establishing custom-houses and ports of entry and delivery on the Rio Grande, the defense of which required an army, and made necessary the battles of Palo Alto and Resaca de la Palma. The despatches of Gen. Taylor were referred to by Mr. McLane, and fully confirmed this view. On the termination of his congressional service, Mr. McLane was employed, in conjunction with Robert J. Walker, to defend the rights of certain claimants to the great quicksilver mines in New Almaden, Cal., then operated by the banking firm of Barron & Co., in the city of Mexico. This engagement took him to California, and caused him for a time to abandon his political career. His professional engagements in California were greatly increased, and he remained there more than a year, when he returned to Baltimore, and served as a delegate in the national Democratic convention that nominated Franklin Pierce for the presidency in 1852. Mr. McLane was appointed by this convention chairman of the national Democratic committee, which held its sessions in the city of Washington, and conducted the political campaign which resulted

in the election of Pierce. In the summer of 1853 Mr. McLane was appointed U. S. commissioner (with the power of a minister plenipotentiary) to China; he was accredited at the same time to Siam, Cochin-China and Japan, and Com. Perry was instructed to detach a ship of war to meet him at Hong Kong. He proceeded via what is known as the overland route to Hong Kong, and there found awaiting him the steam frigate *Susquehanna*. Later in the summer the imperial commissioners were visited at the mouth of the Pei-ho and at Amoy and other places, also by the rebel chief Tai-Ping-Wang, who, at the head of 100,000 rebels, was at the old capital of Nankin. Mr. McLane, on his return to the United States, continued his profession, which took him once more to California and Europe as counsel for one of the earliest pioneers in the construction of the Pacific railways, under the munificent grants of congress. He took an active part in organizing the Democratic national convention of 1856, to which he was a delegate. The candidate of this convention was James Buchanan, of Pennsylvania, who was elected, and he appointed McLane U. S. minister to Mexico. He signed the treaty between the United States and Mexico for the protection of the lives and property of U. S. citizens, but the troubles at home convinced him of its uselessness. In 1877 he was elected state senator, and in 1878 was elected to congress, in which he took foremost rank as a leader in debate. He was a delegate to the St. Louis convention, by which Samuel J. Tilden was nominated for president. Subsequently, in 1885, under the Democratic administration of Mr. Cleveland, he was appointed minister to France, having been elected prior thereto a member of congress, in which body he again served two terms. He closed his political career in Maryland by his election to the state senate of Maryland, and subsequently as governor of the state, just one year prior to his appointment as minister to France. During the last years of his life he resided in Paris, returning to America every year except 1887. Gov. McLane was married, in 1841, to a daughter of David Urquhart, a merchant of New Orleans. He died in Paris, France, April 16, 1898, and his remains were interred in Greenmount cemetery, Baltimore.

**LLOYD, Henry**, forty-third governor of Maryland (1885-88), was born at "Hambrooke," near Cambridge, Dorchester co., Md., Feb. 21, 1852. He is a descendant of the commander of the Patuxent, and the two Edward Lloyds, of 1709 and 1809, through Daniel, youngest son of Gov. Edward Lloyd, of 1809. His mother was "Kitty," daughter of John Campbell Henry, and granddaughter of Gov. John Henry. Henry Lloyd was educated at Cambridge Academy. He studied law while teaching school. In 1881 he was elected state senator, and in 1884, though the youngest member of that body, was chosen president of the senate. In the following year, upon the resignation of Gov. Robert McLane, who had been nominated by Mr. Cleveland minister to France, Henry Lloyd, by virtue of his office, became governor, and was subsequently elected for the term ending in 1887. Gov. Lloyd is a Mason, having served as master four times, and in 1885 and 1886 was senior grand warden. He is a vestryman of many years' service in Christ Protestant Episcopal Church of Cambridge, Md. In July, 1892, he was appointed by Gov. Frank Brown to the bench as associate judge of the first judicial circuit of Maryland. In 1893 he was nominated and elected by the people to that office for the full term of fifteen years, and is now filling the same; he is also president of the Dorchester National Bank. In 1886 he was married to Mary Elizabeth, daughter of William T. and Virginia A. Stapleforts, descendants of old and prominent families of Dorchester county, Md.

*Robert McLane*

**JACKSON, Elihu Emory**, forty-fourth governor of Maryland (1888-92), was born in Somerset county, Nov. 3, 1836, son of Hugh and Sally (McBride) Jackson, grandson of John and great-grandson of Elihu Emory Jackson, of Somerset. His father was a prosperous farmer, and had at one time been judge of the orphans' court. Elihu was brought up on the farm, and, being the eldest of seven children, was his father's chief helper. He obtained a good education, however, at a country school, which he afterward supplemented by private study. When he became of age he started in business for himself, opening a country store at Delmar in 1859. In 1863 he removed to Salisbury, where he took into the firm his father and his brother, William H. Jackson, his three other brothers also becoming associated with him when they came of age. The business of the company consists in the manufacture of yellow pine lumber. In 1877 they erected a large planing mill in Baltimore, and two years later another in Washington. They have a constant supply of lumber from forest lands in Virginia, and own 80,000 acres of timber lands in Alabama. William H. is the chief member of the lumber firm at Salisbury. Elihu E. Jackson was in the legislature for several sessions, and in the senate of Maryland. In 1887 he was elected governor, to succeed Henry Lloyd. During his administration the compulsory fea-

ture of tobacco inspection was abolished; an attempt was made to lease the canal to the Western Maryland railroad. In 1889 the canal was completely wrecked by freshets, and the state could do nothing for it. Assistance from private resources having failed, the Baltimore and Ohio railroad foreclosed its mortgage. A dispute over the legal ownership of Hogg island was instituted by Virginia. Tobacco inspection had decreased so much in revenue as to become a tax upon the state, and Gov. Jackson recommended a reduction in the number of warehouses. In 1890 Hon. Ephraim King Wilson was elected U. S. senator, and in that year the court decreed the sale of the canal. Gov. Jackson was president of the Salisbury Bank, and is now president of the Scaford National Bank of Delaware. His brother, Wilbur F. Jackson, is president of the Continental National Bank of Baltimore. Gov. Jackson was married to Nannie, daughter of Dr. William H. Rider, of Somerset county. They have three sons and two daughters.

**BROWN, Frank**, forty-fifth governor of Maryland (1892-96), was born at Brown's inheritance, Carroll co., Md., Aug. 8, 1846, son of Stephen T. Cockey and Susau A. (Bennett) Brown. His mother was a daughter of Wesley Bennett, of Carroll. The first ancestor in this country, on the paternal side, Abel Brown, emigrated from Dumfries, Scotland, about 1730, and settled near Annapolis, Md., but removed to Carroll county, where he bought a large tract of land, that now forms a part of the splendid estate, "Springfield." The property descended to Elias Brown, Sr., great-grandfather of Frank Brown, who greatly improved it. He was a public-spirited man and a zealous patriot, whose four sons all bore arms in the revolutionary war. Stephen T. C. Brown, born on the ancestral estate in 1820, was regarded as the representative man of the county. He was a member of the state legislature, one of the original subscribers to the Maryland Agricultural College, an

active member of the Agricultural and Mechanical Association, and treasurer, trustee and ruling elder of the Springfield Presbyterian Church. He died in 1876, and "Springfield," with its 25,000 acres, was inherited by his son, who greatly improved it, although for many years it had been considered the model farm of Maryland. As early as 1817 Devon cattle were imported, and most of the Devon herds in the United States have descended from this original stock, or from later importations to the same farm. Much attention was given to the breeding of horses, especially from stock imported from Normandy. Frank Brown was educated in private schools at Carroll, Howard and Baltimore, and then began business life at Carroll, with the firm of B. Sinclair & Co. In 1873-78 he represented Carroll in the state legislature. During the campaign of 1885 he was treasurer of the Democratic state central committee, and in 1886 was appointed postmaster of Baltimore by Pres. Cleveland. He greatly improved the usefulness of the post-office by establishing sub-stations and making other improvements. The Maryland exposition, held in Baltimore in 1889, was planned and managed by him, at a personal outlay of many thousands of dollars. In 1891 he was the Democratic candidate for governor, was elected by a large majority, and was inaugurated Jan. 13, 1892. During his term he appointed eight judges of the courts of Maryland; called out the militia to protect the mining interests of Frostburg during the strike, and went with the 4th and 85th regiments to Frostburg. Gov. Brown has been president of the State Agricultural Association since 1881; has been a director of the Baltimore and Ohio railroad; for several years was president of the Baltimore Traction Co., and is now president of a new loan and improvement company, having for its object the encouragement of immigration to the waste and undeveloped sections of the state. He is also connected with several trust companies and banks of Baltimore. He is a popular member of several clubs and social organizations. Gov. Brown was married, in 18 , to Mary (Ridgely) Preston, widow of Horatio Preston, of Boston, Mass., and daughter of David Ridgely, of Baltimore, who died in 1895.

**LOWNDES, Lloyd**, forty-sixth governor of Maryland (1896-1900), was born in Cumberland, Feb. 21, 1845, son of Lloyd and Maria Elizabeth (Moore) Lowndes, and grandson of Com. Charles Lowndes, of the U. S. navy. Com. Lowndes, whose wife was Elizabeth, daughter of Gov. Edward Lloyd, was son of Christopher and Elizabeth (Tasker) Lowndes, and grandson of Richard Lowndes, of Bostock House, Cheshire, England. Lloyd Lowndes, Sr., was a native of Georgetown, D. C., but, with his younger brother, Richard, removed to Cumberland, where he engaged in business. In 1831 he again removed to Clarksburg, where he established a branch house, under the name of Lowndes & Co., and aided in developing that section of the state. Mr. Lowndes interested himself in farming and lumbering, in addition to carrying on his regular business, and left a large fortune to his sons. Lloyd Lowndes, when sixteen years of age, entered Washington College, at Washington, Pa., but removed to Allegheny College, Meadville, Pa., where he was graduated in 1865. He attended the law school of the University of Pennsylvania, and being graduated in 1867, settled in Cumberland. In 1872 he was elected to congress from a largely Democratic district,

his rapidly acquired popularity being amply demonstrated by his victory of 1,700 votes over his opponent, Hon. John Ritchie, of Frederick county, who two years before had carried the district by over 1,500 majority. Although the youngest member of that body, he was placed on some of the most important committees. His vote against the civil rights bill defeated him at the next election, for he lived in a district where there was a large negro constituency directly affected by the bill. In 1879 he was a delegate-at-large to the Republican national convention at Chicago. In that same year he was urged to become a candidate for the governorship, and in 1891 strong pressure was brought to bear upon him; but his personal business engagements prevented. In 1895 he was nominated, after a struggle, in the state convention, and was elected, being the first Republican governor the state had had in thirty years. His inauguration was the occasion of a great military display and much enthusiasm. Gov. Lowndes made his canvass upon reforms, notably a new election law, and the legislature of 1896 enacted a very excellent one. He urged an immigration law, and under it many of the waste fields of the state have found settlers, who are developing them; he has further developed the commercial interests of Maryland by the organization of a bureau for the study of the mineral resources of the state. The legislative session of 1898 enacted a new charter for Baltimore city, which went into operation in May, 1899. Upon the election of a successor to Hon. Arthur P. Gorman in the U. S. senate, Gov. Lowndes withdrew his name from the list of candidates, in order that there should be no charge that he had used his office to promote his own advancement. Answering the call of the general government, Gov. Lowndes called out the 4th and 5th regiments of militia and reorganized the 1st, which were held in military preparation at Camp Wilmer for volunteers in the Spanish war. The government selected the 1st and 5th regiments, which were ordered to the front. At the conclusion of the war, at the governor's request, the 5th regiment was mustered out. During his administration the board of public works unanimously determined to sell the state's interest in the Baltimore and Ohio railroad, and also in the Chesapeake and Ohio canal. Since 1873 he has been president of the Second

National Bank of Cumberland. He is also president of the Frostburg Gaslight Co., president of the Union Mining Co., and president of the Potomac Coal Co. He is a director in the Cumberland and Elk Lick Coal Co., and vice-president in the Black, Sheridan Wilson Co., in the New York Mining Co., in the Millville Milling Co., in the Barton and George's Creek Valley Coal Co., in the Fidelity and Deposit Co. of Maryland, and a number of other corporations. He was formerly president of the Bar Association of Allegany county, and was a member of the World's Columbian exposition commission. He has been for many years a member of Emmanuel Protestant Episcopal Church of Cumberland, is one of the vestrymen, and has frequently been a delegate to the diocesan conventions. Besides his large financial, coal and milling interests, he has one of the most fertile farms in the county, where he raises choice breeds of cattle. He is closely identified with the agricultural interests of his section, and particularly with the efforts which have been made for the establishment and maintenance of a system of good roads.

**NEWCOMER, Benjamin Franklin**, railroad president, was born in Washington county, Md.,

April 28, 1827, son of John and Catherine Newcomer. His father was for many years a prominent citizen of the state, being sheriff and commissioner of Washington county, state senator and delegate to the constitutional convention in 1850. The original American representatives of the family were Swiss emigrants, who settled in Lancaster county, Pa., in 1720. Mr. Newcomer was educated in the private schools of Washington county, Md., and began preparation for the profession of civil engineer in Hagerstown Academy. In 1842 he was employed with the firm of Newcomer & Stonebraker, wholesale dealers in flour and grain, in Baltimore, and in 1845 he bought his father's interest. During the next seventeen years he saw the house increase to such immense proportions that it absorbed one-tenth of the trade in its line in the city, and was rated one of the most prosperous mercantile concerns of Maryland. The firm was finally dissolved in 1862, and the business was thenceforth conducted by Newcomer & Co. Mr. Newcomer became a director of the Northern Central Railway Co., serving as chairman of its finance committee until 1875, when he resigned, but was re-elected in 1878. He became prominent in the management of the Atlantic Coast Line, with which he is still connected. He was appointed a financial commissioner of the city of Baltimore in 1867, with Hon. William T. Walters as colleague, and served on the board during the next two years. He was one of the founders of the Baltimore Institute for the Education of the Blind, and for a number of years was a trustee of Johns Hopkins University. He was president of the Safe Deposit and Trust Co., of Baltimore; a trustee of the Baltimore Savings Bank, and a director of the Northern and Central, and of the Philadelphia, Wilmington and Baltimore railroads. In January, 1895, he was chosen to succeed ex-Gov. Oden Bowie as president of the Baltimore and Potomac, and in that capacity repeated this brilliant record in the world of finance. Mr. Newcomer enjoys wide popularity in the social world, and although in business transactions firm and determined, possesses the happy faculty of never offending, either by word or act. In 1848 he was married to Amelia, daughter of John H. Ehlen, of Baltimore. They have had four children.

**BATES, Katharine Lee**, author and educator, was born at Falmouth, Mass., Aug. 12, 1859, daughter of William and Diantha (Lee) Bates. Her father was a Congregational minister, the son of Rev. Joshua Bates, D.D., the erudite president of Middlebury College, Vermont. She was educated at the primary and grammar schools of Falmouth, where her eagerness to learn made her an apt pupil. In her thirteenth year she accompanied her mother to Wellesley Hills, Mass., and entered the high school of Wellesley, taking a diploma there in 1874. The family subsequently making their home at Newtonville, Miss Bates studied in the high school of that place as well, and from there entered Wellesley College, when her literary work began. She was class poet, and also received two prizes for poems; the first a Latin boat-song and the other some English verses. Her stories and sketches written during this period were published in the Springfield "Republican" as well as in local publications. One of her poems was printed during her junior year in the "Atlantic Monthly." After her graduation, in 1880, she taught mathematics, classics and English in the Natick high school for one year, and from 1881 until 1885 taught classics in Dana Hall Preparatory School, in Wellesley. In the latter year she was appointed instructor in English literature at Wellesley College, and two years later became associate professor. In 1889 she went to Europe and spent fifteen months in foreign study, after which she returned to Wellesley

*George Lowndes*

College to fill the chair of professor of English literature. Throughout this busy career Miss Bates has necessarily made her literary work subordinate to her other employment, but has never entirely resisted her natural impulse to write. She has been a frequent contributor of verse and prose to the "Century," "Independent," "New England Magazine," "Youth's Companion," "Wide Awake" and other magazines. In 1889 she won a prize of \$30 for a quatrain contributed to the "Magazine of Poetry," and in the same year was awarded a \$700 prize for a juvenile story entitled "Rose and Thorn," which, in the next year, was followed by a second book of the same description, "Hermit Island." In 1887 and 1890 respectively the Wellesley alumni published privately, for the benefit of a college fund, "The College Beautiful and Other Poems" and "Sunshine and Other Verses for Children"; the poem from which the second volume takes its title having also been awarded a prize in a competition. Her other independent works are: "The English Religious Drama," a series of college lectures (1893) and "American Literature" (1897). Besides these writings, Miss Bates has prepared a number of works in connection with her educational labors. She edited Coleridge's "Ancient Mariner" (1888); "A Ballad Book," (1890); "The Merchant of Venice" (1894); "A Midsummer Night's Dream" (1895); and "As You Like It," (1896), and compiled "A Wedding Day Book" (1880). She has earned a reputation as one of the most scholarly of American woman writers.

**FRANCIS, Convers,** educator and clergyman, was born at West Cambridge, Mass., Nov. 9, 1795, son of Convers and Susanna (Rand) Francis. He was educated at the old Medford Academy, then under the preceptorship of John Hosmer, and was graduated at Harvard College in 1815. His theological studies were made at the Cambridge Divinity School, and, after supplying various pulpits, he was, on June 23, 1819, ordained pastor of the Unitarian church at Watertown. This relation he maintained until his resignation, on Aug. 21, 1842, to accept the Parkman professorship of pulpit eloquence and pastoral care at Harvard, where he remained to the end of his life. Throughout his career Prof. Francis was noted as a careful student and wide reader in many branches of knowledge. As has been well said, his preëminent interest was truth, no matter whence derived, so the source be authoritative. Although firmly convinced of the correctness of his own conclusions, he was generously tolerant of the opinions of others, and especially sensible to all expressions and sentiments of beauty and power. His publications consisted mainly of essays and discourses, articles in the "Christian Examiner," "Unitarian Advocate," "American Monthly Review" and other magazines of the day, and several biographies. The most important are: "Errors of Education" (1828); "An Historical Sketch of Watertown" (1828); "Life of Rev. John Eliot, the Apostle to the Indians" (1836), and "Life of Sebastian Rale, Missionary to the Indians" (1845), both in Sparks' "American Biography" series; and "Memoir of Rev. John Allyn, D.D., of Duxbury" (1836); "Memoir of Dr. Gannaliel Bradford" (1846), and "Memoir of Judge Davis" (1849), in the "Proceedings" of the Massachusetts Historical Society. He was an overseer of Harvard College for twelve years (1831-43); delivered the Duddleian lecture at Cambridge, in May, 1833, and was awarded the honorary degree of D.D. in 1837. Dr. Francis was married, May 15, 1822, to Abby Bradford, daughter of Rev. John Allyn, D.D., of Duxbury. A memoir of Dr. Francis, by Rev. William Newell, was published by the Massachusetts Historical Society. He died at Cambridge, Mass., April 7, 1863.

**SHALER, Nathaniel Southgate,** geologist and educator, was born near Newport, Ky., Feb. 22, 1841. His father, Nathaniel Burger Shaler, was a graduate of Harvard College (1827), and of the Harvard Medical School (1829), and for many years a prominent physician of Kentucky. Educated in the schools of his native state, Nathaniel S. Shaler, in 1859, entered the Lawrence Scientific School at Cambridge, Mass., where, beside his regular course of study, he received private instruction in geology from Prof. Louis Agassiz. Being graduated B.S. in 1862, he returned to Kentucky, and there joined the Federal army as captain of a volunteer artillery company, which earned reputation for gallantry, under the name of Shaler's battery. In 1864 he was appointed assistant professor of paleontology in Harvard University, and during 1865-72 was in charge of the regular instruction in geology in the Lawrence Scientific School; meantime, in 1869, having been made full professor of paleontology. In 1866, and again in 1872, he spent several months in Europe, pursuing original lines of investigation in his specialty, and in 1872 was appointed by the governor of Kentucky director of the state geological survey, with which he was largely occupied during the next seven years. In 1884 he received appointment as geologist for the Atlantic coast division of the U. S. geological survey. Besides the report on this work to the federal government, he has made a report of his own on a survey of Mount Desert island; also reports on salt water marshes, etc., fresh water swamps, soils and harbors, etc. The reports of his government survey are to be found in the "U. S. Geological Surveys." In 1891 he became dean of the Lawrence Scientific School. Prof. Shaler has served on a number of public commissions at different times for the commonwealth of Massachusetts, on topographical surveys, the improvement of high-ways, for eradicating the gypsy moth, agriculture, etc. He has been a voluminous contributor to magazines and scientific journals, and has published, among others, the following works: "Antiquity of Caverns and Cavern Life of the Ohio Valley" (1876); "List of Brachiopods from the Island of Anticosti" (1865); "Question Guide to the Environs of Boston for Beginners in Geology" (Part I, 1875); "Geological Survey of Kentucky" (6 vols., 1876-82); "Memoirs of the Geological Survey of Kentucky" (1876); "Recent Changes of Level on the Coast of Maine" (1874); "Thoughts on the Nature of Intellectual Property and Its Importance to the State" (1878); "Illustrations of the Earth's Surface: Glaciers," with Prof. William M. Davis (1881); "On the Fossil Brachiopods of the Ohio Valley" (1883); "First Book in Geology" (1884); "Kentucky" (American Commonwealth series, 1885); "The Story of Our Continent" (1892); "Sea and Land" (1894); "Domesticated Animals" (1895); "Nature and Man in America" (1895); "Aspects of the Earth" (1896); "The Interpretation of Nature" (1893), and "The United States of America; a Study of the American Commonwealth" (1893). In his "Interpretations of Nature" Prof. Shaler makes an able application of the theory of the reality of spiritual causes to explain the evolutionary process. He is a member of the American Academy of Arts and Sciences; a member and curator of the Boston Society of Natural History; and a member of the Geological Society of America, of which he was president in 1895.

N. S. Shaler

**THOMAS, Hiram Washington**, clergyman, was born in Hampshire county, W. Va., April 29, 1832, son of Joseph and Margaret (McDonald) Thomas. He is of German and Welsh descent on his father's side, and of Scotch and English on his mother's. He was brought up on his father's farm, and at the age of sixteen he walked 100 miles to Hardy county, Va., and entered a village academy for a winter's schooling, working nights and mornings to pay his tuition. He next became a private pupil of Rev. Dr. McKesson, one of his father's neighbors, under whom he studied for two years, preparatory to entering an academy at Cooperstown, Pa. Subsequently he entered the seminary at Berlin, Pa., and at the age of eighteen began to preach, though

*H. W. Thomas.*

he had not completed his education. In 1856 he removed to Washington county, Ia., where his father had settled the year previous. He now returned to farm work for one year, but preached every Sunday, and continued his studies. While living in Pennsylvania he had joined the Pittsburgh conference of the Evangelical Association, but in 1856 transferred his ecclesiastical relations to the Methodist Episcopal church, Iowa conference. He soon left the farm to begin the arduous life of an itinerant preacher, and for several years supported his family on an annual income of \$300. His principal charges in Iowa were at Marshall, Fort Madison, where he also served for two years as chaplain of the state penitentiary, Mount Pleasant and Burlington. From 1869 until 1875 he was successively pastor of the Park Avenue and First churches of Chicago; for the next two years was pastor of the First Church at Aurora, Ill., and then was transferred to the Centenary Church at Chicago. During all these years he had been growing in favor as an earnest and eloquent preacher. His "liberality" first attracted general notice while he was pastor of the First Church, and his affiliations with men of "liberal" opinions outside of the denomination was not approved. He originated the Philosophical Society, which included atheists as well as believers, and was its second president; defended Prof. Swing; sometimes preached in Unitarian and Universalist churches, and organized the Round Table, an undenominational association of ministers. There was much dissatisfaction when he was transferred to Aurora, it being believed that a plan was on foot to narrow his field of influence; but he accepted the post, declining calls to large churches both in his own and in other denominations. There, as elsewhere, Dr. Thomas attracted large audiences, and he frequently lectured in lyceum courses in several states of the interior. In October, 1878, at a conference at Mt. Carrol, Ill., Dr. Thomas preached a sermon, in which he expressed his views boldly and criticized the narrowness of some of his detractors, which in 1879 resulted in a trial and expulsion from the ministry and the membership of the church. He appealed to the judicial conference which met at Terre Haute, Ind., Dec. 6, 1881, but that body refused to entertain the appeal, and his position as an independent minister was practically fixed on that date. Early in 1880 a number of gentlemen in Chicago met and pledged themselves to be responsible for the expenses of a service in the central part of the city, and called Dr. Thomas to the pulpit. He accepted the invitation to the People's Church, as it was called; was greeted by a large audience, and continued to preach there to increasing

congregations until 1885; then for a few months in the Chicago Opera House, and since that time in McVicker's Theatre. Dr. Thomas is a simple, direct and impressive speaker, fair and truthful in all his propositions, thus winning both the hearts and sympathies of his hearers. He uses no manuscript, his wonderful memory bringing to his use at the right time, expressed in poetry or prose, as biting sarcasm or most tender appeal to the feelings, the phrase or turn of thought that will be most effective. The People's Church was incorporated in 1880, and the form of organization was enlarged in 1889. Its influence is exerted through several similar organizations of the same name located in different cities. For many years Dr. Thomas entertained the idea of forming a non-sectarian Christian organization, and his thought culminated in the Liberal Congress of Religion, organized, largely through his instrumentality, in December, 1894. Dr. Thomas was married at Dempseytown, Pa., March 19, 1855, to Emeline, daughter of Austin and Jerusha Merrick. Seven children were born to them, of whom but one survives, Dr. Homer M. Thomas, a prominent physician of Chicago.

**de FOREST, Robert Weeks**, lawyer, was born in New York city, April 25, 1848, son of Henry G. and Julia (Brasher) Weeks. His father was a prominent citizen of New York, a direct descendant of Jesse de Forest, a French Huguenot, who, emigrating from Leyden about 1623, was one of the earliest settlers of New York, and his mother was the eldest daughter of Robert D. Weeks, the first president of the New York stock exchange. Robert W. de Forest was educated in the schools of his native city and at Williston Seminary, Easthampton, Mass. He was graduated at Yale College in 1870, and received the degree of LL.B. from Columbia College in 1872, having been admitted to the New York bar in the previous year. After taking a brief course of study at the University of Bonn, Germany, he became a member of the law firm of Weeks, Forster & de Forest, with which his father had at one time been associated, and his uncle, John A. Weeks, was then senior partner. Later he formed a partnership with his younger brother, Henry W. de Forest, under the style of de Forest Brothers. He is general counsel of the Central Railroad Co. of New Jersey, with which company he has been associated since 1874. Although he never sought or held any political office, he has been active in philanthropic and educational movements. Since 1888 he has been president of the New York Charity Organization Society. He was one of the founders of the Provident Loan Society, the original organization in the United States for philanthropic pawnbrokers, and was its first president. He has been trustee of the Metropolitan Museum of Art since 1889. He was his father's successor as manager in the Presbyterian Hospital and in the American Bible Society. In business lines, he has been president of the Hackensack Water Co. since 1885, and he has been director and trustee of the Niagara Fire Insurance Co. and the Continental Trust Co. He is a member of the Century, University, Grolier, Seawanhaka Yacht, St. Andrews Golf, Jekyl Island and other clubs. Mr. de Forest was married, Nov. 12, 1872, to Emily, eldest daughter of John Taylor Johnston, of New York city. They have four children.

*Robert Weeks de Forest.*

*H. W. Thomas.*

**ALDRICH, Charles**, editor and legislator, was born in Ellington, Chautauqua co., N. Y., Oct. 2, 1828, son of Stephen and Elizabeth Aldrich. Most of his life until he was eighteen years of age was spent on a farm and with the usual common schooling. He, however, had the benefit of one year in the Jamestown Academy. In 1846 he went into the office of the "Western Literary Messenger," published at Buffalo, to learn the printer's trade. Four years later he established a weekly paper at Randolph, and in 1851 started the "Olean Journal," which he published for nearly five years. In 1857 he settled in Webster City, Hamilton co., Ia., where he soon became prominently identified with the life and politics of the commonwealth. Here he established

a newspaper, "The Freeman," an advocate of advanced liberalism in the heated ante-bellum controversies in the fifties. He became an enthusiastic Republican, and helped to win the state for that party. The "Freeman" was widely circulated, and long had a powerful influence. It still flourishes (1899) under the same name. On the breaking out of the civil war Mr. Aldrich entered the army as adjutant of the 32d Iowa infantry, where he remained about two years. In 1865 he was for a while editor of the Dubuque "Daily Times." The following year he purchased the Marshalltown "Times," of which he was for three years editor. Four times—in 1860, 1862, 1866, and in 1870—he was elected

chief clerk of the Iowa house of representatives, and each time but the last by acclamation. Twice he was appointed on the commission to investigate the land titles of the settlers on government lands, who had been ousted from their homes by the decisions of the Federal courts. While Mr. Aldrich was representative of Hamilton county in the Iowa general assembly, during 1882-83, he introduced a bill to prevent railroads issuing passes to public officers, which measure aroused national and transatlantic interest. He was active and fearless in his advocacy, his speeches being widely quoted. His great work is the Iowa Historical Library and Memorial Hall. From the time when he was learning the printer's trade he has always been an enthusiastic and indefatigable collector of autograph letters, old documents, books, prints, records, etc. His collection soon began to attract local attention. Realizing the necessity of the careful preservation of what had grown to be of such great value to the public, in 1884 he offered the bulk of his collection to the state of Iowa, as a nucleus for a state collection. The gift was accepted, and displayed in the state library; but the legislature did nothing to increase it or to execute his plan for a great state collection. Mr. Aldrich, after four years, began to push the project himself, and in 1888 the general assembly was induced to appropriate \$1,000. Two years later \$3,000 were secured, and finally, in 1892, "an act to promote historical collections in the capitol of the state" was passed, and \$7,500 appropriated annually for two years. After that time, it was fixed at \$6,000 per annum, at which it remains. Three rooms in the capitol were also set apart for it, and Mr. Aldrich was appointed curator. Under his management, a great deal has been accomplished in collecting materials illustrative of the history and life of the people of Iowa. In 1896 the collections began to crowd the rooms, and now they are filled far beyond their capacity. He has begun a collection in natural history, especially pertaining to the fauna of Iowa. In 1897 and 1898 the general as-

sembly made appropriations for the purchase of grounds and for the erection of a building, to be known as "The Historical Library and Memorial Hall," which will be ready for occupancy in 1900. Mr. Aldrich was married, July, 1851, to Matilda Olivia Williams, who died in 1892. Her ancestors, like her husband's, were New Englanders. There are no children.

**ROWSON, Susanna**, author, was born in Portsmouth, England, in 1762. Her father, Lieut. William Haswell, was an officer in the British navy, who, being shipwrecked on the New England coast, settled in Nantasket, Mass., when his only daughter was seven years of age. She was a precocious child, and early attracted attention by her extraordinary talents; but even then her character was marked by a waywardness and variability which are so often the unfortunate adjuncts of genius. At the outbreak of the revolutionary war, Lieut. Haswell remained true to the mother-land, and his American property being confiscated, he finally returned to England with his family in 1778. Her father's circumstances having become greatly reduced, Miss Haswell obtained a position as governess, and also sought to eke out her small resources by writing. Her first novel, "Victoria," was the means of obtaining for her an introduction to the Prince of Wales, from whom she begged a pension for her father. It was published in 1786, the year in which she was married to William Rowson. In 1792 both she and her husband appeared on the stage, and in the next year accompanied other actors to America, where they performed in a variety of plays, some of which were written by Mrs. Rowson. In May, 1797, she presented "Americans in England," a comedy written by herself, and this ended her life as an actress. For the next twenty-five years she taught in a ladies' academy in Newton, Mass., and subsequently in Boston; this last venture of hers being her most successful one. Throughout her career as actress and preceptor, she wrote constantly, producing besides novels, educational and dramatic works, a number of magazines and newspaper articles. She was a contributor to the "Boston Weekly Magazine," and at one time editor of the "Boston Journal." Besides the works mentioned above, she wrote: "Mary; or, the Test of Honor"; "A Trip to Parnassus," a critique on authors and performers; "Fille de Chambre"; "The Inquisitor; or, Invisible Rambler" (1788); "Mentoria"; "The Trials of the Human Heart" (1795); "Slaves in Algiers," an opera; "The Standard of Liberty," a poetical address to the armies of the U. S.; "Reuben and Rachel" (1798); miscellaneous poems and a number of other works. Her most successful work was a novel, entitled "Charlotte Temple" (1796), which enjoyed an immense popularity at the time of its appearance. Mrs. Rowson died in Boston, March 2, 1824.

**MARSH, Othniel Charles**, paleontologist, was born at Lockport, Niagara co., N. Y., Oct. 29, 1831, son of Caleb and Mary (Peabody) Marsh, and nephew of George Peabody, the banker and philanthropist. He was fitted for college at Phillips Academy, Andover, Mass., where he was graduated with the valedictory in 1856, and then entered Yale, where he was graduated in 1860. He next entered the Sheffield Scientific School, where he spent two years, preparing himself for the higher studies in

Charles Aldrich

natural history. He paid particular attention to mineralogy, which he intended to make his life work, and to geology; but while on an exploring expedition in the coal regions of Nova Scotia he happened to find an important fossil reptile. His reconstruction and description of the *eoosaurus acadianus*, as it was named, no less than the discovery, gave him positive rank among scientists, and he determined to make paleontology his specialty. In 1862-65 he studied at the universities of Berlin, Heidelberg and Breslau, devoting himself to geology, zoology and mineralogy, and spending his vacations in researches in different parts of Germany and among the Alps. In 1866 a chair of paleontology, the first of the kind ever established, was founded at Yale, and he was invited to fill it. In that same year he secured from his uncle, George Peabody, a gift of \$150,000, to found the museum which bears the latter's name, intending to build up a department of paleontology that would be a school of original research as well as one of instruction. During the years immediately following his return from Europe he made a close study of the cretaceous and tertiary fauna of New Jersey; but it soon became apparent to him that the fossil remains in that state were of much less importance than those of the West. In 1868 he made his first trip to the Rocky mountains, where (in Utah), accompanied by a guide, he made

O. C. Marsh

researches which resulted in the discovery of the first bone of a dinosaurian found in America. In the summer of 1870 he headed the first scientific expedition ever organized for the study of the tertiary and cretaceous faunas of that section of the West. This expedition was followed by others, the expenses of those undertaken up to 1882 being defrayed by Prof. Marsh himself. His energy and perseverance were unbounded, and he crossed the Rocky mountains no less than twenty-seven times, extending his explorations into localities never before visited by white men, where investigations could

be carried on only with a strong escort of U. S. troops, as a protection against hostile Indians. Having discovered on one of these expeditions that some of the tribes had been defrauded by government agents, he, in 1875, visited Washington in person to obtain redress, and, in spite of opposition from officials, was successful. In later years collecting parties were sent annually into the western field, under Prof. Marsh's direction, with the result that more than 1,000 species of extinct vertebrates were brought to light, many of them of great scientific value, representing orders wholly new, as well as others not before known in America. Descriptions of more than 300 were published by Prof. Marsh, chiefly in papers in the "American Journal of Science." Among them are a new sub-class of birds with teeth (*odontornithes*), including the genera *hesperornis* and *ichthyornis* from the cretaceous strata of Kansas; and the first known American pterodactyls, including a new order (*pteranodontia*), from the same strata; two new orders of large mammals from the eocene tertiary of the Rocky mountains: the *tilloodontia*, related to the carnivores, ungulates and rodents, and the *dinocerata*, the latter of elephantine bulk, and bearing on their skulls two or more pairs of horn-cores; also, from the same formation, in Nebraska and Wyoming, *cohippus*, *orohippus* and *epihippus*, the earliest supposed ancestors

of the horse, having three and four toes; also the first monkeys, bats and marsupials found in North America; from the miocene of Dakota and Nebraska, the *brontotheriidae*, a new family of great ungulates; from the later cretaceous, a new group of gigantic horned dinosaurs, the *ceratopsia*, and many rare mammalian remains; and from the jurassic and cretaceous of Wyoming, the first mammals of these formations found in America, and several new families of dinosaurs, probably the largest land animals yet discovered. One of these was sixty feet in length, while another had a series of large vertical plates along its back and four pairs of immense spines on the tail. The largest of dinosaurs known (*atlantosauros*) was one of Prof. Marsh's most important discoveries. These remarkable collections were stored in New Haven, only a part of them being exhibited, owing to lack of space in the incomplete Peabody Museum. The vertebrate fossils were examined by Prof. Huxley in 1876, and were declared to be unsurpassed. Darwin, in 1878, when less than half the material had been acquired, expressed a strong desire to cross the Atlantic for the sole purpose of seeing the collection. Early in his career that great scientist had written Prof. Marsh: "Your work on these old birds and the many fossils and animals of North America has offered the best support to the theory of evolution that has appeared in the last twenty years." On Jan. 31, 1878, Prof. Marsh presented his collections to the university, this gift representing the outlay of more than \$250,000 and upwards of thirty years of labor, during which period he served without a salary. The collections include six of special importance: vertebrate fossils, already described; fossil footprints, chiefly from the Connecticut valley; invertebrate fossils, partly collected by Prof. Marsh, including the largest collection of nearly entire trilobites yet discovered and one of the rarest series of silurian sponges known; skeletons of rare existing vertebrates from every part of the world, the gorillas being represented by thirteen specimens; American archaeology and ethnology, especially Central American and Mexican antiquities; minerals, including an interesting series of Nova Scotian zeolites. Other collections of less value include fossil plants, casts of fossils and recent zoological material. In 1876 Prof. Marsh began the publication of a series of monographs, containing full illustrated descriptions of his discoveries. These include "Odontornithes" (1880); "Dinocerata" (1884); and a volume on the "Dinosaurs of North America" (1896), a group of extinct reptiles. These were issued by the U. S. Geological Survey, of which he was at one time paleontologist (1882-92). Among the positions of honor he held were these: president of the American Association for the Advancement of Science, (1878); vice-president of the National Academy of Sciences (1878-83); president of the National Academy of Sciences, two terms, in 1883-96, honorary curator of vertebrate paleontology in the National Museum (1887); foreign member of the Geological Society of London (1898); recipient of the Bigsby medal from the Geological Society of London in 1877 and the Cuvier prize from the Institute of France in 1897, both awards for the highest scientific research. He was a member of the Geological Society of Germany, Royal Irish Academy, Royal Bavarian Academy of Science and the Royal academies of Denmark and Belgium. In 1897 he went to Russia, representing the U. S. geological survey at the international geological congress, held in St. Petersburg in the fall of that year, and before coming home visited all the important museums of Europe. His last trip across the ocean was in 1898, when he read two papers before the international congress of zoology at Cambridge, England, and two papers at the Bristol meeting of the British As-

sociation for the Advancement of Science. The last scientific meeting he attended was that of the National Academy of Sciences, held at New Haven in November, 1898, and at that time he read four papers before the assembly. Besides the degrees received from Yale, the University of Heidelberg gave him the honorary degree of Ph.D. in 1886, and Harvard conferred upon him the degree of LL.D. in the same year. Prof. Marsh died, unmarried, at New Haven, March 18, 1899.

**BAXTER, Charles**, soldier, was born in New York city in 1813. His father was a soldier before him, and five uncles and great-uncles of his had served in the revolution. In 1845, when war was in prospect with England over the Oregon boundary, and this country was stirred to its center with the alliterative cry, "Fifty-four forty or fight," he helped to organize a brigade for service, and was made colonel of one of the regiments. He was elected to the assembly of New York soon afterwards, and when war began with Mexico resigned his seat at Albany in order to participate in that conflict. His own regiment not being called into service, he accepted the rank of lieutenant-colonel in another, the 1st regiment, New York volunteers, and participated in several notable battles with the Mexicans. At the taking of Vera Cruz, he led a detachment which routed a party of Mexicans; took part in the battles of Cerro Gordo and Contreras, and at Churnbusco, when his colonel, Burnett, fell soon after the engagement began, he had command of the regiment. At Chapultepec Baxter again led the regiment. During an assault on the castle, Sept. 13, 1847, he received two wounds from muskets, from which he died. His regimental flag was the first that floated over the captured Mexican fortress. As he lay dying, Baxter sent a message to his father in these words: "Say to him that the New York regiment was there, and that I fell where I should have fallen—at the head of it." Col. Baxter's remains, with those of several other New York city men who fell in Mexico, were afterwards brought to New York, and public funeral ceremonies were held over them from the steps of the city hall. An audience estimated at 20,000 assembled in the park; all the clergymen in the city were present, and John Van Buren, son of the president of the United States and a noted orator of that day, delivered an oration. The bodies were then taken to Greenwood, where the city had purchased a plot, and were buried. Steps were taken to erect an appropriate monument over them, but nothing beyond a foundation-stone has ever been set up. The "Mexican plot" in Greenwood is a place familiar to all frequenters of the cemetery, and has become remembered especially for the neglect into which it has fallen. Another unmerited misfortune has overtaken the memory of Col. Baxter. The city of New York, desiring to do him further honor, changed the name of one of its streets, then called Orange, running from Graud to Chatham square, a residential neighborhood in those days peopled by the upper middle class. The name was changed to Baxter street, but the thoroughfare long since has become a home of squalor, ignoble poverty and crime. An honorable name has thus become associated with dishonor.

**MOISE, Edwin Warren**, jurist, was born in Charleston, S. C., Feb. 2, 1811, son of Hyam and Cecilia (Wolfe) Moise. His father was of French descent, and a native of Santo Domingo; his mother a native of Charleston, and famed for her beauty. The early life of Edwin Moise was spent in Charleston and vicinity and at Columbia. To please his mother, he studied medicine and began practice; but his preference was for the law, and on removing to New Orleans, he took up that profession. He was elected to the Louisiana state legislature,

and was chosen speaker of the house. He was appointed district attorney of the United States, but resigned during Pres. Buchanan's administration, and soon after was appointed attorney-general of Louisiana. On the outbreak of the civil war, he was appointed judge of the supreme court of the state by Pres. Davis, and remained in office until the conflict ended. During that period his home in the city was closed, and his family experienced many vicissitudes, their exile continuing until the spring of 1866. Judge Moise was twice married; first, to Priscilla Lopez, of Charleston, who bore him two daughters—Cecilia (now Mrs. Wood-wire) and Sallie; second, to Louise de St. Hubert, of an old creole family. By the second marriage he has five children—Henry, Theodore Sidney, Warren Hubert, Corinne and Aline. Judge Moise died, in New Orleans, La., June 29, 1868.

**DAVENPORT, Edgar Loomis**, actor, was born in Boston, Mass., Nov. 15, 1816. He received an excellent education, and made his debut as an actor at Providence, R. I., in 1836, as Wellborn in "A New Way to Pay Old Debts," the elder Booth enacting Sir Giles Overreach. This latter character became at a subsequent period one of Mr. Davenport's most masterly impersonations. For ten years following his entrance upon the stage Mr. Davenport was a valued member of the stock companies playing at the different Boston theatres. He early won recognition as an actor of extraordinary talent, and made rapid advancement. In 1847 he accompanied Mrs. Anna Cora Mowatt to England, and was the principal support of that accomplished actress during her engagements abroad. While in England Mr. Davenport supported William Charles Macready for two seasons, gaining much by the careful study of the English tragedian's methods; and he also won great popularity as William in "Black Eyed Susan," in which character he filled an extended engagement at the Haymarket Theatre in London. Following his return to America, Mr. Davenport was for many years a successful star, being seen in all the Shakespearean rôles and in a round of other characters remarkable for their range and diversity. In 1859 he was the manager of the Howard Athenæum in Boston, and ten years later he managed the Chestnut Street Theatre in Philadelphia. Toward the close of his professional career Mr. Davenport appeared principally as Brutus and David Bruce, filling extended engagements in these characters at Booth's Theatre in New York city, and in the other leading cities of the country. His place in the annals of the American stage is a conspicuous and honorable one. Polished, refined and scholarly, and always a hard and conscientious worker, no actor of his day possessed greater versatility. He showed excellence in all that he essayed, and in some characters he was superb. He was the greatest Brutus of his time, and as Sir Giles Overreach he was long without serious rivals. His private life was blameless. While in England, in 1850, he was married to Fanny Vining, a member of a family long prominent on the English stage, and the cousin of Mrs. John Hoey and Lester Wallack. Mrs. Davenport appeared with her husband until his death, and afterwards was frequently seen upon the stage. Nearly all of the ten children who were born to them have achieved prominence in the theatrical

*Edg. Davenport.*

world. The career of their first child, Fanny, receives attention elsewhere. The second child, Blanche, is an opera singer of note. Miss Lillie Davenport died some years ago. Miss May Davenport gave evidence of decided talent as an actress in her childhood, but left the stage when she became the wife of William Seymour, stage manager of the Boston Museum. The eldest son, Edgar, is a member of the stock company playing at the Boston Museum and a young actor of promise. The youngest son, Henry, is a successful impersonator of juvenile characters. Mr. Davenport died at Canton, Pa., where, when not professionally engaged, he had resided for several years, Sept. 1, 1877.

**ANDERSON, Rasmus Bjorn**, author and diplomat, was born in the township of Albion, Dane co., Wis., Jan. 12, 1846, son of Bjorn and Abel Cathrine (von Krogh) Anderson. His father, a Quaker, came from Norway in 1836, at the head of a large company of Norwegian emigrants, and with his wife and family settled in Albion, where they arrived in 1840, after having spent some time in Rochester, N. Y., and in La Salle county, Ill. His mother, a Norwegian lady of high birth, came of a line long famous in the military annals of the kingdom.

Rasmus attended the common schools, and some years after the death of his father, in 1850, he received private instruction from a Norwegian Lutheran clergyman. Afterwards he spent several years at a Norwegian college in Decorah, Ia. In 1866 he became teacher of Greek and modern languages in Albion Academy, near his home, and in 1869 was appointed instructor in languages in the University of Wisconsin, where, in 1875, he was elected to the chair of Scandinavian languages and literature, especially created for him. He visited Norway in 1872, in company with the famous Norwegian

violinist, Ole Bull, to extend his acquaintance with the literature and scholars of Scandinavia. He began early to write for the press, and has always been a frequent contributor to American and Norwegian periodicals, and to various encyclopedias. His interest in the American common school system has been great, and he has made himself widely known by conducting an active controversy in defense of it with the Lutheran clergy in the Northwest. In 1883 Prof. Anderson resigned his chair in the university, to enter the insurance business, in which he has been highly successful; and in 1885 he was appointed minister resident and consul general to Denmark, where he remained until the fall of 1889. His career as a diplomat was eminently successful—so much so that a petition, signed by all the prominent literary men of Scandinavia was sent to Pres. Harrison asking his retention. Prof. Anderson has achieved considerable reputation as a lecturer, having frequently been invited to speak before learned societies in this country and abroad. In 1878 he delivered a course of four lectures on Norse literature at the Peabody Institute, Baltimore. His first published work was "Julogave" (1872), a selection of Norse stories. He has also written "Den norske Maalsag" (1874); "America not Discovered by Columbus" (1874); "Norse Mythology" (1875), the first systematic presentation of the subject

in English; "Viking Tales of the North" (1877), and the "Younger Edda" (1880). In 1884 he published a translation of Dr. F. W. Horn's "History of the Literature of the Scandinavian North, from the earliest period to the present time." His introduction to the American edition of Kristofer Jansen's "Spell-bound Fiddler" (1879) contains an interesting sketch of Ole Bull. He has superintended the publication of the authorized edition of Björnsterne Björnson's novels (7 vols., 1881-82). In 1886 he published a translation of Dr. George Brandes' "Eminent Authors of the Nineteenth Century: Literary Portraits." In 1887 he wrote the chapter on "Ancient Scandinavian Religion" in an English symposium entitled, "Non-Biblical Systems of Religion." In 1889 he published a translation of the Swedish scholar, Viktor Rydberg's, "Teutonic Mythology," and in the same year he edited a new edition of Samuel Laing's "Sea Kings of Norway," under the title of "Heimskringla; or, the Sagas of the Norse Kings." During the last few years Mr. Anderson has written for the new edition of "Chambers' Cyclopedic," for the revised edition of "Johnson's Universal Cyclopedic" and was one of the editors of the "Standard Dictionary." In 1895 he published a large octavo volume entitled, "The First Chapter of Norwegian Immigration, with its Causes and Results," a work of nearly 700 pages; also an illustrated work, "Norge i Billæder." Since October, 1898, Prof. Anderson has been the publisher and editor, at Madison, Wis., of "Amerika," a widely circulated paper in the Norwegian language.

**TENCH, Thomas**, president of the proprietary council and acting-governor of Maryland (1701-03), was fifth in line of royal governors, and succeeded Nathaniel Blackistone. He was from Anne Arundel county, and was connected with Miss Tench, who was married to the Very Rev. John Francis, dean of Lismore and rector of St. Mary's Church, Dublin, in 1722. Their son, Tench Francis, was attorney-general for Lord Baltimore in Kent county (1724). His daughter, Anna, married James Tilghman, and their son was Tench Tilghman. Hon. Thomas Tench, in 1696, was one of the committee of incorporation for the town of Annapolis, and located the first governor's house, for Gov. Nicholson, granting him a lot for planting a vineyard and summer-house. The house was a frame one, curiously modeled in architectural design, and stood in a circle which extended to the state house. In 1689 Thomas Tench was one of "the quorum." In 1692 Lionel Copley asked the council to raise further supplies for the support of the government, and hoped Maryland would not be behind the other colonies in keeping up a respectable fund in support of the governor and council. Thomas Tench was upon a committee to deliver the messages from the upper to the lower house. Acts passed by the council in 1692 were to provide for a record of births, marriages and burials; to prevent importation of convicted felons; to prohibit trade with the Indians without license; to establish grand juries and provincial courts; for the punishment of criminals; for the publication of laws; for the election of sheriffs, the limitation of officers' fees and the collation of a code of laws for the province. From 1684 until 1689 Thomas Tench served as one of the justices of Anne Arundel county. Early in the year 1701 Gov. Blackistone solicited Queen Anne to allow him to return to England on account of impaired health; the permission was granted in June, and Thomas Tench, president of the council, acted as governor until Feb. 12, 1703, old style, when John Seymour came over as the successor. At that time the chief excitement was the dread of Popery, and an act was passed establishing the Church of England, thus disfranchising Roman

*R. B. Anderson*

Catholics. An ecclesiastical legislature was called at Annapolis to consider the law and interpret it. This was the first of the kind in America, and, notwithstanding strong opposition by Quakers and Roman Catholics, the council confirmed the law. This act made the minister's salary payable in tobacco, fixing a tax of forty pounds per poll, out of which 1,000 pounds was to sustain a parish clerk. In April, 1707, Thomas Tench entered the house of delegates with a bill of attainder against Richard Clarke, who, with others, had been indicted for destroying public property at Annapolis. He also bore a message from the governor's council demanding Clarke's trial.

**WILSON, John**, printer, was born in Glasgow, Scotland, April 16, 1802. His parents were laboring people, unable to give him even a common school education, and at the age of twelve he was apprenticed to a printer, in which position he gave faithful service for seven years. At the age of nineteen he became foreman of the printing office. Three years later he was invited to Belfast, Ireland, where he remained twelve years, working and progressing in his trade. After this for ten years he filled a responsible position in the office of the Manchester "Guardian," a leading English paper. During all these years he not only took great pride in doing the best possible work in printing, but he studied to fit himself for editorial work. In 1846 he sailed with his family for Boston, and, with limited means, the following year opened a small printing-office of his own. His faithfulness and knowledge of printing soon attracted not only public notice but friends, and in time he became the foremost printer in a community distinguished for its literary taste and learning. The house for the first year was known by his name; but afterward his son, John, became a partner, and ever since the firm name has been John Wilson & Son, although the father died in 1868. In 1865 the firm removed to Cambridge, Mass., where they greatly enlarged their facilities for work. The establishment had then about 150 employees, eleven Adams presses and one Cottrell & Babcock stop-cylinder press; they now have upwards of 300 employees, and more than fifty power presses. A large proportion of their work has been upon law books. They printed the "United States Digest" and "United States Laws"; also, Bancroft's "History of the United States," published by Little, Brown & Co., of Boston. They do a great deal of fine work for Harvard College, and for publishing houses in Boston and New York. The elder John Wilson was not only a noted printer, but an author. Being a devout Unitarian, he devoted much of his limited spare time to the study of theology. Three valuable denominational works are: "Scripture Proofs of Unitarianism," "The Concessions of Trinitarians" and "Unitarian Principles Confirmed by Trinitarian Testimony." He is widely known, however, by another work: "Treatise on English Punctuation" (1850; abridged ed. "Elements of Punctuation" 1856), a standard authority among printers and publishers. In 1866 Harvard College conferred upon him the degree of M.A., an unprecedented honor for a printer, excepting the case of Franklin. He died at Cambridge, Mass., Aug. 3, 1868.

**DUCEY, Thomas James**, clergyman, was born at Lismore, county Waterford, Ireland, Feb. 4, 1843, son of James Ducey a landed proprietor, and Margaret Walsh. When he was five years of age his parents came to the United States, settling in New York city; not many years later his parents died, when the boy was adopted by James T. Brady, the eminent lawyer. After studying at St. Francis Xavier College, New York city, he entered a law office, but soon left it, being more attracted toward the priesthood. Although strongly opposed by his foster

father and other friends, who thought him better fitted for the legal profession, he refused to abandon his purpose, and proceeded to Troy, N. Y., to enter St. Joseph's Theological Seminary. On Dec. 19, 1868, he was ordained priest by Archbishop Williams, and was appointed to the parish of the nativity in Second avenue. There he remained for three years, and during that period found time to pay frequent visits to the Tombs to give spiritual consolation to inmates. He was assistant to Dr. Burtzell, at the Church of the Epiphany, in Second avenue, from September, 1872, until May, 1873; and then until the end of 1879, labored in association with Father, now Bishop, Spalding, at St. Michael's in Ninth avenue. In 1880 Cardinal McCloskey appointed him to a new parish; and there, chiefly with money contributed by him, the Church of St. Leo was erected, on Twenty-eighth street, near Fifth avenue. The corner-stone of the edifice was laid Aug. 15, 1880; the first mass was said in the chapel on Christmas day of that year, and on May 1, 1881, the church was dedicated by Cardinal McCloskey. On this church, and the charities connected with it, Father Ducey has expended the bulk of the fortune he inherited. He has been conspicuous for his participation in public affairs. He aided in opposing the Tweed ring, and was one of the founders of the People's Municipal League, and of the Social Reform Club, which was organized at his house. In the investigation, by the Lexow committee, of the corruption of the police department, Father Ducey took a deep interest, attending the meetings of the committee despite the protest of Archbishop Corrigan and defending his course in a series of letters, remarkable for their independent tone, as well as for their powerful arguments. He is as brilliant a theologian as writer, hence reporters flock to his house for his opinions, when clerical subjects are publicly discussed. Father Ducey is highly esteemed as a pulpit orator, and is greatly admired. In his preaching he dwells with masterly learning upon the urgent public and social questions of the day. In 1898 he initiated bi-weekly afternoon services for the unemployed to encourage and engender Christian hope, as well as to relieve their material wants. On these occasions Father Ducey preaches to very large gatherings of unfortunates. This is an innovation in Catholic practice, and one very much admired and commended. Archbishop Ireland, highly appreciating the undertaking, says: "It is a truly apostolic work." Father Ducey has, on many occasions, acted the good Samaritan to European literary and artistic geniuses, who come here expecting to reap fabulous rewards, only to find disappointment and despair, many of whom, in all human probability, would occupy suicides' graves but for the timely assistance of the good "Soggarth Aroon." In February, 1899, was completed St. Leo's Repose for the Dead; a building attached to St. Leo's Church, where the bodies of strangers who die in New York, of any creed or no creed, can be kept until their friends are communicated with, even though they should be in the most distant parts of Europe. The necessity for such a building is obvious; it is not surprising Father Ducey should be a leader in the good work—the first of its kind in the country. While many of his parishioners belong to the aristocratic circles of New York society, the larger number of those to whom he ministers are

poor and destitute; the class to whom he is particularly devoted. "This most independent of men and of priests," as he has been styled, has by his life and works demonstrated the wisdom of the step he took in giving up a profession in which he might easily have gained wealth and worldly honors, to follow the narrow path of ministering to the Crucified, through the poor and afflicted.

**HAMMOND, William Gardiner**, lawyer and educator, was born in Newport, R. I., May 3, 1829. He was of English descent; on his father's side, from a family that came to England about the time of the Norman conquest, and to America about 1710; his mother was a direct descendant of Henry Bull, of England, who, with seventeen others, founded Portsmouth, R. I. His father was a lawyer and a man of scholarly attainments, being especially devoted to the study of languages. He personally supervised the education of his son, who early showed great aptitude for intellectual pursuits, and inherited his father's love for languages. In his later years he read Latin, Greek, German and French as easily as English, and less readily Spanish, Italian, Anglo-Saxon and Hebrew. When seventeen years old, he entered the sophomore class at Amherst College, and was graduated in 1849 as salutatorian. He then studied law in Brooklyn, N. Y., and was admitted to the bar in New York city in 1851. After practising for several years, he spent three years in Europe, where he studied law at Heidelberg for a year. He returned to America, and in 1860 removed to Iowa, partly on account of his health. There, in 1866, he was married to Juliet, daughter of Dr. Wm.

Lewis Roberts, a Presbyterian clergyman. He practised law, taught and wrote until 1878, when the board of regents of the Iowa State University established a law department in the university, and incorporated with it the Iowa Law School. Mr. Hammond was made chancellor of the university law department and university professor of law. "Chancellor Hammond fashioned a school and founded a cult which attracted students from the widest range and compelled attention from abroad." "He was a profound thinker, a most ready and entertaining writer, and as a talker either before the court, law class or as a lecturer upon the law, and especially its history and science, the most interesting." He ranked among the finest teachers of law in the country. "As a teacher he was singularly attractive; his profound and varied learning gained the honor and respect of his students, and his kindly, sympathetic nature their love and gratitude." In 1881 he resigned his position to become dean of the St. Louis Law School. In 1887 he was asked to take charge of the law department of the University of California. He was also asked to return to the Iowa school. He, however, remained in St. Louis until his death. While there, he was also one of the lecturers of the Iowa Law School, the Boston University Law School and the law school at Ann Arbor, his subject being the "Growth and Development of the Common Law," on which subject he was preëminently the authority in the United States. The most cherished plan of his later years was to put these lectures into book form, but he did not live long enough to complete this work. He left, however, numerous notes, which it is hoped will be eventually edited and published. Another line of work in which he was very deeply interested was in having the standard of legal education made much higher. He was for

many years a prominent member of the American Bar Association, being chairman of the committee on legal education and admission to the bar, which office he held from 1887. The degree of A.M. was given to Mr. Hammond in 1852. In 1870 the degree of LL.D. was conferred on him by Iowa University, and in 1877 by Amherst College. His works include: "A Digest of Iowa Reports" (1866); an edition (1875) of "Sandais' Institutes of Justinian," with an elaborate introduction on the nature of law in general and of the civil law, which was afterwards published separately, under the title of "System of Legal Classification of Hale and Blackstone in its Relation to the Civil Law"; an edition of "Lieber's Hermeneutics" (1890), and an edition of "Blackstone's Commentaries" (1890), containing elaborate notes. He also contributed liberally to numerous literary and scientific periodicals and to newspapers. In 1867 he was the originator of "The Western Jurist," and was its chief editor until 1870. From 1870-72 he was a member of a commission to revise and codify the statutes of the state of Iowa. Dr. Hammond died in St. Louis, Mo., April 12, 1894.

**COX, Walter Smith**, jurist, was born in Georgetown, D. C., Oct. 25, 1826, son of Clement and Mary (Ringgold) Cox. He was graduated at Georgetown College in 1843, and then studied law with his father. He next attended the Harvard Law School, was graduated there in January, 1847, and was admitted to the bar in Washington on his twenty-first birthday. In January, 1848, he succeeded to his father's practice, and was lucratively and actively employed in his vocation, adding luster to his professional name, until March, 1879, when he was appointed to the bench of the supreme court of the District of Columbia by Pres. Hayes. In the meantime he had served as recorder of Georgetown, and had been president of the board of aldermen of his native city; later he was for several years auditor of the supreme court of the District of Columbia. The most conspicuous event in his career was the trial of Guitau, the assassin of Pres. Garfield, in 1881, which lasted three months. Since 1874 he has been professor of law in Columbian University, and up to the time he went on the bench was president of the Arlington Fire Insurance Co. and a director in the Potomac Insurance Co. of Georgetown. Institutions of learning have not been niggardly in bestowing upon him scholastic honors, the degrees of B.A. and A.M. having been received by him from the Georgetown University, of B.L. from Harvard, and that of LL.D. from Columbian University. Judge Cox descends from a highly respectable family of English origin, whose residence in America antedates the revolutionary war; John Cox, great-great-grandfather of the judge, having reached the country some years before the beginning of the struggle for liberty alluded to. He was accompanied by his brother, Lawrence, an officer in the British army; but that gentleman returned to England when a disruption between the colonies and the mother country became inevitable, while John remained. One of his grandchildren, named after him, was reared in Baltimore, Md., but before 1800 removed to Georgetown, D. C., where for many years he carried on an extensive mercantile business, and became one of the most honored and popular citizens of the city. For twenty-four years he served as mayor, having been elected to no less than twelve consecutive terms. He was patriotic, and in 1814 took up arms in defense of the capital, and was a colonel of volunteer troops. Col. Cox was first married to Matilda Smith, and of this union was born Clement Cox, the father of Judge Cox. Judge Cox was married, in October, 1866, to Margaret, daughter of the late James Dunlop, formerly chief-justice of the cir-

Wm. Hammond

cuit court of the District of Columbia. Mrs. Cox died in February, 1887, leaving two children: Mary and Walter.

**DEARBORN, Henry Alexander Scamwell**, lawyer, congressman and author, was born at Exeter, Rockingham co., N. H., March 3, 1783. He was a son of Gen. Henry Dearborn, distinguished for his services in the revolutionary army, and subsequently secretary of war, and was descended from Godfrey Dearborn, of Devon, England, one of the original settlers of Exeter, in 1639. He was one of the sixth generation of Dearborns in this country. His mother was Dorcas Osgood Marble, daughter of Col. John Osgood, of Andover, Mass., and widow of Isaac Marble; she was his father's second wife. One of his namesakes was Gen. Alexander Scamwell, in whose regiment his father had served as a major. In 1784 his parents removed to that part of Pittston now Gardiner, Me., where he remained until he left home for school. Gen. Henry Dearborn removed to Washington in 1801, and the son entered William and Mary College, Williamsburg, Va., where he was graduated in 1803. He then began the study of law under William Wirt, who was practicing in Virginia at that time, and continued it under Judge Story, at Salem, Mass. He practiced at Salem for a short time, and then, in 1806, removed to Portsmouth, N. H., where he varied his professional life by superintending the defences of the place. In 1812 he succeeded his father as collector of the port of Boston, and as brigadier-general of militia commanded the defences of the harbor. In 1816 he was captain of the Ancient and Honorable Artillery Co. He held his collectorship until 1829, when he was removed by Pres. Jackson, and then was elected to the state house of representatives. He was a member of the governor's council in 1830, and of the state senate in 1831. In 1820 he was a member of the state constitutional convention. He was sent to congress from the Norfolk district in 1831, and served from Dec. 5 until March 2, 1833. He was adjutant-general of Massachusetts in 1835-43, when he was dismissed from office for having lent the state arms, during the governor's absence, to the government of Rhode Island, the Dorr rebellion being in progress in that commonwealth. From 1847 until his death Gen. Dearborn was mayor of Roxbury. His interest in public improvements was a practical one. He was superintendent of the state survey for a canal from Boston to the Hudson river, and when this was rendered unnecessary by the construction of the Great Western railroad of Massachusetts, he gave encouragement to that, and advocated the tunnelling of Hoosac mountain. He was one of the originators of the plan for building Bunker Hill monument and for laying out Mount Auburn and Forest Hills cemeteries, and aided in raising funds with which to erect a monument to John Eliot; writing a life of the devoted missionary. Gen. Dearborn was passionately fond of horticulture, published a volume of papers dealing with that subject, and also was deeply interested in agriculture. He was a voluminous writer, but most of his works remain in manuscript, including a "Life of Jesus Christ" (2 vols.); "Life of Com. Bainbridge"; a voluminous collection of papers, containing the life and correspondence of his father; "Life of W. R. Lee, U. S. A."; a treatise on "Græcian Architecture"; and a diary in forty-five volumes. His published works include: "Commerce of the Black Sea," with charts (3 vols., 1819); "History of Navigation and Naval Architecture" (2 vols.); "Centennial Address on the Settlement of Roxbury"; "Defense of Gen. Dearborn Against the Attacks of Gen. Hull"; "Internal Improvements and Commerce of the West"; "Address Before the Berkshire Agricultural Society," and

"Memories of Mount Auburn." He was an active member of the American Academy, and in 1831 received an honorary degree from Harvard. Gen. Dearborn was married, May 3, 1807, to Hannah Swet, daughter of Col. William R. Lee of Marblehead, Mass. She bore him two sons, Henry George Raleigh and William, and a daughter, Julia Margaretta (Mrs. Clapp). Gen. Dearborn died at Portland, Me., July 29, 1851, and was buried in Forest Hills cemetery, Roxbury, Mass.

**BANGS, John Kendrick**, author, was born at Yonkers, N. Y., May 27, 1862, son of Francis S. and Amelia Frances (Bull) Bangs. His father was a lawyer, practicing in New York city, and president of the Bar Association; his grandfather, Nathan Bangs, was president of Wesleyan University, Middletown, Conn., in 1841-42, and was a prolific writer on religious and historical subjects. The original ancestor of the family was Edward Bangs, who emigrated to Massachusetts, in the ship Anne, in 1622. John Kendrick Bangs received his classical education at Columbia College, and while there acquired a little experience in literary work as an editor of the under-graduate publication, "Acta Columbiana." He was graduated, in 1883, with the degree of Ph. B., then spent a year in Columbia Law School, and in 1884 became associate-editor of "Life." In 1888 he joined the staff of "Harper's Monthly" as editor of the "Drawer"; in July, 1898, succeeded Laurence Hutton as a writer of "Literary Notes" in "Harper's Magazine." In January, 1899, he became editor of "Literature," published by Harper & Bros., New York. Mr. Bangs attributes his success in life to adaptability to circumstances and a cheerful disposition. In addition to being a literary man, he is a reader and lecturer; is also director of a gas company and president of the Halsted School at Yonkers. He was Democratic candidate for mayor of Yonkers in 1894; vice-president of the board of education of that city in 1896-97, and president of the Amackassin Club. He is a vestryman of St. Paul's (P. E.) Church, and a trustee of the Yonkers Public Library, and is a member of the Lotos and University clubs and the Century Association of New York city and the St. Botolph Club, Boston; also of the Ardsley and St. Andrew's golf clubs; and of the Psi Upsilon Fraternity. His principal works are: "Roger Camerden" (anonymous) (1887); "The Lorgnette," with S. W. Van Schaick (1887); "Katharine: A Travesty" (1887); "New Waggings of Old Tales," with Frank Dempster Sherman (1888); "Mephistopheles" (1888); "Tiddlywink Tales" (1891); "In Camp With a Tin Soldier" (1892); "Coffee and Repartee" (1893); "The Tiddlywink Poetry Book" (1893); "Half Hours with Jimmie Boy" (1893); "Toppleton's Client" (1893); "The Water Ghost" (1894); "Three Weeks in Politics" (1894); "Mr. Bonaparte of Corsica" (1895); "The Paradise Club" (1895); "The Idiot" (1895); "A House-Boat on the Styx" (1895); "A Rebellious Heroine" (1896); "The Bicyclers" (1896); "The Pursuit of the House-Boat" (1897); "The Mantel Piece Minstrels" (1897); "A Prophecy and a Plea" (1897); "Paste Jewels" (1897); "Ghosts I Have Met" (1898); "Peeps at People" (1898); "The Enchanted Type-Writer" (1899); "The Idiot at Home" (1899); "The Dreamers: A Club" (1899). Mr. Bangs was married, in New York city, March 3, 1886, to Agnes Lawson, daughter of Jabez B. and Sarah Elizabeth (Bull) Hyde. They have three children living.

**ELKINS, William Lukens**, financier, was born near Wheeling, W. Va., May 2, 1832, son of George and Susanna (Howell) Elkins. His father, born in Philadelphia in 1786, and baptized at Christ Church by Bishop White, served in the war of 1812, and was for many years engaged extensively in paper manufacture in Pennsylvania, Maryland and West Virginia. His paternal ancestor, Ralph Elkins, was a planter in York county, Va., as early as 1664; his maternal ancestor, Thomas Howell, a passenger with William Penn on the *Welcome* in 1682, settled in West New Jersey, and in 1683 and 1685 served in the provincial assembly. Among other early American ancestors of Mr. Elkins were: Col. John Reading, father of John Reading, the first native governor of the colony, and one of the council of proprietors of West New Jersey, member of the assembly in 1697 and 1702; justice of the supreme court; member of the governor's council, and lieutenant-colonel of a battalion of colonial troops; Rev. Thomas Dungan, a native of Ireland, who in 1683 removed from Rhode Island, where he had served in the assembly, and founded the first Baptist church in Pennsylvania; Rev. John Watts, pastor of the Pennypack Baptist Church, near Philadelphia (1688-1702), and William Freeborn, one of the eighteen signers of the historic compact of March 7, 1688, which marks the beginning of the colony of Rhode Island. William L.

Elkins received his education in the schools of Philadelphia, and on reaching majority, engaged in business as a commission merchant with marked success. In 1862 his attention was attracted to the oil regions of Pennsylvania, and after a careful inspection of the field, he concluded that the supply of petroleum was practically inexhaustible, and disposing of his mercantile interests, invested all his capital in the industry. For nearly twenty years he labored ceaselessly in organizing companies, sinking wells and producing vast quantities of oil. He early perceived that refining oil, for illuminating purposes, could be

made profitable if conducted on a scale which would warrant large purchases of the crude material and its manufacture under economical conditions, and to this end he established a plant in Philadelphia, which grew to such proportions that he was finally enabled to secure absolute control of the oil refining interests of that city. He conducted the refining industry in other places also, and at one time owned the *Riverside Oil Refining Works* on the Alleghany river. In 1875 he became a partner in the *Standard Oil Co.*, but disposed of his interests in 1881. The work for which Mr. Elkins is most widely known, and that which has given his name prominence among the leading financial men of this country, is in the construction and development of street railways. In 1873 he invested largely in the street railways of Philadelphia, and being convinced that a consolidation of the numerous lines of the city would lead to better service to the public, at a reduced cost of operating, he bent his energies to bring about this result, until it was fully accomplished. His first success in this direction was in the organization of the *Philadelphia Traction Co.*, which acquired possession of the greater part of the railway system of the city, and the work was completed in the formation of the *Union Traction Co.*, which acquired the entire system—the largest, and probably the most efficient and best equipped in the world. His suc-

cess in this field prompted Mr. Elkins to apply the same methods and system to other cities, with the result that he eventually became identified with and heavily interested in the street railways of New York, Chicago, Baltimore, Pittsburgh and other large centres of population. Among the companies of these cities which he helped to organize, and in which he is a director and extensive stockholder, are the *Metropolitan Traction Co.* of New York; the *Baltimore Traction Co.*; the *North and West Side and United Traction* companies of Chicago, and the *Consolidated Traction Co.* of Pittsburgh, and he is connected in the same way with the *North Jersey* and the *Consolidated traction railways* of New Jersey. He has been a director of the *Pennsylvania railroad* for twenty-one years; is also a director of the *Philadelphia and Erie*, *Schuylkill Valley* and *Fort Pitt* railroads, and is an officer in the *Land Title and Trust Co.*; the *Pennsylvania Manufacturing, Heat, Light and Power Co.*; the *Edison Electric Light Co.*, and *United Gas and Improvement Co.*, all of Philadelphia, and the *United Coke and Gas* companies of Boston and Pittsburgh. The *United Gas and Improvement Co.*, which was practically organized by Mr. Elkins, is a giant concern, controlling over sixty plants for the manufacture of gas in different cities, its latest acquirement being the entire gas plant of Philadelphia, which it has leased from the municipal authorities. He is also a trustee of the famous *Girard estate*, managed in the interests of Philadelphia, chiefly for educational purposes, and is a director and active promoter of the *Pennsylvania commercial museums* and of the *National export exposition* of 1899. Mr. Elkins is one of the largest landed proprietors in Philadelphia, and in connection with his business associate, Mr. Peter A. B. Widener, has erected several thousand houses in that city, a work of development quite in line with the unique system of a home for every family in Philadelphia, which has made that city noted throughout the land as a "city of homes." He is deeply interested in the development of art in the United States, and has instituted a prize of \$5,000 for the most meritorious painting exhibited by an American artist at the *Pennsylvania Academy of Fine Arts*. His own gallery is one of the finest in Philadelphia, and contains some noted paintings of the old masters and many choice selections from the works of the leading artists of the present day. He takes a deep interest in public affairs, but has never sought or held public office, with the exception of the position of aide-de-camp with the rank of colonel on the staff of Govs. Hartranft and Stone, of Pennsylvania, and that of commissioner to represent Philadelphia at the *Vienna international exposition* in 1873. He is a member of the *Historical, Genealogical and Colonial societies* of Pennsylvania; the *Union League, Art, and Country clubs* of Philadelphia; the *Maryland Club* of Baltimore; *Manhattan Club* of New York city, and *Chicago Club* of Chicago. His town house, on Broad street, Philadelphia, is one of the largest and handsomest homes in the country. Mr. Elkins was married, Jan. 21, 1857, to Maria Louisa, daughter of James Broomall, of Delaware county, Pa., and has four children, George W. Elkins, William L. Elkins, Jr., Mrs. George Dunton Widener and Mrs. Sidney Frederick Tyler.

**HAYWOOD, Edmund Burke**, physician, was born in Raleigh, N. C., Jan. 13, 1825, son of John and Eliza Eagles (Williams) Haywood. His father was treasurer of North Carolina (1787-1827), and first mayor of Raleigh, and in his honor the county of Haywood, formed in 1808, was named; his mother was a niece of Gov. Benjamin Williams. His great-grandfather, John Haywood (died, 1758), came from the parish of Bolton, Lancashire, and settled

W. L. Elkins

*W. L. Ellis*

at an early date in North Carolina. As an agent of Lord Granville, he was engaged in laying off and selling the estate of that nobleman in North Carolina; he was also treasurer of the northern counties (1752-58). William Haywood, son of John, was, in 1775, chairman of the committee of safety of Edgecombe county, and in 1776 a member of the provincial congress at Halifax; of the constitutional convention of 1776, and a councillor of state; he died in 1779. E. Burke Haywood was educated in the Raleigh Male Academy and at the University of North Carolina, although he did not complete the course there. He received the degree of M.D. from the University of Pennsylvania in 1819, and immediately entered on a successful professional career in Raleigh. At the outbreak of the civil war he joined the Raleigh light infantry, and was elected surgeon of the command. In May, 1861, he organized the first military hospital established in North Carolina, and soon after this was sent by Gov. Ellis to inspect the military hospitals on Morris island, S. C. On May 16, 1861, he was appointed surgeon of the North Carolina state troops, and on June 15th was made president of a board of surgeons to examine applicants for the position of surgeon. He was on duty in the Seabrook Hospital in Pechmond during the seven days' battle, and remained in the service of the state until Dec. 4, 1862, when he was appointed surgeon in the provisional army of the Confederate states. He was placed in charge of the Pettigrew Hospital in Raleigh, and remained there until the close of the war. He was also president of the Raleigh medical board for granting furloughs and discharges from the Confederate army, and was acting medical director for the department of North Carolina. When the war ended he had a number of sick and wounded soldiers in the Pettigrew Hospital too feeble to move. These patients were tended with his usual care, and the last were not discharged until July 4, 1865. He then resumed his civil practice, which increased in importance and value, his reputation as a surgeon drawing many patients from a distance. In 1868 he became president of the North Carolina Medical Society, and two years later helped to organize the Raleigh Academy of Medicine. He filled many places of honor and trust in these societies; served as delegate to numerous national and international medical societies; was director from 1866 of the North Carolina Insane Asylum and president of the board (1875-89), and was instrumental in securing new buildings for the colored asylum in Goldsboro and in the establishment of the Western Asylum in Morganton. He received the degree of LL.D. from the University of North Carolina in 1889, being the first North Carolina physician to be thus honored. In 1850 he was married to Lucy A. Williams, of Raleigh, and had six sons and one daughter. He died in Raleigh, N. C., Jan. 18, 1894.

**VAN ALSTYNE, Thomas J.**, jurist and congressman, was born at Richmondville, Schoharie co., N. Y., July 25, 1827, son of Dr. Thomas B. and Eliza (Gile) Van Alstyne. At the age of thirteen, while visiting his brother-in-law, a Baptist minister in Cayuga county, he conceived the purpose of acquiring an advanced education, and became a student in the academy at Moravia. After a year spent at Moravia, and a period at a select classical school, he entered Hartwick Seminary, where he completed his preparation for college. He matriculated at Hamilton College, where he was graduated in 1848, receiving the degree of A.B., and in 1851 that of A.M. In college his standing was good, and he excelled in mathematics. In addition to the regular college course, Mr. Van Alstyne took a private course in law, under the instruction of Prof. Theodore W. Dwight, who subsequently became eminent as an instructor in the law department of Columbia College

of New York. In 1848 Mr. Van Alstyne entered the law office of Messrs. Harris & Van Vorst, of Albany. By diligent attention to the business of the office he was enabled, with his knowledge of the principles of law before acquired, to pass, before the close of the year, a satisfactory and successful examination for admission to practice in all the courts of the state. Mr. Van Alstyne remained with Harris & Van Vorst until 1850, continuing study and practice. He then opened an office, and practiced without a partner until 1853, when he associated with himself Matthew McMahon. The firm did a large and diversified business, Mr. McMahon being the confidential adviser of the prelates of the diocese of the church of which he was a member, and Mr. Van Alstyne managing the legal details of the business and the trials of the causes. In 1858 Mr. Van Alstyne formed a co-partnership with Winfield S. Hevenor, which has continued down to the present time, making the firm the oldest in continuance in Albany. The business of the firm of Van Alstyne & Hevenor was large from the first, embracing most of the branches of the law. They adopted as rules of action, never to give advice unfounded on actual or assured fact, or unvarnished in law; never to appeal from a just verdict upon the merits, though a reversal on account of error might be had, and might result in a new trial. In politics Mr. Van Alstyne has always been a Democrat. Prior to the civil war he was a Free soiler on principle, but recognized the rights of the slave-holding states under the constitution and approved their maintenance under the law. War supervening, based upon the institution of slavery, he urged its vigorous prosecution, with the certain abolition of slavery as an incident. In 1871 Mr. Van Alstyne was elected to the office of county judge. On assuming the duties of his office he adopted strict rules for conducting the business of the court. The court calendar during the twelve years of his service was large, the number of cases tried before him nearly equaling the number of those tried at the Albany circuit, and were as varied and difficult in nature. Very few verdicts were reversed for mistrial, and very few decisions were set aside as being against the law. In 1882 Mr. Van Alstyne was elected as representative in the 48th congress, and was appointed a member of the committees of claims and expenditures of the department of justice. He was also on the special committee of three to investigate charges of improper conduct of the U. S. marshal for the southern district of Ohio at the congressional election of 1884. In the fall of 1897 Mr. Van Alstyne was elected mayor of the city of Albany, N. Y., and is discharging its duties at the present time with credit to himself and satisfaction to the great body of the people. Mr. Van Alstyne is a member of Emanuel Baptist Church of Albany. He is also a member of several orders and societies. He has a well-selected library of over 6,000 volumes of miscellaneous books. Mr. Van Alstyne has been thrice married; first, in 1851, to Sarah, daughter of the late Ruel Clapp, of Albany. Of this marriage, one son survives, Thomas Butler Van Alstyne, lawyer and fruit-grower, residing in southern California. He was again married, in 1876, to Louisa, daughter of the late Samuel S. Peck, of Albany, and third, in 1886, to Laura Louisa, daughter of W. W. Wurdemann, Esq., of Washington, D. C. Of this latter marriage one son is living.

*Thomas J. Van Alstyne.*

**GREEN, William Mercer**, first Protestant Episcopal bishop of the diocese of Mississippi, and fifty-first in succession in the American episcopate, was born in Wilmington, N. C., May 2, 1798, son of William and Mary (Bradley) Green. His father, a wealthy rice planter, died when William was a mere child, so that the early training of the boy devolved entirely upon his mother, who, coming of Quaker stock, was inclined to be a rigid disciplinarian. He was graduated at the University of North Carolina in 1818, and decided to take up the study of theology. Three years later he was ordained deacon in Christ Church, Raleigh, N. C., by Bishop R. C. Moore, and ordained priest in St. James' Church, Wilmington, N. C., by the same bishop. He had been called

to the rectorship of St. John's Church, Williamsborough, in 1821. Four years later he removed to Hillsborough, and there established St. Matthew's Church, of which he was rector for twelve years. In 1837 he accepted appointment as chaplain and professor of belles-lettres and rhetoric in the University of North Carolina. In 1849 Dr. Green was elected to be the first bishop of the diocese of Mississippi, and was formally consecrated in St. Andrew's Church, Jackson, Miss., Feb. 24, 1850. For thirty-three years he devoted himself heart and soul to the faithful discharge of the arduous duties of his

office without requiring any help whatever; but after 1883 this venerable bishop, who had then nearly completed four score years and ten of a noble and saintly life, naturally began to feel the infirmities of old age, and, therefore, availed himself of the aid of an assistant. He was one of the most active founders of the University of the South, at Sewanee, Tenn., in 1860, and in 1867 he became its chancellor. Prominent among his publications are: "Memoir of the Right Reverend Bishop Ravenscroft of North Carolina" (1830) and a "Life of the Right Reverend Bishop Otey of Tennessee" (1886), besides two sermons on "Baptismal Regeneration" and "Apostolic Succession," and an oration on "The Influence of Christianity upon the Welfare of Nations" (Hillsborough, N. C., 1831). The degree of D.D. was conferred on him by the University of Pennsylvania in 1845, and that of LL.D. by the University of North Carolina in 1880. Bishop Green was twice married: first, on Dec. 22, 1818, to Sarah Williams, daughter of Stephen and Mary (Williams) Sneed, who died April 11, 1832, leaving five children; and second, Dec. 16, 1835, to Charlotte Isabella, daughter of James and Mary (Hooper) Fleming, who bore him eight children. He died at Sewanee, Tenn., Feb. 13, 1887.

**THOMPSON, Hugh Miller**, second Protestant Episcopal bishop of Mississippi, and 129th in succession in the American episcopate, was born in county Londonderry, Ireland, June 5, 1830. His parents removed to the United States in 1836, and being shipwrecked in the gulf of St. Lawrence, resided for a few years near Caldwell, N. J. In 1844 they settled at Cleveland, O. The future bishop had always been set apart by his parents for the ministry in the church of his ancestors, and after completing his academic and classical education in a private school, became at the age of nineteen a candidate for orders in the diocese of Wisconsin, pursuing his theological studies at Nashotah. He was ordained deacon in the chapel of Nashotah, June 6, 1852, by Bishop Kemper, and immediately put in

charge of Grace Church, Madison. For one year of his diaconate he was in charge of the Church of the Nativity, Maysville, Ky.; then returned to Wisconsin, and took charge of St. John's Church, Portage, where he was ordained priest, Aug. 31, 1856. While rector at Portage he did mission work in Baraboo, Kilbourn city and other places. In 1858 he became rector of St. Matthew's, Kenosha; in 1859, of Grace Church, Galena, Ill., and in 1860 was called to the chair of history at Nashotah House. Here he remained ten years, and during this period was also rector of his former parish in Kenosha and associate rector of St. Paul's, Milwaukee. While in his charge at Kenosha he founded Kemper Hall, the diocesan female school. He also became editor-in-chief of the "American Churchman" of Chicago, which was finally merged in the "Churchman," then published in Hartford, Conn., and for some six months Dr. Thompson continued to write the leading articles. On resigning his professorship at Nashotah, he became rector of St. James' Church, Chicago, which was destroyed in the fire of 1871. He then accepted the rectorship of Christ Church, New York city, and the editorship of the "Church Journal," which he held for a while after he became rector of Trinity Church, New Orleans, in 1876. On Feb. 24, 1883, he was consecrated in Trinity Church assistant bishop of Mississippi, and on the death of Bishop Green became diocesan. The degree of S.T.D. was conferred on him by Hobart College in 1863, and LL.D. by the University of Alabama and D.D. by the University of the South, both in 1884. Bishop Thompson attended the third Lambeth conference in 1888, and was actively engaged upon various committees, including that on socialism and others. In Westminster Abbey he pronounced the eulogy over the remains of his close friend and predecessor in Trinity Church, New Orleans, Bishop Harris, of Michigan. He also attended the same conference of 1897, serving on various committees, especially that on socialistic questions. By request of the English bishops, conveyed through the archbishop of Canterbury, he preached the jubilee sermon of the Society for the Propagation of the Gospel in St. Paul's Cathedral, London. He also preached the Whitsunday sermon before the University of Oxford, in St. Mary's and in Westminster Abbey, for the funds of the diocese of Rochester. Bishop Thompson published "Unity and its Restoration" (1860); "Sin and Its Penalty" (1862); "First Principles" (1868); "Absolution" (1872); "Copy," a volume of editorial papers (1872); "Is Romanism the Best Religion for the Republic?" (1873); "The World and the Logos," Bedell lecture (1855); "The World and the Kingdom," Paddock lecture (1888); "The World and the Man," Baldwin lecture (1890); "The World and the Wrestlers," Bohlen lectures (1895); "More Copy," a volume of essays (1897), and other works, pamphlets and single sermons. Bishop Thompson has been married twice: first, at Madison, Wis., in March, 1853, to Caroline, daughter of Simeon and Mary Berry, of Sandy Hill, N. Y.; second, on Oct. 25, 1859, to Anna Weatherburne, daughter of Henry Butler and Mary (Hatch) Hinsdale, of Kenosha, Wis. By the first marriage he has one son, Rev. Frank Thompson, chaplain U. S. N., and one daughter, Annie, wife of James Pearce, of Yonkers, N. Y.; by the second, one son, Hugh Graeme Thompson, of

W. M. Green

Hugh Miller Thompson

Milbrook, Miss., and one daughter, Mary Weatherburne, widow of the Rev. Wm. Torry Howe.

**CHAPMAN, Frank Michler**, naturalist, was born at Englewood, N. J., June 12, 1864, son of Lebbens and Mary (Parkhurst) Chapman. His father was a prominent New York lawyer and direct descendant of Robert Chapman, who sailed from England to Saybrook, Conn., in 1635. After finishing at a preparatory academy, Mr. Chapman entered the American Exchange National Bank, in New York city, where he remained for six years, rising to the highest position in his department. A love of nature, however, was inherent, and during this period his spare time was given to a continuation

of the study of ornithology, which he had begun as a boy at the age of nine. In 1886 he yielded to the growing desire to devote his life to the study of natural history, and resigning his position, started on an expedition to collect and study the birds of Florida. Two years later he was offered the post of assistant curator of the department of ornithology and mammalogy in the American Museum of Natural History, in New York city, and in the interests of this institution he has since visited Texas, Mexico, Yucatan, most of the West Indian islands and Trinidad, collecting birds, mammals and reptiles, and

publishing the results of his observations in the museum "Bulletin." In 1888 he was elected an active member of the American Ornithologists' Union, "the highest honor which an American ornithologist can attain," and in 1897 was elected president of the Linnaean Society of New York city. In 1893 he was appointed associate editor of the "Auk," the leading ornithological journal of this country, and in 1896 was invited by Columbia University, New York city, to deliver, in conjunction with Prof. Lloyd Morgan, of England, its third series of biological lectures. Mr. Chapman is a firm believer in the ennobling influences of nature, and in addition to numerous technical papers published in scientific journals, he has contributed popular articles to the magazines and delivered lectures on ornithology and naturalists' travels with a view to awakening an interest in natural history studies. His "Handbook of Birds of Eastern North America," published in 1895, was designed to simplify the study of birds. It reached its third edition the year of its publication, and was followed, in 1897, by "Birdlife. A Guide to the Study of Our Common Birds." In 1899 he established "Bird-Lore," a bi-monthly magazine of ornithology.

**BLAIR, Samuel**, clergyman, was born at the family homestead, at Fagg's Manor, Chester co., Pa., in 1741, son of Rev. Samuel Blair (1712-51), pastor of the Presbyterian church and principal of the classical school at that place. An uncle, Rev. John Blair, was professor of divinity and moral philosophy in the College of New Jersey, and also vice-president of the college. He was graduated at the College of New Jersey with honor in 1760, and remained as tutor for three years (1760-64). He was licensed to preach by the presbytery of Newcastle in 1764, and being an impressive speaker, as well as a careful writer, attained an immediate popularity.

On Nov. 27, 1766, he accepted a call to become the colleague of Rev. Dr. Sewell, in the Old South Church, Boston. On his way to Boston he was shipwrecked, lost all his effects and barely escaped with his life. The exposure and the loss of his manuscript sermons injured his health and depressed his spirits. In 1767 he was chosen president of the College of New Jersey as successor to Rev. Samuel Finley, but promptly and generously declined the appointment in consequence of the willingness of Dr. John Witherspoon—then in Scotland—to accept the place, which he (Dr. Witherspoon) had at first rejected. He resigned the pastorate Oct. 10, 1769, partly because of ill health, partly because of differences of opinion between his congregation and himself respecting the "halfway covenant," and took up his residence at Germantown, now a part of Philadelphia. There he aided in founding the English Presbyterian Church, and preached gratuitously for a time. For two years he served as chaplain of congress and was several times a member of the Pennsylvania assembly. He was considered one of the most accomplished ministers in the Presbyterian church, being described as "a man of polished manners; of amiable and generous disposition; a superior scholar and well-read theologian." His published works, now very scarce, embrace: "An Oration on the Death of King George II." (1761); "Discourse on Psalmody" (1789); "Fast-Day Discourse" (1798), and "A Funeral Discourse Occasioned by the Death of Rev. John Blair Smith, D.D." (1799). The degree of D.D. was conferred on him by the University of Pennsylvania in 1790. Dr. Blair was married, in 1769, to a daughter of Dr. William Shippen, Sr. He died in Germantown, Pa., Sept. 24, 1818.

**HERRMANN, Alexander**, prestidigitator, was born in Paris, France, Feb. 11, 1844, youngest son of Samuel and Anna (Meyer) Herrmann. His father had been a conjurer, but had abandoned that calling for the study of medicine, and it was his intention to have his son follow the same profession, but he manifested such a penchant for the stage that he was permitted to accompany his eldest brother, Carl, on various conjuring tours of the continent. Carl Herrmann (1816-87) was the most famous exponent of the art magique of his day. He engaged a competent tutor to travel with the company, and interested his brother, Alexander, whom he had appointed as his assistant, under the stage name of "Master Alexander." Six years were spent in this way, during which they visited Spain, France, Germany, Russia, Brazil and the surrounding countries. The parents now claimed Alexander, and placed him at the University of Vienna, where he remained until the age of sixteen.

Then receiving a proposal from his brother to make a tour of the world, he ran away from home and studies. Their first appearance in America was at the Academy of Music, New York, Sept. 16, 1861. Their last joint engagement was in 1869. On the opening night in New York, Sept. 20th, Carl introduced Alexander to the audience as his brother and successor. After the brothers separated, Alexander Herrmann returned to Europe, where he achieved a brilliant success, subsequently visited South America, and returning to England, played a remarkable engagement of 1,000 performances at the Egyptian Hall, London. In 1874 he returned to the United States, and became a naturalized citizen in Boston in 1876

*Frank M. Chapman*

*A. Herrmann*

He located his home on Long Island, N. Y., where he had a handsome villa. In 1873 he was married to Adelaide Aearsey by Mayor Wickham, of New York, and it is related that the groom produced a roll of greenbacks from his honor's sleeve to pay the wedding fee. His wife was an accomplished dancer, of great beauty, and always assisted him at his performances. Herrmann was a wonderfully expert sleight-of-hand performer, especially with cards and coins. He dearly loved a practical joke, and when off the stage was continually performing surprising feats, to the bewilderment of friends and strangers. A favorite trick of his was to be detected by a policeman in the act of clumsily picking a stranger's pocket, and on being arrested and taken to the station-house the missing articles would be found on the person of the astonished police officer, whose own belongings not unfrequently were discovered in the stranger's pocket. Besides being a conjurer, he was a clever pantomimist and comedian. For years he drew crowded houses and made large fortunes, but injudicious theatrical speculations in New York and Philadelphia, where he essayed the proprietorship and management of local theatres, made sad inroads upon his wealth. He was a raconteur of rare ability; a linguist, speaking French, German, Spanish, Russian, Portuguese, Dutch and English, and the prince of social entertainers. His presence was much sought after by clubs and fraternal organizations. Various chivalric orders were conferred upon him by European potentates. He contributed a number of articles to magazines on magic and sleight-of-hand. He died of heart failure in his private car, Dec. 17, 1896, while on the way from Rochester, N. Y., to Bradford, Pa.

**MOSS, Frank**, lawyer and author, was born at Cold Spring, Putnam co., N. Y., March 16, 1860, son of John R. and Eliza (Wood) Moss. His father, a native of Manchester, England, and a talented musician, came to America in 1850, and achieved considerable reputation both in Newburgh, N. Y., and New York city. During the civil war he was a second lieutenant in the 9th New York volunteer infantry (Hawkins' zouaves); was taken prisoner; confined in Libby prison for six months, and finally exchanged. Mr. Moss' mother was a daughter of Joshua and Joanna (De Groot) Wood, of combined Dutch and English extraction. He received his education in the public schools of New York city, whither he had removed with his parents in 1867, and after a partial course in the College of the City of New York began the study of law in the office of

Joseph Fetzrecht. While engaged in reading law he also pursued the literary and scientific course of the Chautauqua University. He was admitted to the bar in 1881, and two years later, upon Mr. Fetzrecht's removal, began practice in the office where his studies had been made. He earned a reputation for high proficiency in real estate and testamentary practice, and became an authority on excise and police law. He is a successful trial lawyer, and has served as executor and trustee of a number of large estates, notably those of Mathy G. Lane and John Bisco. Mr. Moss first came into public notice in 1887, when, on behalf of certain owners of property in Twenty-seventh street, he prosecuted the keepers of disorderly resorts, and brought to trial before the police board Capt. Alexander S. Williams, then in command of the "Tenderloin" precinct, for per-

mitting the existence of the disorderly places in that then notorious neighborhood. This action was the beginning of a long and arduous fight for the cause of reform in municipal government, which had its fruit in the election of Mayor Strong in 1894. After the trial of Capt. Williams he was appointed counsel for the Society for the Prevention of Crime, and later became a director and a member of the executive committee of that notable organization, in which he has exerted a potent influence and a wise direction. In the conduct of numerous cases throughout the city he gained an experience in police corruption and oppression which peculiarly fitted him for the position of associate counsel to the Lexow investigating committee in 1894. In the investigation he mapped out much of the work, prepared and examined many of the witnesses, participated in the shaping of the investigation and drafted the committee's report. In the spring of 1897 Mayor Strong appointed him president of the board of police commissioners to succeed Hon. Theodore Roosevelt, resigned. The great difficulty of the position was recognized generally. The board was inharmonious, and some of the highest offices in the force had remained unfilled for over two years. He maintained a courteous and dignified, although uncompromising, stand in entire independence of the contending interests which had arisen in the board, and soon saw restored an efficient administration of the affairs of the police department, turning over to the new city administration in 1898 a completely reorganized and a thoroughly efficient force. Outside his efforts for good government, Mr. Moss has not figured conspicuously in politics, although he is, and always has been, a firm Republican and an ardent patriot, and has frequently addressed the public on the issues of good government and good citizenship. In 1898, in the disagreement between a majority of the board of trustees of the Sailors' Snug Harbor, of New York city, and its resident manager, George D. S. Trask, Mr. Moss was retained to represent the trustees in a searching investigation, in which several thousand pages of testimony was taken. His successful prosecution of the case resulted in Trask's enforced resignation and a reorganization of the management. Another notable case was the defence of the boy murderer, Jacob Beresheim, who killed his employer under peculiar circumstances, of medico-legal interest, in which the boy was saved by a disagreement of the jury. Early in 1899, when an investigation committee of the New York legislature on official corruption in New York city was convened, Mr. Moss was chosen its counsel, and still further distinguished himself as a lawyer and an upholder of municipal good government. Mr. Moss is a director of the Society for the Prevention of Crime; a trustee of the City Vigilance League; a member of the Republican Club; the Harlem Republican Club; of the Medico-Legal Society; of the Methodist Social Union; of the Epworth League of the Methodist Episcopal church; of the Law Institute; the City Bar Association, and the Twilight Club. He is superintendent of the Sunday-school of Trinity Methodist Church, and professor of medical jurisprudence in the New York Medical College and Hospital for Women. The degree of LL.D. was conferred upon him by Taylor University, Indiana, in 1896. In 1898 Mr. Moss published his first extensive literary work, "The American Metropolis" (3 vols.), a history of New York city from the earliest times. It treats in a skillful and scholarly manner of the social and historical features of New York's growth from small beginnings to the second largest city in the world, and of the governmental institutions from the earliest times, not forgetting a critical review of the rise of Tammany and its memorable defeat in 1894. It is decidedly novel, and is one of the most valuable

*John R. Thomas*

and thorough histories of New York that have appeared in many years. Mr. Moss was married, Jan. 24, 1883, to Eva Estelle, daughter of Eli F. Bruce, of New York city, and has one daughter and one son.

**HICKS, Francis Marion**, financier, was born in Alabama in 1826, and was educated in the public schools of his native place. He removed to Mississippi and then to Texas when a young man, and in 1870 settled in Shreveport, La. Here he became a member of the firm of Thurmond & Hicks. In 1872 the firm name was changed to Hicks & Howell, so continuing until 1888, when it became F. M. & S. B. Hicks. The Hicks Co. Limited was organized in 1892, and Mr. Hicks became president. He was in early days a Whig, but for many years has identified himself with the Democratic party. He was a member of the board of directors of the Shreveport Charity Hospital for some years, which was the only public

position he ever held. He was said to be one of the keenest financiers in Louisiana during his active business life. He is a strict member of the Presbyterian church, always having taken an active and prominent part in the church affairs. He was married at Paulding, Miss., in 1851, to Ann, daughter of James McDugald. They have eight children.

**THOMAS, John Rochester**, architect, was born at Rochester, N. Y., June 18, 1848, son of John Williams and Elizabeth (Roida) Thomas. He was educated in the schools of his native city, but his father's failure in business, in 1862, obliged him to discontinue study and seek employment. At the end of the year he decided to become an architect, and entered the office of Merwin Austin, of Rochester; subsequently pursuing a university course under the direction of Dr. Anderson, president of the University of Rochester. After spending some time studying the architecture of European countries, in 1868 he entered professional practice in Rochester. In 1874 Gov. Dix, under a special law, appointed him architect and sole commissioner for the erection of the state reformatory at Elmira, this being the first instance in New York where this method of fixing individual responsibility had been tried. He was retained in office by Gov. Tilden, and as a result about \$1,000,000 were saved the state and a reformatory prison erected which has since been considered a model the world over. Other notable buildings erected from Mr. Thomas' designs between 1870 and 1880 are: Sibley Hall of Rochester University; the buildings of the Rochester Theological Seminary, and the natural history building of the University of Virginia. In 1882 he removed to New York city, where he has since resided. During his thirty years of active professional life he has designed more public and semi-public buildings than any other architect in this country. In the combined armories of the 71st regiment and 2d battery (1893) he accomplished a feat never before attempted and never since repeated—the construction of two drill rooms, one above the other, free from all columns, and 150 by 200 feet in area. In rebuilding the New York stock exchange, in 1886, in order to dispense with columns in the large board room, Mr. Thomas used an iron plate girder 102 feet long, against the judgment of other experts, but his position in the matter has been confirmed by time. It was in this stock exchange work that the first iron caisson construction work was used in connection with building foundations. In the Hays building on Maiden lane he first used the cantilever girder construction for distributing the load on the foundations,

a system now very much in vogue. Mr. Thomas was architect for the Willard Asylum at Seneca lake, one of the largest in the country (1872); the armory of the 8th regiment, N. G. N. Y. (1889); the New Jersey State Reformatory at Rahway (1899), and the Eastern New York Reformatory, near Ellenville (1899). More than 150 churches have been erected from his designs. Some of his city churches, notably the Second Reformed Church, in Lenox avenue, and the Calvary Baptist Church in West Fifty-seventh street, New York city, are highly picturesque. In February, 1896, the municipal building commission of New York city, out of 133 designs submitted to them from all over the world for a new city hall, involving an outlay of \$25,000,000, awarded the first prize to Mr. Thomas, which included his employment as architect for the building. The terms of this competition were made purposely attractive in order that the best architectural talent should enter the lists, and were prepared by a selected body of experts, composed of the late Richard M. Hunt, William R. Ware, of Columbia College, and Edward H. Kendall. The state legislature subsequently forbade the city authorities to remove the old city hall, thus preventing the erection of the contemplated building, and this action led to the proposal for the erection of a new hall of records on an adjoining site, which is now being carried out from Mr. Thomas' designs at a cost of \$5,000,000, and is intended in its construction and art details to be equal to the best that can be produced in this age. In November, 1883, he read a paper on "Church Architecture" before a conference of

clergymen in Boston; and this was followed, in 1893, by a "History of Prison Architecture," read before the National Prison Association at their annual congress at Pittsburgh, which has been universally adopted as the standard. His latest paper is an article on proposed legislation restricting the height of buildings in New York city, read before the New York chamber of commerce in 1896. Mr. Thomas is a member of the chamber of commerce; the New York Yacht Club; the Architectural League; the Sculpture Society; the National Arts Club; the Manhattan Club, and the executive committee of the New York Prison Association. As an architectural artist, his work is characterized by originality, moderation and dignity. Judged by the artistic quality of his work and by his achievements in accomplishing repeatedly what others have declared impossible, he well deserves the title of America's leading architect. Probably his most popular work is the very picturesque 8th regiment and squadron "A" armory, in red brick and red terra cotta, which is distinctly one of the ornaments of New York, and cannot be regarded but with approbation and pleasure. Seen from the intended point of view, the granite armory of the 71st regiment piles up with equal effectiveness, though it is scarcely so fortunate in its site. In 1877 he was married to Julia Hortense, daughter of James Lewis and Harriet (Page) Munson and a descendant of the Allen and Baldwin families of New England. He has four daughters and one son.

*F. M. Hicks*

**Le BRUN, Napoléon Eugène Henry Charles**, architect, was born in Philadelphia, Pa., Jan. 2, 1821, son of Charles François Eugène and Adélaïde Louise De Monmignon (Madelaine) Le Brun, both natives of Paris. He is of noble descent, his grandparents on his father's side being Louise Alexandrine De Mauduit and Sir Charles Pierre Eugène Le Brun, and on his mother's side Marie de Monmignon and Léonard Madelaine. The latter left Paris in December, 1792, at the commencement of the French revolution, arriving at New York city in December of the same year. In the following spring they went to Philadelphia, intending to settle in that part of Louisiana now Alabama, where M. Madelaine had purchased a large tract of land, but before leaving Philadelphia M. Madelaine died of yellow fever, Oct. 7, 1793. Mme. Madelaine survived him until March 6, 1817, leaving two daughters, both married. Mr. Le Brun's granduncle, Thomas Antoine, Chevalier De Mauduit Plessis, first came to America at his own expense with Lafayette, and served in the Continental army in the double capacity of engineer and lieutenant-colonel of artillery. He had charge under Col. Greene of arranging and defending Fort Mercer, at Red Bank, N. J., near Philadelphia, when it was attacked by Count Dunop and 2,500 Hessians, on Oct. 22, 1777. At this engagement the Hessians were defeated with great loss,

and the count was taken prisoner by De Mauduit. He was also with Lafayette at the battle of Brandywine, Sept. 11, 1777. He spent the winter at Valley Forge, and was at the battle of Monmouth, June 17, 1778. When De Mauduit asked leave to return to France, the Continental congress, on Nov. 5, 1778, passed resolutions expressing its "high sense of his zeal, bravery and good conduct," and granted his request. He subsequently returned to America with the French allies under Count de Rochambeau, and commanded the artillery at the siege of Yorktown, in 1781. Later on he went to San Domingo in command of a division of the French army, and was there assassinated by the revolutionists at Port au Prince, March 4, 1791. Mr. Le Brun's father, whose direct ancestors for several successive generations had been members of the old parliament of Paris, came originally to the United States on a secret diplomatic mission during the administration of Pres. Jefferson. In 1808 he returned to this country, and in 1815 was married at Philadelphia, to Mlle. Adélaïde Louise de Monmignon Madelaine. He died Sept. 6, 1844, and his wife on Feb. 24, 1850, and both are buried at North Laurel Hill, Philadelphia. He was a distinguished linguist, and an author in several languages, his principal work being the translation of Pope's "Essay on Man" into French prose, greatly extolled for its beauty of diction. He also made a French translation of "The Anti-Anglo-mano" of Don Pedro Estala, and a Spanish translation of Barère's "La Libertad de los Mares." He was also the author of "The Benefaction of a Philosopher," "The Cry of Humanity Against Tyranny," and several other political and literary works; published an arrangement of Fénelon's "Télémaehus" for schools, which has gone through more than one hundred editions, and is still in popular use. Finding that his son, Napoléon, evinced even at an early age a decided aptitude for art and construction, he decided to educate him as an architect, and placed him in 1836 under the direction of the celebrated Thomas

U. Walter, LL.D., F.A.I.A., to pursue his studies. In 1842 Napoléon Le Brun began his professional career, and before two decades had elapsed, a number of prominent public and private edifices in his native city and state had been designed by him and erected under his supervision. The most noted of these are the Seventh, or Tabernacle Presbyterian Church in Broad street (1842), the Cathedral of Sts. Peter and Paul, the American Academy of Music, Girard Estate buildings and several county buildings and prisons. Mr. Le Brun was married, Dec. 20, 1845, to Louise Adèle, youngest daughter of Paul Lajus, a merchant of Philadelphia, and has had three sons; Pierre Paul Lajus, Charles De Mauduit and Michel Moraçin, and two daughters, Adèle and Anne Louise. The eldest and youngest sons having inherited their father's talent in a remarkable degree, have pursued their professional career as his partners since 1880. The second son died on his seventh birthday, Feb. 22, 1858, and the second daughter, a beautiful girl, died in her nineteenth year, Sept. 17, 1888. At the close of the civil war Mr. Le Brun removed with his family to New York city, where, in connection with his sons, he has erected many private dwellings, as well as public buildings of note. Among these are: the Masonic Temple, several large and beautiful churches, the New York Foundling Asylum, the Metropolitan Life Insurance building, on Madison square, the Home Life Insurance building, the hall of the board of education, and other municipal buildings. He is a fellow of the American Institute of Architects; served during eight years as a member of its board of trustees; was president of the New York chapter during two successive terms, and was its representative on the board of examiners of the New York department of buildings for eighteen years. He has been frequently consulted as an expert and adviser in many important enterprises throughout the country, and is president of the Willard Architectural Commission, charged with the duty of forming the noteworthy collection of architectural models and casts in the New York Metropolitan Museum of Art selected by his eldest son, in several European trips made for the express purpose. Of domestic tastes, Mr. Le Brun has been singularly happy in his home relations, and has made strong personal friends. His wife, a woman of rarely beautiful character, died on March 24, 1895, shortly before the long-anticipated celebration of their golden wedding.

**STURGIS, Russell**, architect and author, was born in Baltimore, Md., Oct. 16, 1836, son of Russell Sturgis and Margaret Dawes (Appleton) Sturgis. He pursued the study of architecture in an architect's office in New York, and for a year and a half in Europe. He practiced his art from 1865 to 1880, during which time he designed many important buildings, including Battell Chapel, Farnam Hall, Durfee Hall and Lawrence Hall of Yale College; the Homeopathic Medical College and Flower Hospital, New York; the Mechanics' and Farmers' Bank at Albany; and churches, business buildings, college buildings and residences in New York, Albany, Aurora, Tarrytown and Watertown, N. Y.; New Haven, Farmington and Litchfield, Conn.; Minneapolis and Louisville. In 1878 Mr. Sturgis spent some months in France, and on his return to America was appointed to the chair of architecture and the arts of design in the College of the City of New York. In 1880 he retired from his professorship and from business, on account of weak health, and went to Europe. He resided abroad about five years, during which period he renewed his early studies, and spent much time in the important architectural centres and cities rich in collections of fine art. Since the beginning of 1885 he has devoted himself to writing and to the interests of numerous

U. Walter, LL.D., F.A.I.A., to pursue his studies. In 1842 Napoléon Le Brun began his professional career, and before two decades had elapsed, a number of prominent public and private edifices in his native city and state had been designed by him and erected under his supervision. The most noted of these are the Seventh, or Tabernacle Presbyterian Church in Broad street (1842), the Cathedral of Sts. Peter and Paul, the American Academy of Music, Girard Estate buildings and several county buildings and prisons. Mr. Le Brun was married, Dec. 20, 1845, to Louise Adèle, youngest daughter of Paul Lajus, a merchant of Philadelphia, and has had three sons; Pierre Paul Lajus, Charles De Mauduit and Michel Moraçin, and two daughters, Adèle and Anne Louise. The eldest and youngest sons having inherited their father's talent in a remarkable degree, have pursued their professional career as his partners since 1880. The second son died on his seventh birthday, Feb. 22, 1858, and the second daughter, a beautiful girl, died in her nineteenth year, Sept. 17, 1888. At the close of the civil war Mr. Le Brun removed with his family to New York city, where, in connection with his sons, he has erected many private dwellings, as well as public buildings of note. Among these are: the Masonic Temple, several large and beautiful churches, the New York Foundling Asylum, the Metropolitan Life Insurance building, on Madison square, the Home Life Insurance building, the hall of the board of education, and other municipal buildings. He is a fellow of the American Institute of Architects; served during eight years as a member of its board of trustees; was president of the New York chapter during two successive terms, and was its representative on the board of examiners of the New York department of buildings for eighteen years. He has been frequently consulted as an expert and adviser in many important enterprises throughout the country, and is president of the Willard Architectural Commission, charged with the duty of forming the noteworthy collection of architectural models and casts in the New York Metropolitan Museum of Art selected by his eldest son, in several European trips made for the express purpose. Of domestic tastes, Mr. Le Brun has been singularly happy in his home relations, and has made strong personal friends. His wife, a woman of rarely beautiful character, died on March 24, 1895, shortly before the long-anticipated celebration of their golden wedding.

societies of art and archæology. He is a fellow of the American Institute of Architects; life member of the American Numismatic and Archæological Society; honorary fellow of the Brooklyn Institute of Arts and Sciences; fellow in perpetuity and member of the corporation of the Metropolitan Museum of Art; fellow of the National Academy of Design; honorary member of the National Society of Mural Painters. He is an active member of the New York chapter of the American Institute of Architects, of the Architectural League, the Grollier Club and the Municipal Art Society; also of the University, the Century and the Players' clubs, all of New York; the Archæological Institute of America and the National Sculpture Society; the Japan Society, and the Society for the Promotion of Hellenic Studies, of London. He has been president of the Fine Arts Federation of New York since its establishment in 1895. At the reorganization of the American Institute of Architects, in 1868, when from a New York society it became an organization with chapters in the principal cities, he was secretary of the institute, while the elder Upjohn was president, and R. G. Hatfield treasurer. From the organization of the Metropolitan Museum of Art, in 1870, he was an active member of the executive committee for several years. He was president of the Architectural League of New York for four terms, from 1888 to 1892. Mr. Sturgis has written much for periodicals, and has delivered many public lectures as well as addresses before the numerous societies with which he is affiliated; his subjects being, in every instance, connected with the fine arts, and especially architecture and the kindred arts of decorative design. He was editor for decorative art and mediæval archæology of the "Century Dictionary"; editor for the fine arts of "Webster's International Dictionary," published in 1890, and editor for architecture and fine art of "Johnson's Universal Cyclopedia," edition of 1893-95. In 1868 was published his "Manual of the Jarves Collection of Early Italian Pictures," with biographical and critical notes. In October, 1896, this was followed by "European Architecture: A Historical Study," and in 1897 by an "Annotated Bibliography of Fine Art"; the first of the series of "annotated lists" of the American Library Association. Since January, 1897, he has edited the "Field of Art," a department of "Scribner's Magazine." In June, 1897, a "Dictionary of Architecture," of which Mr. Sturgis is editor, was announced in New York and London, to appear in about two years. Mr. Sturgis was married, in 1864, to Sarah, daughter of Danford N. Barney, of New York. He has received the honorary degrees of M.A. from Yale College and Ph.D. from the College of the City of New York.

**KRAMER, George Washington**, architect, was born in Ashland, O., July 9, 1847, son of Daniel and Susannah (Baughman) Kramer. His family is of German-Swiss extraction, the earliest American ancestor having been George Kraemer, who settled in eastern Pennsylvania early in the eighteenth century. Although the line of descent has not been definitely traced, several of the name have attained local celebrity. His grandfather, Peter Kraemer, of Harrisburg, Pa., was a soldier in the war of 1812, and at one time sheriff of Dauphin county; his father early removed from Pennsylvania to Ashland county, O., where he engaged in contracting and farming. Mr. Kramer's maternal grandfather, Henry Baughman, a native of Virginia, and of Swiss-German descent, early settled in Trumbull county, O., where he was married to Catherine, daughter of Casper Cline, who, with his four brothers, had come to America among the Hessian mercenaries, and joined the Americans at the earliest opportunity. George W. Kramer was educated in the public schools of

his native town until his sixteenth year, when he discontinued school and began work and architectural study. With a view to obtaining a thorough practical knowledge of his profession, he engaged in business as a contractor during 1868-73. Then, opening an office in Ashland, O., he practiced architecture on his own account until 1879 when he formed an association with Jacob Snyder, a widely known designer of churches, under the style of J. Snyder & Co., which continued until 1885. From that date until 1894 he was in partnership with F. O. Weary, under the style of Kramer & Weary. This firm was dissolved upon his removal to New York city, where he is still (1899) in active professional practice. Besides notable public buildings in many states, Mr. Kramer and his associates have designed all the new buildings of Oberlin College, as well as the original buildings of Ohio Agricultural College and the college buildings at Akron, Ashland, Marietta, Mount Union, Meadville, Fostoria and other educational centres. He has also designed high and district schools and municipal buildings in many cities of Ohio and adjoining states; several of the most prominent court-houses and jails throughout the state; numerous hotels, business buildings, dwellings and factories, among which may be named the immense factories of the Duerber-Hampden watch works, the Buckeye, and others at Akron, Canton, Massillon and elsewhere. Mr. Kramer's reputation, however, lies principally in his ecclesiastical achievements. An early interest in this class of work led to his association with Mr. Snyder, who, in connection with the late Hon. Lewis Miller, of Akron, O. (one of the founders and president of the Chautauqua Association), had just begun to develop the original plans of the modern church. A contemporary writer, referring to this notable departure, says: "It marked an era and an advance in church and ecclesiastical architecture such as has not been made for centuries." This system originated largely in the demand for the accommodation of the modern Sunday-school, then being developed by Mr. Miller,

Bishop Vincent and others. In connection with later developments of the "combination church" and the "diagonal" or "pulpit-in-the-corner" plan, originating with Mr. Kramer, this system became known throughout Christendom as the "Akron" plans or ideas, which constitute the fundamental principles of all modern ecclesiastical practice. In the course of his practice, Mr. Kramer has been the architect of over 500 churches, and consulting or associate architect for as many more in nearly every

state in the Union, and also in foreign lands, for all denominations and of all grades of expense. Among the most prominent may be mentioned Christ Church, Pittsburg, the finest Methodist church in the world; Union Methodist Church, Manhattan; and the Baptist Temple, Brooklyn. In the international competition held in connection with the Columbian exposition of 1893, Mr. Kramer's plans for a model Sunday-school building were awarded first place. As an expert on heating and ventilating and a constructional and sanitary engineer, Mr. Kramer is nearly as well known. He is acknowledged as the first to successfully introduce a system of mechanical ventilation in connection with warm-air furnaces, and other successful innovations and improvements in the heating and ventilating of public buildings, and has also devised new systems of constructing and securing prisons, as well as the complete sanitary arrangements therewith. These were commended by the Ohio state board as "the best in existence," and are largely the basic principles of modern construction. Mr. Kramer has published one book, "The What, How and Why of Church Building" (1897), a standard and the only work on the modern church, and has published papers and addresses on technical, scientific and architectural subjects in periodicals or read them before conventions. He was married, in 1870, to Harriet Estelle, daughter of Timothy Blackman, of Kendallville, Ind. She is a descendant of Maj. Elijah Blackman, of the revolutionary army, her eldest American ancestor being John Blackman, who came to Massachusetts between 1640 and 1650, and married the first white girl born in the colony. On the maternal side, the first ancestor was John Taylor, who came to Salem, Mass., with Gov. Winthrop, in 1630, and was lost, with many noted people, in the wreck of the famous "phantom ship." Mr. and Mrs. Kramer have two daughters, Ella Estella, wife of Rev. Levi Marshall, of Hannibal, Mo., and Lora Odessa, and one son, George Lee Kramer.

**STEAD, Robert**, architect, was born in New York city, Jan. 27, 1856, son of Edward Briggs and Matilda Lavinia (Hoagthrop) Stead, the former a native of New York city, the latter of Baltimore, Md. His great-grandfather, Rev. Henry Stead, was born in England, in 1774, and came to the United States in 1802, with his wife and two sons. He was a member of the Methodist Episcopal church, and at one time was presiding elder of the New York conference; died at Greenwich, N. Y., Oct. 18, 1854. His son, Robert, grandfather of Mr. Stead, was a prominent merchant in New York city. Edward Briggs Stead was a captain in the 2d New York regiment, afterwards 83d, during the civil war. Robert Stead received his education in the public schools of New York city and the College of the City of New York, where he was graduated in 1871. After leaving college he entered the office of William Appleton Potter, to study architecture, remaining until he accepted a position as draughtsman in the supervising architect's office of the treasury department at Washington, where he remained nine years, at the end of that period beginning independent practice. Among the buildings erected by him in Washington are the chapel and mission house of Epiphany Church, office buildings, residences and the rectory

of St. James's Church. He is treasurer of the Public Art League of the United States, has been director of the American Institute of Architects, and has been president, secretary and treasurer of the Washington chapter of the institute. He is chairman of the house and library committee of the American Institute of Architects. He is a member of the house committee of the Cosmos and Chevy-Chase clubs, and is fond of golf, tennis, hunting and other outdoor sports. He is an amateur photographer of more than average ability, and derives great pleasure from this pursuit. Mr. Stead has traveled abroad several times, visiting all the countries on the continent east of Russia. He is a communicant of the Protestant Episcopal church. He was married, in Washington, April 5, 1882, to Mary, daughter of William Q. and Elizabeth A. Force, granddaughter of Peter Force, the historian, and great-granddaughter of William Force, of New Jersey, a soldier in the revolutionary war. They have five children, four sons and a daughter.

**VAUX, Calvert**, architect, was born in London, England, Dec. 20, 1824, son of Dr. Calvert Bowyer and Emily (Brickwood) Vaux. He was educated at the Merchant Tailors' School in London, and then became an articled pupil of Lewis N. Cottingham, architect, of London. Mr. Vaux came to America, in 1850, as assistant to Andrew J. Downing, the American landscape gardener, who was at that time occupied with the Smithsonian grounds at Washington, by appointment of the government. At the close of the year he became Mr. Downing's architectural partner, their joint office being at Newburg, on the Hudson. This partnership continued until Mr. Downing's death, after which Mr. Vaux carried on the business in Newburg for some years, and published his book, "Villas and Cottages." In 1857 he moved to New York city, being engaged as architect for the Bank of New York, and until his death remained a resident of that city. In partnership with Frederick Law Olmsted, under the firm-name of Olmsted, Vaux & Co., Mr. Vaux and Mr. Olmsted made plans for Central park, Riverside park and Morningside park, New York city; Prospect park, Brooklyn; parks at Chicago, Ill.; Bridgeport, Conn.; the New York state reservation at Niagara. He also made plans for many country-places for prominent men, among the number being W. B. Ogden, in New York city; Samuel J. Tilden, Yonkers; G. G. Haven, Lenox. Mr. Vaux was one of the architects for the first buildings for the Museum of Art in Central park, and the Museum of Natural History in Manhattan square, New York city. He also made the plans for eleven buildings for the Children's Aid Society in New York. His latest works were plans for down-town city parks in New York, made in conjunction with Samuel Parsons, Jr. Mr. Vaux held, at the time of his death, the following public positions: landscape architect to the commissioners of the state reservation at Niagara; landscape architect to the department of public parks, New York city; member of consolidation inquiry commission of the Greater New York. He was a member of the National Sculpture Association, Municipal Art Society, Century Club, and a fellow of the Metropolitan Museum of Art. Mr. Vaux had the genuine creative faculty which gave the stamp of originality to all his work, and a severity which preserved it from anything like eccentricity or extravagance; and while thus fully equipped on the artistic side, he had a fertility of resource and an unflagging industry which enabled him to grapple successfully with all the complicated practical problems of his profession. In 1854 Mr. Vaux was married to Mary Swan, daughter of James S. McEntee, of Rondout, N. Y. Two sons and two daughters—C. Bowyer Vaux, Downing Vaux, Mrs.

Robert Stead

H. H. Donaldson and Mrs. J. Lincoln Hendrickson—survive him. Downing Vaux is a landscape architect in New York city, who studied two years in the office of his father. He was graduated at the Columbia College School of Mines in the class of 1878. He has made the plans for parks at Poughkeepsie, N. Y.; Kingston, N. Y.; Nutley, N. J.; St. John, Canada, and other places, and has delivered lectures on landscape architecture at the Troy Polytechnic and at the New York University. In private life, Mr. Vaux was a man of singular modesty, gentleness and sincerity, and, while his learning and accomplishments gave him an assured position in the republic of letters and of art, his kindly and unselfish disposition endeared him to every one with whom he was closely associated. As a city official, he was a model of intelligent zeal and sturdy integrity, and no man in public life was ever more loyal to his duty or to his art. More than once, when some construction affecting the design of the parks was undertaken against his advice, he promptly resigned; but in every instance he was quickly reinstated, in obedience to a vigorous demand of the people of the city, who felt assured that while his counsel prevailed their pleasure-grounds were safe. To Calvert Vaux more than to any other man New York city owes a debt of gratitude for the fact that Central Park, in spite of attacks on every side, has been held secure against harmful invasion, and has been developed strictly on the lines of its original conception. Mr. Vaux was accidentally drowned near New York, Nov. 19, 1895.

**WALTER, Thomas Ustick**, architect, was born in Philadelphia, Pa., Sept. 4, 1804, son of Joseph S. and Deborah Walter, and was named after Rev. Thomas Ustick, pastor of the First Baptist Church in his native city, which his parents attended. He received a thorough education in English branches, and at the age of fifteen entered the office of William Strickland, a pupil of Benjamin W. Latrobe, and architect of the mint and other buildings in Philadelphia. He acquired a general knowledge of the profession of architecture, and then resumed his general studies, pursuing them for seven years, and gaining a practical knowledge of the several branches of mechanical construction. He took an elaborate course in mathematics, a science for which he had a predilection, and also studied landscape painting in water colors under William Mason, a celebrated teacher. Mr. Walter re-entered Mr. Strickland's office in 1828, and spent two years in the specific study of architecture, beginning professional practice in 1830. His first important work was the Philadelphia county prison (Moyamensing), designed in 1831, and constructed under his supervision in that year. In 1833 he submitted a design for the Girard College for Orphans, which was adopted, and this fact greatly increased his patronage after the structure was finished. In 1838 he was sent to Europe by the board of directors to examine "the practical workings of the various devices and appointments for health, convenience and comfort in the principal seats of learning in Great Britain and the continent." He presented an elaborate report to the directors, which became their guide in finishing and fitting up the college. The next important work was a design for a break-water at La Guayra, Venezuela. Among his works of private practice were St. George's hall, the Preston Retreat, the Philadelphia Savings Bank, the Debtors' Apartment, several churches in Philadelphia, the Chester County Bank and the Biddle and Cowperthwaite villas on the Delaware river. Many of the buildings designed by him were in the pure classic style, and he became known as the most strenuous advocate of this style of architecture. A design for the extension of the national capitol was approved, and in

1848 Pres. Fillmore appointed him to superintend the construction of the same. This was the most important labor of his life, and it has been said that of all the American architects of that date he was the best fitted to undertake the work. "The boldness of his composition evinces his skill as a designer and his confidence in himself. . . . Much as we pride ourselves upon the advances made in architectural design, we have nothing to show more nobly simple and well studied than this." Fergusson, the historian of architecture, has said: "There are few buildings erected in modern times which possess to a greater extent than the capitol at Washington appropriateness of purpose combined with the dignity necessary for the senate house of a great nation. It has not the variety and richness of detail of our Parliament House, but it is a far stately building. . . . It wants but very little to enable it to obtain to very high rank amongst the buildings of its class in other parts of the world." Mr. Walter held the position for fourteen years, and during that period he planned and executed the iron dome of the capitol, the east and west wings of the patent office, the extension of the general post-office, the government Hospital for the Insane, the repairs of the congressional library and the new treasury building. He also designed the marine barracks at Brooklyn, N. Y., and Pensacola, Fla. After his return to Philadelphia he did little professional work; but for a short time before his death he was connected with John McArthur, Jr., designer and architect of the new city hall. In 1829 Mr. Walter was elected a member of the Franklin Institute of Pennsylvania; subsequently became one of its board of managers, and in 1846 chairman of the board. In 1836, and from time to time after that, he delivered lectures on architecture before that society; and in the "Journal" of the institute, a periodical to which he frequently contributed, his name appearing as professor of architecture, although no professorship had been established. He was one of the founders (1837) of the American Institute of Architects, and as secretary signed the circular calling a meeting to organize the same. On the resuscitation of the organization, in 1857, he was elected a fellow, and in 1876 was elected president, succeeding Richard Upjohn. This office he held continuously until his death. He also became a member of the American Philosophical Society of Philadelphia. In 1860 he delivered a course of lectures on architecture at Columbian University, Washington, D. C., also in Philadelphia and vicinity. The honorary degree of M.A. was conferred upon him by Madison University, N. Y., in 1849; that of Ph.D. by the University of Lewisburg, Pa., in 1853; and that of LL.D. by Harvard University in 1857. He was active in religious work wherever he lived; was for many years clerk of the Spruce Street Baptist Church, Philadelphia, and superintendent of its Sunday-school; in Washington, at the E Street Baptist Church, had a large Bible class of young men; and, on returning to Philadelphia, was deacon in the Second Church of Germantown, and later in the Memorial Baptist Church. He was a man of commanding presence, dignified manners and great modesty. He was twice married: first, to a daughter of Robert Hancock, and again, to a daughter of Dr. Gardiner, both of Philadelphia, Pa. He had twelve children. Mr. Walter died in Philadelphia, Pa., Oct. 30, 1887.

*Thos. Walter*

**SULLY, Thomas**, architect, was born at Mississippi City, Miss., Nov. 24, 1855, son of George Washington and Harriet Jane (Green) Sully. His father was a native of Norfolk, Va., and of English parentage, and his grandfather, Chester Sully, was a prominent landholder and speculator. His mother was a descendant of the famous Green family, so conspicuous in revolutionary times. His great-uncle, Thomas

*Thos. Sully*

Sully, was a renowned artist, once having been given sittings for a portrait by Queen Victoria. Thomas Sully received a liberal education, and at the age of twenty began his architectural studies in the office of Laimour & Wheelock, Austin, Tex. He afterwards studied with H. R. Marshall and J. Morgan Slade, noted New York architects. In 1881 he opened an office in New Orleans, and from that time has met with remarkable success. He has had various partners, always, however, remaining the head of the firm as well as the moving spirit. Since the beginning of his professional career in New Orleans, he has designed and erected almost every structure of importance. Mr. Sully is one of the few architects of modern times who combines a thoroughly

business mind with his artistic and technical training. His public buildings are the finest in the South, among which may be mentioned, the Hennen Building (office building), which was a great stimulant to the city's growth; the Liverpool, London and Globe Insurance building; the Morris building (another office building); the New Orleans National Bank; the Whitney National Bank; the Milliken Memorial Hospital; the New St. Charles Hotel, built at a cost of \$1,000,000; the Tulane Medical College; the Cosmopolitan Hotel; the Crescent and Tulane theatres, and many other public buildings. He also built Lookout Inn at Lookout mountain, and the Vicksburg Hotel at Vicksburg, Miss. In addition to his professional work, he has handled large sums of money for men of wealth, in the way of building commercial and manufacturing structures, such as erecting and managing for four years the Caffrey Central Sugar Refinery, near Franklin, La., which involved \$500,000. He is a director of several of the city's financial institutions, and has large business interests. He is an enthusiastic yachtsman, having designed and built several well-known yachts, and is one of the ex-commodores of the Southern Yacht Club. Mr. Sully was married, in 1884, to Mary Eugenia Rocchi, of an old Louisiana family. They have one daughter.

**FREDERICK, George Aloysius**, architect, was born in Baltimore, Md., Dec. 16, 1842, son of John M. and A. Margaret Frederick, of German descent. He was educated in the school of the Christian Brothers in Baltimore, and in 1858 entered, as a pupil, the office of Lind & Murdoch, leading architects of the period, and favorably known throughout that section of the country. Students in those days had not the advantage of the admirable architectural schools now so common, so he remained in this office for four years, gaining the experience which a large, varied and important class of work afforded. In 1862 (before he had reached his majority) he entered into public competition for a new city hall, projected for his native city. His designs were selected as the best, and the premium and the execution of the work were awarded to him. This important work, retarded considerably in its beginning by reason of the civil war and by other local causes,

was not actively pushed until 1866, and was not completed until 1875. During all that period he was in charge as architect. The building was considered to be the finest and most complete municipal structure of the period in the United States, and had an additional celebrity as being the only public building of magnitude ever erected within the appropriation. The amount assigned was \$2,500,000, but of this sum nearly \$200,000 was turned back into the city treasury as unexpended balance by the commission and the architect in charge. For many years Mr. Frederick designed and had charge of the various architectural embellishments of Druid hill, Patterson, and other of the public parks of Baltimore. The Madison avenue and the Mount Royal avenue gateways of the former, the principal gateway of Patterson park and the Lookout tower of Federal hill park are to be specially noted; also numerous other structures, such as pavilions and fountains. Among the more important works in Baltimore that have been designed by and under Mr. Frederick are the U. S. Marine and the St. Joseph's hospitals, Baltimore City College, Whiteford Hall, St. Pius', St. James', St. Theresa's and Holy Cross Roman Catholic churches, Greisenheim (a home for aged Germans), First National Bank, the Abell block of warehouses, the Gottschalk, Dornell and "German Correspondent" buildings, Bible House, Chesapeake and Potomac telephone exchange, besides the residences on the Potomac and on Chesapeake bay of A. S. Abell, Capt. John W. Hall, Gen. J. L. Donaldson, Nicholas Popplein, George Bauerschmidt, John F. Wiessner, Dr. Hiram Woods, Jr.; the residences of Charles Baker, Aberdeen, Md.; George Baker, Havre de Grace; W. Headington, Wallbrook, and numerous others. In Anne Arundel county, St. Mary's Hall and the renovated state house (both at Annapolis) and the Maryland house of correction testify to his skill and taste. Mr. Frederick has been actively identified with and an associate and fellow of the American Institute of Architects since 1869, and a director of the institute at frequent periods. He has at various times contributed essays and papers on professional subjects to the annual conventions of the institute, as also to magazines, newspapers and other periodicals. Mr. Frederick was married, at Baltimore, in 1865, to Mary E., daughter of John M. and Mary Ann (Everist) Carr. They have one child, a daughter.

**JOHNSTON, Clarence Howard**, architect, was born at Okaman, Minn., Aug. 26, 1859, son of Alexander Johnston, who was a prominent journalist of that state. The son's early education was obtained in the public and high schools of his native town. His diligence and application made it possible for him to carry on his studies and at the same time earn sufficient money to pay his expenses. It was his ambition to become an architect, and upon leaving school at the age of sixteen, he entered the office of A. M. Radcliff, of St. Paul, and studied under him for three years. In 1879 Mr. Johnston entered the Massachusetts Institute of Technology in Boston, and took a special course in architecture with high honors. Returning to St. Paul, he found employment in the office of E. P. Bassford, a leading architect, where he remained one year, when he received a favorable offer from Heiter Bros., of New York city, which he accepted. He remained in New York for two years, engaged on many of the finest residences erected at that time, and then re-

*Clarence H. Johnston*

turned to St. Paul. While with Herter Bros., he, in connection with a few others, organized the Architectural League, which has since become one of the leading organizations of the kind in America. In St. Paul he has met with remarkable success, many of its finest public buildings and private residences having been designed by him, and his work is to be seen in other great cities of the Northwest. In 1881 he made an architectural tour through Europe, Greece and Asia Minor. He is one of the organizers and charter members of the Minnesota chapter of the American Institute of Architects, and is a director in the American Institute of Architects. Mr. Johnston was married, in 1885, to Mary L., daughter of C. B. Thurston.

**BURNHAM, Daniel Hudson**, architect, was born at Henderson, Jefferson co., N. Y., Sept. 4, 1846, son of Edwin and Elizabeth Keith (Weeks) Burnham, and grandson of Nathan and Rebecca (Noble) Burnham.

He descends from Thomas Burnham, who landed at Cape Cod in 1635, and settled at Ipswich, Mass., whence in 1742 John Burnham, great great-grandfather of Daniel, removing to Connecticut, then to Vermont, finally settled at Middletown. Both he and his son John were soldiers in the revolutionary war and delegates to the convention at Windsor that formed the constitution of the state, one of them writing part of that document, father and son being lawyers. The mother of Daniel H. Burnham was a daughter of Rev. Holland Weeks, of Barrington, Mass., and on her mother's side was

descended from Rev. Samuel Hopkins, the original of the chief character in Mrs. Stowe's "Minister's Wooing." Nathan Burnham, in 1811, removed his family to Henderson, N. Y., and there his son Edwin grew up, was married, and lived until 1855, when he became a resident of Chicago. Daniel H. Burnham attended Snow's New Church (Swedenborgian) Academy, the Dearborn and Jones public schools, and later the Chicago High School. In 1864-66 he attended the New Church School at Waltham, Mass., and during all these years studied drawing constantly, giving some time and thought to architecture during his last year at Waltham. He returned to Chicago at the age of twenty-one; spent a year in the office of Loring & Jenney, architects, and later went to Nevada, where he passed a year in a mining camp. In December, 1870, he entered the office of Gustav Laurean, in Chicago, and subsequently worked under John M. Van Osdel, H. B. Wheelock and Carter, Drake & Wight. In 1873 Mr. Burnham formed a partnership with John W. Root, who had been a fellow pupil, and this lasted for eighteen years, during which period they built structures in all parts of the United States, the aggregate value exceeding \$40,000,000, and introduced the use of steel frames for large office buildings. In the autumn of 1890 Burnham & Root were made consulting architects of the World's Columbian exposition in Chicago, and a few weeks later Burnham was appointed chief of construction. Root, whose part in the preliminary plans was small, died early in January, 1891. In that month Mr. Burnham organized the corps of architects, and in association with Ohmsted & Codman, as landscape architects, proceeded to transform the prairie land of 600 acres. Ground was broken in February; nearly 20,000 men were set to work, and in twenty-one months' time the exposition was opened to the world. The

amount expended under Mr. Burnham was about \$20,000,000, and while the exposition lasted he had in his organization about 6,000 men. In March, 1893, his services were formally recognized by nearly 400 leading men, representing many countries and states, who tendered him a banquet at Madison Square Garden, New York city, and presented him with a loving cup. Harvard and Yale conferred on him the degree of M.A. in 1893, and Northwestern University honored him with the degree of D.S. in 1894. Among the buildings planned and constructed by Burnham & Root are: the National Bank of Illinois; Chemical Bank; Mountank block; the Rialto; Rookery; Rand & McNally; Phoenix; Calumet and Counselman buildings; the Chicago, Burlington and Quincy general offices; Masonic Temple; Woman's Temple; Insurance Exchange, and the Calumet Club-house. Among those designed and constructed by Mr. Burnham alone are: the Illinois Trust and Savings Bank; Merchants' Savings and Trust Co.; the Fidelity, the Northern and many other buildings, besides important structures in all the great cities of the United States. Mr. Burnham has been president of the Illinois chapter of the American Institute of Architects, of the Western Association of Architects and of the American Institute of Architects. He has been, at one time or another, a member of the Chicago, Union League, University, Argo, Literary, Quadrangle and Athletic clubs, all of Chicago; the Union and Century clubs, New York city; the Glen View, Golf, Country and Boat clubs, of Evanston; the Ellicott Club, of Buffalo, and the Union Club, of Kansas City, Mo. He was married in Chicago, Jan. 20, 1876, to Margaret Sebring, only daughter of John B. and Ophelia (Graham) Sherman. Her father organized, and still controls, the great stock yards and transit business of the city. They have three sons and two daughters.

**THOMPSON, William Tappan**, journalist, was born at Ravenna, O., Aug. 31, 1812, of Irish and American parentage. He was the first white child born on the Western Reserve. His early years were spent partly in his native place and partly in Philadelphia, Pa. Having lost his parents at an early age, he was obliged to support himself, and while still a boy sought employment on the Philadelphia "Chronicle." He did not remain long at any one calling, but engaged in whatever happened to turn up, and, meantime, his unusual cleverness and attractive manners made him a universal favorite. For a time he was secretary to Gov. Westcott, of Florida, with whom he studied law. He served as a volunteer in the Seminole war in 1835-36, and then engaged in journalistic work at Augusta and Macon, Ga., until 1838. Then removing to Madison, Ga., he conducted the "Miscellany," in which his well-known humorous work, "Major Jones' Courtship," first appeared, as a series of papers entitled "Major Jones' Letters." In 1850 he founded the "Morning News" at Savannah, Ga., and edited this journal until his death, only leaving it during the period of the civil war, when he served in the Confederate army. After the war he took part in the political activity of Georgia, serving as warden of the port of Savannah; delegate to the national Democratic convention of 1868, and member of the state constitutional convention of 1877. He was the author of a number of widely-read humorous works, entitled "Major Jones' Courtship," "Major Jones' Chronicles of Pineville," "Major Jones' Sketches of Travel," "The Live Indian: A Farce," and "John's Alive; or, the Bride of a Ghost, and other Sketches" (posthumous, 1883). He also dramatized successfully "The Vicar of Wakefield," and edited "Hotchkiss's Codification of the Statute Laws of Georgia" (1845). He died at Savannah, Ga., March 24, 1882.

*D. H. Burnham*

**BYRNE, John**, physician, was born at Kilkeel, county Down, Ireland, Oct. 13, 1825, son of Stephen and Elizabeth Byrne. His father, who was a well-known merchant, gave him every available educational advantage at the Diocesan Seminary of Belfast, and subsequently with private tutors. At the age of sixteen he was matriculated at the Royal Belfast Institution, and later entered the General Hospital as a medical student. During the succeeding five years his medical studies were pursued in the universities of Dublin and Glasgow, and completed at Edinburgh, where he was graduated in 1846. His course of study all through was based on the curriculum of the British navy, for which he had prospects of an appointment. At that period a longer probation and many extra branches not included in the ordinary medical course were required of candidates for such a position. During the Irish famine in 1846-47, he received his first professional distinction in an appointment to full charge of one of the temporary fever hospitals. Here his extensive hospital practice enabled him to discharge his every duty with marked success until the close of the epidemic, when he received high commendations from the authorities. In 1848 he came to the United States, and, although soon after his arrival he received his longed-for appointment to the British navy, he decided to remain. He, therefore, settled in Brooklyn, N. Y., where he has since practised his profession. In 1853, with a view to enlarging his professional associations, he was graduated at the New York Medical College. In 1857-58, in conjunction with the late Dr. Daniel Ayres, Dr. Lewis Bauer, and a few generous lay friends, he obtained a charter for the Long Island College Hospital, which he had helped to organize. About this period, owing to improved methods of investigation regarding the diseases of women, he decided to devote himself to the study and practice of this specialty; and one of his earliest contributions to gynecological literature on pelvic hæmatocele, read before the New York Academy of Medicine in 1860, was reprinted in various medical journals, both in the United States and Europe. This was pronounced by the medical press to be "the best essay on the subject in the English, or, perhaps, in any language." Since then his original papers and clinical reports on subjects connected with his specialty have been numerous and of acknowledged merit. In 1868 he was appointed surgeon-in-chief to St. Mary's Hospital for Women, a position which he still occupies. In 1882, on the completion

J. Byrne

of the first wing of St. Mary's Hospital on St. Mark's avenue, he was intrusted with the duty of organizing its medical and surgical staff. In 1869 he undertook an exhaustive series of experiments in electro-physics, with the hope of being able to devise or construct a more perfect apparatus than it was then possible to procure for the generation of heat by the galvanic current; and in 1876 he forwarded to the centennial exhibition at Philadelphia his well-known electro-thermal battery for surgical operations. The remarkable power of this little apparatus was then demonstrated before a select assemblage of scientists, including the late Emperor Dom Pedro, Sir William Thompson and others, all of whom were lavish in their expressions of approval. Through its agency and by ingeniously devised instruments of his own construction, he is said to have operated more frequently and with greater success in a class of diseases otherwise incurable, viz., uterine cancer, than any other living surgeon. His remarkable statistics of nearly 400 operations for cancer, published in

1889, are now of world-wide note. By his manipulation of the electric cauterizer and its successful application in this important class of women's ailments, he has obtained the fullest recognition, not only here, but also abroad, where he is looked upon as *facile princeps* in this branch of uterine surgery. When visiting Paris in 1890, he operated in the Broca Hospital, by invitation of Prof. Pozzi, and again in 1896 he enjoyed the rare and exceptional compliment of being invited by the late Prof. Péan, Prof. Ségoud, Dr. Aubean and others to demonstrate his peculiar method of operating at the International and Salpêtrière hospitals in the presence of large and enthusiastic audiences, comprising the leading surgeons of the French capital. In 1896 the College of St. Francis Xavier conferred on him the degree of LL.D. He is a fellow of the New York Academy of Medicine, of the American Medical Association, surgeon-in-chief to St. Mary's Maternity, chief of gynecological department and president of the faculty of St. Mary's Hospital, ex-president of the American Gynecological Society, ex-president of the New York Obstetrical Society, corresponding member of the Gynecological Society of Boston, ex-president of the Brooklyn Gynecological Society and member of the State and King's County Medical societies. Dr. Byrne still continues actively engaged in hospital, office and consultation practice.

**BULL, Charles Stedman**, physician, was born in New York city, April 21, 1846, son of Henry King and Eliza (Ludlow) Bull. He is descended from the famous Capt. Thomas Bull, of the British army, who came to this country in 1632, landing in Boston, and was one of the original settlers of Hartford, Conn. One of his descendants, Capt. Caleb Bull, the great-great-grandfather of Dr. Bull, was an officer in the Connecticut line in the war of the revolution, and an original member of the Society of the Cincinnati; while Frederick Bull, a son of Capt. Caleb, served as major during the same war. On the maternal side, Dr. Bull is descended from William Ludlow, of Hill Deverill, Wiltshire, England, who settled there about the middle of the fourteenth century. His lineal descendant was Jeremiah Ludlow, who came to this country in 1693, landing in New York, and subsequently settling in Essex county, N. J. His son, Obadiah Ludlow, the maternal great-grandfather of Dr. Bull, was an officer of New Jersey troops during the war of the revolution. The parliamentary general, Sir Edmund Ludlow, and the former Earl Ludlow, were also descended from the same William Ludlow, of Hill Deverill, Wiltshire. On the maternal side, also, Dr. Bull is descended from the Marquis de Séguin de Tallerrange, a French Huguenot, who fled to this country after the revocation of the Edict of Nantes, and who settled, in 1690, at what is now known as Seguin Point, Staten Island. Dr. Bull was educated at the French school of Prof. Elie Charlier, and was graduated at Columbia College in 1864, and at the College of Physicians and Surgeons in 1868. He was eighteen months in Bellevue Hospital, as house physician and surgeon. He then went abroad, and spent two years in Vienna, Heidelberg, Berlin, Utrecht, Paris and London, and was a pupil of Prof. von Arlt, Prof. von Graef and Prof. Donders. On his return, in 1871, he became assistant surgeon to the Manhattan Eye and Ear Hospital; until 1873 was assistant surgeon to the New York Eye and Ear Infirmary, and was visiting surgeon to Charity Hospital, 1875 to 1880. He became full surgeon to the New York Eye and Ear Infirmary in 1876, and still holds the position. He was consulting ophthalmic surgeon to the Nursery and Child's Hospital from 1876 to 1888; became consulting ophthalmic surgeon to St. Mary's Hospital for Children

in 1876, which position he still holds (1899). He was adjunct professor of ophthalmology at Bellevue Hospital Medical College from 1880 to 1888; was appointed professor of ophthalmology, medical department, University of New York, in 1888, and consulting ophthalmic surgeon to St. Luke's Hospital the same year. He is professor of ophthalmology in the Cornell University Medical College, and consulting ophthalmic surgeon to the Presbyterian Hospital. He has written "Choroiditis Following Cerebro-Spinal Meningitis" (1873); "Strychnia in Amaurosis and Amblyopia" (1873); "Retinal Hemorrhage in Diseases of the Brain, Heart and Kidneys" (1874); "Lesions of the Optic Nerve and Pupil in Diseases of the Spinal Cord" (1875); "Pathology and Therapeutics of Contused Wounds of the Eyeball" (1876); "Rare Syphilitic Neuroses of the Eye" (1877); "Influence of the Fifth Nerve in Iritis and Choroiditis" (1876); and "Symptomatology and Pathology of Intracranial Tumors" (1875). He is one of the authors of the "Translation of Stellwag's Treatise on Diseases of the Eye," editor of the third and fourth American editions of J. Soelberg Wells' "Treatise on Diseases of the Eye," and author of numerous original papers on diseases of the eye in American and foreign medical journals; is assistant collaborator of Foster's "Encyclopaedia Medical Dictionary," for which he wrote all the part relating to the diseases of the eye and ear, and of the system of diseases of the eye of Norris and Oliver. In addition to hospital practice, he has a large private practice in his specialty. He is a member of the American Medical Association, New York Academy of Medicine, New York Pathological Society, New York County Medical Society, New York Ophthalmological Society, American Ophthalmological Society, New York State Medical Association, Huguenot Society of America, Society of Colonial Wars, Society of the Sons of the Revolution, and of the University and Century clubs. Dr. Bull was married, in 1882, to Mary Kingsbury, daughter of Hon. Frederick J. Kingsbury, of Waterbury, Conn.

**PARKER, Willard**, surgeon, was born at Hillsboro, Hillsboro co., N. H., Sept. 2, 1800, son of Jonathan and Hannah (Clark) Parker. The family, on his father's side, emigrated from England to Massachusetts in 1640, and settled at Chelmsford, Middlesex co., as farmers. Col. Moses Parker, a great-uncle of Willard Parker, distinguished himself in the French war, and taking the popular side when the revolution broke out, was made prisoner at Bunker Hill, and died in Boston, July 4, 1776. The maternal grandfather of Willard Parker, Capt. Peter Clark, fought under Stark at Bennington, and was at the surrender of Burgoyne. Dr. Parker's father, who was a farmer, returned to Chelmsford when his son was five years of age, and the latter being the oldest son, worked on the farm most of the time until he was nineteen years of age. He then took charge of a district school, in order to earn money to pay his way through college. He was graduated at Harvard in 1826, and then took charge of a school at Charlestown, Mass. Meantime he had attended the lectures of Dr. John C. Warren, professor of surgery at Harvard, whom he had aided in the anatomical department, and in the spring of 1827 he was appointed house-physician in the U. S. Marine Hospital at Chelsea, Mass. In the winter of 1828-29 he became the private pupil of Dr. Warren, and in the latter year served as house-surgeon in the Massachusetts General Hospital, being the first to hold that position. He received the degree of A. M. from Harvard in 1829, and the degree of M. D. in 1830 from the same institution. In 1829-30 he delivered a course of lectures on anatomy in the Vermont Medical School at Woodstock. In June, 1830, he was

appointed to the chair of anatomy in the Berkshire Medical College, Pittsfield, Mass., continuing to lecture at Woodstock, and in 1832 became lecturer on surgery as well as anatomy at Pittsfield. In 1836 he accepted the chair of surgery in the medical college at Cincinnati, O.; but the climate was unfavorable to his health, and in 1839 he removed to New York, to take the chair of surgery in the College of Physicians and Surgeons. He held this chair until 1880, when he was appointed professor of clinical surgery in the same institution, and served for ten years, resigning when he was made professor emeritus. In 1840 he had some interesting cases taken from the city dispensaries to the college, then in Crosby street, where the anatomical theatre offered superior advantages for making diagnoses and performing operations before the whole class, and thus established the first college clinic in the United States. In 1845 the city almshouse was placed under a board of governors. In 1845 Dr. Parker was appointed on a committee to consider the status of the city almshouse and present a plea for its organization; and when, in 1847, the almshouse became Bellevue Hospital, he was appointed a visiting surgeon. In 1856 he received a similar appointment to the New York Hospital. In 1865 he succeeded Dr. Valentine Mott as president of the New York State Inebriate Asylum. Furthermore, he was consulting surgeon at Bellevue, Mount Sinai, St. Luke's, Roosevelt and New York hospitals, and was an honorary member of many American and foreign medical societies. He aided in organizing the New York Pathological Society, the Society for Widows and Orphans of Medical Men, the New York Academy of Medicine, of which he was president for many years, and the New York city board of health. He was active also in religious, charitable and educational work. He was one of the most eminent surgeons of his day, and among his contributions to the art of surgery were the operations of cystotomy, for the relief of chronic cystitis, and that for the cure of abscess of the appendix vermiformis. Among his monographs contributed to medical journals are: "Cystotomy" (1850); "Spontaneous Fractures" (1852); "Concussion of Nerves" (1856); "Ligature of the Subclavian Artery" (1864), and a lecture on "Cancer" (1873). Princeton College gave him the degree of LL. D. in 1870, and the Willard Parker Hospital for Contagious Diseases was erected and named in his honor. Dr. Parker was twice married; first, in 1839, to Caroline Allen of Massachusetts; second to Henrietta Bissell. He had one son and five daughters. Dr. Parker died in New York city, April 25, 1884.

**LUSK, William Thompson**, physician and educator, was born at Norwich, Conn., May 23, 1838, son of Sylvester Graham and Elizabeth Freeman (Adams) Lusk. His father (1805-40) was a well-known merchant of Connecticut, and a member of the firm of Lusk, Lathrop & Co. After receiving the rudiments of a school education at Rev. Albert Spooner's school in Norwich, William T. Lusk attended Dr. Anson's Grammar School, in New York city, and Russell's Military Academy, New Haven, Conn., and entered Yale College in the fall of 1855. Owing to an affection of the eyes he left college at the end of the freshman year, and after a year in business went abroad for treatment at the hands of Maunoir, of Geneva, Switzerland, one of the most celebrated oculists of his day. In 1858 he began

*Willard Parker*

study of medicine in Heidelberg, and remaining there two years went for another year's work to Berlin. On his return to America in 1861, he enlisted in the 79th New York infantry, Highlanders, and immediately went to the front. He served on the staff of Gen. Isaac I. Stevens for a considerable time preceding that officer's death, Sept. 1, 1862. On Sept. 19, 1861, he was commissioned second lieutenant, and on Feb. 24, 1862, captain, resigning in February, 1863, at the request of Gov. Morgan, to take command of a regiment then recruiting in New York city. He, however, accepted instead, the appointment of adjutant-general, with the rank of captain, on the staff of Gen. Daniel Tyler, and served from June to September, 1863. Capt. Lusk several times received honorable mention for conspicuous gallantry on the field. At the battles of Antietam and James Island he performed the duties of aide at the constant risk of his life, and at the first battle of Bull Run he carried his captain, badly wounded, off the field, walking backward to avoid being shot in the back. Among other notable actions in which he participated were, Blackburn Ford, Port Royal, second Bull Run, Chantilly, South Mountain, and Fredericksburg. Several times he narrowly escaped severe wounds, yet despite that three-fourths of his regiment were killed, he was preserved unharmed. During the draft riots in New York city in 1863, Capt. Lusk commanded two companies of troops, and rendered valuable services in the pacification of the city. Resigning from the army Sept. 17, 1863, when his regiment was placed on the inactive list, he entered Bellevue Medical College, New York city, and was duly graduated, in the following year, valedictorian of his class. He then went abroad for further study, spending four months in Edinburgh under Sir James Y. Simpson; six months in Paris, four in Vienna, under Carl Braun, and two in Prague under Seifert. On his return to America he settled in Bridgeport, Conn., where he practiced medicine during 1865-66, in association with Dr. Robert Hubbard; then, removing to New York city, he formed a partnership with Dr. Fordyce Barker, which lasted for seven years. During

1869-71 he was professor of physiology and microscopic anatomy in the Long Island Hospital Medical College, and in the winter of 1870-71, at the request of Dr. O. W. Holmes, delivered a course of lectures on physiology, in the Harvard Medical School. It was expected that he would be called to a professorship there, but owing to an unforeseen delay in this action, he accepted the proffered chair of obstetrics and the diseases of women in Bellevue Hospital Medical College, as successor to Dr. George T. Elliot, deceased. Only a few hours after his acceptance, the invitation arrived from Harvard; thus

he was destined to remain in New York, holding this chair until the time of his death. Dr. Lusk was visiting physician to the New York Nursery and Children's Hospital, and to the New York Charity Hospital (1870-71), and obstetric surgeon of Bellevue Hospital (1871-73). During the latter years he was also co-editor, with Dr. James B. Hunter, of the "New York Medical Journal." Among other professional appointments, he was at various times consulting physician to the Maternity Hospital and Pounding Asylum, visiting obstetrician to the Agency Hospital; gynecological surgeon to St.

Vincent's Hospital, and consulting obstetrician to the Lying-in Hospital. He was an honorary fellow of the Edinburgh and London obstetrical societies; a corresponding fellow of the Paris and Leipsic obstetrical societies, and of the Paris Academy of Medicine. In 1874-75 he was a vice-president of the New York Obstetrical Society; in 1889, president of the New York State Medical Society; in 1890, honorary president of the obstetrical and gynecological section of the tenth international medical congress in Berlin, and in 1894 president of the American Gynecological Society. From 1889 until his death, he was president of the faculty of the Bellevue Hospital Medical College. Dr. Lusk was also a member of the military order of the Loyal Legion. As a surgeon and practitioner he was noted for rapidity and precision of diagnosis, and a skill in operating which was the perfection of science. He was the first surgeon in America to successfully perform the Caesarian section, and although he repeated the operation many times, death resulted in a very small percentage of his cases. In 1872 he received the honorary degree of A.M. from Yale University, which also created him LL.D. in 1894. His published writings are very numerous, and widely recognized as authority in professional circles. His principal work is the "Science and Art of Midwifery" (5th edition 1897), which has been translated into French, Italian, Spanish, Arabic and other languages. He was also the author of: "Histological Doctrines of M. Robin"; "Uremia a Common Cause of Death in Uterine Cancer"; "Irregular Uterine Action During Labor"; "Inquiry into the Pathology of Uterine Cancer"; "Clinical Report of the Lying-in Service at Bellevue Hospital for 1873"; "Origin of Diabetes, with Some New Experiments Regarding the Glycogenic Function of the Liver"; "Cephalotribe and Cephalotripsy"; "Genesis of an Epidemic of Puerperal Fever"; "Morphia in Child-birth"; "Nature, Causes and Prevention of Puerperal Fever"; "Necessity of Caution in the Employment of Chloroform During Labor," and "Description of a New Cephalotribe Weighing Less than Two Pounds." His paper on the "Nature, Causes and Prevention of Puerperal Fever," first read before the international medical congress at Philadelphia, in 1876, was one of the first to support the germ theory of disease, and attracted wide notice at the time. Dr. Lusk's charming personality, affability of manner and gentle, helpful character endeared him to all his associates, and made him an eminent success, both as practitioner and educator. He was twice married, first, May 4, 1864, to Mary Hartwell, daughter of Simeon B. Chittenden, of Brooklyn, N. Y. (she died Sept. 13, 1871, leaving two sons and two daughters); and, second, June 14, 1876, to Mrs. Matilda (Myer) Thorn of New York city, who died in 1892. Dr. Lusk died suddenly in New York city, June 12, 1897.

**HAMMOND, William Alexander**, surgeon-general, U. S. army, was born at Annapolis, Md., Aug. 28, 1828. His ancestor, Gen. John Hammond, of the British army, acquired large grants in Anne Arundel county, Md., from the crown and from Lord Baltimore; his mother was a niece of William Pinkney, U. S. senator and minister to England. His father, Dr. John W. Hammond removed, in 1835, to Harrisburg, Pa., where the son received an academic education. He began his medical studies early; took the degree of M.D., in 1848, at the University of the City of New York, and for another year attended the clinical classes of the Pennsylvania Hospital. Entering the army as an assistant surgeon, he served for three years in New Mexico, and, after a visit to Europe, at West Point, at Fort Meade in Florida, at Fort Riley in Kansas, as a medical director of the Sioux expedition, with the troops

*William T. Lusk*

who built a road to Bridger's Pass in the Rocky mountains, and at Fort Mackinac in Michigan. During the eleven years of his army experience he gave much attention to physiology and physiological chemistry, and published numerous monographs, some of which were reprinted in England, and translated into French and German, gaining him much repute as an original worker in medicine; one of them, on "Albumen, Starch and Gum as Food," received the first prize of the American Medical Association. While on the frontier, he made large collections of the fauna of the newly-explored regions, and presented them to the Smithsonian Institution and the Philadelphia Academy of Natural Sciences. On Oct. 31, 1860, he resigned from the army, and accepted the chair of anatomy and physiology in the University of Maryland. On the outbreak of hostilities, six months later, he returned to the army, "at the foot of the roll of assistant-surgeons"; was assigned to duty with Gen. Patterson, and organized hospitals at Hagerstown, Frederick and Baltimore. He was soon transferred to Gen. Rosecrans at Wheeling, who made him medical inspector of camps and hospitals. The reforms he initiated attracted the attention of the sanitary commission, whose officers, backed by Gen. McClellan, strenuously urged his appointment to the new post of surgeon-general. Receiving this, with the rank of brigadier, in April, 1862, he found the labors involved hereinafter. The affairs of the bureau were in arrears, and small provision had been made to meet the terrible emergency; the medical department was organized for an army of 15,000, and he had to make it equal to the requirements of 1,000,000. In two months his eight clerks had been increased to sixty, the machinery of the office had been extended and sub-bureaus created. How he rose to the occasion, brought order out of chaos, and rendered momentous services to the army and the country is part of the national history; less appreciated were the difficulties he met and the jealousies he inevitably aroused. To mention but two points: he organized and founded the Army Medical Museum, called by the senate military committee, long after, "an institution universally admitted to be one of the proudest scientific monuments of any age or country"; and he originated the ambulance corps, which was not adopted until after his displacement. Dr. Bellows, president of the sanitary commission, called him "the best friend the soldier has in this country," and asserted that the "sick and wounded owe a hundred times over more to the government and the medical department than to all the outside influences and benevolence of the country combined, including the sanitary commission." Within a few months after Dr. Hammond's appointment, hospitals had been erected, mostly after his designs, with accommodations for over 70,000. But he had to encounter hostility, especially from the secretary of war. After two years of eminent service, he was accused of irregularities in awarding contracts, tried by court-martial, and dismissed from office in August, 1864. He was subsequently vindicated, and received official assurance that "a great wrong had been done" him. Bearing this unjust stigma, but undismayed, he entered upon the practice of his profession in New York. For a time he was in pecuniary straits, and compelled to eke out an income with his pen. Besides suggesting and planning the "Medical and Surgical History of the Rebellion," he had already published "Physiological Memoirs" (1863); "A Treatise on Hygiene" (1863); "Venereal Diseases" (1864); edited "Military, Medical and Surgical Essays" (1864), and started at least one medical journal. He now wrote on "Wakefulness" (1865); "Insanity in Its Medico-Legal Relations" (1866), and a novel, "Robert Severne" (1867). A

little later he translated Meyer's "Electricity" (1869), and issued a volume on "Sleep, and Its Derangements" (1869). Fixing his attention on the specialty in which he has become famous, he delivered, in 1866-67, in the College of Physicians and Surgeons the first course of lectures ever given in New York on "Diseases of the Mind and Nervous System." In 1867 a chair of this branch was created for him in the Bellevue Hospital Medical College; this he held until 1873, and then was transferred to a similar professorship in his alma mater, the University of the City of New York, where he lectured until 1882. His "Treatise" on his chosen topic (1871) reached a ninth edition at home in 1890, is much used as a text book in England, and has been translated into French, Italian and Spanish. He established, and for some time edited, the "Quarterly Journal of Psychological Medicine and Medical Jurisprudence"; was one of the founders of the "New York Medical Journal," and in 1870 became a physician of the New York State Hospital. In 1878, desiring no return to army service, nor any arrears of pay, he sought, and in due time obtained, his long-delayed vindication. A bill authorizing the president to review the pro-

William A. Hammond

ceedings of the court-martial and render justice passed the house unanimously, and the senate, after speeches in its favor by the leaders of both parties, with a single dissenting voice. The secretary of war, at the president's direction, then made a thorough examination of the records, and reported that the sentence ought to be set aside. On Aug. 27, 1879, Dr. Hammond was restored to his position as surgeon-general and placed on the retired list. In 1882 he and some of his colleagues in the City University resigned their chairs, and founded the New York Post Graduate Medical School, in which he assumed the professorship of his specialty. In addition to his labors as teacher and writer, he has for many years conducted an immense private practice. To his great professional and literary success, his unusual stature and physical strength have contributed, as well as his versatile talents and enormous industry. Among his later publications are many monographs and several volumes on spiritualism, nervous derangement and insanity. One of these, "Insanity in Its Medical Relations" (1883), has been translated into Italian. He has also found time to write several novels: "Lal" (1884); "Dr. Grattan" (1884); "Mr. Oldmixon" (1885); "A Strong-Minded Woman" (1886), etc., all of which have had an extensive sale. He now conducts the Hammond Sanitarium, a large establishment in Washington, founded in 1890. His daughter, well known as the Marquise Clara Lanza, and as an author and journalist, was married to an Italian nobleman—the Marquis Manfredi Lanza di Mercato Bianco. His son, Graeme M. Hammond, is a practicing physician in New York city.

**HOWE, Andrew Jackson**, surgeon, was born at Paxton, Worcester co., Mass., April 14, 1825, son of Samuel H. and Elizabeth (Moore) Howe. His first American ancestor was John Howe, one of the principal settlers of Sudbury, who was a petitioner for the grant of Marlboro in 1657. One of his descendants went to Paxton in the first part of the eighteenth century, and bought a considerable tract of land, building a house upon it in 1743, where four generations of the family have lived, and which at the present time is in a good state of preservation.

Samuel H. Howe removed, about 1829, from Paxton to a farm in the neighboring town of Leicester, where he continued to reside until his death. Andrew J. Howe received his early education in the public schools of Paxton and Leicester and at Leicester Academy, and, entering Harvard College, was graduated A. B. in 1853. Previously, he had studied medicine in the office of Dr. Calvin Newton, of Worcester, and attended a course of lectures at the medical college in that city. After leaving Harvard, he continued study at the Jefferson Medical College, Philadelphia; at the College of Physicians and Surgeons and the New York Medical College, in New York; and was graduated M. D. at the Worcester Institute in 1855, accepting the position of demonstrator of anatomy

in the college, and being unanimously appointed by the trustees to the chair of anatomy. Dr. Howe was invited to take charge of the surgical practice of Dr. Walter Burnham, of Lowell, during the latter's term in the state senate, after which he opened an office in Worcester. He had hardly established himself in practice when, in 1856, he accepted an invitation to lecture on anatomy before the Cincinnati Eclectic College of Medicine. Some months later he became a member of its faculty, and in 1857 removed to Cincinnati. The surgeon of the college not being able to lecture on account of illness, Dr. Howe, in

addition to his own duties, performed those of professor of surgery. The double office he held during the winter. Upon the merging of the College of Medicine into the Eclectic Medical Institute, in 1859, Dr. Howe was appointed to the chair of anatomy, and later was transferred to the chair of surgery—a position he held until his death. In 1873, he brought out a "Treatise on Fractures and Dislocations." He was the author of a "Manual of Eye Surgery" (1874); "Art and Science of Surgery" (1876); "Operative Gynecology" (1890); and "Conversations on Animal Life," for young people (1897). He was a constant contributor to and assistant-editor of the "Eclectic Medical Journal," and contributed largely to other journals popular essays on semi-scientific and literary subjects. In the progress of the years his surgical writings and editorial sketches became a store-house of reports of operative surgery, of registered observations and notes and deductions carefully compared and reduced to laws of health and disease. A large proportion of the cuts in his books and papers were of his own design, and he also showed great ability in devising improved methods and appliances in surgical science. Apart from his profession, his greatest interest was comparative anatomy, in which he received a great impetus under the instruction of Prof. Agassiz, and he never neglected an opportunity to dissect and study the organic peculiarities of any of the animals dying at the Cincinnati Zoological Garden: once he dissected a whale. He published autopsies on all of them, and perhaps the most widely read and circulated was his "Autopsy of an Elephant." Frequently he would go to great expense in securing rare anatomical specimens and preparations, of which he made pencil sketches for future enlargement and reproduction in permanent form. Dr. Howe was an active member of the Cincinnati Natural History Society, contributing to its meetings many papers. His many preparations and diagrams were given to this society and to the Cincinnati Eclectic Medical College. He was a member of numerous state, county and city eclectic medi-

cal societies, and was president of the national eclectic medical convention at Topeka in 1883. He was a member of the American Association for the Advancement of Science, the Cincinnati Historical and Philosophical Society, the Cuvier Society and many other local societies. His generous sympathy with mankind found expression in kindly manners and genial and noble social intercourse. His scholarly attainments and ability as a speaker and demonstrator gave him eminence as a teacher, while his success in his chosen work and his superior skill as an operator placed him in the front rank of surgeons. Dr. Howe was married, in 1858, to Georgiana, daughter of George S. and Lucy (Harrington) Lakin. He died in Cincinnati, O., Jan. 16, 1892.

**JAMESON, Patrick Henry**, physician, was born in Monroe township, Jefferson co., Ind., April 18, 1824, son of Thomas and Sallie (Humphreys) Jameson, natives of Virginia. His father was a thrifty and intelligent farmer; his grandfather, Thomas Jameson, was a revolutionary soldier; and his great-grandfather, John Jameson, a native of Ireland, came to America when a child, and after living a short time near York, Pa., removed to Virginia. His maternal grandfather was William Humphreys, son of John Humphreys, son of Louis Duke Humphreys, who came from England about 1710 and settled in Virginia. While to some extent self-taught, Dr. Jameson acquired for the times a fairly good education. At the age of nineteen he went to Indianapolis, then a small town of less than 3,000 inhabitants, and there taught school for four years; meantime, beginning the study of medicine with the late Dr. John H. Sanders. He attended medical lectures at the University of Louisville and at Jefferson Medical College, Philadelphia, where he was graduated M. D. in March, 1849. Soon afterwards he located in Indianapolis, and formed a partnership with his former preceptor, Dr. Sanders, who died the following year, leaving him a considerable practice. Although, owing to his youth and inexperience, for a time at least, his position seemed

critical and trying, he sustained himself so well that during the second year he alone did more business than the firm had done for the first. He thus early came into a professional prominence which he maintained for over forty years. During the early years of his practice he encountered Asiatic cholera, a widespread epidemic of dysentery and a pernicious form of anemia, affecting women in the last months of pregnancy, which latter he was among the first to observe. In the treatment of these diseases he bore his part well, and during his subsequent long career did perhaps a larger business than any other physician of Indianapolis. Dr. Jameson is one of the few surviving charter members of the Indiana State Medical Society, organized in 1849. Among his published writings are numerous reports of the state benevolent institutions; memoirs of eminent physicians; an address on scientific medicine in its relations with quackery; and (1858) a report on veratrum viride in the treatment of typhoid and puerperal fevers. He has also frequently contributed to the daily press. He was elected by the legislature of Indiana a commissioner of the Indiana Hospital for the Insane in 1861, and was re-elected for a second term in 1865. In 1869 he was elected by the legislature president of the boards of benevolent institutions of the state, which severally had the management of the Hospital for the Insane, and the

A. J. Howe

P. H. Jameson

schools for the deaf and dumb and for the blind; and he was twice re-elected to this important office for terms of four years. During his eighteen years in office he did much to improve the Hospital for the Insane, and it was largely due to his efforts that its capacity was more than quadrupled and its management brought to a high standard of excellence. He served as military surgeon during the whole of the civil war, and continued until March, 1866; he organized, in 1861, the first post hospital at camp Morton; he also assisted in starting the general hospital; had charge of all unassigned troops in quarters at Indianapolis during the war, and established and conducted the post hospitals at camp Carrington and at Ekin barracks. He was ranking surgeon in charge of the Fort Donelson prisoners confined at camp Morton in 1862, and made an exceptionally satisfactory record. From 1861 to 1869 he was physician to the Indiana Institute for the Deaf and Dumb. In 1862 he was elected to the city council, of which he was a prominent member for six years, being in 1865 chairman of a committee to make a complete revision of the city ordinances; and from 1865 to 1869 he was chairman of the committee of finance. He found the city badly in debt, without credit, meeting its current liabilities with depreciated city orders at a heavy discount, and needing about \$500,000 to help the families of soldiers and relieve the citizens from a draft. Nevertheless, its credit was speedily restored, and when, in 1869, he voluntarily retired from the council there was \$260,000 in the treasury and but \$100,000 of liabilities. In 1866 he drafted and procured the enactment of an ordinance for the establishment and maintenance of the Indianapolis City Hospital. By act of legislature in 1873 he became *ex-officio* a member of a provisional board for the erection of a hospital for insane women, being associated with the late Thomas A. Hendricks, then governor, and other state officers, and was appointed its treasurer and a member of the building committee. In 1876 he wrote a series of letters to the "Evening News" against extravagant expenditure and taxation in the city, clearly demonstrating the feasibility of a large saving, which led to a material reduction in the tax rates and to the formation of a citizens' committee, of which he was chairman, to procure suitable legislation, to limit the power of city councils and school boards and prevent excessive taxation or expenditure. This committee secured the passage of an act limiting the amount of debt for cities to two per cent. of their taxables *ad valorem*, and the annual rate of taxation to nine-tenths of one per cent. for city purposes, and one-fifth of one per cent. for the support of schools. It is still in force, and has been in part incorporated in the state constitution. On the discovery of natural gas near Indianapolis in 1887, an attempt was made to monopolize its sale, but Dr. Jameson, by his timely appeals through the press, did much toward the successful establishing of the Citizens' Gas Trust, which has since furnished abundant and cheap fuel. He has been for over thirty years a director of Butler College, and was the sole agent for the sale of its large realty holdings in Indianapolis and the erection of its buildings in Irvington. He was a prime mover in the recent organization of the University of Indianapolis, which has in all departments about 80 instructors and nearly 1,000 students. He was married, in 1850, to Maria, daughter of Ovid Butler, a prominent lawyer and the founder of Butler University. They have two daughters living, Mrs. John M. Judah and Mrs. Orville Peckham, of Chicago, and one son, Ovid Butler Jameson, a well-known attorney of Indianapolis.

**POST, Wright**, physician and surgeon, was born at North Hempstead, Queens co., N. Y., Feb.

19, 1766. He was educated at home by a private tutor, David Beatty, and at the age of fifteen, being advanced far beyond his years, began medical studies with the celebrated surgeon, Dr. Richard Bailey, then chief of staff of the New York Hospital. After four years of hard work, he went to London, to continue preparation under Dr. Sheldon, a celebrated teacher of anatomy and surgery, and, residing with him for the next two years, attended lectures and worked in the London hospitals. In 1787 he delivered his first course of lectures on anatomy, in spare rooms of the New York Hospital, where Dr. Bailey was teaching classes in surgery; but this beginning of a medical school was rudely interrupted by the "doctor's mob," which, excited by some scandalous report, broke into the building, and destroyed a valuable collection of anatomical and pathological specimens. In 1790 he was married to Dr. Bailey's daughter, and in the following year became his associate in practice. Dr. Bailey was then professor of anatomy and surgery in the Columbia Medical School, and, through his influence, Post was, in 1792, appointed to the newly founded chair of surgery; thus dividing the work into two departments. Meantime, Dr. Post had made a second visit to Europe, where he collected materials for a museum to aid him in his instruction, and for half a century this remained the largest anatomical cabinet in America. While abroad he also studied with the famous Dr. Crnikshank, of London. Says Dr. Valentine Mott, commenting on Post's proficiency as a surgeon: "Long before Sir Astley Cooper proved the safety of tying the carotid artery for aneurism, we have heard Dr. Post assert in his lectures that not only might one be tied for aneurism, but that both might be interrupted by ligature, and the patient recover. He operated twice on Sir Astley's plan, and saved both patients." Dr. Post performed the first operation in America for false aneurism of the femoral artery, and the second operation on record of tying the external iliac artery for inguinal aneurism, Dr. Dorsey, of Philadelphia, having performed the first; Post's was, however, by far the most difficult. Dr. Post's greatest performance was the first successful tying of the subclavian artery above the clavicle, on the scapular side of the scalene muscles, for a brachial aneurism situated so high as to make it expedient to tie this artery. This operation had been previously attempted by Cooper, Abernethy and Ramsden. Dr. Mott also claimed that Post was "entitled to credit for employing opiates in large doses in inflammatory disorders long before Dr. Armstrong published his treatise on fevers." In 1793 Dr. Bailey exchanged chairs with Dr. Post, who continued professor of anatomy until 1813, when, the school having been consolidated with the College of Physicians and Surgeons, he became professor of anatomy and physiology in the resultant Medical School of New York. Dr. Post received an honorary M. D. from the University of the State of New York in April, 1814. He published few papers of importance, and his title to fame lies almost entirely in his surgical achievements. From 1816 until his death he was a trustee of Columbia College. He was a charter member of the Literary and Philosophical Society of New York; a member of the New York Historical Society; for thirty-five years surgeon or consulting surgeon to the New York Hospital, and an active

Wright Post

officer of the New York County Medical Society. He became president of the College of Physicians and Surgeons on Dr. Bard's death, in 1821, and held the office until 1826. He died at his country home at Throgg's Neck, near New York, June 14, 1828.

**POST, Alfred Charles**, physician and surgeon, was born in New York city, Jan. 13, 1806, son of Joel and Elizabeth (Browne) Post. His earliest American ancestor was Richard Post, who went from England to Massachusetts, and subsequently settled on Long Island, and founded the town of Southampton. His father, a native of Long Island and a brother of the celebrated Dr. Wright Post, was an eminent merchant of the old firm of J. & J. Post, New York, and owned a fine country-seat at Fairmont, now incorporated in Riverside park, and embracing the site of Gen. Grant's tomb. Educated at Nelson's Grammar School, he completed his preparatory course at the age of twelve, and entering Columbia College two years later, was graduated in 1822. He began medical study in the office of his uncle, Dr. Wright Post, and later entered the College of Physicians and Surgeons, where he was graduated M.D. in 1827. He then spent two years in Europe, completing his medical education by study and hospital work in Paris, Berlin and Edinburgh. In 1829 he began active professional practice in New York, and continued it to within a week

of his death, devoting himself chiefly to surgery. During 1831-35 he was demonstrator of anatomy at the College of Physicians and Surgeons, New York, and in 1836 was made one of the attending surgeons of the New York Hospital, with which he was continuously connected for fifty years, holding the post of consulting surgeon at the time of his death. He was also connected with the medical staffs of St. Luke's and the Presbyterian hospitals for many years, and was consulting surgeon of the Women's Hospital. In 1847 he became professor of ophthalmic surgery at Castleton Medical College, Vermont,

and next year assumed the chair of the principles and practice of surgery. He was one of the founders of the medical department of the University of the City of New York in 1851, and held the chair of surgery and pathological anatomy for many years, becoming president of the medical faculty in 1873, and emeritus professor of clinical surgery in 1875. As an instructor, he was very successful; his lectures and expositions, which were full, perspicuous and illustrated with a wealth of anecdote and apposite illustrations, were always prepared with great care, and read by him from manuscript. His aim was to impress the student mind indelibly with the principles of anatomical and surgical sciences, and few instructors have better trained the classes under their charge. Dr. Post was a member of the New York Academy of Medicine, its vice-president in 1861-66, and its president in 1867-68; was also president of the Pathological Society, and a member of the county and state medical societies of New York, the Boston Gynecological Society, several professional organizations in Europe, and various benevolent and religious societies. In his practice he devoted especial attention to ophthalmic, aural, orthopaedic and plastic surgery, unlike many surgeons, preferring to avoid a grave operation whenever possible, and also was quite successful in the surgical treatment of cicatricial contractions and deformities from burns and

analogous injuries. For many years he conducted a weekly clinic at the University Medical College, and his marvelous ability to quickly and accurately perform the most delicate operations attracted large audiences of medical students, who listened attentively to his lucid comments and explanations. He was the first man in the United States to operate for stammering, and he also devised a new method of performing bi-lateral lithotomy. Possessing great mechanical ingenuity and inventive skill, he devised several valuable surgical instruments and appliances, notably one for performing his operations in lithotomy—a canula, sliding on a rod, and armed with knives on either side for dividing and making an entrance through the prostate. Dr. Post prepared complete and detailed reports of many of his more important operations, and contributed constantly to the translations of various societies and to such professional periodicals as "The New York Medical Journal," "The Medical Record" and "The Archives of Clinical Surgery." Among his most brilliant articles are his "Club Foot," "Treatment of Stone in the Bladder," "Cicatricial Contractions," "Contractions of Palmar Fascia" and "Reports on Stricture of the Urethra." In 1840 he published his book, "Strabismus," with an "Appendix on Stammering," which is still referred to by surgical authorities. In 1872 he received the degree of LL.D. from the University of the City of New York. He held positions in a number of religious and charitable organizations, and was a life-long member of the Presbyterian church and an elder in the Church of the Covenant. He was also president of the New York Medical Missionary Association, and one of the directors of the Union Theological Seminary. In 1832 Dr. Post was married to Harriet, daughter of Cyrenius Beers, whom he survived nearly nine years. Of their eleven children, three sons and four daughters survived him. One of his sons, George E. Post, of the Presbyterian mission at Beyrout, Syria, became a distinguished surgeon. Dr. Post died in New York, Feb. 7, 1886.

**DA COSTA, Jacob M.**, physician and author, was born in the island of St. Thomas, W. I., Feb. 7, 1832, son of John M. Da Costa. He was educated partly in America and partly in Europe; his preparation for a professional course having been made in the Gymnasium at Dresden, Germany, where he attained particular proficiency in modern languages and the classics. In 1852 he was graduated at Jefferson Medical College, Philadelphia, and then, going to Europe, spent one year at the University of Vienna and another in Paris, making a special study of pathology and internal medicine. He began the practice of medicine in Philadelphia in 1854, and at first devoted particular attention to diseases of the heart and lungs, a department to which he made many valuable contributions through his depth of research. In general medicine also he has always occupied a prominent position, as is evidenced by his many and long-continued connections with hospitals, public institutions and medical colleges. In 1859 he became visiting physician to the Philadelphia Hospital, so continuing for six years; in 1864 he was appointed lecturer on clinical medicine in Jefferson Medical College; in 1872 he succeeded Prof. Samuel Dickson as professor of the practice of medicine and of clinical medicine, resigning and becoming emeritus professor in 1891. During the civil war he was actively connected with military hospitals, chiefly with the one at Turner's Lane, near Philadelphia; was for a time attending physician of the Episcopal Hospital, and for over thirty years has been physician to the Pennsylvania Hospital. Dr. Da Costa is a member of numerous medical and other learned societies, both in America and abroad; notably of the Association of American Physicians,

Alfred C. Post

the American Philosophical Society, the Academy of Natural Sciences of Philadelphia, the American Academy of Arts and Sciences of Boston, the New England Historico-Genealogical Society, the American Academy of Political and Social Sciences, and the Medical Society of London, England. He was president of the College of Physicians of Philadelphia (1884-85, 1895-98), and also president of the Association of American Physicians. He has been a constant contributor to "The American Journal of the Medical Sciences," "The Philadelphia Medical Times," "The Philadelphia Medical Journal," "The Boston Medical and Surgical Journal," and the "Reports of the Pennsylvania Hospital." His published writings include: "An Enquiry into the Pathological Anatomy of Acute Pneumonia" (1855); "The Physicians of the Last Century" (1857); "On Cancer of the Pancreas" (1858); "Medical Diagnosis, with Special Reference to Practical Medicine" (1864); "Inhalation in the Treatment of Diseases of the Respiratory Passages" (1867); "On Membranous Enteritis" (1871); "Internal Complications of Acute Erysipelas" (1877); "Biography of Harvey" (1879); "Nervous Symptoms of Lithæmia" (1881); and "The Albuminuria and Bright's Disease of Uric Acid and of Oxaluria" (1893). The last-named essay was instrumental in calling attention to a little-appreciated form of disease, which in recognition of his careful investigations, is now known as "Morbus Da Costa." His brilliant observations on the disorder he named "irritable heart," which term has been adopted by authorities, caused the complaint to become known as the "irritable heart of Da Costa." Dr. Da Costa's "Medical Diagnosis," now in its eighth American edition, has been translated into Russian, Italian and German, and has seen several editions in the latter language. In addition to a brilliant record in the field of literature, Dr. Da Costa has repeatedly lectured with great acceptance before learned bodies throughout the country. In 1874 he read a paper on "Strain and Overaction of the Heart" before the Smithsonian Institution, Washington, D. C.; in 1888, one on the "Relation of Diseases of the Kidneys, especially Bright's Disease, to Diseases of the Heart," before the New York Pathological Society; and in June, 1897, one on "The Scholar in Medicine," before the Harvard Medical Alumni Association. The degree of LL.D. was conferred on Dr. Da Costa by the University of Pennsylvania in 1891, and by Harvard University in 1897. He enjoys the respect and confidence of both the profession and the general public, while his intellectual gifts and social graces have won him a well-deserved popularity. In 1860 he was married to Sarah, daughter of George Brinton, of Philadelphia. He has one son, Charles F. Da Costa, a member of the Philadelphia bar. His brother, Charles M. Da Costa, was one of the most eminent lawyers of New York city and a prominent trustee of Columbia University.

**KEYES, Edward Lawrence**, physician, was born at Fort Moultrie, Sullivan's island, Charleston harbor, S. C., Aug. 28, 1843, son of Erasmus Darwin and Caroline M. (Clarke) Keyes. The Keyes family is of New England origin. Two brothers emigrated from England early in the seventeenth century; the first, by the name of Robert Keyes, is known to have been living at Watertown, Mass., in 1633. The present member of the family is a lineal descendant of Solomon Keyes, also of Massachusetts, whose relationship to Robert Keyes is not definitely known. Erasmus Darwin Keyes, a well known general of the Federal army during the civil war, had an army life, covering a period of over thirty years, which was brilliant and varied. It included active service against the Indians; a

period of four years during which he was instructor at West Point; service in the position of lieutenant-colonel and military secretary on the staff of Gen. Winfield Scott, and a notable career during the civil war, in which he rose to the rank of major-general and commanded the 4th army corps. His wife was the daughter of James B. Clarke, of New York. Edward L. Keyes entered Yale College in 1859, and was graduated there in 1863, with the degree of M.A. Two of his grandfathers and a great-grandfather were physicians and surgeons of acknowledged ability and position. It seems, therefore, that he must have inherited his taste for medical studies and his capacity for medical and surgical practice. Having concluded his course at Yale, he went to New York city, and received the degree of M.D. from the University of the City of New York in 1866. He then spent eighteen months in medical study abroad, attending the hospitals in Paris, and devoting his attention particularly to cutaneous diseases and a course of study which had previously been mapped out by his New York preceptor, Prof. William H. Van Buren, M.D., with whom, on his return in the autumn of 1867, he became associated in practice. Subsequently they became professional partners, and the relationship continued unbroken until the death of Dr. Van Buren in 1883. From 1868 to 1872 Dr. Keyes gave his services gratuitously and worked hard as an attendant in the Bellevue dispensary, and in 1871 was appointed surgeon to the Charity Hospital. In 1876 he was consulting surgeon to that institution and a visiting surgeon to Bellevue Hospital. In 1885 he became one of the surgeons of the New York Skin and Cancer Hospital and of St. Elizabeth's Hospital. In 1869 and 1870 he was professor of dermatology and instructor of surgery in Bellevue Medical College, and continued in that chair thereafter. In 1875 he was appointed adjunct professor of surgery in the same college, under Prof. Van Buren, serving in that position until 1881. There is no doubt that the association of Dr. Keyes with Dr. Van Buren, so long and intimate, had much influence over his career. At the same time he has always been noted for his interest in his work and for his sense of responsibility. In his specialty, which is that of surgery, more especially connected with the genito-urinary system of the male, his success has been exceptional, and he has been considered for years a recognized authority, as was Dr. Van Buren, his preceptor, before him, and a peer of such men as Sir Henry Thompson, Gnyon, Civiale, Mercier and Hultzman. After having devoted the larger part of his life to general practice, Dr. Keyes gave up his time entirely to his specialty, in which he became easily eminent. He was a member of the New York Surgical Society, New York Academy of Medicine, of which he was at one time vice-president, and the American Association of Genito-Urinary Surgeons, which he founded. Besides the time which he devoted to active and constantly increasing practice, he found leisure to write a number of most important works on the subject with which he was best acquainted, besides special articles in encyclopedias of medicine and surgery. His principal publications are a number of text-books, monographs and essays upon dermatology, but more especially upon the surgical maladies of the genito-urinary system in the male. Dr. Keyes was married,

*Edward L. Keyes*

April 26, 1870, to Sarah Maria, daughter of Hamilton Loughborough, of Georgetown, D. C. They have had four children, three of whom survive; namely, Edward L., Eleanor and Agnes Franklin.

**BARBER, Isaac Henry**, physician and surgeon, was born at Florida, N. Y., Aug. 3, 1829, of Welsh extraction. His great-great-grandfather and first American ancestor was James Barber, who, with four brothers, went from Wales to New England. His father, William Barber, moved from Milford, Mass., to New York state. He was educated in the academy of Amsterdam, N. Y., and in 1847 began the study of medicine with Dr. Jacob G. Snell, of Port Jackson, N. Y., later going to New York and studying under Dr. R. K. Hoffman. In 1849 he entered the College of Physicians and Surgeons, now medical department of Columbia College, and was graduated there in 1851. Soon after graduation he became surgeon on the Vanderbilt line of steamers running to the Chagres river, and was made harbor surgeon for Chagres. Later he received an appointment on the Pacific Mail Steamship line, serving on the steamer Uncle Sam. In 1856 he settled in Brooklyn, N. Y., where, in 1861, he became a member of the Medical Society of Kings County, and, in 1889, its vice-president. In 1862, when the call for volunteers to the surgical staff of the army was made, Dr. Barber responded, and served throughout the war. In 1865 he was appointed surgeon to the Brooklyn Central Dispensary, and served in that capacity for thirty years as attending surgeon, consulting surgeon, trustee and president of both the medical staff and

*Isaac H. Barber*

the board of trustees, and was also attending surgeon to the county hospital. He was a member of the Physicians' Mutual Aid Association and other medical organizations. In 1857 he was married to Jane Fremyer, of Amsterdam, N. Y., and had one son, Dr. Calvin F. Barber, who survives him. He died in Brooklyn, N. Y., Feb. 5, 1896.

**LEVICK, James Jones**, physician, was born in Philadelphia, Pa., July 28, 1824, son of Ebenezer and Elizabeth Wetherill (Jones) Levick. The Levicks, originally from France, lived for many years in Derbyshire, England, whence in 1680 one Richard Levick, with his wife, Mary, emigrated to Delaware, settling in what is now Kent county. Their descendants figure somewhat conspicuously in the early history of Kent. One was a justice of the peace, two were members of the assembly, and one a captain in the Continental army. Dr. Levick's paternal great-grandfathers were farmers and men of wealth, owning large tracts of land in Kent county. It is on record that "Richard Levick and his wife, Mary, in 1684, in open court, donated lands on which to build the town of Dover." Ebenezer Levick, at the age of sixteen, removed to Philadelphia, and there was engaged in mercantile business for many years. His wife, Elizabeth Jones, was of Welsh descent, and among her ancestors numbered some of the earliest settlers of Merion, Pa. Her father, Isaac Jones, son of Richard and Mary (Noble) Jones, wedded Mary Wetherill; both Marys being of English descent. These ancestors were Friends, associates of William Penn, and influential in religious and civic matters in the early days of the colony. The Wetherills for three generations succeeded one another in the council of proprietors of New Jersey.

James Jones Levick was fitted for college by a private tutor, and then entered Haverford, where he was graduated in 1842. He at once took up the study of medicine, under the direction of Prof. George B. Wood, and in 1847 was graduated at the University of Pennsylvania. After a trip to Europe, he returned to Philadelphia to become assistant physician to the Pennsylvania Hospital for the Insane; next becoming resident physician to the Pennsylvania Hospital, where he remained until 1851. He then began private practice in Philadelphia with signal success, and in the same year began giving private instruction to the summer pupils of Dr. Wood. Subsequently, associated with Drs. H. Hartshorne, Hunt, Lassiter and Penrose, he was engaged in office and other medical teaching. He was a member of what in olden time was known as a "quiz," and as a teacher therein was unsurpassed. Whether in the amphitheatre or at the bedside of a patient, Dr. Levick was a skilled instructor. He was elected a member of the medical staff of the Philadelphia Hospital in 1856, and served over twelve years, resigning in 1868. He was elected a fellow of the College of Physicians in April, 1851; for forty-one years was physician to the Magdalen Asylum, and from 1853 until 1865, physician to the Wills Eye Hospital. In 1868 he was appointed lecturer on auscultation and percussion, etc., in the summer school of the University of Pennsylvania. During the civil war he had charge of a hospital in Philadelphia. After the battle of South Mountain, he organized, as volunteer surgeon, a military hospital at Hagerstown, Md. He became a member of the Philadelphia County Medical Society in 1853; of the American Medical Association in 1864; of the Academy of Natural Sciences of Philadelphia in 1865; and of the Historical Society of Pennsylvania in 1865. Historical subjects had a deep interest for him, especially everything relating to the settlers of the state. His last literary work, entitled "The Early Welsh Quakers and their Emigration to America," was read at a session of the Historical Society. He was early identified with the Welsh Society, and was one of its most prominent members, as his grandfather was before him. The Welsh mottoes that ornament Bryn Mawr Hotel were devised by Dr. Levick, who twice visited Wales for the purpose of collecting historical data. At the request of the Pennsylvania Hospital, he wrote his papers, "Early Physicians of Pennsylvania," which are replete with instructive and entertaining matter. His practice was large, for he was widely known as a prudent and conservative physician, and his genial, kindly nature attached every one to him. His literary attainments were considerable, and in some of his historical papers a vein of poetical feeling is noticeable. His contributions to medical journals attracted much attention in Europe as well as in this country. One of the most important treatises from his pen was published in 1861, and was entitled "Epidemic Influenza and its Treatment." Among other articles are the following: "Spotted Fever without Cerebro-Spinal Meningitis" ("American Journal of Medical Sciences," Vol. L.); "Sunstroke Treated by the Use of Large Pieces of Ice" (ibid. Vol. LII.); "The Prolonged Use of Hypodermic Injections of Morphia" (ibid. Vol. XLV.); "Miasmatic Typhoid Fever" ("Medical and Surgical Reporter," June, 1862); and "Remarks on Chorea and Allied Diseases" ("American Medical Journal," Vol. XLIII.).

*James J. Levick*

In an address before the Baltimore meeting of the American Medical Association in 1866, Dr. Levick read a paper, entitled "Spotted Fever, So-called," maintaining that the disease was identical with epidemic cerebro-spinal meningitis, so-called, and was a fever rather than a phlegmasia. He proposed for it the name "cerebro-spinal fever." During his connection with the Pennsylvania Hospital he introduced the use of ice in the treatment of sunstroke. In 1861, in an article contributed to the "American Medical Journal," he called attention to the resemblance of many of the symptoms of sunstroke to those of idiopathic fever, and suggested that these phenomena may be due to a modification in the nerve-centres from the elevation of temperature, by which the conservative or regulating influence of nervous power is lost in part or in whole. Among his historical articles and addresses were: "Three Epochs in the Life of William Penn" (1888) and "The Olden Times in Haverford" (1890). Dr. Levick maintained the traditions of his family by adhering to the Society of Friends, whose views were his by conviction as well as inheritance. He died unmarried, in Philadelphia, June 26, 1893.

**BULL, William Tillinghast**, physician and surgeon, was born in Newport, R. I., May 18, 1849, son of Henry and Henrietta (Melville) Bull. His mother was the daughter of David Melville, of Newport. His first American ancestor was Henry Bull, one of the nine original settlers of Aquidneck (Newport), R. I., and twice created governor of the colony. The tract of land allotted to him in Bull street, Newport, is still in the possession of the descendants in the direct line. Dr. Bull's father was the seventh of that name, and lived in the family

homestead in Newport until his death. After preparation in the best schools of the time, William Tillinghast Bull entered Harvard, where he was graduated in 1869. He then attended the medical department of Columbia College, and was graduated M.D. in 1872 with honors. During his course and later, he was a student under Dr. Henry B. Sands, then the most noted surgeon in New York. He won, by merit, an appointment to the staff of Bellevue Hospital, where he remained for about two years. He went to Europe in 1875, and studied in the hospitals for two years; and on his return, entered upon the practice of his

profession in New York. Dr. Bull was in charge of the New York Dispensary for two years, and for eleven years, from 1877, had charge of Chambers Street Hospital, with a staff of several assistants under him, and made the hospital famous for its successful operations in a great number of accident and emergency cases. By an improved method of laparotomy, he helped to revolutionize the treatment of gunshot wounds of the abdomen, which had formerly been fatal in 87 per cent. of the cases. The treatment of these serious injuries by operation greatly reduced the mortality. This was but one of the surgical advances which made for him a fame that brought patients from every state in the Union, and made him the universally acknowledged head of surgery in America while still a young man. In 1888 he gave up charge of the Chambers Street Hospital, and became attending, and later consulting-surgeon to St. Luke's Hospital, as well as attending-surgeon to the New York Hospital. He is also consulting-surgeon to the Manhattan Hospital;

to the Orthopædic Hospital and Dispensary, surgeon-in-charge of the Hospital for the Ruptured and Crippled, and other institutions equally well known. After an intensely competitive contest, he won an appointment as professor of surgery in the College of Physicians and Surgeons of Columbia. He is a member of the Harvard University, Century, Zeta Psi, Racquet and other New York clubs, in all of which he has held high office. In 1893 he was married to Mary Nevins, formerly the wife of James G. Blaine, Jr. Dr. Bull is a member of the American Surgical Association, the Academy of Medicine, the Practitioners' Society and the New York County Medical Society.

**JACOBI, Abraham**, physician, was born at Hartum, Westphalia, Germany, May 6, 1830. He completed his preparatory education at the Gymnasium of Minden, and, making his university studies at Greifswald (1847-48), Göttingen (1848-49) and Bonn (1849-51), received the degree of M.D. in 1851. At his graduation he presented a thesis, entitled "De Vita Rerum Naturalium."

Like many other young Germans of the time, he imbibed the revolutionary sentiments then prevalent throughout Europe, and on account of his outspoken enthusiasm in their behalf was, soon after leaving the university, arrested for high treason and *Verschwörung*, being confined in prison at Berlin, Cologne, Minden and Bielefeld until 1853. After his discharge, he went to Manchester, England, but a few months later removed to New York city, where he has since continued to reside. Although he has been continuously engaged in general practice, Dr. Jacobi has devoted con-

siderable study and attention to the diseases of children, and is ranked among the foremost American authorities in this specialty. He was professor of the diseases of children in the New York Medical College (1860-64); was clinical professor of children's diseases in the New York University Medical College (1865-70), and held the same chair in the College of Physicians and Surgeons, New York, since 1870. He has also been visiting physician to a number of public hospitals in New York, notably the German, since 1857; Mount Sinai (1860-83), Bellevue since 1874, and Randall's Island hospitals. He has been consulting physician to the Hebrew Orphan Asylum since 1868, and also to the Babies', Orthopædic, Skin and Cancer, Scarlatina and Diphtheria, Mount Sinai and other hospitals. During 1868-71, he was associate editor of the "American Journal of Obstetrics and Diseases of Women and Children," and has contributed numerous articles covering a wide range of subjects relating to the congenital and acquired diseases of infants to this periodical, and also to "The American Medical Record," "The American Medical Times," "The New York Medical Journal" and others. Several of his articles have been published in Europe; others were translated and reprinted in the medical publications of Europe, particularly his "Congenital Sarcoma of the Tongue" (1869) and "Congenital Sarcoma of the Kidneys," in the "Transactions of the International Medical Congress," Copenhagen. He has published several works of value: "Contributions to Midwifery and Diseases of Women and Children," in conjunction with Emil Nœggerath (1859); "Dentition and its Derangements" (1862); "The Raising and Edu-

Abraham Jacobi

Wm. J. Bull

cation of Abandoned Children in Europe" (1870); "Infant Diet" (1874); "Treatise on Diphtheria" (1880); "Intestinal Diseases of Infancy and Childhood" (1887); "Therapeutics of Infancy and Childhood" (1896 and 1898, translated in Germany, Italy and France); and has also contributed chapters to several medical cyclopedias and kindred compilations. Dr. Jacobi is a member of the New York Academy of Medicine, being president in 1885-89; of the New York Obstetrical Society, being president in 1868; of the New York Pathological Society, being president in 1866; of the New York County Medical Society, being its president in 1870 and 1871; of the New York State Medical Society (president in 1882); of the German Medical Society; of the Association of American Physicians (president in 1896); of the American Pediatric Society (president in 1888); etc. In 1873 he was married to Mary C., daughter of George P. Putnam, publisher, of New York, herself a physician of ability and reputation, and the first woman graduated at the *École de Médecine*, Paris.

**MITCHELL, John Kearsley**, physician and surgeon, was born at Shepherdstown, W. Va., May 12, 1798, son of Alexander Mitchell, M.D., a Scotchman, who emigrated to the United States in 1786. His mother was related to John Kearsley, M.D., founder of Christ Church Hospital, Philadelphia, vestryman of Christ Church and one of its designers, and one of the designers of the plans for Independence Hall. He was beloved by the citizens for his defense of the rights of the people while a member of the assembly. On the death of his father, which occurred when he was eight years of age, John Kearsley Mitchell was sent to Scotland to his paternal relatives, and remained there for about ten years, acquiring a general education at Ayr and Edinburgh. He studied medicine under Dr. Nathaniel Chapman, of Philadelphia, and in the medical department of the University of Pennsylvania, where he was graduated in 1819. His health having become impaired, he took a position

as ship surgeon, and made three voyages to China and the East Indies. In 1822 he began practice of a general character in Philadelphia; in 1824 was appointed lecturer on the institutes of medicine and physiology at the Philadelphia Medical Institute, and two years later became professor of chemistry in that institution. He was appointed to the chair of chemistry at the Franklin Institute in 1833, and in 1833-38 delivered annual courses of lectures on chemistry applied to medicine and the arts. In 1841 he was chosen professor of the practice of medicine in Jefferson Medical College, Philadelphia, and held that position until his death. He was visiting physician to the Pennsylvania and City hospitals, and during two epidemics in the city his services were so important that they were acknowledged by gifts from the municipality. In addition to contributions to medical journals, Dr. Mitchell published "Saint Helena; A Poem by a Yankee" (1821); "Indecision: A Tale of the Far West, and other Poems" (1839); "On the Wisdom, Goodness and Power of God, as Illustrated in the Properties of Water" (1834); "On the Cryptogamous Origin of Malarious and Epidemic Fevers" (1849); and "Five Essays on Various Chemical and Medical Subjects" (1858). The last-named was edited and published after his death, by his son, Dr. S. Weir Mitchell. His longest poem, "Indecision," is of a didactic character, and was described by his friend, Joseph C.

Neal, as "a story of romantic incident, somewhat unequal and hasty at times in its construction, but, on the whole, marked with power, and calculated deeply to interest the reader." Dr. Mitchell was married, in Philadelphia, in 1828, to Sarah Matilda, daughter of Alexander Henry, who bore him eight children. He died in Philadelphia, Pa., April 4, 1858.

**MITCHELL, Silas Weir**, physician and author, was born in Philadelphia, Pa., Feb. 15, 1829, son of Dr. John Kearsley Mitchell, physician and author, and Sarah Matilda Henry, his wife. He acquired a classical education at the University of Pennsylvania, but was obliged to leave in the senior year, on account of illness. His health restored, he entered Jefferson Medical College, Philadelphia; in 1850 was graduated there, and began private practice. During the civil war he had charge of Turner's Lane Hospital, Philadelphia, the first hospital established for the special treatment of cases of nervous injury caused by wounds, and was thus enabled to broaden a field of research in which he had been making investigations for a number of years. During that period he collaborated with Drs. George R. Morehouse and William W. Keen, Jr., in writing circular No. 6, of the surgeon-general's office: "Reflex Paralysis"; a volume, entitled "Gunshot Wounds and Other Injuries of Nerves," and a paper printed in the "American Journal of the Medical Sciences," entitled "On Malingering, Especially in Regard to Simulation of Diseases of the Nervous System," all in 1864. Subsequently, and in addition to a large number of magazine articles on this special subject, Dr. Mitchell published alone: "Wear and Tear; or, Hints for the Overworked" (1871); "Injuries of the Nerves and Their Consequences" (1872; new edition, 1881), and "Diseases of the Nervous System, Especially of Women" (1881). "Fat and Blood" (7th edition, 1897); clinical lessons, "Nurse and Patient, and Camp Cure," both published in 1877, have high rank as professional literature. "Fat and Blood" has been translated into French, German, Spanish, Italian and Russian, and the value of the methods of treatment there described has been thoroughly recognized by the physicians of all civilized countries. "Doctor and Patient: A Series of Essays" (1887) is of particular interest to laymen. The subject of toxicology early became a favorite one, and a number of highly important contributions to periodicals was the result. These include: "Experimental Researches Relative to Corroval and Vao, Two New Varieties of Woorara, the South American Arrow Poison," published in the "American Journal of the Medical Sciences" (April, 1859), Dr. William A. Hammond having assisted him; "Researches upon the Venom of the Rattlesnake," published as one of the "Smithsonian Contributions to Knowledge" (1860); "On the Insusceptibility of Pigeons to the Toxic Action of Opium," in the "American Journal of the Medical Sciences" (October, 1869), and "On the Effect of Opium and Its Derivative Alkaloids" (*ibid.*, 1879). Other papers relate to the toxic action of chloral, chloroform and other hypodermically applied. His observations with regard to the venom of serpents extended over a period of twenty years. In 1863, with George R. Morehouse, M.D., he wrote "Researches on the Anatomy and Physiology of Respiration in the Chelonia," published by the Smithsonian Institution. His contributions to medical literature are more than one hundred in number. Not the least important part of Dr. Mitchell's professional labors has been in connection with his suggestion of that combination of measures which has come to be known as the "rest-cure," and has acquired a fame that may be called international. At the same time he has had a large practice. He has twice been president of the Philadelphia Col-

J. K. Mitchell

lege of Physicians, and once headed a delegation sent by that body to call the mayor's attention to an imminent sanitary need; the visit resulting in an appropriation, by the common council, of \$400,000. He is a member of numerous societies, including the National Academy of Sciences, to which he was elected in 1865, and the British Medical Association. In 1886 the degree of LL.D. was conferred upon him by Harvard, and later by Edinburgh and Princeton. Dr. Mitchell began writing fiction during the civil war, publishing a little work entitled "The Children's Hour," the sales of which were in aid of the sanitary commission fair held in Philadelphia. This was followed by another juvenile:

S. Van Mitchell

"The Wonderful Stories of Fuz-Buz, the Fly, and Mother Grabent, the Spider" (1867). About this time he began to contribute to the "Atlantic Monthly," and as the inclination toward literary work strengthened decidedly, he consulted Oliver Wendell Holmes, who advised him to wait until he was secure as to his medical position before entering seriously into literature. The advice appears to have been taken, and in 1880, when he was fifty-one years of age, there appeared a volume, containing three stories: "Hephzibah Guinness," "Thee and You" and "A Draft on the Bank of Spain." This was followed by "The Hill of Stones,

and Other Poems" (1882); "In War Time," a novel (1885); "Roland Blake," a novel (1886); "A Masque, and Other Poems" (1887); "Prince Littleboy, and Other Tales out of Fairyland" (1888); "Far in the Forest," a story (1889); "The Cup of Youth," drama in verse (1889); "François Villon," dramatic poem (1890); "The Psalm of Death" (1891); "Characteristics," dialogues in the style of Helpe; "Friends in Council" (1892); "Francis Drake," dramatic poem (1893); "When All the Woods Are Green," descriptive of forest life (1894); "Philip Vernon," dramatic poem (1895); "Collected Poems" (1896); "Hugh Wynne, Free Quaker" (1897); "The Adventures of François" (1899). "Hugh Wynne" treats of life and manners in Philadelphia at the time of the revolution, and has been called one of the great novels relating to that period. Of it the critic, Talcott Williams, wrote: "The intimate knowledge of the nature of men and women; the personal acquaintance with the revolution, local, traditional, by residence, by descent, by kin and by marriage, the sense of the American ideal of gentleness, loftier and more uncompromising than the European, and breathing a freer air, higher and more secure; the serene confidence in the national movement, based on even-footed acquaintance with the Old World and the New; the constancy of character and principle—these all met and mingled in this romance, just as the nation itself had unawares reached a new resolve to take its place on the world's stage and play its fit part in the responsibilities, the rewards and the sacrifice of empire—no like work in our letters has had such swift reward, or better met the national movement." The same writer places the "Collected Poems" on a level with the higher achievements of American verse in 1885-98, when most of them were written; declares that "in certain genre of dramatic narration, 'Dominique de Gourguès' and 'The Huguenot' have no equal"; and calls "The Magnolia" the final and satisfying achievement of philosophic poetry—"a poem which holds even place with the few best of either land." His drama in verse, "The Masque," was presented

on the stage by Wilson Barrett; while readings from "Francis Drake" were given in public by Dr. Mitchell himself, the proceeds going to buy and preserve the site of Raleigh's early colony, relieved by Drake, Fort Raleigh, on Roanoke island. Dr. Mitchell's family spend their summers on the coast of Maine, but his favorite place of recreation is the Restigouche region in Canada, where conditions are more primitive. He was married, in 1858, to Mary Middleton, daughter of Alfred Elwyn and Mary (Middleton) Mease. She bore him two sons, one of whom, John K. Mitchell, is a physician, and author of a work on the remote effect of nerve lesions, etc. His wife died in 1864, and he was married again, in 1875, to Mary, daughter of Thomas and Maria Cadwalader, and had by her one daughter.

**PRUDDEN, Theophil Mitchell**, physician and teacher, was born at Middlebury, Conn., July 7, 1849, son of George Peter and Eliza Ann (Johnson) Prudden. His father, a Congregationalist clergyman and active abolitionist, was a direct descendant of Rev. Peter Prudden, an associate of John Davenport in planting the New Haven colony, and leader of the colonists and first minister of Milford, Conn.; his mother was a daughter of Ebenezer Johnson, of Southbury, Conn. After receiving a good elementary education in public and private schools, Theophil M. Prudden was employed in a furniture manufactory and store for about two years. He then completed his preparatory training at Wilbraham Academy, entered the Sheffield Scientific School, Yale University, and pursuing the biological course, was graduated Ph.B. in 1872. During the two succeeding years he was instructor in chemistry at Sheffield, and meantime studied medicine in the Yale Medical School and the College of Physicians and Surgeons, New York, being graduated M.D. at Yale in 1875. After one year as interne at the New Haven Hospital, he pursued advanced studies for two years, especially in pathology, at Heidelberg, Vienna and Berlin universities. Upon his return to America, in 1879, he was appointed assistant in normal histology and pathology in the College of Physicians and Surgeons, New York, becoming, in 1882, director of the laboratory of the Alumni Association. For three years he also delivered lectures on normal histology in the Yale Medical School. In 1885, he again visited Germany, to acquire the new methods of research in bacteriology and to study the newly discovered cholera microbe with Dr. Koch at Berlin. On his return, he resumed his educational duties, and in 1892 was appointed to the newly created

Theophil Prudden

chair of pathology in the College of Physicians and Surgeons of Columbia University, New York, which he still (1899) occupies. Dr. Prudden has published five volumes: "Manual of Normal Histology" (1881); "Story of the Bacteria" (1889); "Dust, and Its Dangers" (1891); "Drinking Water and Ice Supplies" (1891); and, with Francis Delafield, "Hand-book of Pathological Anatomy and Histology." Among his monographs and reports of experimental researches are: "Contributions to the Structure and Clinical History of the Multiple Neuroma" (1880); "On the Action of Carbolic Acid upon Ciliated Cells and White Blood Cells" (1881); "Experimental Studies on the Transplantation of Cartilage" (1881); "An Experimental Study of the Action of Salicylic

Acid upon Blood Cells and upon Amoeboid Movements and Emigration" (1882); "Cell Life and Animal Life" (1883); "Rhabdomyoma of the Parotid Gland" (1883); "On the Occurrence of the Bacillus Tuberculosis in Tubercular Lesions" (1883); "On the Occurrence of Tuberculosis in which the Bacillus Tuberculosis is not Demonstrable by the Ordinary Methods of Staining" (1883); "Myxo-Sarcoma of the Optic Nerve with Hyalin Degeneration" (1885); "Cystic Kidneys with Large Bilateral Perinephritic Cysts" (1885); "On Koch's Methods of Studying the Bacteria" (1885); "The Description of an Adenoma of the Caruncle" (1886); "An Experimental Study of Mycotic or Malignant Ulcerative Endocarditis" (1887); "On Bacteria in Ice and Their Relations to Disease—with Special Reference to the Ice Supply of New York City" (1887); "Myxodema," with Henry Hub, M.D. (1888); "On the Etiology of Diphtheria" (1889); "Studies on the Etiology of the Pneumonia Complicating Diphtheria in Children" (1889); "On the Germicidal Action of Blood Serum and Other Body Fluids" (1890); "Bacterial Studies on Influenza and Its Complicating Pneumonia" (1890); "Studies on the Etiology of Diphtheria," second series (1891); "Studies on the Action of Dead Bacteria in the Living Body," with E. Hedenpyl, M.D. (1891); "A Study of Experimental Pneumonitis in the Rabbit" (1891); "The Element of Contagion in Tuberculosis" (1892); "Cholera and Our Quarantine" (1892); "Some Hygienic Aspects of Asiatic Cholera" (1892); "On the Poisonous Products of the Tubercle Bacillus" (1892); "The Public Health" (1893); "A Study on the Etiology of Exudative Pleuritis" (1893); "Concurrent Infections and the Formation of Cavities in Acute Pulmonary Tuberculosis" (1894). His scientific articles of a popular character are: "Glimpses of the Bacteria" (1891); "Ice and Ice Making" (1892); "Some Records of the Ice Age about New York" (1894); "Tuberculosis and Its Prevention" (1894), and "New Outlooks in the Science and Art of Medicine" (1896). He has also contributed, mostly to "Harper's Monthly," several popular articles on travels and explorations in the great West: "A Summer among Cliff Dwellings" (1896); "An Elder Brother to the Cliff Dwellers" (1897), and "Under the Spell of the Grand Cañon" (1898). Dr. Prudden received the honorary degree of LL.D. from Yale University in 1897. He is a member of the New York Pathological Society, the New York Academy of Medicine, the Association of American Physicians, New York Academy of Sciences, New York Historical and Geographical societies, the Century Association and the University and New York Athletic clubs.

**WILDER, Alexander,** physician and author, was born at Verona, Oneida co., N. Y., May 14, 1823, sixth son of Abel and Asenath (Smith) Wilder. His father (1783-1869), a native of Petersham, Mass., was a farmer, first at St. Albans, Vt., and later at Verona, N. Y.; his mother was a daughter of William Smith, a farmer and millwright of Barre, Mass., and a soldier in the revolution. The Wilder genealogy may be traced in England as far back as 1490, beginning with Nicholas Wilder, supposedly of German origin, and still has seats at Purley Hall and Sulham Manor, Berkshire. The original American representative was Thomas Wilder, who, with his mother, Martha, and brother, Edward Wilder, came from Lancaster, in England, to Massachusetts Bay colony in 1638. He settled first at Charlestown, where he took the freeman's oath in 1640; and in 1652 at Lancaster (formerly Nashua), where he was a farmer and manufacturer of potash. From him the descent runs through his son, Nathaniel Wilder, a founder of Leominster, who was killed by

the Indians in 1704; through his son, Nathaniel, a farmer of Sterling and an early settler of Petersham; through his son, Jeremiah, also a farmer of Petersham; through his son, Abel, a farmer and drover of Barre, Mass., and grandfather of Dr. Wilder. Through his mother, he is descended from Robert Smith, of Londonderry, an Irish Presbyterian, who settled in Massachusetts shortly before the revolution; and from William Williams, of Yarmouth, England, who settled at Salem in 1638; and is collaterally related to the Brecks, Fullers, Boardmans, and other noted Massachusetts families. Alexander Wilder attended the common schools until his fifteenth year, when he began teaching school and educating himself in the higher branches of mathematics and the classics, to which he added the study of French and Hebrew and political science. The circumstances of the deaths of several of his father's family demolished his confidence in current medical methods, and he accordingly began studies in medicine, in order to render himself as far as possible independent of physicians. Meantime, he worked at farming and type-setting, reading medicine with local physicians, and in 1850 was awarded a diploma by the Syracuse Medical College. He then became a general practitioner, and for two years lectured on anatomy and chemistry in the college. In 1852 he was employed as assistant editor of the Syracuse "Star," and in 1853 of the "Journal"; and when, next year, the department of public instruction was created by the legislature, he was appointed clerk. In 1856 he became editor, first of the New York "Teacher," afterward of the "College Review"; and sojourning in Springfield, Ill., in the winter of 1857, displayed his activity in education by preparing the charter, still in force, of the Illinois Normal University. He located in New York city in 1857, and became, in 1858, a member of the editorial staff of the "Evening Post," with which he was connected for thirteen years, establishing a reputation as an expert on political and financial matters. In 1871 he was elected alderman on the "anti-Tweed" ticket by a majority exceeding 26,000. It was his last political experience; and, on account of failing health, he, in 1873, removed to Roseville, then a suburb of Newark, N. J., where he has since continued to reside, engaged in educational and literary pursuits. He was president of the Eclectic Medical Society of New York (1870-71); professor of physiology in the Eclectic Medical College (1873-77), and professor of psychology in the U. S. Medical College (1878-83), until it went out of existence by a decision of the courts. Dr. Wilder became, in 1876, secretary of the National Eclectic Medical Association, and held the office until 1895, by annual re-election, meantime editing and publishing nineteen volumes of its "Transactions," besides contributing extensively to its literature. Loving knowledge for its own sake, he has always been a diligent student and an almost omnivorous reader. In 1882 he attended the School of Philosophy at Concord, Mass., and a year later took part in the organization of the American Akademe, a philosophic society, holding meetings at Jacksonville, Ill. He edited its journal for four years, contributing monographs, entitled: "The Soul," "Philosophy of the Zoroasters," "Life Eternal," "Creation and Evolution," and others. He also made a translation from the Greek of the "Dissertation of Iamblichus on the Mysteries of the Egyptians," etc., which was printed in "The

Alexander Wilder

Platonist." Among his pamphlets and books are: "Later Platonists," "Paul and Plato," "The Resurrection," "New Platonism and Alchemy," "Mind, Thought and Cerebration," "Plea for the Collegiate Education of Women," "The Ganglionic Nervous System," "Vaccination, a Medical Fallacy," "Prophetic Intuition, or the Daemon of Socrates," "History of Medicine," and "Ancient Symbolism and Serpent Worship."

**ROOSA, Daniel Bennett St. John**, physician, was born in Bethel, Sullivan co., N. Y., April 4, 1838, son of Charles B. Roosa, and great-grandson of Isaac A. Roosa, who was a lieutenant in the New York line of the Continental army. His mother was Amelia E., daughter of Jesse M. Foster. On the paternal side he is of Dutch and Huguenot extraction, his grandmother being Dolly Duryea (Durier); on the maternal side he is of English origin (Foster-Heard)—Gen. Heard, of the Continental army, being one of his ancestors. He was educated at the district school of his native village, at the academies of Monticello, N. Y., and Honesdale, Pa., and in 1856 he entered the class of 1860 of Yale College. He was obliged to leave college, on account of his health, in a few months. His studies were continued under the care of a tutor until the autumn session, in 1857, of the medical department of the University of the City of New York, when he was matriculated at that institution. He also took special courses in the laboratory of Prof. John W. Draper. He received the degree of M. D. from the university in 1860, and was made an assistant to the house-surgeon of the New York Hospital by a competitive examination in that year. In April, 1861, he volunteered, under the call of the president for 75,000 men, and was ordered to the 5th regiment, N. G. S. N. Y., as assistant surgeon, and served with the regiment for its term of enlistment, three months. He completed his service in the New York Hospital as house-surgeon in April, 1862, and then spent a year in Europe in study at the ophthalmic clinics in Berlin and Vienna; returning to New York in May, 1863. In June of that year, he went with the 12th regiment, N. G. S. N. Y., to Pennsylvania, and was mustered into the United States service as surgeon for thirty days. In the autumn of that year he engaged in private practice, chiefly in ophthalmology and otology, in New York city. He has been aural surgeon to the New York Eye and Ear Infirmary, professor of diseases of the eye and ear in the University of the City of New York and in the University of Vermont, professor of diseases of the eye and ear in the New York Post-graduate Medical School and president of the faculty. Dr. Roosa was president of the New York State Medical Society in 1879, of the International Otolological Society in 1876, of the American Otolological Society, and honorary vice-president of the International Ophthalmological Society, meeting in Edinburgh, in 1894. He was president of the New York Academy of Medicine in 1893 and 1894. He is one of the surgeons and founders of the Manhattan Eye and Ear Hospital. He has translated "Trottsch on the Ear" from the German; also, in conjunction with Dr. C. E. Hackley and Dr. C. S. Bull, "Stellwag on the Eye." He is the author of "Vest Pocket Medical Lexicon," "Treatise on the Ear," "The Old Hospital," and other papers, and a "Clinical Manual of Diseases of the Eye." He has been an occasional contributor to the popular magazines, besides numerous contributions to medical journals. Dr. Roosa has always taken a lively interest in public affairs, and for a long time was a member of the committee on political reform of the Union League Club. He is a member of the Society of the Sons of the Revolution, of the St. Nicholas and Holland societies, and was president of the latter-named society in 1896.

He received the honorary degree of M. A. from Yale, and LL.D. from the University of Vermont. He has been twice married: first to Mary Hoyt, daughter of Stephen M. Blake, of New York city, who died in 1878; second to Mrs. Sarah E. Howe, daughter of Eder V. Haughwout, also of New York city.

**HAMILTON, Allan McLane**, physician, was born in Brooklyn, N. Y., Oct. 6, 1848, son of Philip and Rebecca (McLane) Hamilton. His father was a son of Alexander Hamilton, and his mother a daughter of Louis McLane, secretary of state in Pres. Jackson's cabinet. On his graduation at the College of Physicians and Surgeons, in 1870, Allan McLane Hamilton received the Harsen prize medal and the first faculty prize for a paper entitled "Galvano Puncture," and in 1879 the first prize of the American Medical Association for an essay upon diseases of the spinal cord. Almost from the beginning of his practice he made a specialty of nervous diseases, in which he has long been one of the foremost American authorities. He was the first to use and recommend nitroglycerine in nervous and vascular diseases, and was among the first in America to use the galvano-cautery and electrolysis in medicine and surgery. In 1896 he read a paper before the Medical Society of London upon intestinal autoeoxia as a cause of insanity, which has, in Europe and America, led to a radical change in the treatment of mental diseases. In 1872-73 he was physician in charge of the New York State Hospital for Diseases of the Nervous System, and for several years was visiting surgeon to the Epileptic and Paralytic Hospital on Blackwell's Island; attending physician to the New York Hospital for Nervous Diseases; consulting physician to the New York city insane and idiot asylums, and consulting physician to the Hudson River State Hospital for the Insane, and the New York Institution for the Ruptured and Crippled. He is now professor of mental diseases at Cornell University Medical College. In the trial of Guiteau, Dr. Hamilton testified as an expert in behalf of the government. In 1873 he published his well-known work, "Clinical Electro-Therapeutics," which has been translated into Japanese, in 1878 "Nervous Diseases"; and in 1895 "Medical Jurisprudence," which is a text-book and work of reference in Europe and the United States. For several years he was editor of the "American Psychological Journal." Dr. Hamilton was a fellow of the New York Academy of Medicine, of which he was statistical secretary (1874); a member of the Society of Neurology, of which he was secretary in 1875; a member of the New York County Medical Society; a corresponding fellow of the Medical Society of London, and in 1899 was elected a fellow of the Royal Society of Edinburgh. He was the insanity expert for the prosecution, testifying in the Maria Barberi, Carlyle Harris and Whittaker celebrated murder trials in New York city, and has been prominently identified with most of the important criminal and civil cases in New York city and in other parts of the country.

**BATTEY, Robert**, physician, was born near Augusta, Ga., Nov. 26, 1828, son of Cephas and Mary A. (Magruder) Battey, and grandson of Robert Battey, of Peru Clinton co., N. Y. His mother was the daughter of George Magruder, of

Richmond county, Ga. His paternal ancestors, who were English, settled at Providence, R. I. Dr. Battey was educated at Augusta, Ga., and at Phillips Academy, Andover, Mass. He studied medicine at Booth's Laboratory, Philadelphia, and at the Philadelphia College of Pharmacy, where he was graduated in 1856. He continued his studies at the University of Pennsylvania and the Jefferson Medical College, graduating at the latter in 1857. He at once settled in Rome, Ga., where he has ever since resided. He originated and successfully performed, in August, 1872, an operation, since known as

Battey's operation, for the removal of the ovaries, with a view to effecting the change of life in women, and thereby remedy certain otherwise incurable maladies. It is to-day an established operation in surgery, and has been the means of saving thousands of valuable lives. Besides other notable discoveries and additions to the means of curing disease, he introduced to the medical world, in 1877, a new uterine escharotic and alterative, which he named iodized phenol—a remedy which has gone into general use in the treatment of diseases of women in every civilized nation upon the globe. He is an ex-president of the Georgia Medical Association and the American Gynecological Society; a fellow of the

British Gynecological Society; a member of the American Medical Association of the Congress of American Physicians and Surgeons; an honorary fellow of the Obstetrical Society of Edinburgh, of the Medical Society of Virginia, etc. In July, 1861, he was commissioned surgeon in the Confederate army, and served in field and hospital throughout the war. He was professor of obstetrics in the Atlanta Medical College from 1873 until 1875, and from 1875 until 1876 was editor of the Atlanta "Medical and Surgical Journal." He was married, Dec. 20, 1849, to Martha B. Smith, of Rome, Ga.

**DEARBORN, Henry Martin**, physician, was born at Epsom, Merrimack co., N. H., Nov. 19, 1846, son of Edwin and Lettice C. (Stanyan) Dearborn. His family in America begins with Godfrey Dearborn, who settled in the Massachusetts bay colony, and in 1639, in company with Rev. John Wheelwright and others, was banished, and became one of the founders of Exeter, N. H. He removed to Hampton, N. H., in 1648-50, and there spent the remainder of his days. Although his descendants have been few in number, comparatively, some in every generation have been conspicuous, and no less than thirty-eight have been physicians, several of these having more than a local reputation. Simon, great-grandfather of Henry Martin Dearborn, was a brother of the famous Maj.-Gen. Henry Dearborn, secretary of war in 1807-09. Dr. Dearborn was prepared for college at Blanchard Academy, Pembroke, N. H.; spent two years at Harvard Medical School, and then entered the medical department of Bowdoin College, and was graduated in 1869. He practiced at Hopkinton, N. H., in 1869-73, and during that period was superintendent of public schools for one year. In 1874 he removed to Boston, Mass., and bought Dr. Thaxter's practice, continuing until 1880, when, owing to ill health, he was compelled to give up a large and lucrative practice and remove to New York city, abandoning allopathy for homeopathy at that time. He soon acquired an enviable reputation, and was called to fill a number of prominent positions. He was appointed visiting physician to the Metropolitan Hospital (formerly Ward's Island

Homeopathic Hospital, 1881); state examiner in lunacy (1882); assisted in organizing the first medical staff of the Laura Franklin Free Hospital for Children (1885), and became visiting physician for diseases of the skin to that institution; he was appointed professor of theory and practice of medicine to the New York Medical College and Hospital for Women (1886); professor of dermatology in the same institution (1889); consulting physician to the Women's Hospital (connected with the college, 1887); professor of dermatology in the New York Homeopathic Medical College and Hospital (1893); professor of dermatology in the Metropolitan Post-Graduate School of Medicine (1895); consulting dermatologist to the Flower Hospital (1896); and consulting physician to the Memorial Hospital for Women and Children, Brooklyn, (1897). He was elected president of the New York County Homeopathic Medical Society (1889); was associate editor of the "North American Journal of Homeopathy" (1885-91); and has been a frequent contributor to periodicals, many of his papers relating to diseases of the skin, which he has made a specialty. He is a member of the Colonial Club; New York Medical Club; Jahr Club; American Institute of Homeopathy; New York Materia Medica Society; New York Pædagogical Society; Academy of Pathological Science; New York State and County Homeopathic Medical societies; National Society of Electro-Therapeutics; honorary member of the New Hampshire State Medical Society, and a member of the medical council, University of the State of New York. Dr. Dearborn was married in Salem, Mass., Jan. 1, 1873, to Sarah, daughter of the late Edward Henry Smith, of London, and Sarah (Buttery) Smith. They have a daughter and a son.

**BECK, Theoderic Romeyn**, physician and author, was born in Schenectady, N. Y., April 11, 1791. His father was Caleb Beck, and he was of mingled English and Dutch descent. At an early age he was left by the death of his father in the care of a widowed mother who had four other sons. He attended the common schools of Schenectady, and in 1803 entered Union College, where he was graduated at the age of sixteen years. He then went to Albany where he commenced the study of medicine which he completed in New York city, under the eminent Dr. David Hosack. He received the degree of M.D. in 1811, and returned to Albany, where he began the practice of medicine and surgery. In the same year he was appointed physician to the almshouse. Having become a member of the Society for the Promotion of Useful Arts, in 1812 he began to interest himself in agriculture and manufactures and continued to promote the useful arts during his entire life; in 1813 he read before the society an important report on the mineral wealth of the state of New York. In 1815 Dr. Beck was appointed professor of the institutes of medicine and also lecturer on medical jurisprudence in a new college of physicians and surgeons which had been established at Fairfield, in Herkimer county. He also became principal of the Albany Academy and withdrew from the practice of medicine in 1817, being led to this action by a sensitive organization; revolting at the suffering he was compelled to witness. In 1823 Dr. Beck was elected vice-president of the Albany Lyceum of Natural History, and the same year published with his brother, J. B. Beck, their important work on "The Elements of Medical Jurisprudence." This gave the authors world-wide fame. It was translated into several European languages and became the standard authority on that subject. In 1829 Dr. Beck was elected president of the Medical Society of the State of New York. In 1840 he was elected professor of materia medica in the Albany Medical College, and

*Albert C. Battey*

continued to fill the chair until 1854, when he resigned on account of impaired health. He also filled, from 1841 until his death, the important position of secretary of the board of regents of the state of New York. Dr. Beck was an expert on insanity; published an inaugural dissertation on the subject in 1811, and from 1849 to 1853 edited "The American Journal of Insanity." He contributed to a number of journals of general science, and the papers from his pen which were read before the general societies were valuable contributions to American literature. He died at Utica, N. Y., Nov. 19, 1855.

**BATCHELDER, John Putnam**, surgeon, was born at Wilton, N. H., Aug. 6, 1784. From early youth he showed a strong interest in medical science and considerable aptitude in discovering and applying remedies, and, after a good education in the local schools, became a student in the office of Drs. Samuel Fitch and Matthias Spaulding, at Greenfield, N. H. In June, 1807, he was licensed to practice, although he did not receive the degree of M.D. until 1815, when he completed the course of the Harvard Medical School, Boston, Mass. On his graduation at this time he presented a thesis on aneurism, which is notable for its profound reasoning and many remarkable anticipations of improvements in medical science. In 1817 he became professor of anatomy in the Castleton Medical College, Vermont, and, later, in the Pittsfield Medical College, Massachusetts, and afterwards practiced at Utica, N. Y., whence he removed to New York city in 1846. He performed his first operation for calculus as early as 1818, and during his long and successful career treated a wide range of surgical cases, although devoting particular attention to diseases of the eye and to tumors and fungous growths. His extensive experience in the latter class of affections led him to make many improvements and simplifications in surgical instruments. In 1846 he invented the first craniotome to be worked with one hand, thus avoiding the serious accidents frequently occurring with the earlier forms of the instrument. As has been well said, his method of operating was characterized by an accuracy almost mathematical, and his delicacy of touch was of immense utility, especially in ophthalmic operations. He performed the rhinoplastic operation and the plastic treatment for producing a new under lip, both for the first time in America; frequently tied the greater arteries in the attempt to cut off the blood supply from tumors, and was the first American surgeon to remove the head of the femur. He was a member of several professional and learned associations, was president of the New York Academy of Medicine and the New York Medical Association. His writings consist mainly of lectures, monographs and magazine articles, mostly reports on important operations performed by him and suggestions on the treatment of a wide range of disorders. He also published a book, "Thoughts on the Connection of Life, Mind and Matter" (1845), which created considerable interest among thoughtful people. An immense amount of his manuscript was lost to the world through an early-acquired habit of using shorthand, which, after the lapse of years, became utterly unintelligible to him. Dr. Batchelder died in New York city, April 8, 1868.

**SAJOUS, Charles Eucharist de Médieis**, physician and editor, was born at sea, Dec. 13, 1852, son of Count Charles Roustain de Médieis-Jodoigne and Marie Pierrette Curt, his wife. His father was the head of the Franco-Flemish branch of the de Médieis family of Florence, Italy, to which rank the son succeeded by decree in 1893, under the title of Count de Médieis-Jodoigne-Sajous. The surname by which he is known was derived from his step-father, James Sajous, and was assumed in order to comply with the terms of the inheritance law of California. His

mother, who died in 1889, was a native of Cluse, Savoy, and a daughter of Pierre Curt, whose family has for many generations been among the most prominent in that country. Spending his early years in France, Dr. Sajous attended schools for four years in Paris, and after his arrival in America, in 1861, continued study under private tutors. He began the study of medicine at the University of California, and in 1878 received the degree of M.D. from Jefferson Medical College, Philadelphia. Subsequently, in recognition of his attainments in several branches, he received the equivalent of bachelor in arts and sciences from the University of France. In 1879 he held the chair of anatomy and physiology at the Wagner Institute of Science; in 1880 was professor of laryngology at the Pennsylvania School of Anatomy, and in 1884-90 clinical lecturer on laryngology at the Jefferson Medical College. His latest connection with an educational institution was as professor of laryngology and dean of the faculty of the Medico-Chirurgical College for a few months in 1897-98, his resignation being occasioned by the pressure of his editorial duties. Meantime he had conducted an extensive and profitable practice, and won a great reputation from several devices and instruments of his invention, now widely used in operating for diseases of the throat. Since 1888 he has been editor of the publication originally known as "Annual of the Universal Medical Sciences," but which, in recognition of his able services in bringing it to a successful issue, has since 1897 been entitled "Sajous' Annual and Analytical Cyclopædia of Practical Medicine." In the conduct of this work he is assisted by a staff of over 100 physicians of recognized ability, as well as by correspondents in all parts of the world, and is thus able to collect and publish the latest information on medical progress in every land. It enjoys a universal reputation, and during the last ten years has had a total circulation of nearly 500,000 volumes in the United States alone. Among other expressions of praise that have come to Dr. Sajous for his work in this publication are the following: the "Internationale Klinische Rundschau," of Vienna, says: "What have we in German literature that can be compared to this work?" the Albany "Medical Annals" says: "This vast work deserves to rank among the improvements of modern times"; the "American Practitioner" says: "This work shows an ability for organizing on the part of the editor that, shown in war, would make one of history's greatest generals or admirals." Dr. Sajous has contributed articles to other medical periodicals; has written several books, notably: "Curative Treatment of Hay Fever" (1885), and "Diseases of the Nose and Throat" (1886), and was editor of the medical department of "The People's Cyclopædia of Universal Knowledge." He is a member of the French Society of Scientific Men; of the Philadelphia Academy of Natural Sciences; of the American Laryngological Association, being its vice-president in 1888; of the Astronomical Society of France; a fellow of the American Philosophical Society, and a fellow, associate or honorary member of a number of other learned bodies in America and Europe. Among honorable recognitions of his genius and attainments may be mentioned one of the honorary presidencies of the international medical congress in Rome (1894); the U. S. commissionership to the book and literature exposition, Paris (1894); the cross of the Legion

of Honor of France; the knighthood of Leopold of Belgium; the title of officer of the Academy of France; the rank of knight-commander of the Order of the Liberator of Venezuela; the rank of knight-commander of the Order of St. John of Spain, and the cross of the Life Savers of Belgium for humanitarian work among the poor. In 1884 he was married to Emma Christine, daughter of the late Theodore Bergner, a civil engineer of Philadelphia. They have one son, Louis Theodore de Médicis-Sajous.

**HARRIS, Elisha**, physician and sanitarian, was born at Westminster, Vt., Mar. 5, 1824. He was, in his early years, of feeble constitution, and while pursuing his education suffered severely from an attack of tuberculosis. On recovering, he turned his attention to medical and sanitary studies, and making his professional preparation at the College of Physicians and Surgeons, was graduated in 1849. He began practice in New York, and in 1855 received appointment as superintending physician of the hospitals at Quarantine, Staten Island, where he served for several years. In 1859 the commissioners for the removal of the quarantine station committed to Dr. Harris' superintendence the preparation and direction of the experiment of a floating hospital; and most of the great sanitary reforms which have given to the port of New York its present

model system of quarantine defenses were, in the beginning or organized, if not originated, by him. He was the first to suggest, at the beginning of the civil war, a national sanitary commission, the result being that for nearly five years he was himself wholly given up to duty as a sanitary commissioner, devoted to advising and working out the sanitary problems of the armies. The railway ambulance was exclusively his device and for it he received a silver medal at the Paris exposition of 1867. He also devised and prepared the remarkable system of national records of death and burial of soldiers and the collecting, arrangement and analysis of information which was published in several volumes, known as

the "Sanitary Memoirs of the War." Later, having been appointed sanitary inspector of New York city, he did an important work in a survey of the city, especially of the tenement districts, making a report on its condition and bringing about a vigorous enforcement of health laws, especially as regards ventilation. After the close of the war, Dr. Harris was U. S. register of vital statistics and sanitary superintendent, at the same time being secretary of the American Public Health Association and finally its president. In 1880 the New York legislature created a state board of health, of which Dr. Harris became one of the commissioners, and was elected by his colleagues secretary and state superintendent of vital statistics. He made most important contributions to sanitary and reformatory literature, writing with vigor, earnestness and perspicuity. Among such works are: "Four Reports on Quarantine Hospitals, Yellow Fever and Cholera"; "An Essay on the Pestiferous Diseases"; "On the Ventilation of American Dwellings"; "Review of the Sanitary Experience of the Crimean Campaign"; "History of the Work and Purposes of the United States Sanitary Commission"; "Practical Manual on Infectious and Contagious Diseases in Camps, Hospitals and Ships"; "The Citizens' Report of the Sanitary Condition and Wants of New York"; "Report on the Sanitary Government and Vital Statistics of the American

Cities"; "Report and Transactions of the State Board of Health"; "Report on a Uniform System of Vital Statistics in the United States," and many other equally important monographs. Dr. Harris was noted not only for exact scientific and general knowledge on medical and sanitary matters, but for physical powers and habits of unusual endurance in severe labor. He was perhaps the best authority on sanitary science in this country. He died in Albany, N. Y., Jan. 31, 1884.

**McKNIGHT, Charles**, surgeon, was born at Cranbury, N. J., Oct. 10, 1750, son of Charles and Elizabeth (Stevens) McKnight. His father was a noted Presbyterian minister of New Jersey, a trustee of Nassau Hall (now Princeton University) and a leading patriot in the revolution, who was thrown into prison by the British in 1777, and died there; his mother was a daughter of Richard Stevens, also of New Jersey. He was graduated at Princeton with the title "candidatus primus," in the famous class of 1771, which counted among others Pres. James Madison, and then began the study of medicine under Dr. William Shippen, of Philadelphia. On the outbreak of the revolutionary war he enlisted as surgeon in the American army, and, his abilities soon attaining recognition, he was appointed April 11, 1777, senior surgeon of the flying hospital, middle department, serving in this capacity three and a half years. In the discharge of the arduous duties of his profession among the cantonments on the Hudson river, his talents and indefatigable zeal were alike conspicuous. And although surrounded by the most discouraging circumstances and exposed to all the hardships necessarily connected with his department of the American army, he proved himself worthy of every trust. For about two months in 1780 he served as surgeon-general, and from Oct. 1, 1780, to Jan. 1, 1782, as chief physician to the entire army (not to the middle department only, as stated by several authorities), as is proved by an official certificate, dated from the office of accounts, hospital department, New York, May 20, 1788, and still in the possession of his descendants. At the close of the war, Dr. McKnight became a member of the Society of the Cincinnati. He settled in New York city, where he continued in practice until his death. He was elected a regent of the University of the State of New York, and in 1785 was appointed professor of surgery and anatomy in the medical department of Columbia College. His genius gained for him wide approbation. May 12, 1781, he was appointed port physician of New York. Dr. McKnight, although eminent as a physician, was particularly distinguished as a practical surgeon, and at the time of his death had few rivals. He is said to have performed the first successful Cæsarian section in this country. On April 22, 1778, he was married to Mrs. Mary Litchfield (1753-96), widow of Col. John Litchfield, of His Majesty's 16th foot, and only daughter of Gen. John Morin Scott, a prominent lawyer of New York city, a leading member of the Sons of Liberty, a delegate to the Continental congress and for many years secretary of the state of New York. She was a lady of great beauty and accomplishment, and a very interesting account of her is given in Mrs. Lamb's "History of the City of New York" (vol. ii., p. 285). They had five daughters and one son, John Morin Scott McKnight (1784-1848), who was also a well-known physician. Dr. McKnight died in New York city, Nov. 16, 1791.

**TALMAGE, John Frelinghuysen**, physician, was born near Somerville, Somerset co., N. J., March 11, 1833, son of Thomas Talmage. The family, originally known as Tollemache, is an ancient one in Scotland, where one branch is represented by the earls of Dysart. The original American representative of the family settled at Charlestown, Mass., in

*Elisha Harris*

1630. His maternal grandfather was a Van Vechten, a Hollander of high rank, whose wife was a daughter of Count Lagrange, of France, of Huguenot descent and friend of Lafayette. John F. Talmage was named after Gen. John Frelinghuysen, who was his uncle by marriage. His boyhood was passed on his father's farm, and his education, begun at the village academy, was completed under the tuition of his pastor, Rev. T. W. Chambers. In 1819 he entered the sophomore class of Rutgers College, New Brunswick, N. J., where he was graduated in 1852. After leaving college he was appointed professor of ancient languages in a college in Alabama, which has since become extinct, and while thus employed became interested in homeopathy with the result that he attended lectures on medicine in Huntsville, Ala., for six months. Then coming North he entered the medical department of the New York University, at the same time studying in the office of the late Dr. A. Cooke Hull, of Brooklyn, and in the spring of 1859 received the degree of M.D. A short time after this he was taken into partnership by Dr. Hull, and the relation between them continued until the latter's death, in 1868, when Dr. Talmage succeeded to the full practice. By 1870 his business had so increased that he was obliged to associate his brother, Dr. Samuel Talmage, and even then his work was so exacting that it was impossible for him to make much active effort in regard to the public charities and benevolent enterprises of the city. He was, however, for a time physician to the Brooklyn Orphan Asylum, and also for a time in the department for diseases of women in the Brooklyn Homeopathic Dispensary; consulting physician to the Brooklyn Nursery; visiting physician to the Brooklyn Homeopathic Hospital, and surgeon of the 11th brigade, N. G. N. Y. In 1866, during the visitation of Asiatic cholera in this country, Dr. Talmage issued a circular of hints and suggestions for the use of those stricken with the disease, which was extensively reprinted, but for lack of time he never made frequent or large contributions to medical literature. He was a member of the American Institute of Homeopathy and several other medical societies, as well as of the Crescent, Brooklyn and Hamilton clubs and the Philharmonic Society, all of Brooklyn, being a director of the last-named, and of the Zeta Psi Club of New York. Dr. Talmage was married, in 1863, to Maggie A., daughter of Thomas Hunt, a prominent New York merchant. He died in Brooklyn, N. Y., July 7, 1881.

**THEBAUD, Julius Stephen**, surgeon, was born in Morristown, N. J., Oct. 28, 1827. After a thorough preparatory education, he entered on the study of medicine with Drs. Sabine and Lewis A. Sayre in New York city, later matriculating at the College of Physicians and Surgeons, where he was graduated M.D. in 1849. The years 1849-51 he spent in travel and study in Europe, attending medical and scientific lectures and examining into the hospitals of England, Germany and Italy. Even at this early age, his mechanical talent was so developed that he was able to contrive several great improvements in surgical instruments, which are still recognized as useful. Shortly after his return home, in October, 1851, he was appointed surgeon to the New York Dispensary and to the French Benevolent Society, and in March, 1853, also to the Demilt Dispensary, holding all three positions for many years. Among other connections with public institutions, he was attending surgeon to the Colored Home Hospital from January, 1854; to St. Vincent's Hospital from April, 1857; to the St. Vincent de Paul Asylum from July, 1858, and to the Bethune Orphan Asylum from October, 1858. For many years he made a specialty of urethral and venereal diseases, and among other great improvements in practice contrived an instru-

ment for forcible rupture of the urethra in cases of chronic stricture. Dr. Thebaud was one of the few surgeons of his day to successfully perform the hip-joint operation; he tied the carotid of a six-months-old child as a cure for aneurism; he performed in 1857 a heroic and delicate operation for circocele, the patient recovering, and had great success in operating for tumors of various kinds and for aneurism. He was a member of the New York Pathological Society; a fellow of the New York Academy of Medicine, and a member of the Medical and Surgical Society. He died in New York city, Oct. 20, 1876.

**TAYLOR, Isaac Ebenezer**, physician, was born in Philadelphia, Pa., April 25, 1812, son of William and Mary Taylor, natives of Cambridge, England, who settled in Philadelphia in 1797. He was educated at Rutgers College, where he was graduated in 1830. During his college course he was suspended for playing billiards and during that time attended lectures on anatomy, chemistry and midwifery. He read law for two years, then entered the medical department of the University of Pennsylvania and was graduated in 1834. In 1835 he removed to New York to engage in business with his father-in-law, Stuart Mollan, of that city, but in 1839 took up the practice of medicine. The year 1840-41 was spent in Europe, studying in hospitals and in the office of Prof. Cazeaux in Paris. On his return to New York city he became attending physician to the City, Eastern, Northern and Demilt dispensaries, having charge in each of the diseases of women for seven years. In 1851 he was elected physician to Bellevue Hospital and was instrumental in bringing about many reforms and uniting the different departments under one government. In 1860 he suggested the establishment of a medical college in connection with the hospital, and when in 1861 the institution was opened he was appointed its president and treasurer. An out-door department was added at his suggestion in 1863. In 1867 he was elected emeritus professor, having resigned his professorship of obstetrics, and was continued in the presidency.

He was president of the medical board of the hospital (1868-76); was attending physician to the Charity Hospital (1860-74); president of its medical board (1860-62). For a number of years beginning with 1876 he was obstetrical physician to the Maternity Hospital. He was a permanent member of the American Medical Association and of the New York State Medical Society; member of the New York County Medical Society, its president in 1865 and its vice-president (1864-77); vice-president of the New York Academy of Medicine (1867-68) and trustee (1872-82); president of the obstetrical section of the Academy of Medicine in 1856, 1876 and 1877, and of the New York "Medical Journal," of which he was also the founder (1868-69); vice-president of the American Gynecological Society, and corresponding member of many obstetrical societies, including that of Berlin. He contributed many articles on obstetrics and women's diseases to the New York "Journal of Medicine and Surgery," the "American Journal of Medical Sciences," the New York "Medical Times," and other periodicals. He was the first American physician to introduce uterine auscultation and in 1843 edited Dr. Evory Kennedy's work on that method. In 1839, with Dr. James A. Washington, he introduced the hypodermic method of treatment by morphia and strychnia. He was the first American physician to use the speculum in diseases of women and children, publishing a paper

*Isaac E. Taylor*

on that subject in 1841. Dr. Taylor was held in the highest regard by his pupils and patients and by his medical associates. He died in New York city, Oct. 30, 1889.

**HOSACK, David**, physician and scientist, was born in New York city, Aug. 31, 1769, son of Alexander Hosack, a Scotch artillery officer, who distinguished himself at the capture of Louisburg in 1758. After a thorough school education in New York city and Newark, N. J., he entered Columbia College, about the same time beginning medical study under Dr. Richard Bayley, an eminent surgeon of New York. In 1788 he transferred his allegiance to the College of New Jersey (Princeton), and having been graduated in 1789, continued professional preparation, first in New York, under Drs. Romaine, Post and Bard, and then at the Medical College of Philadelphia, where he received the degree of M.D. in 1791. He began practice in Alexandria, Va., then believed by many to be the future site of the national capital, but at the end of one

year removed his family to New York city and went abroad for two years of advanced medical, anatomical and general study at the University of Edinburgh and under several noted specialists of London. He also studied botany under William Curtis and James Dickson, the celebrated cryptogamist; their instruction proving the foundation of his subsequent valuable researches and contributions to the science. In the autumn of 1794 he returned to the United States in the ship Mohawk, and on the voyage seized an opportunity to demonstrate his professional skill in the treatment of an outbreak of typhus fever among the steerage passengers. His success was complete, not a life being lost, and the flattering testimonials published in several New York newspapers on his arrival laid the foundation of his extensive and successful practice. Among his earliest regular patients were the families of Alexander Hamilton and Aaron Burr and other prominent New Yorkers. During the first year after his return he added to his income by instructing private pupils in natural history and medicine, and in 1795 he received appointment as professor of botany at Columbia College. In that year a particularly malignant epidemic of yellow fever broke out in New York, and Dr. Hosack by his activity in relief of the sufferers and his skill in treating that distressing disease gained new reputation. The celebrated Dr. Samuel Bard invited him to a professional connection preparatory to making him successor to his extensive practice on his retirement four years later, and this fact, coupled with his extraordinary success with yellow fever during eight separate epidemics previous to 1823, made him one of the foremost physicians in New York. His theory of the origin and nature of yellow fever was confirmed by his experience in an immense number of cases—he himself was attacked by the disease in 1798—and the “sudorific treatment,” first employed by him, proved altogether the most efficient ever devised, effectually supplanting the “indiscriminate use of the lancet and mercury in this epidemic form of fever.” In 1797 he was appointed professor of *materia medica* at the Columbia Medical School, as successor to Dr. William Pitt Smith, deceased, and continued to hold the chair in connection with that of botany until the school was consolidated with the College of Physicians and Surgeons in 1807. He then became professor of midwifery and surgery,

and later of the theory and practice of physic and clinical medicine in the reorganized institution; the latter chair giving the widest possible scope to his genius and learning, dealing, as it must, with almost every disease known to medical science. In addition to his eminent intellectual qualifications and broad scholarship he was, according to universal testimony, most remarkable as a lecturer; his manner was magnetic, his method of statement lucid and his eloquence convincing. The balance of his mind was eminently shown in his thoroughly scientific treatment of pathological conditions, without regard to the sophistical theories current in his day. To quote one of his published lectures: “Hoffman gave his whole attention to the nervous system, as also Cullen, who attempted to explain all the phenomena of disease by the same cause; he overlooked the fluids entirely, except in diabetes, typhus and scorbutus. Before the time of Hoffman all was humoral pathology. Darwin resolved all by the absorbent and nervous systems; Sydenham and Boerhaave by the fluids. . . . I attend to the whole circle—to the nerves, fluids and solids; in fine, to every part of the system, for every part may become the seat of disease.” A large number of the views originated by him have since been adopted as recognized principles of medicine; the most valuable and permanent being his methods of treatment for croup, tetanus, scarlatina and fever. He was also one of the earliest physicians in America to recommend the use of the stethoscope, now so important a factor in medicine. His skill in diagnosis was remarkable, almost intuitive, and has been explained by the fact that he “always acted on first impressions,” believing that the mind is then most free from bias. In surgery he was equally skilled and successful, having profited by the instruction of several of the foremost surgeons of the time, and some of his ablest papers dealt with topics under this head: “Surgery of the Ancients” (1807), delivered as a lecture on the opening of the College of Physicians and Surgeons; “Observations on Hemorrhage, and the Removal of Scirrhus Tumors from the Breast,” and others. He was the first surgeon in America to successfully perform the operation of tying the femoral artery at the upper third of the thigh, according to the method of Prof. Scarpa, repeating the feat several times for cure of aneurism; he devised a treatment for hydrocele by injection, and was among the earliest to set forth the advantages of exposing a wound to the air to check hemorrhage after operations. The credit for the last-named method was later claimed by Sir Astley Cooper, of London, and Prof. Dupuytren, of Paris. Dr. Hosack became an enthusiastic advocate of vaccination shortly after its discovery and promulgation by Jenner, and it was largely due to his efforts that its popularity was extended in America. The founding, in 1822, of what eventually became known as Bellevue Hospital was chiefly due to Dr. Hosack’s efforts, the original need being for a suitable fever hospital at a point distant from the city. In 1826 he aided in organizing the medical department of Rutgers College, with which he was connected until it was closed in 1830. At various periods he was physician to the New York Hospital and the Bloomingdale Asylum for the Insane; was also president of the New York Historical Society during 1820–28 and of the Literary and Philosophical societies of New York. He rendered notable service to science by bringing from England the first collection of minerals that had been introduced into this country, and a duplicate collection of plants from the herbarium of Linnæus. His lifelong enthusiasm was, however, botany, which, next to his profession, occupied his time. In 1801 he established the Elgin Botanical

Garden, the second in America, at a point then three and a half miles from the city, between Fifth and Sixth avenues and Forty-seventh and Fifty-first streets. It consisted of about twenty acres and contained a large collection of rare specimens of American and foreign trees and shrubs. Dr. Hosack's "Hortus Elginensis," a catalogue of this collection, is a valuable contribution to botany. He was for a time president of the Horticultural Society. From 1810 to 1815 he edited in connection with his pupil, Dr. John W. Francis, the "American Medical and Philosophical Monthly." His publications include: "Essays on Various Subjects of Medical Science" (1824-30); "System of Practical Nosology" (1829); and "Lectures on the Theory and Practice of Medicine," edited by Henry W. DuRoi (1838). He was an authority on the subject of contagious diseases, and one of his papers, "The Laws of Contagion," was republished by the Royal Society of London in 1794, and was rated one of the most suggestive medical works of the day. He was a leader in every philanthropic and patriotic movement, was a collector of works of art, and entertained at his home the most distinguished people who visited New York. He was distinguished in appearance and most affable in manner. He enjoyed the close friendship of many of the foremost men of the time, notably, of Alexander Hamilton, whom he accompanied to the scene of his fatal duel with Aaron Burr, and DeWitt Clinton, whose "Memoir" (1829) he prepared by request. He also wrote "Memoir of Hugh Williamson, M.D." (1820). Dr. Hosack was twice married; first, to Elizabeth Warner, of Princeton, N. J.; second, to the widow of Henry A. Costar, of New York. He died in New York city, Dec. 22, 1835.

**HOSACK, Alexander Eddy**, surgeon, was born in New York city, April 6, 1805, son of Dr. David and Elizabeth (Warner) Hosack. He was educated at select private schools in New York city, but was prevented by ill health from pursuing a college course. An interest in medicine had early been instilled into his mind under his father's influence, and on the partial recovery of his strength he entered on preparation for his professional career at the University of Pennsylvania; being graduated M.D. in 1824. The three following years were spent in Paris studying under Dupuytren and Amussat; meantime serving as externe for eighteen months and interne for one year at the Hotel Dieu. With this experience he established himself in practice in New York city, where he quickly attained distinction for profound acquaintance with medical science and a remarkable aptitude for diagnosing and treating unusual cases. He was also a tireless investigator, desirous to examine and test every reasonable improvement in practice, and to this trait he owes his title to fame as the first physician in New York to administer sulphurous ether as an anæsthetic; exhibiting its effects in the presence of a number of practitioners in operations for calculus and amputation. By a strange coincidence he was called to examine the body of Dr. Horace Wells, co-discoverer of anæsthesia, who had just committed suicide during a fit of derangement. For many years Dr. Hosack conducted experiments to determine the most humane method of executing criminals, and finally rendered the decision on a large range of facts collected in executions witnessed by him or derived from other sources, that in hanging no pain is suffered, the gradual asphyxiation resulting in loss of will and sensation long before death intervenes. Absurdly enough, some instances quoted by him show that there is at first a decidedly pleasing effect. In surgery he introduced several improvements; he was the first in this country to perform Syme's operation of exsection of the elbow, and in-

troduced from Germany the practice of performing lithotomy without dividing the prostate gland. On one occasion, by this method, he removed seventeen calculi from one patient who so completely recovered as to outlive all of the nine physicians witnessing the feat. Notable among his inventions was an instrument for more completely performing the operation of staphyloraphy, which in its complete success formed a permanent contribution to surgical appliances. He operated twenty-three times for calculus; tied both earotids for encephaloid tumor, and in one instance cut the portio dura. Dr. Hosack was the first physician to examine the body of Colt, the murderer, after his suicide, and constantly attended Aaron Burr during his declining years. He was long attending physician to the Marine Hospital, and one of the most active in founding the Ward's Island institutions. His writings are numerous and of high merit, consisting principally of communications to medical societies and articles in the periodicals, and include "Description of an Instrument for the Tying of Deep-seated Arteries" (1824); "Observations on the Use and Advantages of the Actual Caustery" (1831); "A Memoir on Staphyloraphy" (1833); "Case of Popliteal Aneurism Cured by Compression with a New Instrument" (1848); "Pamphlet on Anæsthesia"; "Pustule Maligne and its Treatment," and "History of the Case of the Late John Kearney Rodgers, M.D." (1851). Dr. Hosack's widow left \$70,000 to the New York Academy of Medicine to found a memorial of him. He died in Newport, R. I., March 2, 1871.

**STEVENS, Alexander Hodgden**, surgeon, was born in New York city, Sept. 4, 1789. His father, Ebenezer Stevens, a native of Boston, and one of the party that destroyed the cargo of taxed tea, was an artillery officer in the revolutionary army, participated in the expeditions against Quebec and Ticonderoga and commanded the American artillery in the siege of Yorktown; his mother was a daughter of Col. William Ledyard (1750-81), who commanded the American forces at the battle of Groton, Conn., where he was foully murdered in the act of surrendering, and was a cousin of Ledyard, the traveler. Prepared for college in a select school at Plainfield, N. J., Alexander H. Stevens made his academic studies in Yale University, and was graduated A.B. in 1807. He entered on the study of medicine in the office of Dr. Edward Miller, of New York city, attended one course of lectures in the College of Physicians and Surgeons, and completing his professional training at the University of Pennsylvania received the degree of M.D. in 1811. On this occasion he presented a thesis on the "Proximate Cause of Inflammation," which won high praise from Dr. Rush and other noted physicians. Dr. Stevens then sailed for England in search of additional advantages in his studies, spending a year under the lectures of Dr. John Abernethy and Sir Astley Cooper, and early in 1812 going to Paris for further instruction under Boyer and Baron Larrey. On the homeward voyage he was made prisoner by a British cruiser, and returned to Plymouth, being allowed to resume his voyage only after a vexatious delay for the necessary papers. Arriving in New York, he was appointed a surgeon in the army, and after a brief experience entered on private professional practice. In 1814 he was called to the chair of surgery in the New York

Alex. H. Stevens

Medical Institution, and in 1818 became surgeon to the New York Hospital, where, for the benefit of his students, he introduced the European method of clinical instruction and demonstration, previously unknown in America. It is said that in his operations he often purposely avoided the neatness deemed so essential by other surgeons, in order to show his students that it was not essential to the recovery of a patient; howbeit, his skill and rapidity of manipulation were very great. He was transferred to the chair of the principles and practice of surgery in the College of Physicians and Surgeons, in 1825, and when failing health determined his resignation in 1838, he was made professor emeritus by the regents of the State University. In 1841 he was appointed president of the college, an office filled by him for many years. Dr. Stevens was a leading member of several important medical societies, particularly of the American Medical Association, of which he was vice-president in 1847 and president in 1848. He was the author of many of its important public and professional acts, particularly those regarding the care of paupers and the insane. In 1849 he received the degree of LL.D. from the regents of the University of the State of New York. Dr. Stevens' contributions to literature were many and various, consisting principally of articles in the medical periodicals and short monographs on surgical topics; he also prepared an edition of Sir Astley Cooper's "First Lines of Surgery" (1822). He died in New York city, March 30, 1869.

**BRUCE, Archibald**, physician, was born in New York city in February, 1777. His father was William Bruce, chief of the medical department of the British army in New York; his mother was a daughter of Nicholas Bayard and widow of Jeremiah Van Rensselaer. He entered Columbia College and was graduated in 1797. Having become interested in some medical lectures he attended, he decided to devote himself to that profession, and consequently began study under the celebrated Dr. Hosack. In 1798 he went to Europe and continued his professional preparation at the University of Edinburgh, where he obtained the degree of M.D. in 1800. He then spent two years more in travel on the Continent, meantime devoting himself to the collection of a cabinet of mineralogical specimens which proved to be of great value. He was married while in London, and in 1803 returned to New York and began practice. Four years later he was appointed professor of materia medica and mineralogy in the College of Physicians and Surgeons, and in 1812 to the same chair in Rutgers College, New Jersey,

at that time known as Queen's College. In 1810-14 Dr. Bruce edited and published the "Journal of American Mineralogy," the precursor of "Silliman's Journal," which afterwards became celebrated. He published a chemical analysis of the native magnesia of New Jersey, which first brought to the knowledge of the scientific world the mineral which was named after him, "Bruceite." He also published an important paper entitled "On the Ores of Titanium Occurring within the United States." Dr. Bruce was a member of most of the leading scientific societies of America and Europe and an original member of the New York Historical Society. He died in New York city, Feb. 22, 1818.

**TYSON, James**, physician, was born in Philadelphia, Pa., Oct. 26, 1841, son of Dr. Henry and Gertrude (Hayland) Tyson. He is fifth in descent from Cornelius Tyson (or Teissen), who emigrated from Creffield on the lower Rhine to Germantown, Pa., between 1683 and 1703. He died in the year 1716, and over his grave in Axe's cemetery, Germantown, is a well-preserved tombstone, said to be the oldest existing monument erected to the memory of a German in Pennsylvania. Dr. Tyson received his early education in Reading, Pa., and in the Friends' Central School in Philadelphia, and was graduated A.B. at Haverford College, Pennsylvania, in 1860, receiving the degree of A.M. in 1864. The degree of M.D. was awarded him by the University of Pennsylvania in 1863. He was an acting military cadet in the U. S. military hospital at Broad and Cherry streets, Philadelphia, during the last year of his student life, and soon after his graduation was made acting assistant surgeon in the U. S. army. From July, 1863, to April, 1864, he was a resident physician in the Pennsylvania Hospital, after which he was again in the service of the government until the close of the civil war in 1865. In 1864 he entered on the practice of medicine in Philadelphia, where he has since resided, and also began teaching medicine to private classes of students in the University of Pennsylvania with the session of 1864-65. He has been lecturer on microscopy, urinary chemistry and on pathological anatomy in the university, and professor of physiology and microscopy in the Pennsylvania Dental College. He was professor of general pathology and morbid anatomy in the University of Pennsylvania during 1876-79, then being transferred to the chair of clinical medicine. He was secretary of the faculty of medicine during 1877-88 and then dean of the faculty until 1892. He was connected with St. Joseph's Hospital, Philadelphia, as visiting physician (1871-72); was appointed microscopist to the Philadelphia Hospital in 1866 and pathologist in 1870, was visiting physician (1872-90) and again since 1893, and was president of the medical board of the hospital (1886-90). He is also, ex-officio, one of the physicians to the Hospital of the University of Pennsylvania, was one of its board of managers from 1874-78, and again became a manager in 1891. He was one of the incorporators and is now a trustee and chairman of the executive committee of the Rush Hospital for Consumption and Allied Diseases, incorporated in Philadelphia in 1890, and was also consulting physician in 1890-92. In 1891 he was appointed consulting physician to the Kensington Hospital for Women, and in 1897 consulting physician to St. Mary's Hospital. During 1871-72 Dr. Tyson assisted in editing the "Philadelphia Medical Times," and besides numerous papers on histology and pathology and clinical lectures on general medicine he has published a treatise on "The Practice of Medicine"; "The Cell Doctrine: Its History and Present State"; "Practical Examination of Urine" (9th ed., 1896); "A Treatise on Bright's Disease and Diabetes," and other works. He was made a fellow of the College of Physicians of Philadelphia in 1866; is a member of the Philosophical Society; has been vice-president and president of the Philadelphia County Medical Society; and was one of the founders of the Association of American Physicians organized in 1886, besides being a member of, or holding important positions in, many other prominent societies. Dr. Tyson was married, in 1865, to Frances Bosdevex, and has a son, Dr. T. Mellor Tyson, and a daughter.

**HALLOCK, Lewis**, physician, was born in New York city, June 30, 1803, son of Jacob and Sarah (Mather) Hallock. His father, a native of Southold, L. I., was a prominent merchant of New York until

his death in 1813. The family descends from Peter Hallock, leader of a colony; the first white settlers on the eastern end of Long Island, where they purchased a large tract of land from the Indians and founded the town of Southold. After the death of his father, Lewis Hallock went to live with his grandmother at Mattituck, L. I., and completed his preparatory education at Clinton Academy, East Hampton, the second incorporated school in the state. He began the study of medicine with his uncle, Dr. Elisha Hallock, of Southold, and at the end of the year

*Lewis Hallock*

returned to New York city to continue his preparation under Dr. James W. Francis and at the College of Physicians and Surgeons, where he was graduated M.D. in 1825. After fifteen years of successful practice, his attention was called to the homeopathic system of medicine, then rapidly gaining strength in America, and after carefully investigating its claims, he announced himself a convert. The same course was pursued by a goodly portion of his class-mates. In 1846 he joined the Homeopathic Institute of America, and later also the county and state societies; being president of city and county societies for one year each. For many years he was one of the board of censors of the Homeopathic

Medical College, in which he was twice offered and declined a professorship, and in 1876 received from its faculty and trustees the honorary degree of M.D. This honor was conferred on the occasion of the fiftieth anniversary of his graduation, when a dinner was given him at the Fifth Avenue Hotel. He lived to see the seventieth anniversary of the same event, and then received another complimentary dinner at the Savoy Hotel from the New York Medical Club, at which several highly congratulatory speeches and a poem by Dr. William Tod Helmuth were delivered on his nearly unparalleled record as an active practitioner. Although living to the advanced age of ninety-five, he continued in active practice until within a few days of his death. Throughout life he was an earnest advocate of temperance, having as a young man founded the Young Men's Total Abstinence Society, which in 1836 published a weekly paper advocating the cause. To his principles in this regard he attributed his longevity, and indeed his unusual quickness of comprehension and rapidity of judgment was an excellent evidence of faculties well used. His contributions to homeopathic periodicals were numerous and representative, and to his influence is attributed much of the popularization the system has achieved. At the annual meeting of the American Institute of Homeopathy, held in Newport, R. I., in June, 1895, he was greeted with the greatest enthusiasm and made a few appropriate and pleasing remarks. Personally, Dr. Hallock was an exemplar of the most charming, old-fashioned, courtly manners and bearing, and although justly popular with a wide circle of friends and professional associates, was preëminently domestic in his tastes, belonging to but one club. Dr. Hallock was twice married: first to Sarah Mack, of New York, and second, in 1835, to Emily Louisa, daughter of Frederick L. Seely, of the same city. He had three sons, all deceased, and three daughters, who survive. He died in New York city, March 3, 1897.

**WOOD, James Rushmore**, surgeon, was born in New York city, Sept. 14, 1816. His father was a merchant and a member of the Society of Friends, and James R. Wood began his education at the Friends' Seminary, New York. He took his first

course of medical lectures at the College of Physicians and Surgeons, and continued his studies under Dr. William Tully, of New Haven, Conn., Dr. David L. Rogers, of New York city, and at the Castleton Medical College, Vermont, now extinct. He was graduated in 1834 and appointed demonstrator in anatomy, but soon afterwards returned to New York to practice his profession, and in 1847 was appointed a member of the medical board of Bellevue Hospital. At that time lunatics and criminals were admitted as patients, the nursing was inefficient, and but little regard was paid to the laws of hygiene. Aided by Dr. Drake, of the board, and by Morris Franklin, president of the board of aldermen, Dr. Wood began a reform action that resulted in reducing the annual death rate by 600. During the time that Dr. Wilson was resident physician of Bellevue, Dr. Wood made all the post-mortem examinations, amounting to several hundred. He also established Saturday surgical clinics and founded the Wood prize for the best anatomical dissection. In 1861 he aided in founding Bellevue Hospital Medical College, and in the same year was appointed to the chair of operative surgery and surgical pathology in that institution, which he held until his death, being made professor emeritus in 1868. He was also surgeon to St. Vincent's Hospital and the New York Ophthalmic Dispensary and consulting surgeon of the New York Academy of Medicine. He was a member of the New York Academy of Medicine; the New York Pathological Institute, of which he was twice president; the American Medical Association; the New York Medical and Surgical Society; the New York Society for the Relief of Widows and Orphans of Medical Men; the New York Physicians' Mutual Aid Association; the Medical Journal Association; honorary member of the New York and Massachusetts state medical societies; and of other organizations. In 1847 he began to collect material for a museum, which, greatly augmented, was presented to the commissioners of charities and correction in 1856, and is known as the Wood Museum.

Dr. Wood established the fact of the second growth of bone by separating the periosteum from necrosed bone and carefully enucleating it. He tied both carotids in one patient for malignant disease of the antrum, placed the ligature on the subclavian on several occasions and tied the external iliac several times. He excised the entire lower jaw-bone for phosphor-necrosis, and the patient subsequently developed a new and complete jaw, and died years after of an entirely different affection; his skull is now preserved in the Wood anatomical collection. With Drs. Willard Parker, Martyn Paine and others, Dr. Wood was instrumental in securing the passage of the dissecting bill, in 1857, providing that "all vagrants dying unclaimed, and known by the public authorities to be such, and without friends, are to be given to the institutions in which medicine and surgery are taught for dissection." This bill, although once defeated in the state senate, was finally successful through the saving clause: "Any unknown person found dead shall be buried." Dr. Wood was the author of several papers and pamphlets, including "Strangulated Hernia" (1845); "Spontaneous Dislocation of the Head of the Femur into the Ischiatic Notch, occurring in Morbus Coxarius" (1847); "Medical Education" (1848); and "Ligature of the External Iliac Artery" (1856). In 1853 he was married to a daughter of James Rowe, of New York. He died in New York city, May 4, 1882.

*James R. Wood*

**HAMILTON, Frank Hastings**, surgeon, was born at Wilmington, Vt., Sept. 13, 1813. He was graduated at Union College in 1830, and entering on medical study in the office of Dr. John G. Morgan and at the Western College of Physicians and Surgeons, Fairfield, N. Y., was licensed to practice by the Cayuga County Medical Society in 1833. The degree of M.D. was conferred on him by the University of Pennsylvania in 1835, and thereafter, until 1838, he continued practice at Auburn, N. Y., also giving courses of lectures in anatomy and surgery. In 1839 he was appointed professor of surgery at the Western College of Physicians and Surgeons, and in 1840 at the Medical College of Geneva, N. Y. He located in practice in Buffalo, N. Y., in 1844, becoming professor of surgery in Buffalo Medical College in 1846; subsequently dean of the faculty and surgeon to the Charity Hospital. In 1859 he removed to New York city to accept the chair of principles and practice of surgery and the post of

surgeon-in-chief at the newly founded Long Island College Hospital. During 1861-65 he occupied the chair of military surgery, fractures and dislocations at the Bellevue Hospital Medical College, that chair being the first of its kind in the world. Meantime, during the civil war, he served as surgeon of the 31st New York infantry, which he accompanied to the front, being made brigade surgeon after the battle of Bull Run, and later U. S. medical director. He organized the U. S. General Hospital, New York city, in 1862, and in February, 1863, was made medical inspector, U. S. army, with the rank of

lieutenant colonel. He resigned his military connections in September, 1863, and resumed his private practice and instruction. The subject of the principles of surgery being added to his chair in 1865, he continued lectures in both departments until 1868, and from then until 1875 was professor of the practice of surgery. Dr. Hamilton was visiting surgeon to Bellevue Hospital (1861-82) and consulting surgeon (1884-86); he was also consulting surgeon to the Institution for Ruptured and Crippled Children, St. Elizabeth's and other city hospitals and dispensaries. He was a member of the New York State Medical Society (president in 1855); of the New York Pathological Society (president in 1866); of the Medicolegal Society (president in 1875-76); of the American Academy of Medicine (president in 1878), and of the New York Society of Medical Jurisprudence (president in 1878 and 1885), and an honorary member and officer of various other professional and learned bodies. Throughout his career he was recognized as one of the most skillful surgeons of the metropolis. He originated a safe method of cutting the sternal portion of the sterno-cleido-mastoid; was the first to operate for simple talipes where there is no disease of the joint; was the first to excise the central portion of the thyroid gland; originated the now accepted theories in relation to resection in compound dislocations of the long bones; was one of the earliest to operate for closing old ulcers by the transplantation of new skin; was the first to use gutta-percha for intertendal splints; was largely instrumental in introducing gutta-percha splints for support of irregular joint surfaces, and devoted considerable attention to plastic surgery, having performed rhinoplasty more than twenty times. Among his most valuable inventions and contrivances are: a bone drill, appliances for treating fracture of the

jaw and of the long bones, an improved Neaton probe, a modified Liston artery forceps, an improved Owen tonsillotome, a serrated giant bone-cutter and other instruments equally valuable. His method of manipulating the body in asphyxia from drowning and his system of "keys" and "guides" for securing precision in amputation through the joints give him a title to enduring fame. Besides originating several new and radical operations, he was the first to work from the palm of the hand, a method now widely adopted. He was rated one of the foremost American authorities on military surgery and gunshot wounds, and on the assassination of Pres. Garfield was called in consultation, remaining connected with the case until the close. Dr. Hamilton was a constant and lucid writer on surgical topics. His larger works are: "A Practical Treatise on Fractures and Dislocations" (1860, 5th ed. 1880); "A Treatise on Military Surgery and Hygiene" (1865); "Contributions Relating to the Surgery of War" (1870); "The Principles and Practice of Surgery" (1872, 2d ed. 1879); a series of papers on "Prognosis in Fractures" (1855-56-57); one on "The Effect of a Sudden Loss of Consciousness on the Memory of Preceding Events" (1876), and numerous other articles, addresses and lectures. He was twice married: first, in 1834, to Mary Virginia McMurrin, of Virginia; second, to Mary, daughter of Judge Oliver Hart, of Oswego, N. Y. His only daughter, Mary, is the wife of Daniel N. Davis, a business man of New York. Dr. Hamilton died in New York city, Aug. 11, 1886.

**BUCK, Albert Henry**, surgeon, was born in New York city, Oct. 20, 1842, son of Gurdon and Henrietta E. (Wolff) Buck, the latter a native of Geneva, Switzerland. His paternal grandparents, Gurdon and Susannah (Manwaring) Buck, were first cousins, and grandchildren of Gov. Gurdon Saltonstall, of Connecticut. Inheriting a predilection for surgery from his father, who was distinguished in his profession, Albert Buck, after graduation at Yale in 1864, entered the College of Physicians and Surgeons, New York city, and was graduated with the degree of M.D. in 1867. In 1867-69 he was junior walker and house physician at the New York Hospital, at that time on Broadway, opposite Pearl street. In 1870 he was appointed an aural surgeon in the New York Eye and Ear Infirmary, and held this position until 1883, when he was appointed a consulting aural surgeon to the same institution; in 1889 he was made clinical professor of diseases of the ear at the College of Physicians and Surgeons, medical department of Columbia University; in 1893 he received the appointment of consulting aural surgeon to the Presbyterian Hospital, and still holds all three positions. Dr. Buck is the author of a "Treatise on the Diseases of the Ear" (3d ed. 1898), and has published a large number of articles on subjects relating to this special field of work. At the same time he has served as editor for the American edition of Ziemssen's "Cyclopaedia of Medicine" (20 vols.); for the "Reference Handbook of the Medical Sciences" (9 vols.), and for the American edition of Ziegler's "General Pathology." He is a member of the Century Association. Dr. Buck was married at Fair Haven, Conn., to a daughter of John S. C. Abbott, the historian. They have a son and daughter.

**STILLÉ, Alfred**, physician, was born in Philadelphia, Pa., Oct. 30, 1813, son of John and Maria Stillé. His father, a leading merchant of Philadelphia (1790-1812), was descended from one of the first Swedish colonists on the Delaware river. His mother was a descendant of Tobias Wagner, chancellor of the University of Tübingen in 1658, and of one of his descendants who was a Luth-

Frank H. Hamilton

eran missionary in Pennsylvania about the middle of the eighteenth century. Dr. Stillé was educated in the classical school of Wylie & Engles, Philadelphia, from which he entered Yale in 1828. In 1830 he was transferred to the University of Pennsylvania, where he took the degree of A.B. in 1832. The following year he began the study of medicine, matriculated at the University of Pennsylvania and was graduated M.D. in 1836. Immediately afterwards he served as a dispensary physician, and then as a resident physician of the Philadelphia Hospital for a period of six months, after which he spent two years in Europe, chiefly in medical study under some of the most eminent teachers of London, Edinburgh, Dublin and Paris.

On his return he was a resident physician of the Pennsylvania Hospital for two years, and then, in 1841, began private practice. From 1844 to 1851 he lectured for the Philadelphia Association for Medical Instruction. In 1851 he revisited Europe, spending the greater part of his time in Vienna, where he attended the lectures of Oppolzer, Skoda and Hebra. He held the chair of theory and practice of medicine at the Pennsylvania Medical College from 1854 to 1859, and in the University of Pennsylvania for twenty years, and, on resigning it in 1884, was made professor emeritus. On the organization of St. Joseph's Hospital

he was elected one of its physicians, and served it for upwards of twenty years. During the civil war he was one of the physicians of Satterlee Hospital, Philadelphia; for a time he held a similar appointment in the University Hospital, and for six years (1865-71) was a visiting physician and clinical lecturer in the Philadelphia Hospital. Although for nearly fifty years engaged in the practice of his profession, Dr. Stillé devoted himself assiduously to teaching and writing. In 1844, in collaboration with Dr. J. Forsyth Meigs, he translated Andral's "Pathological Hæmatology." In 1848 his treatise on "General Pathology" appeared. In 1860 he made numerous additions to the second edition of Wharton and Stillé's "Medical Jurisprudence," the medical part of which in the first edition had been prepared by his brother, Dr. Moreton Stillé. In the same year appeared the first edition of his "Therapeutics and Materia Medica," of which the fourth edition was published in 1878. In 1867 his monograph on "Epidemic Meningitis" was published. In 1879 was issued the first edition of the "National Dispensatory," prepared by Dr. Stillé in collaboration with Prof. John M. Maisch. Of this work the fifth edition was issued in 1894. In 1885 his work on "Cholera" appeared. It was an enlarged edition of a lecture that was published in 1873. Besides the degrees in course received by Dr. Stillé, he was made honorary A.M. by Yale in 1849; LL.D. by Pennsylvania College (Gettysburg) in 1859, and by the University of Pennsylvania in 1889. He was a member of the Philadelphia Medical Society (1834); La Société Médicale d'Observation, Paris (1836); fellow of the College of Physicians of Philadelphia (1842), and subsequently chairman of its library committee, secretary, vice-president, censor and president; he was an original member and secretary of the American Medical Association (1847); member of the Philadelphia County Medical Society (1849), and its president (1863); member and president of the Pathological Society of Philadelphia (1859-63); member of the U. S. sanitary commission (1863-65);

member and vice-president of the U. S. centennial commission, and chairman of the section of medicine (1876); corresponding member of the New York Academy of Medicine; of the New York Neurological Society; of the state societies of New York, Rhode Island and California; honorary member of the Association of American Physicians and of the American Climatological Association; president of the Society of the Alumni of the Medical Department, University of Pennsylvania; president of the Association of ex-Resident Physicians of Philadelphia Hospital, and member of the Historical Society of Pennsylvania.

**ALLEN, Harrison**, physician and scientist, was born in Philadelphia, Pa., April 17, 1841, of Quaker ancestry, being descended from Samuel Allen, who came from Chu Magna, England, with William Penn. His family was variously connected with Nicholas Wain and with the Revell, Elton, Stacey, Justice and Merritt families, all of which were among the early Quaker settlers of Pennsylvania. His parents were Samuel Allen, sheriff of Philadelphia, and Elizabeth Justice (Thomas) Allen. He was educated in Philadelphia at the public schools, the Central High School and the University of Pennsylvania, where he studied medicine, and was graduated with the degree of M.D. in 1861. He then spent some months as resident physician in the Philadelphia Hospital, and in July, 1862, became an assistant surgeon in the regular army. He was on duty successively at Clifburne General Hospital, Washington, D. C., with the artillery of the 3d army corps in the army of the Potomac, again in Washington hospitals, and in Alexandria, Va., Mount Pleasant General Hospital and Washington. His resignation was accepted in December, 1865, when he held rank as brevet major. He had immediately before been appointed to the chair of comparative anatomy and zoölogy in the auxiliary department of medicine in Pennsylvania University, just established by Dr. George Wood. This position he held until 1878, when he was appointed to the chair of physiology in the medical department. In 1883 he resigned from his professorial duties to confine his attention to his medical practice, and he then became emeritus professor of physiology, which position he held until 1892. He had also acted during this period as professor of anatomy and surgery in the Philadelphia Dental College, assistant surgeon in the Will's Eye Hospital and in St. Joseph's Hospital, and surgeon in the Philadelphia Hospital, and had, besides these labors and those of a large general practice as a surgeon, frequently published important papers on scientific subjects. The most important of these were contributed to the "Proceedings" of the Academy of Natural Sciences, the Smithsonian Institution and other learned bodies. They include a "Monograph on North American Chiroptera," 1864; "Outlines of Comparative Anatomy and Medical Zoölogy," 1869, now a standard text-book, and "Studies in the Facial Region"; "On the Life Form in Art"; "System of Human Anatomy"; "The Stage of Development of the Bat"; "Clinical Study of the Skull." At the Columbian exposition Dr. Allen was a judge on anthropology. He was a member of the Academy of Natural Sciences; the Natural History Society of Boston; the Philadelphia Pathological Society; Washington Biological Society; Philadelphia County Medical Society; Ameri-

*Harrison Allen*

can Laryngological Association; Philadelphia Neurology Society; Texas Historical Society and American Association of Anatomy, and correspondent of the Society of Natural Science of Chili; corresponding secretary of the Academy of Natural Science in 1868; vice president of the Pathological Society in 1877; president of the American Laryngological Association in 1886; of the American Association of Anatomy in 1891-93; of the Contemporary Club of Philadelphia in 1894 and 1895, and in 1897 president of the Anthropomorphic Society. In 1891, upon the death of Dr. Joseph Leidy, Dr. Allen took charge in the University of Pennsylvania of two chairs in the medical and auxiliary department, and in 1891-92 he was rector of Dr. Wistar's Institute of Anatomy. He became noted in Pennsylvania for his unusual skill as an anatomist. He was married, in Philadelphia, Dec. 29, 1869, to Julia A., daughter of S. W. Colton, of Longmeadow, Mass., and Susan Beaumont, of New York. Among her paternal ancestors are George Colton, a Puritan settler in Massachusetts in 1640; Charles Chauncy, the second president of Harvard College; Rev. Peter Bulkeley; Henry Wolcott; John Ingersoll; the Boardmans; Maj. Jonathan Prescott, and Nathaniel Foote. On her mother's side, she is of Scotch and English ancestry. Dr. Allen died in Philadelphia, Pa., Nov. 14, 1897.

**MOTT, Alexander Brown**, surgeon, was born in New York city, March 31, 1826, son of Dr. Valentine and Louisa D. (Mums) Mott, and grandson of Dr. Henry Mott, a descendant from an English Quaker, who in 1660 settled on Long Island. He was educated privately by Prof. William Darling, M.D., of the University Medical College of New York, and at the Columbia College Grammar School, there remaining until 1836, when he went to Europe with his parents. He remained abroad

five years, and received a good classical education. In spite of his Quaker blood he had a great fondness for a military life, and on his return to New York he entered West Point, but abandoned this in deference to his father's wishes. He then passed a year in France and Germany about 1842, and occupied a position in the naval agency in Marseilles. Two years after Mr. Mott became the private secretary of Com. Morris, of the U. S. navy, who was then in charge of the Mediterranean squadron. He afterwards made a journey to Spain, and was present at the siege and surrender of Barcelona, and took part in the fighting in command of a battery. On his return to

Marseilles he was offered and accepted a position with a firm in that city, and during 1845 he was sent by them to Turkey, Greece, Piedmont, Italy and Austria. With his father's successful and brilliant career before him, it was not strange that he began to seriously consider entering the medical profession. He commenced his studies in medicine at Havre, and on his return to New York resumed them in his father's office. He was graduated at the New York Medical College in 1849; at the University of Pennsylvania in 1850, and at the Castleton Medical College in 1849, and besides he attended a course of lectures at the University Medical College. In 1849 he assisted in founding St. Vincent's Hospital, and in 1853 became visiting surgeon. Dr. Alexander Mott was appointed surgeon to the New York Dispensary in 1850. From 1855 to 1863 he was attending surgeon to the Jewish Hospital, and for fourteen years he was surgeon to the Charity Hospital. At the University Medical Clinic he performed many difficult surgical operations, where he acted as his

father's prosector for a number of years. He was one of the founders of the Bellevue Medical College, where he at one time held the chair of surgical anatomy, and was professor of clinical and operative surgery from 1872 until his death. He was consulting surgeon to the bureau of medicine and surgical relief to the out-door poor, and in 1859-84 he held the appointment of attending surgeon at Bellevue Hospital. On the outbreak of the civil war he was given two hours' notice to proceed to Washington with the first regiments of militia on April 18, 1861. After organizing the medical corps of those regiments under his charge, he inspected all the recruits for thirty-eight regiments of New York volunteers. As medical director of New York, more than 70,000 men passed under his supervision. He also inspected all the New York regiments around forts Monroe and Washington. Aided by some patriotic boomers of prominence in New York, in 1862 he founded the U. S. Army General Hospital, of which the surgeon general placed him at the head. He was appointed surgeon U. S. volunteers, and was one of the medical examining board for admission to the medical corps of the army for surgeons of volunteers. In 1864-65 he was inspector of the department of Virginia, with headquarters with the army of the James, under Maj.-Gen. Ord, and served under him until the war was at an end. Dr. Mott was present at the interview between Gens. Lee and Grant on the occasion of the signing of the agreement of surrender at Appomattox Court House, Va. After being on duty in Richmond Va., he was mustered out of the U. S. service Aug. 1, 1866, and made brevet-colonel of the U. S. volunteers. His father, Valentine Mott, possessed the qualities that made him famous for his operations; he was almost as dexterous with one hand as with the other, and to a great extent the son inherited his skill. His most difficult operations were amputations at hip joint and excision of ulna twice; tying the common carotid fifteen times; internal carotid twice; innominate once; subclavian four times; common iliac twice; internal iliac twice, and external iliac five times; resection of the femur three times; performing lithotomy twenty-one times; femoral eighteen times; and removal of the entire lower jaw for phosphor-necrosis twice. There have been published reports of other cases of interest treated by him. He was fellow of the American Geographical Society; member of the New York Academy of Sciences; of the New York Medico-Legal Society; of the New York Society for the Relief of Widows and Orphans of Medical Men; of the New York Physicians' Mutual Aid Association; a permanent member of the American Medical Association, and honorary member of the Hudson County Pathological Society. In 1851 he was married to Arabella Upsom, youngest daughter of Thaddeus Phelps, of New York, by whom he had one son, Valentine Mott, who became a physician of prominence in New York, and the fourth of the family in a direct line to follow the medical profession. Dr. Mott died in Yonkers, N. Y., Aug. 12, 1889.

**FLINT, Austin**, physician, was born in Northampton, Mass., March 28, 1836, son of Austin and Annie (Skillings) Flint. He comes of good colonial stock, and several of his family have been notable in the history of Massachusetts. His father was a very eminent physician and a voluminous writer on medical topics. Austin Flint was educated in private schools in Buffalo, N. Y., and in 1852 entered the freshman class of Harvard College. At the end of the year, however, he left college, at his father's request, and obtaining employment in the engineering department of the Louisville and Nashville railroad at Bowling Green, Ky., remained there one year. In the summer of 1854 he entered the office of the city surveyor at Buffalo, N. Y. In the following autumn

*Dr. Mott*

he began the study of medicine in the office of Dr. Frank H. Hamilton, and continued it in the medical department of the University of Louisville (Ky.) during the next two years. Meantime, in the summer of 1855, he served as assistant to Dr. John C. Dalton, professor of physiology in the Woodstock (Vt.) Medical College, and completing his professional study at the Jefferson Medical College, Philadelphia, Pa. (1856-57), was there graduated M.D. During 1857-60 he was editor of the Buffalo "Medical Journal," and, meantime (1858-59), was professor of physiology in the medical department of the University of Buffalo, and (1858) visiting surgeon to the Buffalo General Hospital. He removed to New York city in 1859, to become professor of physiology at the New York Medical College, and in 1860 accepted the same chair in the New Orleans School of Medicine. In 1861 he spent several months in Paris, studying physiology with Prof. Claude Bernard and histology with Prof. Charles Robin. He was acting assistant surgeon, U. S. army, at the U. S. General Hospital, New York city (1862-66), and was one of the founders of, and professor of physiology at the Bellevue Hospital Medical College from 1861 to 1898. In 1898 he was elected professor of physiology in the Cornell University Medical College. During 1862-68 he filled the same chair at the Long Island Hospital Medical College, Brooklyn. Among other important official positions, he has been visiting physician of Bellevue Hospital (1869), consulting physician (1896), visiting physician of the insane pavilion (1896), and consulting physician on nervous diseases in the Bellevue Hospital Dispensary since 1866. He was examining physician to the New York office of the Connecticut Mutual Life Insurance Co. (1871-86), surgeon-general of the state of New York (1874-78), consulting physician of the Manhattan State Hospital for the Insane (1896), and a member of the executive committee of the New York Prison Association (1896). Dr. Flint is a member of the American Medical Association; a fellow of the New York State Medical Association, editor of its "Transactions" (1885), and its president (1895); correspondent of the Academy of Natural Sciences, Philadelphia, and member of the American Philosophical Society. He has been decorated with the Order of the Bust of the Liberator by the republic of Venezuela (1891). He has contributed many articles to medical literature, principally on physiological subjects, and has published a number of books: "Physiology of Man" (5 vols., 1866-74); "Manual of Chemical Examination of the Urine in Disease" (1870); "Physiological Effects of Severe and Prolonged Muscular Exercise" (1871); "Text-Book of Human Physiology" (1875), and "Source of Muscular Power" (1878). He has made a number of important investigations and discoveries in physiology. Experiments on alligators, while in New Orleans, developed some important points in reference to the influence of the pneumogastric nerves on the heart. He has also operated on the spinal cord and nerves in various animals with important results, and has published various monographs. Dr. Flint was married, Dec. 23, 1862, to Elizabeth, daughter of Robert P. McMaster, of Ballston, N. Y., and has three sons and one daughter.

**BEDFORD, Gunning S.**, author and physician, was born in Baltimore, Md., in 1806. He was a great-nephew of the revolutionary patriot, Gunning Bedford, of Delaware, a representative in congress (1783-86), and attorney-general and governor of his state. Gunning S. Bedford was graduated A.B. at Mount St. Mary's College, Emmetsburg, Md., in 1825, with high honors and as valedictorian of the class. The degree of A.M. was conferred on him in course at the end of three years. Among his classmates were Archbishops Purcell, of Cincinnati;

Hughes, of Baltimore, and McCloskey (later cardinal), of New York; Rev. Charles C. Pise and other noted men. He had planned to study law with Daniel Webster, but having accidentally heard a lecture on blood circulation by Dr. John D. Godman, he determined to devote himself to medicine. Dr. Godman took a great interest in his young convert, becoming his friend, counsellor and preceptor, and greatly aiding him in acquiring the skill and fame that marked his life. After his graduation at the Rutgers Medical College, New Brunswick, N. J., he spent two years in the best hospitals of Europe, where he worked incessantly. Returning to America in 1832, he in 1833 accepted a professorship at the Medical College of Charleston (S. C.), where he remained about one year, then going to the Albany Medical College, New York. In 1836 he removed to New York city, where he rapidly built up an extensive practice, particularly in obstetrics and the diseases of women. He was a skillful surgeon, and repeatedly performed the Caesarian section with success. Dr. Bedford originated the idea of founding the New York University Medical College, which he carried to a successful issue through the assistance of Dr. Valentine Mott. The first faculty contained, besides these two, Drs. Draper, Paine, Revere and Patterson, Dr. Bedford being professor of obstetrics until 1862. It was a success from the start, although solely supported by the fees of the students. He also founded the New York obstetrical clinic, the first held in the country, to afford the poor skilled advice and service. Sessions were held Mondays, and so successful was the enterprise that probably 10,000 yearly received its aid. Dr. Bedford was a prolific writer. His two elaborate treatises: "Diseases of Women and Children" and "Principles and Practice of Obstetrics"—the former passed through fifteen editions and the latter five—have been adopted as text books both in America and abroad, and have been translated into German and French. He wrote and delivered eulogies upon Drs. Francis and Mott before the New York County Medical society. Dr. Bedford was noted for his eloquence and broad intelligence. In person he was unusually short, but correspondingly light in his movements and gentle in his manners. His consideration for suffering was well illustrated by his admonition to his students to particularly avoid afflicting their patients with squeaking shoes and angular movements. His professional reputation and influence was equaled only by his personal popularity both with physicians and the public generally. In religious faith he was a devout Roman Catholic, and enjoyed close relations with many priests and prelates of the church. He was survived by a widow and three sons, one of whom, Gunning S. Bedford, Jr., was at one time assistant district attorney of New York, and later a judge of the city court. Dr. Bedford died in New York city, Sept. 5, 1870.

**SANDS, Henry Berton**, surgeon, was born in New York city, Sept. 27, 1830. After passing through a high school in his native city, Henry Sands entered the College of Physicians and Surgeons, and was graduated in 1854. He then began a general practice, giving special attention to surgery, and from 1860 until 1870 was in partnership with Dr. Willard Parker. He was house physician and in 1854-55 house surgeon to Bellevue Hospital, and then visited Europe, returning in 1856. He then became demonstrator of anatomy in the College of Physicians and Surgeons and held the position for ten years. He was professor of anatomy in the same institution (1867-79), and professor of the practice of surgery (1879-88). He was visiting surgeon, Bellevue Hospital (1862-77); Charity Hospital, (1865-66); Mount Sinai Hospital, later; St. Luke's Hospital (1862-70); consulting surgeon, (1870-84);

visiting surgeon, New York Hospital (1864-81), consulting surgeon (1881-84); visiting surgeon, Strangers' Hospital (1871-72); Roosevelt Hospital (1872-88). He was a member of the New York Medical and Surgical Society and of the New York County Medical and Pathological societies, was president of the second named in 1874-76 and of the last named in 1866-67. The degree of A.M. *honoris causa* was conferred upon him by Yale in 1883. Among his contributions to periodical literature, many of which were reports of operations performed by him are: "Case of Cancer of the Larynx Successfully Removed by Laryngotomy" ("New York Medical Journal," May, 1861); "Aneurism of the Sub-Clavian, Treated by Galvano-Puncture" (1869); "Notes on Perityphlitis" ("Annals of Anatomical and Surgical Society," Brooklyn, 1880, Vol. II., No. 7); "The Question of Trephining in Injuries of the Head" ("Medical News," Philadelphia, April 28, 1883), and "On the Use and the Abuse of Passive Motion" ("New York Medical Journal," Jan. 22, 1887). Dr. Sands was twice married: first, in 1859, to Sarah M. Curtis, and, second, in 1875, to Mrs. J. Reamey. Dr. Sands died suddenly in New York city, Nov. 17, 1888, leaving a son, Dr. Robert A. Sands, in the same profession.

**TAYLOR, Charles Fayette**, physician and surgeon, was born at Williston, Vt., April 25, 1827, son of Brimage and Miriam (Taplin) Taylor. His original American ancestor was Rev. Edward Taylor (1642-1729), who early settled at Westfield, Mass. From him descent is traced through his son, Eldad Taylor (1708-77), of Westfield, Mass.; his son, Eldad Taylor (1733-96), of Williston, Vt.; his son, John Taylor (1760-1847), and his son, Brimage Taylor (1797-1867). Charles F. Taylor was educated in the public schools, and was graduated M.D. at the University of Vermont in 1856. He settled in New York city, and having become interested in the "Swedish movement" system, spent several months (1856) in studying it under Dr. Roth in London. He was one of the first, if not the first, to use the system in this country. He early devoted

much attention to the treatment of the crippled and deformed, and met with such success in practice that he readily interested a number of well known people in founding the New York Orthopedic Dispensary. He was head surgeon of this institution for many years, and it is in connection with his work in orthopedic surgery that he is most widely known. Dr. Taylor invented several important surgical appliances, notably the Taylor splint for treatment of spinal diseases and the long extension hip splint. He wrote several books and over forty articles, mostly on his specialty, his best known works being: "The Theory and Practice of the Movement Cure," "Spinal Irritation," "The Mechanical Treatment of Pott's Disease of the Spine" and "Mechanical Treatment of Hip Joint Disease." His work was recognized by diplomas and medals at the expositions in Paris (1867), Vienna (1873) and Philadelphia (1876). Dr. Taylor was a member of the New York County Medical Society; a fellow of the New York Academy of Medicine; a corresponding member of the Imperial Medical Society of Vienna; a charter member of the American Orthopedic Association; a fellow of the American Geographical Society and of other societies. He had the true physician's kindness and

affection for the suffering and was always foremost and untiring in giving the best practical help to any person in trouble. He was married, in 1850, to Martha, and in 1854 to Mary Sanna, both daughters of Zenas Skinner, of Williston, Vt. By his second wife he had three daughters—Mrs. Harold P. Brown, Montclair, N. J.; Mrs. John McCarthy, Plainfield, N. J., and Charlotte Taylor, New York—and one son, Dr. Henry Ling Taylor, a practicing physician of New York city. Dr. Taylor died at Los Angeles, Cal., Jan. 25, 1899.

**CARNOCHAN, John Murray**, surgeon, was born in Savannah, Ga., July 4, 1817, only son of John and Harriet Frances (Putnam) Carnochan. His father, a native of Scotland, removed at the beginning of the nineteenth century to Nassau and the West Indies, and afterwards to Savannah, Ga., where he became a wealthy planter and merchant; his mother was a grandniece of Gen. Israel Putnam, a granddaughter of Henry Putnam, killed in the battle of Lexington, and, through her mother, a granddaughter of Dr. Fraser, a distinguished surgeon of the British army. The ancestral home of the Carnochans in Scotland was Gate House, of Fleet Kirkcudbright, in the district of Galloway, bordering on Ayrshire. To this homestead John Murray Carnochan, being in feeble health, was taken by his father and mother to sojourn for a year with his two maiden aunts, who had the place in their keeping. These two old ladies became so attached to him, however, that they kept him with them until he was eleven years of age. He was sent to school at Edinburgh, where he passed through the high school with honor, and afterwards entering the university, completed the course and took his degree at the age of seventeen. While a student, he was thrown into association with Prof. Wilson, in philosophy; Hope, in chemistry, and Knox, in anatomy; and their influence doubtless guided him towards his profession, as immediately after graduation he entered on a course of instruction at the Royal College of Surgeons. Being called back to America, he spent a short time at his home in Georgia, and then going to New York city, began the study of surgery, under the celebrated Dr. Valentine Mott, who soon grew to refer to him as his "most distinguished pupil"; he also passed through the usual course of instruction at the College of Physicians and Surgeons, receiving the degree of M.D. in 1836. He afterwards studied at the *École de Médecine*, Paris, and for six years "walked" the hospitals and attended the clinical lectures of Civiale, Lisfranc, Roux, Velpeau and others. From Paris he went to London, and studied under such eminent surgeons as Sir Benjamin C. Brodie and Sir Astley Cooper, and while there was offered a partnership by the great Liston, which he declined. In 1847 he came to America, thoroughly equipped and trained for the career which he was destined to pursue, and fixing his residence in New York, began his labors as a regular practitioner. On the organization of the board of immigration commissioners in 1850 Dr. Carnochan was placed in charge of the hospital for immigrants on Ward's Island, and was surgeon in chief for twenty-five years. In 1851 he was chosen professor of the principles and operations of surgery in the New York Medical College, and for twelve years taught large classes of students with brilliancy and effectiveness. During the civil war this institution was discontinued on account of the loss of Southern patronage. In 1870 Dr. Carnochan was appointed health officer of the port of New York, in which position his administrative talent enabled him to establish prompt and efficient quarantine without greatly embarrassing commerce. As an operator, Dr. Carnochan received the highest commendation of the leading surgeons of Europe who had

Chas. F. Taylor

studied his cases: such as ligature of the femoral and carotid arteries for elephantiasis; amputation of the entire lower jaw, with disarticulation of both condyles at one time, and removal of the ulna and radius while saving the arm with its functions unimpaired. In a case of chronic facial neuralgia, he performed excision of the entire trunk of the second branch of the fifth pair of cranial nerves from the infra-orbital foramen, through the foramen rotundum to the base of the skull, which resulted in giving a new pathology to the disease, and, while several times successfully repeated by himself, is a feat never attempted before or since. He also performed the operation of amputation at the hip joint with entire success five times, one instance being on May 18, 1864, at the battle of Spottsylvania, where he acted under orders of the surgeon-general of the U. S. army. In the practice of ovariectomy he was unusually skillful, and almost always successful. He performed all the more difficult operations known in surgery, and originated no less than six, as, for example, the tying of both common carotid arteries in a case of elephantiasis of the head, face and neck, and the tying of the common carotid on one side and of the external carotid on the other in hypertrophy of the tongue. He tied the femoral artery in a number of cases of varicose enlargement of the veins of the leg and thigh, and also for elephantiasis of the leg, where amputation had formerly been the only resort. He was noted as one of the most rapid operators of his time, his skill being efficient in saving much suffering to his patients. The extreme delicacy of his touch was shown in his elaborate dissection of the human foot, in which he laid bare the almost microscopic ramifications of nerve fibres, and prepared the specimen for preservation. Dr. Carnochan was a voluminous writer, and published a number of important works in practical surgery, all contributions of exceptional value to the literature of his profession. They include papers on partial amputation of the foot, "Lithotomy and Lithotomy"; "Treatise on Congenital Dislocations" (1850); "Contributions to Operative Surgery" (nine parts, 1877-86), and translations of Sedillot's "Traité de Médecine Opératoire, Bandages et Appareils" and Karl Rotiransky's "Handbuch der pathologischen Anatomie." A number of his original papers were brilliantly illustrated, after drawings by his wife, who was a skillful artist and an enthusiastic aid to her eminent husband in his professional career. He was married, in 1856, to Estelle, daughter of Maj.-Gen. William Walton Morris, U. S. A., and a great-granddaughter of Lewis Morris, a signer of the Declaration of Independence. Dr. Carnochan died in New York city, from an apoplectic stroke, Oct. 28, 1887.

**DICKSON, James Henderson**, physician, was born in Wilmington, N. C., in December, 1806, son of James Dickson, a commission merchant. He was graduated at the University of North Carolina in 1823, and entered upon the study of medicine in the office of Dr. Armand J. DeRossett, where he also mastered the practice of pharmacy, then usually an adjunct to medical learning. Being graduated at the College of Physicians and Surgeons, New York, in 1827, he began practice in South Washington, N. C., but soon removed to Fayetteville, N. C., where he remained ten years. While here he cultivated surgery in particular, in 1833 performing the direct transfusion of blood, and in 1835 a tenotomy for club-foot. These operations put Dr. Dickson among the very first surgeons to perform this class of work. He removed to New York in 1837, but returned to Wilmington in 1841, and soon secured a large practice. While devoting himself closely to his general practice, he was also a student of literature, as was

shown by his address before the University of North Carolina in 1853. He was also one of the founders of the Wilmington Library Association in 1860, but the war not only put a period to its accumulations, but scattered what had been already gathered. His own extensive library, which he had sent to Laurinburg, N. C., for preservation, was captured there, and when last heard of had been loaded on a Federal gunboat, and was being carried down the river, no doubt for "safe-keeping." Dr. Dickson was early interested in the organization of the North Carolina Medical Society, and was its president in 1852 and 1854. In May, 1853, he delivered an address before it on "Respiration." In 1859 he was instrumental in the organization of the North Carolina state board of medical examiners, and became its first president. His most important contribution to the history of medicine was his "Report on the Medical Topography and Epidemics of North Carolina," printed in the "Transactions" of the American Medical Association in 1860. This article is based on his own observations and on the reports of other physicians; it treats of the geographical distribution of disease in the various sections with a somewhat detailed account and yet remains the fullest description extant of the endemic and epidemic diseases of the state. During September, 1862, yellow fever appeared in Wilmington, introduced probably by blockade runners from the West Indies. As there had been no epidemic of the kind in half a century, no physician then in practice had ever had a case. Under these circumstances, and when as many of the inhabitants as could find it possible had already left the city, Dr. Dickson remained faithful to his professional duties, now larger than ever, and fell a sacrifice to his constancy. In 1845 he was married to Margaret, daughter of Gen. James Owen, a congressman in 1817 and first president of the Wilmington and Raleigh (now Wilmington and Weldon) railroad. He died at Wilmington, N. C., Sept. 23, 1862.

**BROWER, Daniel Roberts**, physician, was born at Manayunk, Pa., Oct. 13, 1839, son of Daniel Rife and Ann Billop (Farmer) Brower. He is descended from the old Brower family who settled in Montgomery county, Pa. His early education began in Phenixville, whence his family had removed shortly after his birth. When he was thirteen years of age, the family removed to Norristown, Pa., where he entered the Tremont Seminary, and prepared for the Polytechnic College of Philadelphia, where he was graduated in 1859. His inaugural address on the ventilation and drainage of mines was published in full, and favorably noticed in the London (England) "Mining Engineer," the leading engineering publication of the world. For about one year he continued mining engineering in western Virginia, and then, following out the wish of his life, began the study of medicine, being graduated in 1864 in the medical department of the Georgetown University. Shortly before this he passed the army medical board of examination, then sitting in Washington, D. C., and was appointed assistant surgeon of U. S. volunteers. After a brief service in the U. S. General Hospital at Portsmouth, Va., he was sent to the General Hospital at Fortress Monroe, Va., then the largest hospital in the United States. Here he distinguished himself by his active and extensive service until he was ordered to Norfolk, Va., as chief medical officer of the military district of eastern Virginia. In 1866 he organized the first hospital for

*D. R. Brower*

insane freedmen at Richmond, Va., under the freedmen's bureau. From 1868 until 1875 he served as medical superintendent of the Eastern Lunatic Asylum of Virginia at Williamsburg. While he did much in reforms, in improvement of the buildings, and in the care and treatment of the insane, he started schools and shops for various industries, and an endless variety of amusements, and bought a farm for the supply of farm products and for the occupation of the patients. In 1875 he removed to Chicago, and entered immediately upon active professional work, making a specialty of mental and nervous diseases. He is now professor of mental diseases, materia medica and therapeutics at Rush Medical College, the oldest and largest college in the Northwest; professor of mental and nervous diseases in the Woman's College of the Northwestern University and professor of mental and nervous diseases in the Post-Graduate Medical School, Chicago. He is the neurologist of the St. Joseph's, Wesley and Cook County hospitals of Chicago, as well as consulting physician to the Presbyterian Hospital, Woman's Hospital, State of Illinois Women's and Children's Hospital and the Washington Home, all of Chicago. He is conspicuous as a lecturer and writer, having contributed many valuable papers to science, and was for many years editor of the Chicago "Medical Journal." The degree of LL.D. was conferred upon him by Kenyon College, Ohio, and St. Ignatius College, Chicago, Ill. He was married, May 15, 1857, to Eliza Ann, daughter of Col. A. W. Shearer. They have two children.

**McCREADY, Benjamin William**, physician, was born in New York city, Oct. 28, 1813, son of Thomas and Margaret (Miller) McCready. He was educated in the public schools of New York. He first studied medicine under Dr. John Brodhead Beck, professor of materia medica in the College of Physicians and Surgeons, and became a favorite with him. Through the latter's advice, Dr. McCready undertook the course there, and was graduated in high standing

in the class of 1835. His skill as a student was sufficiently marked to win for him an appointment as house physician to the New York Hospital, where he served a full term to the eminent satisfaction of the authorities. He was later appointed physician at the Tombs, and after a short term there became one of the most sought and valuable of the dispensary physicians in New York. This brought him to the notice of the Bellevue authorities, who invited him to that hospital as visiting physician, a position he held for twenty-five years (1848-73), a length of service rarely equaled. In 1874, being advanced in years and the demand on his time and service very great from without, he became consulting physician, in which capacity

he served until his death. His earliest efforts as a teacher were made at the College of Pharmacy, which he helped largely to develop. In 1861 he helped to found the Bellevue Hospital Medical College, becoming its first professor of materia medica and therapeutics. This chair he filled for eleven years, until 1872, when he was created emeritus professor. He was chief medical examiner for the Washington Life Insurance Co., of New York, for twenty years. He helped to found the New York Medical and Surgical Association, and was one of its charter members. Dr. McCready was an acknowledged expert in medico-legal science, and was often called to testify in disputed will and insanity cases. During the cholera and typhus fever epidemics he

manifested his zeal in the service. He was also a member of the New York Academy of Medicine and of the Century Club, and belonged to a number of scientific and philanthropic societies. He took an active interest in the politics of his era, and was an ardent friend of the slaves before the war. He was sent to Canada in the interest of the New York "Tribune" to inquire into the conditions of the fugitive slaves there, and wrote for that newspaper the results of his observations in a series of interesting and widely read articles on the subject. Taking a fancy to Halifax, N. S., he spent a part of each year there from 1886 to 1892. Dr. McCready was married, first, to Margaret Boyle, of New York, who died in 1860; second, to Jane Gall. He had one son and three daughters. He died in New York city, Aug. 9, 1892.

**MACNEVEN, William James**, physician, was born at Ballynahowne, county Galway, Ireland, March 24, 1763. The family name is spelled MacNevin. His ancestors originally held extensive estates in the north of Ireland, but were deprived of them by Cromwell, who compelled them to remove to the wilds of Connaught. Several of his family attained distinction, notably his uncle, Baron William O'Kelly MacNevin, court physician to Empress Maria Teresa of Austria. William J. Macneven began his education in Ireland, and at the age of ten was sent by his uncle to a school in Prague, where he received a good classical education and entered on his medical studies. He was graduated M.D. at the University of Vienna in 1783, and about a year later began practice in Dublin. Early in his career he became actively associated with the Catholic Committee, and attained his first public prominence in 1791 by his eloquent speech in opposition to the proposed remonstrance to the government, on the ground that its tone was "too submissive and slavish." By this action he succeeded in preventing its unanimous adoption, and it received only sixty-two signatures, mostly of the loyal and aristocratic Catholics. This action brought him great popularity, and occasioned his election as representative to the Catholic conference of 1792 by both Galway and Cavan; he made choice of the latter county. His constant and outspoken sympathy for his oppressed countrymen made him a leading spirit in the order of United Irishmen, and he became prominently involved in the revolution of 1797-98, as associate of Lord Edward Fitzgerald, Arthur O'Connor and Thomas Addis Emmet. On March 12, 1798, he was arrested, and confined, first in Kilmalsham jail and later in Fort St. George, for nearly four years. According to current report, he occupied his period of imprisonment in translating fragments of Ossian from the original Gaelic and instructing Emmet and other captives in the French language with a grammar of his own compilation. After his release in 1802, he made a pedestrian trip through Switzerland, which he described in his "Rambles through Switzerland in the Summer and Autumn of 1802" (1803); and then making a brief visit to relatives in Germany, in 1803 he went to Paris, and in either 1803 or 1804 enlisted in the French army. In this course he was prompted by the hope that Napoleon was planning an invasion of Ireland, and having accepted a captain's commission in the Irish brigade, entered heartily into what he believed to be preparations to that end. An interview with the emperor and Talleyrand, however, convinced him that his hopes were vain, and forthwith he resigned from the service and sailed from Bordeaux for the United States. Arriving in New York city, July 4, 1805, he entered on professional practice, and rapidly attained a successful prominence. In 1808 he was appointed to the chair of obstetrics and midwifery in the College of Physicians and Surgeons, which, three years later, he exchanged for that of chemistry in the same institution. On the

B. W. McCready

departure for Europe of Dr. John W. Francis in 1816, the subject of materia medica was added to his department, and he continued to give instructions in both until 1820, when they were again separated. He resigned his professorship in 1826, and, with Drs. Mott, Francis, Hosack and Goodman, organized the Duane Street Medical School, where he held the chair of materia medica and therapeutics until the dissolution of the school by legislative enactment in 1830. In 1807 Dr. Macneven became associate physician of the New York almshouse under Dr. David Hosack; on the outbreak of the cholera epidemic in 1832 he was appointed to the municipal medical council, and assigned to the supervision of hospitals, and in 1810 he was appointed by Gov. Seward resident physician of New York city. Dr. Macneven was to the end of his life an ardent Irish patriot and devoted Catholic. He was a member of nearly every Irish society in New York, and long president of the Friends of Ireland. For the guidance of immigrants, he prepared a pamphlet of directions, and founded an agency to obtain employment for Irish girls. In addition to the books already mentioned, he published "Pieces of Irish History" (1807), depicting the careers of several of the patriots of his time; "Chemical Examination of the Water of Schooley's Mountain" (1805), tending to show its value in calculus and nephritic diseases, and "Exposition of the Atomic Theory" (1819). He also prepared an edition of "Brand's Chemistry" (1821). He was for three years editor of the "Medical and Philosophical Journal"; with David Hosack and Hugh Williamson, promoted the organization of the Literary and Philosophical Society of New York, and was a fellow of the American Philosophical Society. Dr. Macneven died in New York city, July 12, 1841.

**WHITING, Charles Goodrich**, journalist and author, was born in St. Albans, Vt., Jan. 30, 1842, son of Calvin and Mary Richards (Goodrich) Whiting. The Whiting and Goodrich families both came from England to America between 1630 and 1650; and the Van Dater family, with which he was connected through his mother, came from Holland about 1630. Mr. Whiting, owing to delicate health, did not attend schools, but studied at home and by reading. In his youth he worked on a farm, in a country store and in paper mills before he finally, at the age of twenty-six, began his journalistic career, as reporter under the celebrated Samuel Bowles, on "The Republican," of Springfield, Mass. With this newspaper he continued to be associated in various departments, and in 1897 held the position of associate and literary editor. In it appeared his more strictly literary efforts in prose and verse. He collected some of these writings from "The Republican" in 1886, and published them in book form, with the title of "The Saunterer." This volume found many lovers, and the "Spectator" wrote of it: "As a whole, "The Saunterer" is a nature-book, a record of natural sights and sounds, and of the reflections naturally suggested by them to a sympathetic mind. It is not, perhaps, a book for everybody; but those to whom it makes any appeal will find it one of the most delightful companions of their solitude." Mr. Whiting has edited several books of various sorts, and in 1885 he delivered an ode at the dedication of the soldiers' monument in Springfield. Brief notices of his life are found in the year-book of the Authors' Club, the "Magazine of Poetry," and the Stedman and Hutchinson "Library of American Literature"; and selections from his writings are to be found in several anthologies. Mr. Whiting is a member of the Authors' and Twilight clubs, of New York, and the Connecticut Valley Historical Society. He was married at Adams, Mass., June 12, 1869, to Eliza Rose, daughter of Isaiah J. and Eliza (Rose) Gray, both of whom were descendants of early English

settlers in New England. They have two children, Agnes Mary, a graduate of Bryn Mawr College, and Edward Elwell, educated at Harvard University, both of them journalists. Mrs. Whiting is secretary of the Union Relief Association, the Charity Organization Society of New York city, and is also connected with journalism.

**STROTHER, David Hunter**, soldier, author and artist, known by the pen name of "Porte Crayon," was born at Martinsburg, Va. (now W. Va.), Sept. 26, 1816, son of Col. John and Elizabeth Pendleton (Hunter) Strother. He received a good academic education; later became a student of art under Prof. Samuel F. B. Morse, the famous inventor of telegraphy, and then spent two years as an art student in Rome. He made his appearance as author and artist in 1850 in one of the earliest numbers of "Harper's Magazine," under the nom de plume of "Porte Crayon." The charming style and delightful illustrations of the "Blackwater Chronicles" and "Virginia Illustrated" extended his reputation to every part of the world reached by "Harper's Magazine," and gave him a strong place in the affections of the public. His illustrations, reproduced by the crude wood engraving of those days, give little idea of his talent; but certain of them, which have been reproduced by modern processes, show him to have possessed great ability as an illustrator. Both his father and himself held strong

opinions on the subject of slavery; and, in view of the probable conflict between the sections, he raised and equipped a company of cavalry. On the outbreak of the war, however, his company joined the southern forces, and Strother was obliged to enter the Union lines alone. Appointed assistant adjutant-general on McClellan's staff, he subsequently saw service on the staff of Gen. Pope during the campaign in Virginia, and later with Banks in New Orleans and in the Red river expedition. He was recalled from New Orleans to be made colonel of the 3d West Virginia cavalry. Later on he was made chief of staff to his cousin, Gen. David Hunter, who commanded the army in the valley, and retired at the close of the war with the rank of brigadier-general. On the return of peace, Gen. Strother retired to his cottage at Berkeley Springs, and again engaged in literary pursuits. During the war he had carried with him note-books, and the night after every battle had seen him busy fixing on paper the strong impressions of the day's events. His "Personal Recollections of the War," which ran for three years in "Harper's Magazine," is ranked among the ablest contributions to the personal history of battle-fields. In 1870 Pres. Hayes appointed him consul-general to Mexico, which post he held until 1885. He numbered among his friends many of the most distinguished men in artistic, literary, army and political life. Honest in his own convictions, he conceded a like honesty to his opponents and never spoke ill of them. His action in siding with the Federal government created a sharp antagonism between him and many of his relatives and friends in Virginia and the South, but before his death this had entirely disappeared. He was twice married; first, to Ann Doyme Wolfe, by whom he had one daughter, who became the wife of John Brisben Walker. His second wife was Mary Elliott Hunter, by whom he had two sons. His daughter and his son, John Strother, survive him. Gen. Strother died at his home in Jefferson county, W. Va., March 8, 1898.

**FAUGERES, Margaretta V. (Bleecker)**, author, was born in the city of New York, in 1771, daughter of John J. and Ann Eliza (Schuyler) Bleecker. Her mother was noted as a graceful and popular poet. Her early youth was spent at Tomhanick, near Albany, N. Y., where her parents settled in 1771, and after the death of her mother, in 1784, she and her father removed to New York. There she made the acquaintance of Dr. Peter Faugères, an infidel physician, and was married to him in spite of her father's wishes. Her married life was very unhappy, and part of the time she lived in the direst poverty; for, although she inherited a large fortune from her father, her husband soon squandered it, and treated her with extreme cruelty as well. He died of yellow fever in 1795, and after that Mrs. Faugères supported herself by teaching in schools in New Brunswick, N. J., and Brooklyn, N. Y. She inherited her mother's taste for poetry, and from her early years was in the habit of occasionally giving expression to her moods in verse. In 1793 she published her mother's "Posthumous Works," appending to them a number of poems and essays by herself. In the year of her husband's death she offered her five-act tragedy, entitled "Belisarius," to the John Street Theatre, but it was refused. It has since been published in Griswold's "Female Poets of America," where the following description of it is given: "Though unsuited to the stage, this tragedy has considerable merit, and is much superior to the earlier compositions of the author. The style is generally dignified and correct, and free from the extravagant declamation into which the subject would have seduced a writer of less taste and judgment." Mrs. Faugères died in New York city, Jan. 9, 1801.

**RINDGE, Frederick Hastings**, philanthropist and author, was born in Cambridge, Mass., Dec. 21, 1857, son of Samuel Baker and Clarissa (Harrington) Rindge, both of Cambridge. He is descended from Puritan ancestors, who settled at Roxbury in 1638, and Ipswich in 1649. His father was a merchant and bank president, and was enabled to give his son every advantage in the way of education, in the best schools of Cambridge, and at Harvard University. After his graduation there, in 1879, Mr. Rindge engaged in commercial pursuits for two years, and then spent two years traveling in America and Europe. In 1890, he purchased the Malibu ranch, consisting of 13,000 acres, a few miles above Santa Monica, Cal., and engaged in fruit-growing,

and in raising cattle and Angora goats. Mr. Rindge's tastes are scholarly, and he has become known in various branches of intellectual activity. He is devoted to the study of archaeology and numismatics, and in the course of his travels has made valuable collections, of which the archaeological collection is at present loaned to Harvard University, and his numismatic collection to the Boston Museum of Fine Arts. In further aid of the educational interests of his native city, he founded and long supported the Cambridge Manual Training-school for Boys; presented to Cambridge its public library building and grounds, and also its city hall, which cost \$200,000. He has made donations to the American University, Washington, D. C., and to the University of Southern California, Los Angeles. He has written "Thoughts of a Truth Seeker"; "Meditations of Many Matters"; "Concerning Ourselves and Our Interests," and

"Happy Days in Southern California." Mr. Rindge presented Lowell Island, in Boston harbor, with an hotel, for the benefit of sick children, in 1885, and has since aided in the support of the institution. In Cambridge he helped erect a Methodist church, and built one in Santa Monica, and in the South he has expended large sums in founding Sunday-schools among untutored settlements on the frontier. He is a member of the state board of the California Y. M. C. A. He was married, at Trenton, Mich., to Rhoda May Knight, May 17, 1887, and has three children.

**MARCHANT, Henry**, jurist, was born on Martha's Vineyard, Mass., in April, 1741, son of Capt. Hexford Marchant by his first wife. He was educated in the schools of Newport, whither his father removed, and at Philadelphia College, now the University of Pennsylvania, where he was graduated in 1762. He then studied law in the office of Judge Edmund Trowbridge, at Cambridge, Mass., and five years later was admitted to the bar. Returning to Newport to practice, he entered with ardor into the patriotic movements preceding the revolution, and served as chairman of the committee to prepare instructions to the delegates in congress. He was elected attorney-general of Rhode Island in October, 1770, and remained in office until May, 1777. He went to England, in 1771, on matters connected with his office, and remained a year. Soon after this, foreseeing that in case war broke out the British would seize Newport, he bought an estate in Narragansett, and removed thither. From 1777 until 1780 he was a delegate to the Continental congress, and again in 1783-84, taking an important part in the debates. He was one of the signers of the Articles of Confederation, to which he and his associates affixed their signatures, "while," as he expressed it "the guns of the battle of Brandywine were roaring in our ears." After the war he returned to Newport and was elected to the general assembly, where he exerted all his influence to secure the adoption of the federal Constitution. In 1790 he was nominated by Pres. Washington judge of the U. S. district court of Rhode Island, and the nomination was unanimously confirmed. Yale gave him the degree of LL.D. in 1792. Judge Marchant remained in office until his death, which occurred in Newport, Aug. 30, 1796.

**PHELPS, Austin**, clergyman and author, was born at West Brookfield, Worcester co., Mass., Jan. 7, 1820, son of Rev. Eliakim and Sarah (Adams) Phelps. His paternal grandfather was a farmer of some local importance, and among his ancestors were magistrates, deacons, members of the legislature and other officials. Dr. Eliakim Phelps left West Brookfield to become principal of the Young Ladies' High School at Pittsfield, Mass.; four years later moved to Geneva, N. Y., where he ministered to the First Presbyterian church, and subsequently was pastor of the Congregational church at Huntington, Conn. By nature a conservative, he again and again took the radical side; for instance, supporting the movements to establish Sunday-schools and temperance societies in the days when public opinion favored neither. His wife was admired for her beauty and revered for her spirituality; was fond of retirement and books, and never known—such was her husband's testimony—to do one unkind or unwise thing. Austin Phelps was precocious above the average, being able to read the Bible at the age of four, and to do any sum in cube-root and explain the process, at the age of eight. The religious instinct in him was developed early by his father's preaching and his mother's hymn-singing. At Pittsfield his mind was first awakened to ambition for distinguished achievement, and he began to cherish the hope of becoming a publicator. At Geneva he

*Frederick A. Rindge*

was fitted for college, and at the age of thirteen entered Hobart, where he stood high in his classes—usually at the head. Near the close of his second year he was removed to Amherst College, and in December, 1835, he was again removed to the University of Pennsylvania, his father having gone to Philadelphia to reside. Here the young man had as his instructor in English literature Prof. Henry Reed, and from him learned to appreciate Wordsworth and the type of literature represented by his poetry. Rev. Albert Barnes was pastor of the church he attended; between him and young Phelps there was remarkable intellectual and moral sympathy, and the latter united with the church at that time. He was graduated at the university in 1837, taking high honors in the classics, and the valedictory, and then spent a year of historical and literary reading under Prof. Reed. After several months of study of Hebrew under Dr. Nordheimer, at Union Theological Seminary, New York city, he in 1839 entered the theological seminary at New Haven, intending to take a full theological course. Unwisely urged by friends to begin preaching, he in 1840 applied for a license, and in that year delivered his first sermon, in the Arch Street Presbyterian Church, Philadelphia. Calls to prominent city churches came, but feeling himself unfit to assume the religious guidance of others, he declined them, until 1842, when he received a second invitation to the pastorate of the Pine Street Congregational Church in Boston. He was installed in April, and remained until May, 1848, when he removed to Andover to take the chair of homiletics and sacred rhetoric in the theological seminary. He was influenced to make the change by considerations of duty and health; for the ministry was his preference, his work in it had been greatly blessed, and he was deeply beloved by his people; it was the great sacrifice of his life, and to him it was ever a matter of regret, but to the hundreds of young men who came under his instruction it was a matter of self-congratulation. Prof. Phelps remained at Andover for forty years, declining calls to other theological seminaries and to city churches. In 1869 he became chairman of the faculty as senior professor, and held both positions until 1879, when he was forced by ill health—the result of overwork—to resign. His latter years were years of physical suffering, and were saddened by a theological controversy that agitated his beloved seminary and the denomination that supported it—a conservatism which had grown upon him with age, separating him from most of his younger fellow-workers in the institution. He bore his sufferings heroically; he continued his studies and his writing, and during that period of retirement and pain prepared several of his best books. Elizabeth Stuart (Phelps) Ward, in her printed recollections of her father, says: "He had the tastes and the gifts of a type of culture which one is more accustomed to find in the 'world' than in the church. . . . His true position in the American pulpit was as a spiritual orator. . . . The attentive soul that listened to him went away saying less 'that was a great preacher' than 'that was a great truth.'" His manner was intense, but his self-possession was perfect. His voice had a wonderful quality, and it "was probably the most powerful element in his pulpit manner." Said one of his students: "He used fairly to take possession of his audience by the lucidity, the directness, the elegance of his style, and his thought would linger in the memory as the tone of a rich bell will linger in the ear." He was as catholic in his religious as he was in his intellectual sympathies, and could have worked zealously in almost any one of the great denominations. As a teacher he impressed upon his pupils what one of them has called "his imperial personality." "Never

did more felicitous relations of instructor and pupil exist than were illustrated there" (his lecture-room), adds another, "Never were instructions more quickening, more sympathetic, more generally adapted to find out and fetch out the best of which a pupil was capable. The courses of lectures always served to glow with the heat of recent thinking." But Prof. Phelps was more than an inspiring instructor; he was the personal friend of every one of the young men who listened to his lectures. Doubts, and perplexities not spiritual, were taken to him as to a father; and by a rare power of intuition and a sympathy which, in the words of his daughter, "was with him an extra sense," he entered into their experiences as thoroughly as though they were his own. Few of his sermons have been preserved in continuous form, but one of these—on prayer—was so acceptable that it was expanded into a small book, "The Still Hour" (1859). This "gem of devotional and contemplative literature," as it has been called, was republished in London and Edinburgh, found hundreds of thousands of readers, and brought him letters from strangers in every part of the world. Of his other works the most important are: "The New Birth" (1867); "The Solitude of Christ" (1868); "Sabbath Hours" (1870); "Studies in the Old Testament" (1879); "Theory and Practice of Preaching; Lectures on Homiletics" (1881); "Men and Books; or, Studies in Homiletics" (1882); "My Portfolio," a collection of essays (1882); "English Style in Public Discourse" (1883); "My Studies and other Essays" (1886); and "My Note-Book: Fragmentary Studies in Theology and Subjects Adjacent Thereto" (1889). With Prof. Edward A. Park and Dr. Lowell Mason, he edited the "Sabbath Hymn-Book" (1859). He was a frequent contributor to the religious weeklies, especially the "Congregationalist," and published a number of addresses. He was long chaplain of both houses of the Massachusetts legislature, and in 1861 preached the "election sermon." The degree of D.D. was conferred upon him by Amherst College in 1861. Dr. Phelps was married at Andover, in September, 1842, to Elizabeth, eldest daughter of Rev. Moses Stuart, D.D. Her character and her career as an author are described in an accompanying article. She bore him three children—the eldest, who took her name, still better known as an author; the second, Moses Stuart, became professor of metaphysics in Smith College, and died in 1883; the third, Amos Lawrence, entered the Congregational ministry. Mrs. Phelps died in November, 1852. In April, 1854, her sister Mary became the wife of Dr. Phelps, but lived only two years. In June, 1858, Dr. Phelps was married to Mary A., daughter of Samuel and Charlotte Johnson, of Boston. She bore him two sons, Francis, now resident in Baltimore, and Edward, who is a journalist in Chicago. Dr. Phelps died at Bar Harbor, Me., Oct. 13, 1890, and was buried at Andover. A memoir written by his daughter, Mrs. Ward, was published in 1891, and frequent references to him are made in her "Chapters from a Life."

**PHELPS, Elizabeth (Stuart)**, author, was born at Andover, Mass., Aug. 13, 1815, daughter of Rev. Moses and Abigail (Clark) Stuart. She was descended from Robert Stuart, who emigrated to Massachusetts in 1650, residing in Boston for a short time, thence removing to Milford, Conn., and about

*Austin Phelps.*

1660 to Norwalk. Gov. Winthrop of Massachusetts was another ancestor. Her father has been described as "a man of moods and variable power, but of exceptional fascination and brilliancy." A broad-minded and enthusiastic scholar, he brought to the attention of English readers the works of the most enlightened and unprejudiced theologians of Germany, and published a Hebrew grammar and a Hebrew "Chrestomathy" that were honored by being published at Oxford University. Miss Stuart inherited her father's alert mind and in large measure his intellectual gifts. Royal in her carriage, vivacious with all her dignity, she commanded the ebullient admiration of men, and in particular of Rev. Austin Phelps, whose wife she became in September, 1842. After a residence of four years in Boston, where her husband was pastor of a Congregational church, she returned with him to her native town to spend the rest of her too short existence, and, in the words of her daughter, "to achieve the difficult reconciliation between genius and domestic life." The latter, Elizabeth Stuart (Phelps) Ward, in her memoir of her father and in her own autobiography, "Chapters from a Life," has drawn a most attractive and touching picture of this richly endowed woman. "She was a homemaker born," says Mrs. Ward, in speaking of the early years of her mother's married life. "She poured the opulence of her deep nature right royally and gladly into that one channel of womanly tenderness. The keen intellect which could intelligently criticize the young preacher's sermon on Saturday night was quite able to discern ways of amusing and resting him on Monday. . . . Her nature was rich in expedients, in courage, in imagination and in that womanly common sense whose absence or presence make the creative intellect either a torment or a blessing to live with. . . . Genius was in her and would out. She wrote because she could not help it, and her public read because it could not help it, and asked for more and got it. A wife, a housekeeper, a hostess, in delicate health; on an academic salary, undertakes a deadly load when she starts upon a literary career. She lifted it to her frail shoulders and she fell beneath it." Among the works of Mrs. Phelps were the "Kitty Brown" series (1850); "Sunnyside" (Andover, 1851; republished in Edinburgh); "A Peep at Number Five" (1851); "The Angel over the Right Shoulder" (1851); and, posthumously published, "The Tell Tale" (1852); "Little Mary" (1853); and "Last Leaf from Sunnyside," with a memoir by her husband (1853). Her books bore on their title-page "By H. Trusta," an anagram of her maiden name, and the scenes were mostly laid in New England. They were vivacious in style and abounded in delicate humor; they were praised by the best critics; they led one to expect far stronger work from her, and had she lived and been less hampered by her conditions, these expectations might have been satisfied. "Sunnyside," a story descriptive of life in a country parsonage, was for many years highly popular,—more than 100,000 copies being sold,—and led to the publication of "Shady-side" by another clergyman's wife, Mrs. Martha Stone Hubbell. Mrs. Phelps bore her husband a daughter and two sons. After a brave fight against disease, following the birth of her last child, she died in Boston, Mass., Nov. 30, 1852.

**WARD, Elizabeth Stuart (Phelps),** author, was born in Boston, Mass., Aug. 31, 1844, eldest child and only daughter of Rev. Austin and Elizabeth (Stuart) Phelps. She was baptized Mary Gray, but was given her mother's name, on the latter's death, eight years after. Heredity and environment conspired to make her a woman of letters, and she has somewhere said, in speaking of her parents: "It would be impossible to be their daughter

and not have something to say, and a pen to say it." Her father was eminent as a theologian and author, and at the time of her birth was pastor of the Pine Street Congregational Church, in Boston. In 1848 he was called to the professorship of homiletics and sacred rhetoric in the theological seminary at Andover, Mass., and brought additional culture to the circle of plain lives and high thinkers whose interests centered in that institution. Mrs. Phelps was the eldest daughter of Rev. Moses Stuart, another noted Congregational divine, for many years professor of sacred literature in Andover Seminary, and a prolific writer on theological subjects. She inherited her father's intellectuality; displayed marked social gifts and artistic tastes, and before she died had made her name known on both sides of the ocean as a writer of simple stories of home life, that took strong hold upon the hearts of their readers. Elizabeth Stuart Phelps grew up under the elms of Andover, in "a community engaged in studying thought," as she has expressed it—precocious in her religious as in her intellectual development. The most important portion of what is called education she received from her father, discussion of theological questions alternating with discussion of the British classics, according to the mood of the juvenile listener, and her distinct awakening to the intellectual life she connects with his reading to her the writings of De Quincey and Wordsworth. From the private schools of the village she passed to the seminary of Mrs. Prof. Edwards, where the course of study—Greek and trigonometry excepted—was equal to that of the boys' colleges of the day. Mental philosophy, English literature, and astronomy were favorite studies; but to mathematics and chemistry she had a decided aversion. At the age of nineteen she left school, and for several years gave herself, with all the ardor of her nature, to mission work at Abbott village, a factory settlement a mile or two from her home. Then began an acquaintance with the lives and needs of working people that deepened with the years, and resulted in such books as "Hedged In" (1870); "Jack, the Fisherman" (1887), "one of the most effective temperance sermons ever published"; "The Madonna of the Tubs" (1889), and "A Singular Life." In the same year (1863) she took up serious literary work, her first effort (a "pious little tale," she calls it) having been published in the "Youth's Companion" when she was only thirteen. With a war story, "A Sacrifice Consumed," printed in "Harper's Magazine" in January, 1864, she earned her right to the title "author," and became a regular contributor to that periodical. She also began to write for denominational weeklies and to produce Sunday-school books to order, not from preference, including the "Tiny Series" and the "Gypsy Series." A little later, a story, based on the burning of the Pemberton mills at Lawrence and entitled "The Tenth of January," appeared in the "Atlantic," and brought her the first recognition she had received from literary people. The book that was to give her fame, "The Gates Ajar," was begun about the year 1862, and had for its primal aim the comforting of the many women in the land whose hearts had been crushed by the loss of husbands, brothers and lovers. "In story form," says one who recalls it, "and by suggestion, it attempts to show that the heavenly life must provide for the satisfaction of the whole nature, as well as for the

technically religious side, the one department which seeks God directly in personal affection and worship." Again, "It boldly attacked," says another, "problems that the pulpits and theological chairs feared or ignored, and, while it did not say the last word on any of them, it did, in many cases, say what was to most people the first word they had ever heard." The author devoted two years to writing the book; the publishers kept it for two years more; and, finally, without especial enthusiasm on their part, and with little expectation on Miss Phelps', it was issued in 1868. "Opinion battled about that poor little tale," says the author, "as if it held the power to overthrow church and state and family." It was made the subject of pulpit discourses and of newspaper wrangles. It was enthusiastically praised as comforting and inspiring; it was savagely denounced as irreverent, fantastic and dangerous. Partly because such a book was needed, partly because it was "talked about," it went through twenty editions in one year. Eventually, nearly 100,000 copies were sold in the United States, and more than that number in Great Britain; and it was translated into a number of continental languages, with no pecuniary benefit to the author. Many years later, Miss Phelps returned to this theme. In 1883 she published "Beyond the Gates," and in 1887 the "Gates Between"—the latter being, as one critic asserts, "a reversal of 'The Gates Ajar,'" showing, as it does, "how truly heaven is a spiritual condition." In 1869 Miss Phelps published a book of short stories, "Men, Women and Ghosts," and in 1871, "The Silent Partner," a revelation of the hard lot of mill operatives; then ill-health forced her to rest, almost entirely, for several years. In 1877 she delivered, with great effort and in spite of constitutional timidity, a course of lectures on "Representative Modern Fiction," before the Boston University. In that year, also, she published the "Story of Avis," in which, as said a reviewer in "The Nation" at the time, "there are bursts of truth, and of rarely expressed truth, which lift the book far above the mere record of conjugal infelicity. The story, although a painful one, rests on the solid ground of fact." This, in the opinion of most of her critical readers, is her strongest work, and, together with "Old Maids' Paradise" (1879); "Friends: A Duet" (1881), and "Dr. Zay" (1884), forms a group in which are set forth her opinions regarding woman's "sphere." Among other works—she has published many—are: "Poetic Studies," verse (1875); "My Cousin and I" and "Scaled Orders" (1879); "Songs of the Silent World" (1885); "The Struggle for Immortality," essays (1889); "Fourteen to One," short stories (1891); "Austin Phelps: A Memoir" (1891); "Chapters from a Life," autobiography (1896), and the "Story of Jesus Christ" (1897), her last and most important book. In 1888 Miss Phelps was married to Herbert D. Ward, and soon after collaborated with him in writing two romances based on scriptural characters, scenery and history, "The Master of the Magicians" which was chiefly the work of Mr. Ward (1890), and "Come Forth," written chiefly by herself (1891); and in a story which took a first prize offered by the "Youth's Companion." Of Mrs. Ward's work in general, Vedder, the critic, says: "Her plots are fairly good, though never complicated, and she peoples her books with persons whom it is good to know. . . . The conscience of the woman descended from the Puritans, sensitive and introspective to morbidity, is incarnate in her books. In them all one reads the conviction that she has a message to souls diseased or disquieted—a message of peace and comfort; and this message she has managed to convey through her fiction not less plainly and perhaps more effectively to many than in her

avowedly didactic books. It is to her praise that she has done this without any sacrifice of artistic purpose and method. Her style is original, refined, reflecting thought and study without pedantry, occasionally sparkling with wit, oftener glowing with gentle humor, brilliant and vivacious at times, well bred and urbane always. . . . Of all our American women of letters, she impresses us as the most intense, the most high-purposed, the most conscientious in her art. . . . The substance of her verse is so solid, so conscientious always, and so exquisite frequently, that she should be better known as a poet." For many years Mrs. Ward has spent her summers at Gloucester, Mass., the scene of heroic work on her part among victims of intemperance, and of ministrations to the poor. Her winters, since her marriage, have been spent in the South and at Newton Centre, near Boston.

**ROBERTS, Jonathan William**, merchant, was born in Hartford county, Conn., Sept. 1, 1821, son of William Martin and Maria (McMillan) Roberts. The name was originally MacRoberts. His family on both sides is of Scotch-Irish extraction, and was settled in America in colonial times. His father, a native of Vermont, and the son of Jonathan Roberts, a "Green Mountain Boy" in the revolution, was by profession a bookseller; his mother was a daughter of John McMillan. Educated in the schools of New Haven, whither he early removed, Mr. Roberts entered on his active career in New York city in 1842, and in 1845 became a clerk in the wholesale dry-goods establishment of Amos R. Eno. When, in 1847, the business was reorganized under the style of Eno, Mahony & Co., he was admitted to partnership, and steadily rose to higher positions in the concern, which, in 1853, became Eno, Roberts & Co., and later J. W. Roberts & Co. During this last term the business was mainly in the line of package commission. Notwithstanding the heavy losses sustained in consequence of the civil war, Mr. Roberts, by well directed efforts, close application and remarkable executive ability, acquired a competence, which has, since 1867, enabled him to live retired, unharassed by the cares of an arduous business. In that year he purchased his beautiful country residence, "Glenbrook," Morris Plains, N. J., where he still resides. Connecting himself with the South Street Presbyterian Church of Morristown, he was soon after made an elder, and later superintendent of the Sunday-school, president of the board of trustees and chairman of the building committee for the erection of the beautiful new church, which was completed and furnished largely from his designs, and, in accordance with his objections to church debts, without a dollar of encumbrance. Mr. Roberts was also one of the founders of the Young Men's Christian Association of Morristown, and three times its president. As chairman of its building committee, he projected and superintended the erection of the handsome new building on South street, which was also completed entirely free of debt. Mr. Roberts was president for some years of the Morristown Institution for Savings, accepting the office at a critical period of its history, and saving it from great loss, if not failure, by his energy and business methods. In 1884 he was elected a trustee and made chairman of the executive committee of the Washington Association of New Jersey, and in 1887 was elected to the presidency, an office he still (1899) holds. By his untiring efforts he has increased the

*Jonathan W. Roberts*

membership fourfold, has more than doubled its domain; paid off its large debt, and personally secured a large part of its valuable collection of relics. He has also been vice-president, chairman of the executive committee, and is now a member of the board of trustees of the New Jersey Historical Society, to which he has freely given of his time and means. In politics an earnest Republican, he has been a member of the state committee, and often a delegate to the conventions, although steadily refusing all offers of nomination for public office. Mr. Roberts was married, in 1850, to Mary, daughter of Hezekiah King, of Bristol, Pa. She was one of the three honorary members of the Washington Association, and was the donor of the autograph letters at the Washington headquarters, Morristown, known as the "Roberts Collection."

**JAMES, Edward Christopher**, lawyer, was born in Ogdensburg, St. Lawrence co., N. Y., May 1, 1841, son of Amaziah Bailey and Lucia Williams (Ripley) James. His ancestor in the eighth generation, Dr. Thomas James, a native of Wales, settled in Rhode Island, where he was one of the twelve original companions of Roger Williams. Through his mother, he is connected with Samuel Huntington, signer of the Declaration of Independence; the two governors, William Bradford, junior and senior,

of Plymouth colony; Roswell S. Ripley, historian of the Mexican war and major-general in the Confederate army, and Gen. James W. Ripley, who gained fame in the war of 1812, was commandant of the armory at Springfield, Mass., and Chief of Ordnance on the staff of Pres. Lincoln. His great grandfathers, Private Amos James, Cornet Ralph Ripley and Private Roswell Caulkins, and his great-great-grandfathers, Maj. Hezekiah Huntington and Private Hezekiah Hine, served in the revolution with troops of the Rhode Island and Connecticut line. His maternal grandfather, Christopher Ripley, was captain in the 37th U. S. infantry in the war of 1812; his father, his grandfather, Samuel B.

Edward C. James

James, and his great-grandfather, Amos James, were prominent lawyers. His father (1812-83), a native of Stephentown, Rensselaer co., N. Y., was admitted to the bar in 1838, and, after fifteen years of practice at Ogdensburg, was elected a justice of the state supreme court. He filled this honorable position for twenty-three years (1853-76), and then resigned to become a representative in congress from the 22d district, serving through the 45th and 46th congresses. Edward C. James was educated in the common schools and the academy at Ogdensburg, and at Dr. Reed's Walnut Hill School at Geneva, N. Y., and began the study of law in his father's office. He enlisted in the civil war, and went to the front in August, 1861, as adjutant of the 50th New York volunteer engineers. During the winter of 1861-62 he served as acting-assistant adjutant-general of the engineer brigade, and during the Peninsular campaign (1862) was aide-de-camp on the staff of Gen. Daniel P. Woodbury, commanding the engineer brigade in the army of the Potomac. His soldierly qualities were quickly manifested, and he was successively promoted to be major of the 60th regiment New York infantry volunteers and lieutenant-colonel and colonel of the 106th regiment New York infantry, and was several times in command of his brigade. In August, 1863, he was honorably

discharged on a certificate of physical disability. Returning to Ogdensburg, he was, in October, 1863, admitted to the bar, and on Jan. 1, 1864, formed a partnership with Stillman Foote, surrogate of St. Lawrence county, under the firm-name of Foote & James. This association continued until Mr. Foote's retirement in 1874, and thereafter, for seven years, Col. James conducted a large practice alone. In November, 1881, he formed a partnership with Alric R. Herriman, whom he left in charge of his Ogdensburg office, and removed to New York city. Here he soon secured wide recognition, and rapidly built up an extensive practice. Among the most prominent cases he has handled in New York is the "Freight-handlers' Strike" case (People v. New York Central and Hudson River Railroad Co.), in which, as counsel for the state, he, in 1882, successfully brought mandamus proceedings to compel the New York Central and Erie companies to the performance of their duties to the public; thus establishing the right of the state to compel the operation of railways. Hon. Roscoe Conkling was leading counsel for the corporations. Since January, 1885, he has been special counsel for the Manhattan Elevated Railway Co., and has defended many of the important cases involving the rights of property owners in the streets abutting the lines of the roads. He was counsel for Russell Sage in the famous case of *Laidlaw v. Sage*, in which the plaintiff sought to recover \$50,000 damages for injuries from the explosion of a dynamite bomb, thrown by the assassin Norcross in Mr. Sage's office; the opposing counsel being Joseph H. Choate. He also successfully defended Capt. William S. Devery and Inspector McLaughlin, of the New York police force, upon the several trials growing out of the "Parkhurst crusade." He was counsel for Russell Sage and the executors of Jay Gould in the action brought to recover \$11,000,000 by the bondholders of the Kansas Pacific Railway Co. The complaint in the latter suit was withdrawn after a year's litigation. Col. James has been, since June 1, 1897, associated in practice with Edward P. Schell, Abram I. Elkus and Edward J. McGuire, under the style of James, Schell, Elkus and McGuire, one of the prominent law firms of New York. His own practice is confined exclusively to court work, and he is recognized as one of the foremost counselors in America. His reputation as a pleader and jury lawyer is second to none. Col. James was married, Nov. 16, 1864, to Sarah Welles, daughter of Edward H. Perkins, of Athens, Pa., who died Dec. 3, 1879, leaving two daughter, Lucia, wife of Dr. Grant C. Madill, of Ogdensburg, N. Y., and Sarah Welles, wife of Paulding Farnham, of Tiffany & Co., N. Y.

**VINTON, John Rogers**, soldier, was born in Providence, R. I., June 16, 1801, second son of David and Mary (Atwell) Vinton. His father was a goldsmith; his mother was a woman of great force of character, and to her is attributed the rise of the children to important positions in life, despite the lack of family influence and of means. In 1815 he entered the Military Academy at West Point, and in two years and a half completed the prescribed four years' course, receiving a commission as third lieutenant in the artillery, July 19, 1817. He was appointed second lieutenant Oct. 31, 1817, and first lieutenant, Sept. 30, 1819. The army was re-organized June 1, 1821, and he was retained as first lieutenant of the 4th artillery. He was engaged in topographical work for several years on the Atlantic coast and the Canada line, and in 1824-25 was adjutant of the artillery of practice at Fort Monroe. He was aide-de-camp to Maj.-Gen. Brown, general-in-chief of the army, from March 1, 1825, until May 24, 1828, residing in Washington, and was employed by the government in several duties of a special

nature. Some papers prepared by him were praised in a speech delivered in congress in favor of West Point Academy, and he was instanced as "the kind of men the system of that institution can produce." On Sept. 30, 1829, he was appointed brevet-captain "for faithful service ten years in one grade," and received a commission as captain in the 3d artillery, Dec. 28, 1835. He served in Florida, in 1837, during the Seminole war, and while there decided to resign as soon as possible and enter the Episcopal ministry, following the example of his brothers, Francis and Alexander Hamilton. But the right opportunity to leave the army did not come, and he finally determined to remain. He was considered one of the most talented, accomplished and effective officers in the service, and at the battle of Monterey, Sept. 21-23, 1846, displayed remarkable gallantry, being in five engagements and under heavy fire in each, and was rewarded by being brevetted major, his commission being dated Sept. 23d. In the attack on Vera Cruz he was on duty as field and commanding officer in the trenches, and was killed by the windage of a cannon-ball, March 22, 1847. Maj. Vinton was married, in Boston, Mass., Sept. 29, 1829, to Lucretia Sutton, only daughter of Ebenezer Parker, merchant. She died in Providence, Sept. 12, 1838. Their children were: Helena Lucretia, who died in infancy; Louise Clare, who became the wife of Dr. Augustus Hoppin, of Providence, and Francis Laurens, brigadier-general in the U. S. army during the civil war.

**SQUIRE, Andrew**, lawyer, was born in Mantau, Portage co., O., Oct. 21, 1850, son of Andrew Jackson and Martha (Wilmot) Squire. The Squires were an old New England family, living at the beginning of the century in the heart of the Berkshire hills; and thence Andrew Squire's grandfather, Dr. Ezekiel Squire, went over the mountains, on horseback, and settled in Portage county, O. Dr. Andrew Jackson Squire, son of this pioneer, was for more than half a century one of the prominent men in his part of Ohio. At the beginning of the civil war, when his friend and neighbor, James A. Garfield, was state senator, he was a member of the house. He died in 1897, having been an invalid for many years. Andrew Squire, 2d, was early put into a preparatory school at Hiram, O., and in 1867 attended lectures in the Western Reserve Medical College; but at the end of the year returned to Hiram, determined to become a lawyer. He entered Hiram College, and was graduated with the degree A.B. in 1872. During his last two years at college he both tutored and commenced the study of law; and in the autumn of 1872 he entered the law office of Caldwell & Marvin in Cleveland, O., being admitted to the bar at Columbus, in December, 1873. In February, 1874, by Mr. Caldwell's elevation to the bench, the firm became Marvin & Squire, and in 1876 was Marvin, Hart & Squire. In 1878 Mr. Squire retired, to form a partnership with E. J. Estep, a prominent Cleveland attorney, and in 1882 Judge M. R. Dickey retired from the bench at Mansfield, to form with them the firm of Estep, Dickey & Squire, which soon became one of the most prominent in northern Ohio. This connection continued until Jan. 1, 1890, when Mr. Squire, with James H. Dempsey, a junior partner, retired; and, with Judge William B. Sanders, then lately resigned from the Cleveland bench, formed the well-known firm of Squire, Sanders & Dempsey. This firm still (1899) continues in general practice, dealing particularly, however, with corporations and commercial enterprises, its business extending throughout this country, and occasionally taking members of the firm to England and the Continent. While not a politician, Mr. Squire has always taken an active interest in the Republican party; and, although repeatedly refusing party

nominations, he has frequently been sent as delegate to county and state conventions. In 1896 he was a delegate to the Republican national convention at St. Louis, which nominated William McKinley for president of the United States. Mr. Squire has always been particularly active in all enterprises for the building up of Cleveland and vicinity. He is a director in many enterprises, and was elected to fill Rutherford B. Hayes' place as trustee of the Garfield monument, and H. B. Payne's place on the sinking-fund commission of the city of Cleveland. He is a Mason of the 3rd degree, and belongs to the Masonic, Union, Tavern, Country, Roadside, Golf and Yacht clubs of Cleveland; to the Ottawa and Middle-Bass Fishing clubs, and to the University and New York clubs in New York city. The degree of A.M. was conferred on him by Hiram College in 1875, and LL.D. in 1898. Mr. Squire has been twice married: first, in June, 1873, to Ella, daughter of Eber Mott, of Hiram—she died, leaving one son, Carl Andrew, who still survives; and, second, on June 24, 1896, to Mrs. Eleanor Seymour Sea, of Cambridge, Mass., the widow of Sidney Guy Sea, of Chicago, and the daughter of Belden Seymour, of Cleveland. They live in their beautiful colonial home, the Terraces, standing at the end of a double row of tall poplars on Euclid avenue, where they are recognized as among the entertainers of Cleveland.

**THATCHER, Joseph Adison**, banker, was born in Shelby county, Ky., July 31, 1838, son of John Pemberton and Patsy (Hickman) Thatcher. His father was born in Westmoreland county, Va., in 1798, and died in 1853. He moved to Kentucky about the year 1800, studied law, and afterwards was engaged in farming; and upon the outbreak of the war of 1812 he enlisted as a private, and was made captain in a Kentucky regiment. The son attended the district schools of his native county until the age of twelve, when his parents removed to Jackson county, Mo. He there continued his studies in public schools until 1857, when he entered Jones Commercial College at St. Louis, graduating a few months later. In 1858, he was elected assistant secretary of the senate of the Missouri legislature, and held his position for two terms; and in the spring of 1860 he removed to Central City, Col., where he engaged in mercantile business and mining. In 1863, he was appointed cashier and manager of Warren Hussey & Co.'s banking-house, of Central City, which he conducted until 1870, when he purchased the business, in connection with Joseph Standley, and formed the firm of Thatcher, Standley & Co., with a capital of \$50,000, being shortly after made its president. On Jan. 1, 1874, he organized the First National Bank of Central City, and was made its president, and in 1880 he resigned the presidency and removed to Denver, and in 1884 organized the Denver National Bank, and became its president. The greater part of 1883-84 he spent in Europe, making a leisurely tour of Great Britain and the Continent. He has been largely interested in stock-growing, with Messrs. Dennis Sullivan and H. S. Holly. He aided in establishing the Union Stock-yards in one of the northern suburbs of Denver, the Colorado Packing Co., the Denver Electric Light, Heat and Power Co., and is a director in the Omaha and Grant Smelting Co. Mr. Thatcher is one of the

oldest bankers in Colorado. In 1865, he was married to Frances, daughter of Capt. St. Claire Kirtley, of St. Louis.

**GAINES, Edmund Pendleton**, soldier, was born in Culpeper county, Va., March 20, 1777. His father, an officer in the revolutionary war, was a member of the North Carolina legislature, as well as of the state convention which ratified the federal Constitution. He removed to East Tennessee, where Edmund engaged in Indian warfare, reaching the rank of lieutenant at the age of eighteen. He was active in procuring the arrest of Aaron Burr, in 1807, and the same year was promoted captain. In 1811, he resigned from the army to study law, but, owing to the outbreak of the war with Great Britain, he returned to the service, in which he was appointed major, March 24, 1811, and colonel the following year. Joining the northern troops he accompanied Gens. Brown and McComb in the expedition down the St. Lawrence, which resulted, Nov. 11, 1813, in the battle of Chrysler's field, in which he commanded the 25th regiment of infantry, and covered the American retreat. He was made adjutant general, and on March 9, 1814, was promoted to brigadier-general. After the capture of Fort Erie by Gens. Scott and Ripley, Gaines was put in command of that post, which, in August, 1814, the British determined on recapturing, sent a brigade to besiege, beginning to bombard it on the 5th day of the month. The British having been reinforced in the meantime, this bombardment continued, almost without cessation, until the night of the 14th, when an attack, made by about 2,000 British infantry, was repulsed, with a loss to them of 582. Their total loss, up to this time, was about 1,000, while that of the Americans was only seventeen killed, fifty-six wounded, and eleven taken prisoners. The bombardment continued, with varying severity, until Sept. 17th, but on Aug. 28th Gen. Gaines had been so badly wounded by the explosion of a shell that it was necessary to send him to Buffalo. For his heroic defense, he was brevetted major general, and received the thanks of congress, together with a gold medal, in commemoration of the occasion, while both New York and Tennessee voted him a sword. In 1817 Gen. Gaines was ordered to the South, where he was engaged in the campaign against the Seminoles and Creeks, having been previously one of the commissioners to treat with the latter tribe. He was afterwards aided by Gen. Jackson in the campaign which practically resulted in the accession of Florida to the United States. In 1832, Gaines attacked the celebrated chief, Black Hawk, with success, and

*Edmund Pendleton Gaines*

in 1835, when the Florida war broke out, he organized a force of 1,200 men, with which he arrived at Fort Crooke, on Tampa bay, in January, 1836. Pushing forward into the country, he defeated a large body of Indians, though losing in the encounter thirty-two men killed and wounded, and being himself shot in the month. Shortly after this he was superseded by Gen. Scott, and retired from Florida. Early in the Mexican war, while Gen. Taylor's positions were being sharply invested by the Mexicans, Gen. Gaines summoned a large volunteer force for the relief of his brother officer. For this act, however, he was severely criticised by the government, deprived of his command by the president, and summoned to Fortress Monroe for trial by court-martial where he

defended himself with great skill, displaying an accurate knowledge of the civil and military law of this country. The court decided that, while he had no authority for mustering the volunteers, he was excusable on account of his display of patriotism and the apparent necessity of the case, and recommended that proceedings should be stopped. He was afterwards intrusted with the command of the eastern department. In 1839 he was married to Mrs. Myra (Clark) Whitney, whose suit against the city of New Orleans for the recovery of vast estates is famous in legal annals. Gen. Gaines died at New Orleans, La., June 6, 1849.

**PARKHILL, Charles Breckinridge**, lawyer, was born at Tuscarawilla, Leon co., Fla., the plantation home of his parents, June 23, 1859, only son of Capt. George W. and Elizabeth (Bellamy) Parkhill, the latter a native of Jefferson county, Fla. His grandfather, John Parkhill, removed from Ireland to Virginia in the early part of the nineteenth century, and there wedded a Miss Copland; also served in the war of 1812, and in 1828 removed to Florida. His youngest child, George Washington, was born in Richmond, Va., in 1822; was educated at various northern academies and at the New York Medical College; settled in Leon county to practice his profession; was elected to the legislature in 1857; was a member of the state secession convention which met at Tallahassee in 1860. He was elected one of the two major generals of the state troops in 1860, but resigned his commission when Florida seceded, and raised and equipped at his own expense company M, 2d Florida infantry, which he led with gallantry until he was killed at the battle of Gaines' Mills, June 27, 1862. Upon the death of Gen. Parkhill, his widow, with her son and daughter, returned to her childhood home at Monticello, Jefferson co., Fla. Here Charles Parkhill was educated in the public schools until he was sent to Randolph-Macon College, Ashland, Va.; later he studied law at the University of Virginia. At college he was a member of the Beta Theta Pi fraternity, and editor of the "Virginia University Magazine." In January, 1883, he moved to Pensacola, Fla., where he has since practiced his profession. He is the attorney of the Pilots' State Association of Florida, and was attorney of Escambia county, until appointed by Gov. Bloxham, May 9, 1897, prosecuting attorney for the criminal court of record for a term of four years. Mr. Parkhill is a Democrat, and before he attained his majority made speeches for his party. In 1888 he was elected state senator from the second senatorial district. In the senate he served upon the judiciary and other important committees. He assisted in drawing up the bill creating the state board of health, and advocated municipal home rule, leading the opposition to the movement to abolish the city government of Jacksonville and to authorize the governor to appoint a board to govern that city. He has frequently represented his county in the state and congressional conventions, and in 1890 he was secretary of the Democratic executive committee of the first congressional district. He has attained distinction in the practice of criminal law, and is recognized as a popular orator of unusual eloquence and ability. In 1890 he was elected grand chancellor of the Knights of Pythias of Florida.

*C. B. Parkhill*

**STOCKWELL, John Nelson**, astronomer, was born April 10, 1832, in Northampton, Hampshire co., Mass., fifth son of William and Clarissa (Whittemore) Stockwell. His father's ancestors settled in Connecticut, early in the 18th century; his mother was one of the Massachusetts Whittemores, and a niece of Amos Whittemore, the inventor of a machine for making wool and cotton cards. His parents removed to Ohio in 1833, and Mr. Stockwell first attended school in the town of Charlestown, Portage co. After his eighth year he lived with an aunt whose husband was a farmer in Brecksville, Cuyahoga co., O., and

*John Nelson Stockwell*

when not engaged in farm work, but made little progress in his studies until his thirteenth year. Happening then to be awakened from intellectual indifference by the exciting events of the time, he became an ardent student of passing history; then of history in general, and of science and mathematics. An eclipse of the moon directed his attention to astronomical research, and after studying carefully La Place's "Mecanique Céleste," he industriously prepared a "Western Reserve Almanac for 1853," which brought him before the notice of some of his fellow scientists. In the following year he formed an acquaintance with Dr. B. A. Gould, editor of the "Astronomical Journal," and through him obtained a position as computer in the longitude department of the U. S. coast survey, of which Dr. Gould was director. He spent eight months in Cambridge, Mass., fulfilling his duties in this connection. Subsequently devoting himself to the study of astronomy, he computed the orbits of two comets which appeared in 1858, and the orbit, perturbations and ephemeris of Virginia, the fifteenth asteroid for the opposition of 1859, publishing the results of these investigations in the "Astronomical Journal" before the end of 1858. In May, 1860, he computed and published another ephemeris of Virginia, for the opposition of that year, and in July, 1860, he published a new method of solving a set of symmetrical equations having indeterminate coefficients, and he had begun a very elaborate computation of the secular variations of the planetary orbits, arising from their mutual attractions on each other, when he was interrupted in his labors by the outbreak of the civil war. From 1861 to 1864 he held a position in the U. S. Naval Observatory at Washington, and for the following three years he was engaged in statistical work for the U. S. sanitary commission. Since 1867 he has been engaged at his home in Ohio, in various astronomical calculations, and particularly in a general discussion of the mathematical theory of the moon's motion. He has published in the "Astronomical Journal" and elsewhere, papers on "Inequalities of the Moon's Motion produced by the Oblateness of the Earth"; "Long Period Inequalities of the Moon's Motion produced by the action of Venus"; "Secular and Long Period Inequalities of the Moon's Motion, containing a discussion of several ancient eclipses"; "On the Rectification of Chronology by Ancient Eclipses." In recent years, Mr. Stockwell has turned his attention to researches concerning ancient eclipses for chronological purposes, and has discovered records of one visible in India B. C. 3784, Oct. 20th; another visible in China Oct. 10th, B. C. 2136, the only one seen in China during that century, and of other interesting scientific facts. He has in course of preparation a popular work on "The Skies of Past and Future Ages," to contain the places of the principal fixed stars during

a period of 32,000 years. In his chosen department he is acknowledged by American and foreign scientists as an authority. He was married, Dec. 6, 1855, to Sarah Healy, of Brecksville, O.

**CADY, Sarah Louise (Ensign)**, educator, was born at Northampton, Hampshire co., Mass., Sept. 13, 1829, daughter of Salmon and Melinda (Cobb) Ensign. Her father was the largest manufacturer of carriages in western Massachusetts. She is descended from James Ensign, who removed from Newtown (Cambridge), Mass., in 1636, with the company under Rev. Thomas Hooker, and thus became one of the founders of Hartford, Conn., where he died in 1670 or 1671. Her great-grandfather, Datus Ensign, was married to Lucretia Seymour, whose ancestor, Richard Seymour, came to this country from Berry Pomeroy, Devonshire, England, in 1635, and, settling at Hartford, became prominent and founded a family which still flourishes and has produced many statesmen and jurists. Her mother's grandfather, Samuel Cobb, came, in 1743, to Tolland, Conn., where he purchased 125 acres of land. He was a distinguished physician; was eight times a member of the general assembly, and attendant at two extra sessions; was justice of the peace thirteen years, and acting magistrate all that time. The inscription on his monument in Tolland cemetery describes him as "a gentleman of public education and distinguished abilities, who long served his generation as a physician and minister of justice to great acceptance, and in his life and death was an example of sobriety and virtue, and evidenced the influence and consolation of religion; lived much esteemed and died, universally lamented, April 6, 1781." Mrs. Cady was a victim of the infant school craze created in Europe at the time of her infancy by Pestalozzi, the predecessor of Froebel. She was an attendant at school before she reached the age of two years, and continued to the age of three and one-half, when she began to attend the district school of Westfield, Mass., whither her family had removed. She next attended the high school, Westfield Academy, and the normal school, where she was prepared to teach. After leaving the normal school she taught in public schools until her marriage, in 1850, to Henry Stearns Cady of Springfield, Mass.

After the death of her husband in 1864, she accepted the position of associate principal in that famous boarding-school, the Maplewood Institute for Young Ladies, at Pittsfield, Mass.; here her two elder daughters received their education. In 1870 Mrs. Cady removed to New Haven, Conn., and established the school known as the West End Institute, now called Mrs. Cady's School for Girls. Beginning with twenty-nine pupils, the school has increased steadily in numbers, until it has now (1899) 100 names on its annual roll, and graduates residing in every part of the United States, and in 1891 it was removed to its present location at the head of Hillhouse avenue, the most beautiful residence avenue in New Haven. For the annual commencement exercises the speakers have been chosen from the most distinguished educators or literateurs in the country, among them Prof. G. H. Palmer, Mrs. Alice Freeman Palmer, George W. Cable and Hamilton W. Mabie. From choice, Mrs. Cady devotes several hours daily to the work of teaching, making it a point to supervise the youngest and oldest pupils, thus learning the abilities and capabilities of each, and bringing to bear

*Sarah L. Cady*

upon their characters an influence which is as important as the knowledge derived from direct instruction. In addition to the regular course of study pursued, there are special courses for pupils desiring to enter the various colleges for women, and certificates from this institution admit young ladies without further examination to any of those colleges. Mrs. Cady has had four children: Carrie Louise, married, in 1874, to C. G. Cooper, of Mount Vernon, O.; Cornelia Ensign, now associate principal in the school; Charles Henry, who died in 1864, and Marie Emily, who is the wife of Charles A. Terry, of New York city.

**GILFERT, or GEILFERT, Charles**, conductor, was born in Germany in 1787, of German parentage. He was brought to New York at a very early age by his father, who appears to have been a popular organist and music teacher, and at one time leader of an orchestra in a New York theatre. Charles Gilfert became a teacher of singing and of the violin and pianoforte. Later he rose to be manager of concerts and oratorios, and for several years was leader of the Park Theatre orchestra, and conductor of the Musical Fund Society. He composed music for several plays, and adapted and arranged the work of other composers with considerable taste and skill. In 1815 he was married to Agnes Holman, an English actress, daughter of the tragedian, Joseph George Holman, and from that time on gave his attention to theatrical performances, although he never lost his interest in musical affairs. He leased a theatre in Charleston, S. C., but did not meet with success, and after one season removed to Albany, N. Y., and for several years managed the theatre in that city, his wife being the star of the company. In 1826 the first Bowery Theatre was built, and he became its manager. Operas and spectacular plays, superior to anything yet produced, were put on the stage by him; but his "happy-go-lucky" and over-sanguine temperament involved him constantly in financial difficulties, and frequently he was imprisoned for debt. He died in poverty in New York city, July 30, 1829, and his wife ended her days, a few years later (1833), in Philadelphia, obscure and neglected.

**CUSHING, William Barker**, naval officer, was born at Delafield, Matwakesha co., Wis., Nov. 24, 1842, a descendant of Matthew Cushing, who emigrated to Hingham, Plymouth co., Mass., in 1638.

He received an ordinary country school education in New York city, whither his parents had removed, and on Sept. 25, 1857, was appointed to the naval academy from the state of New York. He remained there four years, without distinguishing himself in his studies, and resigned on March 23, 1861. The actual outbreak of the civil war showed that whatever may have dictated this action on his part, it was no lack of patriotism nor anything approximating to coward-

ice, for in May of the same year he applied to the secretary of the navy for service, and was appointed master's mate, attached to the North Atlantic blockading squadron. On the day of his arrival at Hampton roads, he captured and brought into port the first prize of the war, a tobacco schooner. In October, 1862, Cushing, who had been appointed on July 16th, a lieutenant, was placed by Lee, acting rear-admiral, in command of the gunboat *Ellis*,

which was ordered to enter New river inlet, capture the town of Jacksonville, Fla., intercept the Wilmington mail, take possession of any vessels found in the river, and destroy the salt-works along its banks. On Nov. 23d, he undertook this expedition. He captured Jacksonville and three vessels, but while returning his steamer got aground. Knowing that the enemy would soon come upon him in overwhelming force, he took everything out of her but her pivot-gun, her coal and ammunition and sent a crew to accompany what was unloaded on board one

of his prize schooners; then calling for six volunteers, which he at once obtained, he remained to fight to the last. Early next morning, as he anticipated, the enemy opened on the little band, delivering at them a terrific cross-fire from four different points. They soon found it was going to be destructive work for them to handle their single gun, which had to be turned in every direction while encountering a fiery tempest from the batteries on shore, and Cushing determined to abandon his vessel. He trained his gun on the enemy, to go off when the flames reached it, and firing the steamer in five places left her, and with his companions started down the river in a row boat. They succeeded in reaching the schooner a mile and a half away, and at once made sail for Beaufort, which was reached in safety. During the same year Cushing distinguished himself in the waters of North Carolina, and early the following January, with three cutters and twenty-five men set out to capture the pilots at a station thirty miles below Fort Caswell. He succeeded in getting possession of an earthwork, which had been hurriedly deserted by a company of infantry, and carried off or destroyed all their stores, clothing, ammunition and part of their arms. In the spring of 1863 he was ordered with a gunboat to assist Gen. Peck, who was stationed at Norfolk and against whom Gen. Longstreet was marching with a heavy force. Cushing had a severe engagement, on April 14th, with a Confederate battery, which he silenced; he also prevented the enemy from crossing the river and attacking Gen. Peck. For his services in this instance he received a letter of congratulation from the secretary of the navy, in which the latter said: "Your conduct adds lustre to the character you had already established for valor in the face of the enemy." Later, when Gen. Peck needed information with regard to the state of the enemy, Cushing volunteered to furnish it. He accordingly organized a party with which he surprised and captured a small force of the enemy and forwarded his prisoners to Gen. Peck with his compliments, and the remark that he sent him some "information." Cushing was then placed in command of the U. S. steamer "Shokokon," and in August, finding a Confederate steamer, the *Hebe*, ashore a short distance from fort Fisher, he threw shells into her until he set her on fire and left her a wreck. Shortly afterwards he destroyed another blockade runner, exhibiting in this exploit a degree of vigilance and energy which again brought him the highest commendations from his superior officers. But Cushing's transcendent feat of daring was the destruction of the powerful ironclad ram *Albemarle*, on the night of Oct. 27, 1864. The *Albemarle* had come out of the Roanoke river in the spring, and attacked the Union naval force near Plymouth, sinking the *Southfield* and dis-

abling the Miami; killing the gallant commander of the latter. A hundred-pound rifle shot made no impression on the mailed sides of this vessel, and she threatened to regain control of the waters of Albemarle sound. Altogether she was a great obstacle, as she required the presence of a large naval force in those waters. On May 5th, in Albemarle sound, Capt. Melancthon Smith had attacked her with seven vessels; a fight without avail, so far as the Albemarle was concerned, although the desperate attempt to sink her by the *Sassacus*, under Comr. Roe, added another brilliant page to the annals of the Federal navy. Efforts to blow her up with torpedoes, later made, were without success. Cushing then suggested that the offensive force be conveyed in two low-pressure and very small steamers, each armed with a torpedo and howitzer. He was ordered to Washington to confer with the secretary of the navy, and by him sent to New York to purchase suitable vessels. Two open launches building for picket duty were secured, and to each was attached a boom, raised or lowered at will, with a torpedo fitted into an iron slide at the end. The best of the boats was lost on the voyage to Norfolk, but with the other, and a crew of fifteen, he ascended the Roanoke river on the night of the 27th, towing a small cutter with a few men, and intending if possible to surprise and board the Albemarle. Although the river was lined with pickets, he passed the wreck of the Federal steamer *Southfield*, sunk by the Albemarle in the previous spring, and now used as a picket station, and arrived within a short distance of the Albemarle, before he was discovered. He then cast the cutter loose, ordering her crew to board the *Southfield*, and capture its picket guard while he attacked the Albemarle—a more difficult thing to do than he had anticipated, for she was protected by a circle of logs arranged to prevent the action of torpedoes. The enemy opened fire with muskets and howitzers from the Albemarle and from the shore, but the launch returned fire, and putting on a full head of steam Cushing forced the launch across the logs and then still nearer, while the bullets tore the coat from his back, until he had lowered the boom, and the torpedo was under the ram's overhang. He now stood in front of the muzzle of a one-hundred pound rifle, with four lines attached to his body, each one of which it was necessary to pull with precision in order to place and fire the torpedo, but with utmost coolness and exactness he carried out his plan, and the torpedo exploded under the Albemarle's hull. She sank at her moorings and was never raised. Just as the torpedo exploded, however, 100 pounds of grape at ten feet range crashed into the torpedo-boat, and Cushing, who had twice refused to surrender, ordered his men to save themselves. The launch was hit and sunk at the same time, and out of the entire party only two, including the intrepid lieutenant, escaped, the rest being either captured or drowned. Cushing swam down the stream to a point about half a mile from the town and gained the shelter of a swamp, learning from the conversation of some officers who passed his hiding-place of the destruction of the ram. He at last reached a creek where he found a row-boat belonging to a picket party of soldiers, and in this he made his way to the mouth of the Roanoke, and into Albemarle sound, where before midnight on the 28th he was picked up by a vessel belonging to the Federal fleet. For this exploit, one of the most daring in naval history, Lieut. Cushing received the thanks of congress, and promotion to lieutenant-commander, his commission to date from Oct. 27, 1864. In the attack on Fort Fisher, during the following winter, which resulted in taking Wilmington, N. C., the last seaport open to the Confederacy, he undertook to place buoys to indicate the channel of

the river, and successfully performed the task in a small skiff, although for several hours he was under a constant and heavy fire. In the second assault upon Fort Fisher he assisted the troops in landing, and took part in the shelling of the fort until the final assault, when he landed with a force of forty men from his vessel, the *Monticello*, and led the storming party. When Lieut. Porter fell, Cushing rallied his men and placed them in the trenches, thus relieving regiments needed at the front, and hastening the surrender of the fort. With the fall of Fort Fisher Cushing's active career ended. For his services he five times received commendatory letters from the secretary of the navy. In 1866 and 1867 he served on the *Lancaster*, the flagship of the Pacific squadron, and in 1868 and 1869 commanded the *Mauvee*, of the Asiatic squadron. On Jan. 31, 1872, he was advanced to the rank of commander, and owing to failing health was granted a leave of absence. At the time of his death he was the youngest officer of his rank in the navy. (See the article by Gen. J. G. Wilson, in the "Cosmopolitan Magazine" for July, 1891; Cushing's own account, "Century Magazine," July, 1888, and a letter by Adm. D. D. Porter, in the "North American Review" for September, 1891.) He died of brain fever at Washington, D. C., Dec. 17, 1874.

**BINGHAM, John Arende**, jurist and legislator, was born at Mercer, Pa., Jan. 21, 1815. His early education was acquired in the district school of his native town and the village academy. He then went into the village printing-office, and learned the business from "devil" to assistant editor. Here he remained for two years, and then entered Franklin College, Ohio; but obliged by failing health to relinquish the regular college course, he applied himself to the study of law, and was admitted to the Ohio bar in 1840. In 1846 he was elected district-attorney for Tuscarawas county, O., serving three years. In 1854, he was elected a representative from Ohio to the 34th congress, and was thrice successively returned by his district to the 35th, 36th and 37th congresses. During his first term he prepared the report on the contested Illinois election. This gave him prominence and secured for him recognition as an able jurist. In the thirty-seventh congress he was chairman of the managers of the house in the impeachment trial of West W. Humphrey, U. S. district judge of Tennessee, who was impeached for high treason on the charge of having advocated secession in a public speech at Nashville, Tenn., Dec. 29, 1860, "for giving aid to armed rebellion; for conspiracy with Jefferson Davis, and for imprisoning W. G. Brownlow." In 1862 he failed of re-election to congress, and Pres. Lincoln appointed him judge-advocate in the army, with the rank of major, and shortly afterwards solicitor of the court of claims. Mr. Bingham made a full argument before the general court-martial held in Washington, D. C., for the trial of Brig. Gen. William A. Hammond, surgeon-general of the U. S. army, in reply to the several arguments of the counsel of Gen. Hammond upon this trial before this court in 1864. He also made an argument in reply to the counsel of the several parties accused and tried before a military commission on the charge of con-

*John A. Bingham*

spiracy for the assassination of Pres. Lincoln, which argument was delivered by him before the commission on the 27th and 28th of June, 1865. Mr. Bingham while in congress wrote and introduced the fourteenth amendment to the Constitution of the United States of America, which is now embodied therein by the action of congress and the several states of the Union. During this long service of sixteen years in congress, he introduced various acts of congress in support of the government, for the prosecution of the war in suppression of the rebellion, and for the reconstruction of the Union by the restoration and readmission into the Union of the seceded states. Mr. Bingham was a delegate to the conventions at Philadelphia and Pittsburgh, Pa., for the inauguration of the Republican party. In 1864 he was elected to the 39th congress as representative for his district, and re-elected to the 40th, 41st and 42d congresses. In the impeachment trial of Pres. Johnson he was chairman of the managers of the house of representatives, and on Wednesday, March 5 1868, read the article of impeachment before the U. S. senate, sitting as a court to determine the issue. While in congress Judge Bingham served on the committees on military affairs, freedmen, and reconstruction, and as chairman of the committee on claims and judiciary. Pres. Grant appointed him U. S. minister to Japan, which position he held until April 2, 1885, having served therein twelve years, when he was succeeded by Richard B. Hubbard, appointed by Pres. Cleveland.

**ENGLISH, William Hayden**, statesman, financier and historian, was born at Lexington, Scott co., Ind., Aug. 27, 1822, son of Elisha G. and Mahala (Eastin) English. His paternal grandparents were Elisha and Sarah (Wharton) English, natives of Sussex county, Del., who, in 1790, removed to Kentucky, where their son, Elisha G., was born. His maternal grandparents were Philip and Sarah (Smith) Eastin, who were married, in 1782, at Winchester, Va., Sarah Eastin being a descendant of the Hite family, founders of the first settlement in the Shenandoah valley. Philip Eastin, who had been a lieutenant in the 4th Virginia regiment during the revolutionary war, emigrated to Kentucky and thence to Indiana, where he died, in 1817, leaving a widow and the

*Wm. H. English*

survivees of seventeen children. William H. English was educated in a district school and studied three years in Hanover College, Indiana. He then studied law, and at the age of eighteen was admitted to the bar. Soon after he was admitted to the supreme court, and in the twenty-third year of his age to the supreme court of the United States. For a short time he was associated in practice with Joseph G. Marshall; but he drifted into politics, and soon into a government office at Washington, where he remained four years, never returning to the law. Before he arrived at his majority he had been active in the Democratic party, and had been chosen a delegate from Scott county to the Democratic state convention at Indianapolis, and during the Harrison and Tyler campaign had done effective stump-speaking. When Tyler became president, Mr. English was appointed post-master of Lexington, his native village. In 1843 he

was chosen principal clerk of the state house of representatives over several other worthy competitors. In the great campaign of 1844 he again took the stump in behalf of Polk against Henry Clay, and after the election of the former he was given a position in the treasury department. As delegate from Indiana to the Democratic convention of 1848, he voted for Lewis Cass, and on the day preceding the inauguration of Gen. Taylor sent Pres. Polk a letter of resignation that was extensively copied by the Democratic press, with favorable comments on his independence. He was clerk of the claims committee in the U. S. senate in 1850, and in the same year was secretary of the convention called to revise the state constitution of Indiana, also supervising the publication of the constitution, the journals and addresses. In 1851 he was elected to represent Scott county in the state legislature, of which he became speaker, and proved so able in the duties of that office that, in 1852, he was nominated for congress by the Democrats in his district and was elected. He entered congress under Franklin Pierce, and was always a warm supporter of the latter's political measures. He was a member of the committee on territories to which the famous Kansas-Nebraska bill was referred, and formulated a minority report advocating some important amendments, which were not, however, adopted, although they undoubtedly led to modifications of the bill in the senate, which, as an amendment to the house bill, became a law. He was one of the three representatives from a free state who were able to secure a re-election in spite of their opposition to the Kansas-Nebraska bill. During his second term he was bold in his denunciations of Know-nothingism, and contributed as much as any other man to the downfall of the party upholding it. For eight years he was a regent of the Smithsonian Institution, and in a speech before congress made an able defense of its management that was warmly commended by Prof. Henry. He was elected to congress a third time by an increased majority. He was appointed chairman of the committee on post-offices and post-roads, and performed the duties of this arduous position with great acceptance. The attempt made during this session to secure the admission of Kansas under the Lecompton constitution, which did not prohibit slavery, was steadily opposed by him, because the people had not voted upon the question, and he finally submitted a proposition, afterward called the "English bill," providing for such an election and ending the long-standing difficulty. He was offered an executive office by Pres. Buchanan, but declined it, and at the end of his term was re-elected (1858), for the fourth time, by a larger majority than ever. In the spring of 1860 the national Democratic convention met at Charleston, S. C., and although not a delegate Mr. English attended the sessions in the interests of peace, but found it too late to exert any influence. He denounced secession from the beginning, in the halls of congress, and did his best to persuade southern members to abandon it. When his fourth session was ended he refused renomination. He declined the command of a regiment, but throughout the war zealously supported the Federal cause. In 1863 he founded the First National Bank of Indianapolis, removing to that city, and later became president of the Indianapolis Clearing-house Association and the Indiana Banking Association. He remained president of the First National Bank for fourteen years, during which the capital stock was increased from \$150,000 to \$1,000,000. He made the bank one of the leading institutions of the United States, and his able management of it during the panic of 1873 increased his reputation as a safe leader in emergencies. On his retirement from the presidency he was presented by the stockholders and directors with a magnificent gold medal. His con-

nection with all corporations ceased about that time. In 1861 Mr. English was a delegate to the state convention, and in 1862 was again offered a renomination to congress, but declined. In 1879 he was elected chairman of the Democratic state central committee of Indiana, and in the national Democratic convention at Cincinnati, in June, 1880, he was unanimously nominated for vice-president of the United States on the ticket with Winfield S. Hancock in the unsuccessful campaign against Garfield and Arthur. From that time on he devoted his time to state and local interests. He was a member of the Indiana soldiers' and sailors' monument commission, a member of the Society of the Sons of the American Revolution, member of Center Lodge, F. and A. M., and president of the Indiana Historical Society. Historical study was one of his favorite pursuits, and his published works that give him a high place in the list of American historians are: "Conquest of the Northwest," "History of Indiana" (1887), and "Life of George Rogers Clark." Mr. English was married, at Baltimore, Md., Nov. 17, 1847, to Emma Mardulia, daughter of John F. and Elizabeth (Grigsby) Jackson, of Virginia. She died Nov. 14, 1877. There are two surviving children: Hon. William E. English, ex-congressman from Indiana, and captain on the staff of Gen. Wheeler during the Santiago campaign, Spanish-American war, and Rosalind, wife of Dr. Willoughby Walling, of Chicago. Mr. English died in Indianapolis, Feb. 7, 1896.

**WARREN, Samuel Prowse**, organist, was born in Montreal, Canada, Feb. 18, 1841, son of Samuel Russel Warren. His father, a native of Rhode Island, removed to Canada in 1837, and there conducted the manufacture of organs until his death in 1882. The son, born and reared in an atmosphere of music and musicians, early developed marked talent and made rapid progress on both the piano and organ. Moreover, his early acquaintance with the details of construction gave him an unusual advantage in the production of tone effects and an ease in handling his instrument which enabled him to become a brilliant performer while still very young. His first essay at public playing was in St. Stephen's Chapel, Montreal, and from 1853 to 1861 he was organist at the American Presbyterian Church. In 1861 he went abroad to complete his general and musical studies. He spent three years in Berlin, studying the organ and theory of music under Haupt; the piano under Gustav Schumann, and instrumentation under Wieprecht. After his return to America in 1865, he located in New York city. For two years he was organist in All Souls' Unitarian Church, and later in Grace Church (1868-74) and in Church of the Holy Trinity (1874-76). In 1876 he returned to Grace Church, where he remained until 1894. Mr. Warren has also achieved reputation and success as a teacher of instrumental music and theory. For eight years (1880-87) he was conductor of the New York Vocal Union. Mr. Warren's activity is particularly in the direction of organ solo work. He has given many organ concerts and recitals—over 300 in New York city alone. Their object has been educational and they have covered the whole range of organ literature. He is a master of technique and a thoroughly scholarly musician, familiar with the works of all the great composers, and has produced some original material. His compositions, some of which have been published, consist of church music—anthems, tunes, etc.; part songs; secular songs; transcriptions and original pieces for the organ.

**DAHLGREN, John Adolph**, naval officer and inventor, was born in Philadelphia, Pa., Nov. 13, 1809, eldest son of Bernard Uric and Martha (Rowan) Dahlgren. The Dahlgren family is of

Swedish origin; both his father (1784-1824) and his grandfather, Johan Adolf Dahlgren (1744-97), being graduates of the University of Upsala. The latter was a noted physician and a voluminous writer on professional subjects, whose books are still held in high esteem, and at the time of his death was chief physician of the province of Finland. The former, having imbibed at the university the then prevailing sentiments in favor of republican institutions, was banished from the country in 1804, and lost his property by confiscation for an attempt to disseminate his views. Later, the discriminations against him were withdrawn, and he was appointed consul of Sweden and Norway, first at Oporto, Portugal, and later at Philadelphia, Pa., where he died. His wife was a daughter of James Rowan, who served as commissary in Gen. John Laury's brigade, Pennsylvania line, in the revolution, and participated in the battles of Princeton and Germantown. By the death of his father, in 1824, John A. Dahlgren was compelled to seek a means of livelihood, and tried for two years, apparently in vain, to secure a midshipman's commission in the navy. Finally, on Feb. 1, 1836, he received his warrant, and made his first cruise on the frigate *Macedonian*, Com. Biddle, of the Brazilian squadron, which had been captured from the British during the war of 1812. After two years' service on her, he was assigned to the sloop-of-war *Ontario*, of the Mediterranean squadron, and in 1832 was successfully examined for the warrant of passed midshipman.

His remarkable proficiency in mathematics, demonstrated on this occasion, caused him, in 1834, to be detached from regular naval duty and detailed to the U. S. coast survey under Ferdinand R. Hassler, who was then just resuming the great work first inaugurated in 1815. Dahlgren was selected to serve in the triangulation of the survey, and assist in the astronomical observations and the measurement of the base on Long Island, which was the first base-line ever scientifically computed in this country—the Mason and Dixon line being merely a chain and compass measurement. So high was Hassler's opinion of his ability, that he chose him to make counter-calculations of the base to verify his own work. In 1836 Dahlgren assisted in the observations on the solar eclipse of that year, and during the next year was made second assistant of the survey, with direction of a party of triangulation. About the same time he was promoted to the rank of lieutenant. The long-continued and exacting duties of his service finally resulted in such an impairment of his unusually good eyesight, that he was reluctantly obliged to relinquish active work for over four years. In 1838 he went to Paris for treatment by the celebrated oculist, Sichel, and while there investigated the rocket-firing system of Maj. Henri Joseph Paixhans of the French army, whose pamphlet on the subject he translated and had printed at his own expense for distribution in the U. S. navy. This was his first contribution to the literature of naval ordnance—a department in which he was destined, by force of his own inventive genius, to peculiar and enduring fame. On his return, in 1839, Lieut. Dahlgren was married, and for two years thereafter lived on a farm in Bucks county, Pa., to the ultimate salvation of his eyesight. In 1842, he resumed active service, his first assignment being to the receiving ship at the Philadelphia navy yard, and in 1843 he was detailed as flag-lieutenant to the frigate *Cumberland*,

of the Mediterranean squadron, commanded by Com. Joseph Smith. The cruise lasted two years, but was cut short by the impending war with Mexico; and Dahlgren, although applying for active service, was assigned to ordnance duty. In 1847 he was made superintendent of the rocket department of the bureau, and immediately set himself heartily to the task of supplying the large orders given out by the navy department. The greatness of his task, and the industry needed to meet it, are evident when it is remembered that his first ordnance workshop was arranged at the end of a lumber shed, which he occupied continuously for seven years before suitable quarters were provided. Meagre though his opportunities were, his genius enabled him to use them to revolutionize the system of naval ordnance then in vogue, and introduce methods completely new, and very greatly in advance. By recommendation of a special committee, in 1845, a uniform system of guns had been adopted for the navy, and, in imitation of the English, the 32-pounder had been adopted as the unit. Dahlgren, however, by long and laborious experimentation, described in his "Thirty-two Pounder Practice for Ranges" (1850) reached a precise formulation of power and trajectory for these guns, and set forth the conclusion that the system was a disadvantageous one, robbing the service of some of its best guns, since "the powerful guns of the 32 pounder class lacked accuracy, and the accurate ones lacked power." Accordingly, he started upon his revolutionary quest after suitable armaments of both light and heavy ordnance. The first problem to which he applied himself was the devising of a serviceable boat-gun for landing parties—"a sort of naval light artillery"—and the result was a form of light howitzer, which proved so serviceable as to be adopted by the navy department in 1850. A complete account of the system and the piece itself was set forth by Dahlgren in his now famous work, "Boat Armament of the United States Navy" (1852). The introduction of a new system of heavy ordnance was a much more tedious and discouraging undertaking, involving a long fight against established theories on the subject, coupled with the delays usual to official business. In 1850 he drafted his 11-inch shell-gun, which, proving a success in every respect, prepared the way for another of 11-inch calibre.

At this juncture, the death of his friend and supporter, Com. Lewis Warrington, chief of the ordnance department, interfered with the promising prospects of his innovations, and delayed his triumph for several years. Nevertheless, with a courage worthy of his convictions,

and the great object he had in view, he took advantage of every opportunity, and when, as a member of the investigating commission on coast defenses, appointed by the secretary of war in 1851, he filed a report on his observations, he submitted therewith his plans of a screw frigate, armed with 11-inch guns on the gun-deck, and 11-inch pivot-mounted shell guns on the spar deck, a complete departure from recognized systems of armament. The suggestion met with the approval of several prominent persons, and was eloquently recommended to congress by Representative Stanton, in 1852, but the opposition of the navy department interfered with the appropriation for its practical realization. However, the merit of his guns, whose principal feature was a

great thickness at the breach, with the barrel rapidly tapering from the trunnions to the muzzle—"soda-water bottles" they were called—adjusted to meet the varying pressure of the explosive force, was soon recognized, and when the first two steam frigates were constructed for the navy, one, the Merrimac, was provided with his 11-inch main-deck battery, and the other, the Niagara, with a spar-deck battery of twelve 11-inch guns. This was a partial concession, but the department was still skeptical of the practicability of handling batteries of heavy guns at sea, and would not sanction any more complete trial of his system. In the autumn of 1855 he was promoted commander, and in the following spring failed of appointment as chief of the bureau of ordnance only in obedience to the law requiring that official to be at least a captain in rank. In the meantime he had published several additional works of great value, setting forth his views and observations on ordnance matters: "Naval Percussion Locks and Primers" (1852); "Ordnance Memoranda" (1853), and "Shells and Shell-Guns," an exponent of his own system and improvements (1856). He had also brought the construction department of the ordnance bureau to great system and perfection, and was able to meet all demands for arming the new frigates then rapidly being added to the navy. Finally, in 1857, after considerable opposition from the conservative element in the department, he was appointed to command the sloop-of-war Plymouth, with full permission to alter and arm her as he thought best. Despite the verdict of naval experts that his 11-inch guns were too large for even a frigate of 3,000 tons, he boldly mounted one on this vessel, whose tonnage was not equal to half that limit; and this, with a battery of four of his 11-inch guns, made her the most formidable craft afloat. In the course of this voyage Comr. Dahlgren rendered several notable services to his country: such as adjusting the passing misunderstanding with Great Britain regarding the right of our merchant marine, settling the difficulties over the guano island of Nevasa, and investigating the outrages on American citizens in Tampico, Mexico. On his return he announced, with his usual fullness of detail and categorical accuracy, that the experiment had proved a complete success in every way, thus effectually disarming the last vestige of opposition to his system. Within a year he had the satisfaction of seeing his 11-inch guns ordered for the new war-ships in progress of construction, and a suitable foundry—designed by himself—already authorized. Immediately resuming work in the ordnance department, Dahlgren conducted an elaborate series of experiments on rifled cannon; and, to meet the improvements in this respect, strenuously urged on the navy department the crying need of iron-clad war vessels. His recommendations were, as usual, unheeded, when they deserved immediate attention; and, meantime, the civil war broke out and found the navy in many respects unprepared. One of Dahlgren's first acts, after the firing on Sumter, was to fortify the Washington navy yard—all of its officers had seceded, except himself and another—against the hourly expected attacks of Confederate sympathizers or of the armies then rapidly pushing toward the capital. On April 22, 1861, he was made commandant of the navy yard, to succeed Capt. Franklin Buchanan, later so prominent in the Confederate navy as commander of the ram Virginia (Merrimac) in her attacks on the Federal shipping in Hampton Roads, and immediately pushed forward the work of equipping ships to guard the approaches to the yard, and capture all suspicious-looking vessels. He personally, on board the Pawnee, co-operated with several vessels in the movement on Alexandria, Va., on May 24th; after the battle of Bull Run, dispatched a gunboat to cover

the battle of Bull Run, dispatched a gunboat to cover

the retreat of Mansfield's forces; furnished a battery of heavy guns and howitzers, under command of his son, Ulric, to help repel Jackson's assault on Harper's Ferry; and, in fact, was continually kept busy on such a multiplicity of diverse duties as to allow himself little time for either rest or refreshment. On July 16, 1862, he was appointed chief of the bureau of ordnance, and in August was promoted captain, with commission dating from July 16th. Among other important duties in the next few months was the arming and equipping of the iron clads on the western naval ports. He was commissioned rear-admiral Feb. 7, 1863, receiving at the same time "the thanks of congress" and the extraordinary compliment of a ten year extension to his term of active service. In July he was ordered to relieve Adm. Dupont in the command of the South Atlantic squadron, the way being left open by the untimely death of Adm. Andrew H. Foote, whom he had consented to assist, as commander of the iron-clads of his fleet. Then began a tedious and vexatious series of assaults upon the defenses of Charleston, in co operation with Gen. Quincy A. Gillmore, whose continual changes of plan and ill-directed movements greatly harassed him. Adm. Dahlgren, however, succeeded in silencing the guns of forts Sumter and Wagner, and the batteries of Morris Island, and in rendering the blockade of the port complete; but his failure to reduce Charleston created a widespread dissatisfaction, which, as it seems, Gillmore utilized to conceal his own inefficiency and dilatory policy. The matter being finally referred to a council of war, the decision was, "that there would be extreme risk, without adequate results, by entering the harbor of Charleston with seven monitors, the object being to penetrate to Charleston." Gen. W. T. Sherman also wrote him, declaring, "that it would be unwise to subject his ships to the heavy artillery of the enemy, and his sunken torpedoes." In Dahlgren's gallant efforts before Charleston, he had lost several of his vessels, among them his flag-ship, and was further crippled by the disablement of several others. On more than one occasion, he fearlessly exposed himself in the discharge of his duty, and repeatedly escaped, almost by a miracle, from instant death. Thus, after the occupation of Charleston harbor, while cruising in Winyaw bay, S. C., a torpedo exploded under his flag-ship, sending her to the bottom within two minutes, and resulting in the loss of many lives. In view of the fact that his duties included the patrol of 300 miles of coast, and the direction of a fleet of seventy vessels, the results achieved seem to have eminently warranted the navy department in upholding him against all adverse criticism. In November, 1863, he organized a fleet brigade of 500 men and a squadron of light-draft steamers; and, moving up the Broad river, struck inland to assist Gen. John G. Foster in his diversion in favor of Sherman. In this expedition, as also in the one on the St. John's river, Florida, in February, 1864, he demonstrated his ability as a commander of men on land, as well as on shipboard. On Dec. 14, 1864, he received Gen. Sherman, who had just completed his "march to the sea," on board the temporary flag-ship *Harvest Moon*. Finally, on Feb. 18, 1865, he entered the harbor of Charleston, which he thereafter held in conjunction with the forces of Gen. Schimmelpfenning. Adm. Dahlgren resigned command of the South Atlantic squadron, June 17, 1865, and in the following year was appointed to the south Pacific squadron, where he continued to command for two years. During 1868-70, he was again chief of the ordnance bureau, and, for a few months before his death, received again, at his own request, the command of the Washington navy yard. Adm. Dahlgren's skill and precision as a commander and disciplinarian was

equaled only by his marvelously accurate insight into mechanical and mathematical subtleties, and the rapid and masterly manner in which he worked out problems whose solution meant the revolutionizing of established methods and ideas. The Dahlgren guns, for whose recognition he worked vainly for years, are historic, not only in the fact that they furnished the model and impetus for model naval armaments, but also for their wonderful part in saving the integrity of the Federal Union. They were many strides in advance of anything that preceded them, in scientific principles of construction, accuracy, power, and endurance; they necessitated iron clad ships, and also set a period to the old theories of land fortification. In an able paper on the Dahlgren guns, the admiral's son, Charles Bunker Dahlgren, enumerates nine important engagements in the civil war in which they turned the tide of success: at Port Royal, S. C., Nov. 6, 1861, where the frigate *Wabash*, with her forty Dahlgren guns, silenced the forts and secured a harbor for the

Federal fleet; at the attacks on Forts Jackson and St. Philip, April 24, 1862, when the fleet under Farragut and Porter destroyed the Confederate rams and earthworks; at the battle between the U. S. monitor, *Weehawken*, and the Confederate iron clad, *Atlanta*, June 17, 1863, when the two Dahlgren guns of the former crushed in the sides of the enemy in twenty-six minutes; at the blockade of Charleston harbor, when Dahlgren guns not only silenced the forts, but put an effectual stop to blockade running; during the siege of Vicksburg, May-July, 1863, when the heavy Dahlgrens, loaned by Adm. Porter, accomplished the silencing of the forts in four days; at the battle between the *Kearsarge* and *Alabama*, July 19, 1864, when the two 11-inch Dahlgrens of the Federal ship sunk the enemy in fifty-nine minutes; at Farragut's attack on Mobile, in August, 1864, when the formidable ram *Tennessee*, a terror to ships of every class, was destroyed by the steady fire of the monitors *Manhattan* and *Chickasaw*; at Fort Fisher, Jan. 15, 1865, "where the roar from the crescent of Dahlgren guns of Adm. Porter's fleet resembled Niagara, and their precision of fire was wonderful, knocking the Confederate guns quickly out of existence, as well as the gunners." The most memorable occasion of their use, however, was at the battle of Hampton Roads, between the Monitor and Virginia (*Merrimac*), when the two 11-inch Dahlgrens of the former gained the day, and saved the Federal fleet from destruction. Commenting on this engagement, Adm. David D. Porter writes: "I was the first person who ever fired the 11-inch Dahlgren with thirty pounds of powder, and am of the opinion that, had the Monitor used that charge, the Merrimac would have been captured." In addition to the works already mentioned, Adm. Dahlgren was the author of numerous articles, reports and shorter monographs, as well as of "Memoir of Col. Ulric Dahlgren" (1872), and "Notes on Maritime Law" (1877), which was left unfinished by him, and edited by Charles Covley, with a preface by his widow. He was twice married; first, in 1839, to Mary, daughter of Nathan Bunker, of Philadelphia; and, second, Aug. 2, 1865, to Mrs. Madeleine (Vin-

ton) Goddard, daughter of Hon. Samuel Finlay Vinton, of Ohio. By his first wife he had five sons: Col. Ulric Dahlgren, U.S.A., who rendered distinguished services at Fredericksburg, Chancellorsville, Beverly Ford, Gettysburg, and Hagerstown, where he lost a leg, and who, in an attempt to liberate the prisoners at Libby prison and Belle Isle, was killed March 4, 1864; Capt. Charles Bunker Dahlgren, U.S.N., who served with distinction under Adm. Porter, and also with his father in the South Atlantic blocking squadron; and Lieut. Paul Dahlgren, who, on his resignation from the army, in 1873, was appointed U. S. consul-general at Rome, Italy, where he died in 1874. By his second wife he had two sons: John Vinton, a brilliant young lawyer of New York city, and Eric, a successful business man of St. Paul. Adm. Dahlgren died suddenly from heart disease in Washington, D. C., July 12, 1870, and was buried in Laurel Hill cemetery, Philadelphia.

**DAHLGREN, Ulric**, soldier, was born in Bucks county, Pa., in 1842, son of John Adolph and Mary Clement (Bunker) Dahlgren. He received his education in Washington, and at the earliest age showed that steadiness and earnestness of character which shone out so prominently in after years. At the outbreak of the civil war he was reading law in Philadelphia with an uncle, but at once left his desk to uphold the flag. He was appointed captain by Pres. Lincoln, and reported to Gen. Sigel at Harper's Ferry, where he placed some of his father's guns in battery in a very difficult position. He dashed into Fredericksburg with one company of the 3d Indiana cavalry and surprised a large force of the enemy's cavalry, holding the town several hours and returning with thirty-one prisoners. This daring feat has been painted by Felix O. C. Darley, and

with its reproductions in oil and photography serves as an object lesson to the youth of our land. He served as an aide to Gen. Sigel, and later to Gens. Burnside, Frémont, Hooker and Pope, greatly distinguishing himself by repeated acts of exceptional bravery. He was among the first to cross the river at the fatal Fredericksburg. At Chancellorsville he stayed the Confederate advance by a desperate charge. At second Bull Run, as chief of artillery under Gen. Sigel, he contested "Stonewall's" advance, step by step, and enabled the disorganized Federal forces to throw up intrenchments, from which they could not be driven. At Gettysburg he rendered signal service to the cause; with a small force he wrought havoc with Lee's trains, destroying 179 wagons, and on their retreat he harried them so that they turned at bay. Here he lost his leg in a dash on their front, and had to retire for some months. The struggle for life was long and intense, but he passed the trying ordeal of three amputations, and was promoted over the grades of major and lieutenant-colonel to a colonelcy for gallant and meritorious service, the commission being brought by Sec. Stanton's own hand to the sufferer; a most unusual departure from the ordinary course of procedure, but intended to give greater importance to the honor conferred. As soon as he could move, and after a visit to his father at Charleston, he was again found at the head of his men, and lost his life in a daring attempt to liberate the Federal prisoners confined in Libby prison and Belle Isle. A blundering guide misled him, still, with a handful of men he carried the first line of infantry, only to be hurled back from the second and strongly reinforced one. In trying

to lead out his few survivors he was shot from ambush and instantly killed at the head of his men, March 4, 1864. Young Dahlgren's brilliant record had gained him a national reputation, and naturally excited the envy and enmity of many small minds. Either this motive, or a desire to contribute to the growing disaffection in some quarters at his father's conduct of the naval operations against Charleston, led to the desecration of his body on the battle-field. The Confederate authorities circulated the report that a paper had been found in his pocket containing directions to his men to indiscriminately destroy life and property in Richmond upon its capture. This instrument was proved a forgery, both because the handwriting was not his, and because the signature "U. Dahlgren" was contrary to his habit and misspelled. No credence was attached to it at the North, at any time.

**DAHLGREN, Charles Bunker**, engineer and late captain, U. S. navy, was born near Philadelphia, Pa., Oct. 23, 1839, the eldest son of Rear-Adm. John A. Dahlgren and Mary Clement (Bunker) Dahlgren, his first wife, and is the last surviving child of that marriage. He was educated at the Rittenhouse Academy in Washington, and brought up in a naval and military atmosphere at the capital of the nation. He was graduated in 1857, and for the next three years he studied ordnance and steam engineering at the West Point foundry, and entering the engineer corps, U. S. navy, was graduated at the head of a large class at the beginning of the war, and was transferred to the line from the engineer corps. He was with Capt. Wilkes on the San Jacinto when he captured the Confederate commis-

sioners Mason and Slidell, and with Com. D. D. Porter from New Orleans to Vicksburg. In 1863 he participated in all the actions, from the capture, by assault, of Arkansas Post to the surrender of Vicksburg. After the passage of the batteries on April 16th, Capt. Walke said: "Ensign Dahlgren was present everywhere, actively receiving and transmitting orders during that terrible fire of infantry and artillery." For his service at this time he received promotion and a command. In his official report Com. D. D. Porter said: "Lieut. Dahlgren was assigned for duty by Gen. McPherson to the management of the naval battery of two 1x-inch Dahlgren shell-guns, which was well served." Continued and arduous service and severe injuries sent him to the hospital for three months, after which he again undertook active duty, this time in the East, serving in front of Charleston under his father, and on the James river (U.S.S. Onondaga, a two-turreted monitor) protecting the right of Gen. Grant's army. Later he served as fleet ordnance officer of the N. A. B. squadron, as executive officer of the Gettysburg, and in the bloody assault on Fort Fisher, where he narrowly escaped death, being one of the two officers who were not killed or wounded. After the surrender of Lee in 1865, Capt. Dahlgren tendered his resignation, although urged by the navy department to remain in the service. For the next twenty-five years he followed, in the far West, his chosen profession of engineering, and wrote several war papers and a standard technical work on the "Historic Mines of Mexico," which has become the authority on the subject, and "The Dahlgren Gun." He belongs to the Masonic fraternity and the

G. A. R., and is a member of the Loyal Legion, the Naval Order, the American Engineers' Society and several historical associations. He resides in Trenton, N. J. As commander of the naval reserve of New Jersey, he took part in the Spanish war on the U. S. steamer *Resolute*, which was present at the battle of Santiago harbor and the destruction of Cervera's fleet, July 3, 1898, and at Manzanillo, on the 13th. He was married, in Brooklyn, N. Y., Dec. 17, 1867, to Augusta, daughter of William A. Smith, and a descendant of Henry Wisner (1720-90), a delegate to the first three Continental congresses. Two of his sons are John A. and Ulric Dahlgren.

**DAHLGREN, John Vinton**, lawyer, was born in Valparaiso, Chili, April 22, 1868, son of John Adolph and Madeleine (Vinton) Dahlgren. His father was, at that time, in command of the South Pacific squadron. The mother of Mr. Dahlgren, a woman of rare intellectual and literary ability, and a daughter of Samuel Findlay Vinton, long distinguished as lawyer, statesman and congressman—Vinton county, O., was named for him—was his father's second wife. Her mother was Romaine Madeleine Bureau, whose father, Pierre Bureau, emigrated to Ohio in 1792, and was one of the earliest state senators; Mr. Vinton's grandfather, Abiathar Vinton, was a soldier in the revolutionary war. John Vinton Dahlgren received his early education in Washington, D. C., and, entering Georgetown University, was graduated valedictorian of his class in 1889. He then began preparation for the bar in the law school of the same university, and after his graduation, in 1892, was admitted to practice in the supreme court of the District of Columbia. In the same year he removed to New York city, where he was admitted to the bar in 1894, and began professional practice. One of his earliest clients was Stephenson Constable, who, upon his appointment by Mayor Strong as superintendent of the department of buildings, in March, 1895, named Mr. Dahlgren first assistant attorney. Upon the resignation of Gen. Thomas Ewing as attorney of the department, in December, 1895, Mr. Dahlgren was appointed his successor, and filled the office with credit and acceptance for one year, when, as had once been the case with his distinguished father, failing eyesight, induced by overwork, compelled his resignation. Amid the arduous duties of his office,

Mr. Dahlgren found time to systematize the work by the preparation of his book, "Dahlgren's Building-Law Manual" (1897), which is a complete collation of all laws relating to his department, and has (1899) passed through three editions. Neither his native activity of mind, nor his excellent public record, would allow of his continuing in retirement; and early in 1898 Gov. Black nominated him a commissioner of the state board of charities for the full term of eight years; his appointment being confirmed by the senate on March 25, 1898. Mr. Dahlgren was married, June 29, 1889, to Elizabeth, third

daughter of Joseph W. Drexel, the well-known banker and philanthropist, the Most Rev. Michael A. Corrigan, archbishop of New York, performing the ceremony. Mr. Dahlgren's brother, Eric, was later married to Lucy Drexel, second daughter of Mr. Drexel, thus doubly uniting these two prominent families. The mother of Mrs. Dahlgren, Lucy Wharton Drexel, is a lineal descendant of Thomas

Wharton, revolutionary and first state governor of Pennsylvania. Mr. and Mrs. Dahlgren resided in New York city, where their home was a centre of generous hospitality. They had one child. Mr. Dahlgren died at Colorado Springs, Col., Aug. 11, 1899.

**HEAD, James Marshall**, lawyer, was born in Sumner county, Tenn., July 25, 1855, son of James Marshall and Barthemia (Branham) Head. His father was a prominent physician, whose practice in Sumner county extended over a period of fifty years. His mother was the daughter of John Branham, of Sumner county, an extensive miller and manufacturer. His paternal grandfather and grandmother, the latter a relative of the Marshall family of Virginia, removed to Sumner county, early in the nineteenth century, and there engaged in farming. James M. Head attended schools at Gallatin, Tenn., then read law for two years under Hon. John J. Verrees, preparatory to entering the law department of Harvard University. He was graduated at that institution in 1876, and began practice at Gallatin. In 1880, he was elected a member of the general assembly as a low-tax Democrat, and in 1882 was re-elected. While serving in the legislature he was considered to be one of its most useful members. He served as chairman of the judiciary committee, and was a member of the special committee appointed to draft the bill, which subsequently became a law, for the adjustment of the state debt. Though not seeking political preferment, Mr. Head has ever been an ardent Democrat, and has yielded to the demands of his associates to take part in the party organizations. For ten years he was a member of the state Democratic executive committee, and in 1896 was elected to the Democratic national executive committee for Tennessee, still being a member (1899). In 1883, he removed his residence to Nashville, and rapidly acquired a large and lucrative practice. He became a member of the firm of Champion & Head, now Champion, Head & Brown, one of the best known law firms in Tennessee, with an extensive practice, especially in the chancery courts. He is president of the board of directors of the Tennessee industrial school, an institution founded by a private citizen, but adopted by the state. Its success, in a great measure, has been due to the intelligent and zealous guidance of Mr. Head. In 1894, he became chief editor of the Nashville "American," a leading Democratic journal, in which he had long owned a controlling interest, and directed its policy in favor of the free coinage of silver and a tariff for revenue only. In 1885, he called a convention of the Democrats of the state and effected an organization in favor of free coinage. The influence of the newspaper was exerted to promote the holding of a centennial exposition, and Mr. Head was made one of the board of directors, his firm having charge of all law matters connected with the exposition. The extent of Mr. Head's culture, and his pronounced literary tastes, are shown both by his conversation and by his library, which is one of the largest and best selected in the state. Mr. Head was married, at Nashville, June 30, 1885, to Minnie, daughter of William H. Cherry, a well-known capitalist and manufacturer, of Nashville. They have three children—Annie Cherry, James Marshall, Jr., and Mary Cornelia.

John V. Dahlgren

**HART, William Henry Harrison**, attorney-general of California, was born in Yorkshire, England, Jan. 25, 1848, son of John and Mary (Hugill) Hart. His father was a wealthy farmer of Yorkshire, and a descendant of that sturdy stock which has given to England her men of thought and action and made her what she is. In 1852 his parents came to the United States and settled at Little Rock, Kendall co., Ill., where, in April, 1856, he was stolen by a party of Blackhawk Indians, and only recovered from them in the following October. In 1857 the family moved to Clinton county, Ia., where his

mother died in 1858 and his father in 1859. Young Hart was then only eleven years of age, so the struggle of life commenced for him while a mere boy. He went to live with a quasi-guardian, whose treatment was so unfatherly that in 1861 he ran away, and through the kindness of a friend of his father made his way to Cairo, Ill. Here he joined Hinckley, an old school companion, fifteen years his senior, who, on account of important services rendered to Gen. Grant, had been commissioned to organize a company of scouts. Hart enlisted; was sworn in Jan. 23, 1862, and a few days later left for Paducah. With them he took part in the campaigns of Donelson, Shiloh, Vicksburg and Chattanooga. In command of the company he performed important services at the battle of Missionary Ridge, and was wounded three times while carrying dispatches, from Grant to Sherman's command, across a portion of the field (between Citeo Creek and Sherman's right) occupied by the Confederate forces. After partial recovery he returned home in March, 1864, but in May he enlisted as a private in the 44th Iowa, and was mustered out in September. In February, 1865, he re-enlisted in the 147th Illinois, and was finally mustered out of the service in February, 1866, and offered a colonel's commission, which he declined. He was wounded five times, at Shiloh, Pullums Ferry and Citeo Creek. In the summer of 1865, while doing provost duty at Dawson, Terrell co., Ga., Judge Russell of that place suggested to Hart the study of law and presented him with a copy of Blackstone. The young man followed the advice, and during two years after leaving the army he attended the public schools during the day and studied law at night. In September, 1868, he was admitted to practice in the county courts, in 1869 in the district courts and in 1870 in the supreme courts of Iowa. Success attended his practice. He won reputation as a superior criminal lawyer, and was elected attorney of the city of De Witt. Desiring a wider field he removed in 1873 to California, and the same year was admitted to practice in the supreme court of the state. In 1874 he was admitted to the U. S. supreme court and the U. S. court of claims. In California, Gen. Hart devoted himself to the civil law in all its branches with marked success. He is one of the best mining lawyers in the state; a reputation he gained in the Copper Queen cases in Arizona and sustained in numberless other important cases. The Blythe case, involving over \$5,000,000 and 1,600,000 acres of land, out of which he got a fee of over \$600,000 and 200,000 acres of land, the largest fee ever obtained by any lawyer of the United States, in its long course, gave opportunity for the display of Gen. Hart's legal knowledge and ability. Pitted against many of the ablest lawyers of the coast, he carried the case to a successful finish for the claimant, Florence Blythe, and at the end of the long trial was

admitted even by his opponents to have shown complete mastery of the case in all its various details and evidence, as well in reference to the collateral claimants and the alleged widows, as to his own client. The necessary preparation for this case, the longest and bitterest legal contest ever fought in the state, was intricate, arduous and enormous, involving the gathering and selecting of evidence in Great Britain, France and Australia. In the trial 208 witnesses testified orally, 139 depositions were introduced, and the pleadings drawn by him personally filled 2,200 printed pages. The trial lasted 228 days and was followed by twenty-four appeals to the supreme court of the state, but in every case the judgment of the lower court was affirmed in favor of his client. Of the 5,025 claimants, 188 appeared and joined issue, one as daughter, his client, two claiming to be wives of Blythe, and nineteen men claiming that they had been born of as many different mothers. Through all the trial and in the various appeals of the case Gen. Hart exhibited a wonderful power of analysis; keen appreciation of the weak and strong points of the case; a ready judgment to select the right means to meet difficulties; a great constructive ability; profound acquaintance with the principles of law; and oratorical ability of the first quality. Perhaps the most remarkable thing is the fact that in all this enormous and intricate work, he committed not one mistake in the introduction of evidence or the drawing of pleadings. "The law," says Blackstone, "is the perfection of common sense," and it is that even-balanced common sense, rarer even than genius, which has marked Gen. Hart's career throughout and brought him the honors he now enjoys. In the Swift campaign, in 1886, Gen. Hart was the Republican candidate for attorney-general of the state, and although the party was defeated, ran ahead of his ticket more than 7,000 votes. In 1889 he was the originator and chief promoter and agent in passing the belt railway bill for San Francisco, which gave the city a railway around the margin of the bay, to be controlled by the state board of harbor commissioners, and to be free to all shippers of freight and all railways coming into San Francisco. The following campaign, in 1890, he was elected attorney-general of the state by a plurality of 17,140, and signalized his tenure of office by many able and courageous measures, notably the securing judgment and recovery of \$1,000,000 of back taxes from the Southern Pacific railroad system, which was affirmed by the U. S. supreme court, and the inauguration of suits to recover for the state the ownership of the Oakland water front, a matter involving at least \$25,000,000. Gen. Hart has devoted years of study to international law, in which he ranks without a peer in the West. He is a student of art, literature and science, and a profound thinker on political science and economy. From his boyhood Gen. Hart has made mineralogy, geology and chemistry a subject of close study and investigation. During one of his many researches he found a mineral, known as osmium, that could not be burnt or destroyed. He took it to an electrician who, after experimenting, pronounced it to be capable of storing electricity. Further investigation on Gen. Hart's part disclosed the fact that he had discovered the only mine in the world in which osmium is found in metal form, with a new metal, in large quantities. By uniting this metal with other products, electric candles, controllers and electric storage batteries are made, which far exceed anything heretofore discovered or invented. Although not affiliated with any religious denomination, he is a strong believer that God rules men and the destiny of nations, and his contributions to worthy charitable causes are liberal, unostentatious, and limited by no sect or creed. His personal magnetism is strong, and his reasoning log-

ical and sure, and by reason of his unassuming character, unfailing courtesy and easy approachability, he enjoys great social popularity, and wields a vast influence in political and professional circles. He is a member of the G. A. R., of the Order of Odd-fellows, Masons, and of the Golden Gate Commandery, Knights Templars. Gen. Hart was married Sept. 10, 1874, to Loretta B., daughter of James Hedden, of De Witt, Ia., a lady of many accomplishments. They have one son, Lowell J. Hart, born Aug. 11, 1888.

**IRVING, William**, merchant and author, was born in New York city, Aug. 15, 1766. His father was William Irving, a Scotchman, who settled in New York in 1763, where he engaged in business, associated himself intimately with his church, and brought up in the fear of the Lord eight children, of whom Washington Irving was the youngest, and William the eldest. They were a gifted family, and, though far outshone by their youngest brother, the elder members were not without considerable literary talent. William began his career as a fur trader on the Mohawk river from 1787 to 1791, during which time it may be supposed that he gathered information concerning the Indian trade, which was afterwards helpful to his gifted brother in the compilation of "Astoria." He afterwards engaged in mercantile life in New York, and here his literary tastes found vent in contributions to "Salmagundi," then being composed by his brother and James K. Paulding. Some of the poetical pieces are by him, and he also supplied hints and sketches from which his brother prepared portions of the prose of "Salmagundi," notably the letters of Mustapha, in numbers five and fourteen. He was a member of congress from 1813 to 1819; was married, to a sister of James K. Paulding, Nov. 7, 1793; and died, in New York city, Nov. 9, 1821.

**FITZHUGH, George**, lawyer and writer on social subjects, was born in Prince William county, Va., July 2, 1807, a descendant of William Smith of Bedford, England, who emigrated to Virginia about 1679, and was a lawyer, planter and merchant. George Fitzhugh was chiefly self-educated, but became a successful lawyer and practiced for many years at Port Royal, Va. During Buchanan's administration, he was employed in the land claim department at Washington, and about that time visited Boston where he lectured once or twice. He was a contributor to the New York "Day Book," the "Richmond Examiner," "De Bow's Review," and other magazines and newspapers, and published "Sociology for the South; or, the Failure of Free Society" (1854); and "Cannibals All; or, Slaves without Masters" (1856). His writings defend slavery and extol the southern people, who, in his opinion, are descendants of master races and naturally opposed to the "descendants of Saxon serfs" who settled New England. Mr. Fitzhugh died at Huntsville, Walker co., Tex., July 30, 1881.

**WOODS, James**, banker and iron merchant, was born in Montgomery county, Va., Dec. 10, 1793, son of James Woods. When he was nineteen years of age he went to Nashville, Tenn., where his elder brothers were established in business, but soon removed to Trenton, Ky., and opened a general store. He returned to Nashville in 1819 and engaged in the grocery and commission business and also established a transportation business. His brothers, in connection with Thomas Yeatman, carried on a large banking business under the style of Yeatman, Woods & Co., and also operated iron works on an extended scale in Stewart county, Tenn. After the death of Mr. Yeatman and the retirement of Joseph Woods, he became associated with his brother Robert in the management of these enterprises, the ill

health of his brother soon throwing the entire burden upon his shoulders. He successfully conducted the business of the bank through the trying times from 1837 to 1842, and on a final liquidation, distributed to the owners ten times as much as the estimated assets when he took charge. The iron business was equally successful, and Mr. Woods virtually controlled the New Orleans market, the product of his iron works competing successfully with the best from Sweden and Norway. During fifty years of active business life in Nashville, Mr. Woods controlled large interests, affecting all classes in the community, and with such justice and fairness that he attained an enviable reputation among his associates. In private life he was noted for his unostentatious charity. Mr. Woods was married at Trenton, Ky., to Elizabeth Ann Kay of the adjoining town of Elkton, who bore him several children. He died at Nashville Aug. 9, 1875.

**TRUMBULL, Henry Clay**, author, was born at Stonington, Conn., June 8, 1830, brother of James Hammond Trumbull, the philologist, and member of the family which has taken so prominent a part in the history and literature of Connecticut. He was educated partly at home, partly at Williston Seminary, East Hampton, Mass. In 1851 he removed to Hartford, and engaged in railroad business, but, coming under strong religious influences, took up Sunday-school work, and in 1858 became the missionary of the State Sunday-school Association. In 1862 he became chaplain of the 10th Connecticut regiment, having been ordained to the Congregational ministry, and served through the war. In 1863 he was taken prisoner before Fort Wagner, and was confined in Charleston jail, at Columbia, S. C., and later in Libby prison, at Richmond, Va. On his release, he returned to duty with his regiment. At the end of the war he became New England secretary of the American Sunday-school Union, with headquarters at Hartford, and later had charge of its normal work for the entire country. The degree of M. A. was conferred upon him by Yale College in 1866, and that of D. D., by Lafayette College, in 1883, and the University of New York, in 1884. In 1875 he removed to Philadelphia with his son-in-law, John D. Wattles, to take charge of "The Sunday-school Times." In 1881 ill health forced him to travel and he made a visit to Egypt, Arabia, and Syria, studying closely the track of the Exodus, and identifying the site of Kadesh-barnea, which plays so noted a part in the history of the wanderings of the Israelites. In 1888 he was Lyman Beecher lecturer at the Divinity School of Yale University. He continues in active Sunday-school work in Philadelphia, in addition to his editorial labors. He has published a number of books. Three originated in his army experiences: "Some Army Sermons" (1864); "The Knightly Soldier" (1865), and "The Captured Scout of the Army of the James" (1869). The fruits of his travels are manifest in the group including "Kadesh-barnea" (1884); "The Blood Covenant" (1885); "Studies in Oriental Social Life" (1894), and "The Threshold Covenant; or, The Beginning of Religious Rites" (1896). Others deal directly with his life work, such as "Teaching and Teachers" (1884); "Yale Lectures on the Sunday-school" (1888); "Teachers' Meetings" (1896), and "Hints on Child-Training" (1890). A number of his editorials have been brought together in a series of six small volumes (1889). His more recent works have been republished in London.

**ROOT, George Frederick**, musician and composer, was born at Sheffield, Berkshire co., Mass., Aug. 30, 1820, son of Frederick F. and Sarah (Flint) Root. In 1826 his parents removed to Reading, Middlesex co., where he grew up on a farm. His was a musical family, his brothers and sisters being gifted either as vocalists or performers, and before he left home he had learned to play, unaided, several instruments. About the year 1838 he went to Boston, where he began to study under A. N. Johnson, a prominent teacher of that city, and advanced so rapidly that he became an assistant to his instructor. He was associated with Lowell Mason also in the first experiment in this country of introducing singing as a regular branch of education in the public schools, and was also director of two choirs. In 1844 Mr. Root went to New York city on invitation of Jacob Abbot, who, with his brothers, had established a young ladies' seminary there; and, in addition to giving instruction in that institution, taught in the Rutgers Institute, the Institute for the Blind, and elsewhere, and was leader of the choir in the Mercer Street Presbyterian Church. In 1850 he visited Europe, and spent a year in study in Paris, returning with enlarged ideas and greater ambition. In the autumn of 1852, he opened at Dodsworth Hall, in New York city, the first normal musical institute ever held in this country; and three years

later, when it was well established, gave up teaching to devote himself to composition and the conducting of musical conventions. His first song, "Hazel Dell," appeared in 1853, and became extremely popular, as did those that followed, such as "Rosalie, the Prairie Flower," "There's Music in the Air," and the war songs; notably, "The Battle Cry of Freedom" (1861) and "Tramp, Tramp, Tramp, the Boys are Marching" (1864). The words of some of the ballads were trivial, but the melodious quality of the compositions captivated the uncritical, and the patriotism that found vent in the war songs is still gratefully remembered by millions who were thrilled and encouraged by them. Many of his compositions for church use are as widely known as his secular pieces. "How Lovely is Zion," "When Shall the Voice of Singing," and "The Shining Shore," for example, and a number of the most popular of the "Gospel Songs" are from his pen. In this line of composition Mr. Root was particularly successful, and during the later years of his residence in New York he was connected with the publishing-house of Mason & Bradbury in the production of church music-books. In 1859 Mr. Root removed to Chicago, where he established the publishing-house of Root & Cady, one of his brothers being associated with him. The firm prospered until the autumn of 1871, when, by the great fire, a loss of \$250,000 was incurred. After this, John Church & Co., of Cincinnati, purchased the good-will of the firm, and the Chicago house was conducted under the name of Root & Sons. Mr. Root continued to live in Chicago, devoting his time to composition, in which he was exceedingly fertile. The popularity of his work abroad, as well as at home, may be judged from the fact that the catalogue of musical publications in the British Museum (to which a copy of everything published in the kingdom must be sent) gives more than twenty pages to this one composer. His works include cantatas ("The Flower Queen" (1852), "The Haymakers" (1857), "Daniel," "Belshazzar's

Feast," "David," "The Pilgrim Fathers," "Under the Palms," etc.); singing-books for Sunday and day-schools, singing-classes and conventions; church music-books; piano and organ-books, and sheet music of varied character. Mr. Root was widely honored and beloved; his manly, Christian character and his genial manner impressing themselves upon all who became acquainted with him. His autobiography, entitled "The Story of a Musical Life," was published in 1891. He died while at his summer home at Bailey's Island, off the coast of Maine, Aug. 6, 1895. His eldest daughter, Mrs. Clara Louisa Bernham, is well known as an author.

**ROOT, Frederic Woodman**, musician, was born in Boston, June 13, 1846, son of Dr. George Frederick and Mary Olive (Woodman) Root. Both of his parents were professional musicians and members of musical families. On the paternal side, his grandfather, Capt. Frederick Ferdinand Root, of Sheffield, Mass., was a choir leader and singer, while his grandmother was one of a large family all of whom were accomplished musicians. His mother's parents were the principal choir leaders and singers of Newburyport, Mass.; her sister was the solo soprano of Bowdoin street choir, under Dr. Lowell Mason, and her brother, J. C. Woodman, a professional musician, was author of the church tune, "State Street," and father of the organist and composer, R. Huntington Woodman. The son spent his earliest years in New York city, surrounded by musicians, and hearing of little else besides music and musicians, rehearsals and concerts, church music and singing lessons. His father's profession prevented his living long in one place, and he frequently removed from Boston to New York, then to North Reading, Mass., where he lived for a short time with his grandparents before passing on to Brunswick, Me., and from there to Newton and Auburn, Mass. This interfered with his regular studies, which had to be made up in later years; but his musical education was carried on steadily after his sixth year. He was always impatient of instrumental practice, but at an early age began to compose music, and his musical taste was educated to a high degree. After studying under his father and B. C. Blodgett, now in charge of the musical department in Smith College, he went, at the age of sixteen, to New York city, where he studied piano under Dr. William Mason, and organ with James Flint, of Madison Square Church. There he made his first public appearance as an organist. In 1863 he removed to Chicago, Ill., and became organist of the Third Presbyterian church, and, after three years, of the Swedenborgian church. At the same time, he held a position in the publishing department of the music-house of Root & Cady, of Chicago, and made occasional tours, as pianist and accompanist, into the Northwest with popular artists of that day. He also began the study of vocal music at this time, under his father. In 1869 he went to Europe and spent a year or two in travel and work, studying piano and singing in Berlin and Florence. Mr. Root published, during his early years in Chicago, a large number of musical compositions, the value of which he himself considers small, but some of which seized the popular fancy. Occasionally in these early years he wrote in a more serious vein, as in the case of a song "Beyond" and a duet with four hand accompaniment, "The Crimson Glow of Sunset Fades." Among his later compositions are the songs: "For Your Dearest Heart," "Through Winter Snow and Summer Shine," "The Knight of Old" and "A Hushaby Song," the words written by Eugene Field for Jessie Bartlett Davis, who requested Mr. Root to set them to music; also a "Te Deum in G"; an anthem, "The Earth is the Lord's"; a quartet, "Soft Floating in the Evening Air"; and a cantata,

and encouraged by them. Many of his compositions for church use are as widely known as his secular pieces. "How Lovely is Zion," "When Shall the Voice of Singing," and "The Shining Shore," for example, and a number of the most popular of the "Gospel Songs" are from his pen. In this line of composition Mr. Root was particularly successful, and during the later years of his residence in New York he was connected with the publishing-house of Mason & Bradbury in the production of church music-books. In 1859 Mr. Root removed to Chicago, where he established the publishing-house of Root & Cady, one of his brothers being associated with him. The firm prospered until the autumn of 1871, when, by the great fire, a loss of \$250,000 was incurred. After this, John Church & Co., of Cincinnati, purchased the good-will of the firm, and the Chicago house was conducted under the name of Root & Sons. Mr. Root continued to live in Chicago, devoting his time to composition, in which he was exceedingly fertile. The popularity of his work abroad, as well as at home, may be judged from the fact that the catalogue of musical publications in the British Museum (to which a copy of everything published in the kingdom must be sent) gives more than twenty pages to this one composer. His works include cantatas ("The Flower Queen" (1852), "The Haymakers" (1857), "Daniel," "Belshazzar's

"The Landing of the Pilgrims," which was performed by the Beethoven Society under Carl Wolfsohn. He has made numerous arrangements for quartets and chorus, and for many years gave an annual entertainment, for which he generally wrote a musical play or short operetta, some of which have been published, including "The Old Melodeon" and "Castanea." As a conductor, he has had great success from the earliest years of his life in Chicago. He conducted for years at the summer sessions of the National Normal Musical Institute, and had charge of a choral society in Hyde Park which gave all the principal oratorios. In 1889 he organized and conducted a festival chorus of 400 voices in a series of concerts given by P. S. Gilmore's band and several leading vocalists. He conducted the Silver Lake Assembly festival in New York in 1895, and in 1884 organized in Chicago the "War Songs Concerts," which were repeated for years. He published, on the theory of vocalization, "The School of Singing," in 1873; and later, "Root's New Course in Voice Culture and Singing" and "Root's Condensed Method." In 1893, he resumed for a year his vocal studies in Germany, Italy, France and England, and after his return published a series of articles in the Cincinnati "Musical Messenger," entitled "The Polychrome Lessons; or, How to Train My Voice." He edited "Root's Special Edition of Songs of the Great Masters," Nos. 1 and 2; "The International Song Album," "The Song Recital Album," "The Columbia Choir Collection," "Studies from the Opera" and "Exercises in Pitch and Rhythm." Many of the leading American professional singers have been his pupils. Mr. Root was married in Cincinnati, O., in 1874, to a daughter of S. S. Smith, Esq.

**BURNHAM, Clara Louise**, novelist, was born at Newton, Mass., May 25, 1854, oldest daughter of George F. and Mary Olive (Woodman) Root. Her father, a musical composer, was famous for his war songs, "Battle Cry of Freedom," "Tramp, Tramp, Tramp," etc., and others. Her ancestors on both sides for several generations back were noted for their musical attainments, although following other vocations. Her great-great-grandfather, Azariah Root, was a colonel in the revolutionary war. When very young, she removed with her family to Chicago, where she attended public and private schools. Her frequent visits to New England have kept her closely in touch with New England ways and ideas. While in her teens, she was married to Mr. Burnham. The peculiarity of her experience was that she had no literary connections and no leaning toward authorship; but she was urged by one of her brothers to try to write, as he recognized talent in her letters. He continued his persuasions for a year before she laughingly consented to prove to him that she had no talent. With scarcely any obstacles to overcome, she almost immediately met with success. Her first novel, "No Gentleman," was published in 1881, others following in quick succession: "A Sane Lunatic" and "Dearly Bought." In 1886 appeared "Next Door," which won her great popularity, and added greatly to her reputation as a novelist. Others followed: "Young Maids and Old," "The Mistress of Beech Knoll," "Miss Baggs' Secretary" and "Dr. Latimer." "Sweet Clover," one of her most successful stories, was published in 1894, being a pure-toned romance of the "White City." The "Art Interchange" speaks of Mrs. Burnham thus, in noticing one of her novels: "In bright, airy chatter, sparkling with fun and wit, this author has scarce an equal among to-day's story-tellers; and for the clever showing up of superficial oddities and mannerisms, none is her superior." Mrs. Burnham wrote the text for several of her father's cantatas, and has contributed poems and stories to periodicals.

Vol. IX.—25.

**SHERWOOD, William Hall**, pianist and composer, was born at Lyons, N. Y., Jan. 31, 1854, son of Rev. Lyman Hinsdale and Mary (Balis) Sherwood. He belongs to a family of English origin, remarkable for the number of prominent men it has produced. His great-grandfather, Lemuel Sherwood, was a captain in the army during the revolutionary war. His grandfather, Judge Lyman Sherwood, was noted throughout New York state for probity and learning, and other ancestors were not less conspicuous as patriots and public citizens. William H. Sherwood's teacher, until he reached the age of seventeen, was his father, who was the founder of the Lyons (N. Y.) Musical Academy, and to the patient, thorough guidance of that parent Mr. Sherwood attributes his own success. He was well drilled in mathematics and the classics at the same time, but instead of entering college went to New York to devote his whole time to music, having there as instructors Edward Heimbürger, Pychowski, and William Mason, who advised him to study under Kullak, of Berlin. In 1871, Mr. Sherwood placed himself under the last-named instructor, who took great pride in his youthful pupil, and in addition had Depe for a teacher. For a short time he studied at Leipsic, and then became a pupil of Liszt, at Weimar. He took organ lessons at Stuttgart of Scotson Clark, and courses in theory, counterpoint and composition under Dr. Weitzman, Carl Doppler, R. Wuerst and E. F. Richter. At Berlin he was organist of the English chapel, and at Stuttgart held a similar position in the English church. During his first year in Berlin he was selected to play at the Royal Sing-Academy, and was received with great enthusiasm. On another occasion he rendered Beethoven's "Emperor Concerto" with full orchestra, under the direction of Royal Capellmeister Wuerst, before an audience of 4,000 persons, and his success was so great that the performance of this concerto was demanded and given five different times in Berlin. After finishing his studies he made a concert tour of some of the large cities of Germany, and everywhere was conceded to be one of the greatest living pianists. He declined flattering proposals to remain in Germany and play in orchestral concerts in various cities, returned to his native country in 1876, and one of his first public appearances was with Thomas' orchestra at the Centennial Exhibition at Philadelphia. He made Boston his home for several years, and was prime mover in the organization of the Philharmonic Orchestral Society of that city; then removed to New York, where he remained about three years, finally establishing himself in Chicago. He is principal of the Sherwood Piano School of Chicago, in which his method of instruction is exclusively used; all the assistants having been trained by himself. For ten years he has been examiner at the Conservatory of Toronto, Canada, and also director of the piano department of the Chautauqua Assembly during the same period. He was one of the founders of the American College of Musicians, and was its first elected examiner. He was one of the first members of the Music Teachers' National Association and of other prominent organizations, but while his services to the country have been recognized by at least two colleges which have offered him the degree of doctor of music, he has steadily declined the honor.

Wm. H. Sherwood

He has made frequent tours through the United States and Canada, playing with nearly all the leading orchestras and musical societies, and has an extended reputation as a teacher as well. In 1896, during a vacation trip in Europe, he played by invitation in several large cities, and was urged to return for regular engagements, including appearances with leading orchestras of London and Paris. His compositions, which include impromptus, scherzos, waltzes and the like, have been played by noted artists, and some of them have been published in Germany. Mr. Sherwood takes a patriotic interest in the progress of music in America, and in his own countrymen who are striving for success as composers or players, and rarely gives a concert without placing the works of Americans on the programme. He has done original work towards developing an understanding of newer and more varied ways of managing the arm, wrist, knuckles and fingers of piano students with a view to greater resources of technique and touch, and for more perfect physiological growth; while making an equal analysis of the musical contents of the works of the great masters, down to the minutest details, thereby developing in his pupils both a logical understanding of the principles of expression and the most practical and modern powers of interpretative technique and touch. His pupils occupy positions among the best in our music schools and largest cities.

**SOUSA, John Philip**, conductor and composer, was born in Washington, D. C., Nov. 6, 1854, son of Antonio and Elizabeth (Trinkhaus) Sousa,—a Spanish father and German mother. His early musical training was of the best, and he began his career as a violinist when very young. Meanwhile, his studies in harmony and composition kept pace with his constant instrumental practice, and at the age of eighteen he became a leader of theatre orchestras. In the year 1880 Mr. Sousa was appointed, under the Hayes administration, musical director of the United States marine band—this being his first entrance into the field of military music. For twelve years he filled this position, serving under five successive presidents, and it is an accepted fact that he developed the organization he succeeded to into one of the foremost military bands in existence. In 1892 the late David Blakely prevailed upon Mr. Sousa to leave the government service and create a band for purely concert work. Mr. Sousa acceded to the proposition, and on Aug. 1, 1892, his present band was organized. It began a tour in September; has since played in every town of any prominence in the United States, Canada, at Manhattan beach, and at the leading exhibitions of the country; and was one of the leading attractions at the World's fair. As a composer, Mr. Sousa is as widely and favorably known as he is as a leader. The title of "March King" has been bestowed upon him by universal acclaim, although he is rapidly demonstrating that he is entitled to higher honors in other and wider fields. He is one of the very few American composers whose works are generally played through Europe. Altogether, he has composed over two hundred musical works. Among the most popular are: "The Gladiator," "National Fencibles," "Semper Fidelis," "The Thunderer," "The Crusader," "The Occidental," "The Belle of Chicago," "The Beau Ideal," "The Washington Post," "The High School Cadets," "The Liberty Bell," "Manhattan Beach," "King

John Philip Sousa

Cotton," "El Capitan" and "The Stars and Stripes Forever," marches. His most popular songs are: "I Wonder"; "My Own, My Geraldine"; "Hoping"; "Sweet Miss Industry"; "Oh, Ye Lilies White," and the patriotic song, "The Stars and Stripes Forever"; his most popular waltzes: "La Reine de la Mer," "Paroles d'Amour," "Intaglio" and "Colonial Dames." In the operatic field, Sousa has written: "The Smugglers," produced in 1879; "Desirée," produced in 1884; "Queen of Hearts," produced in 1885; "El Capitan," produced in 1896; and "The Bride Elect," produced in 1898, the libretto of the latter opera being also his work. Among his miscellaneous works is a compilation, entitled "National, Patriotic and Typical Songs of All Lands"; a book of instruction for the trumpet and drum; a volume of popular music for the violin and piano, and a volume of popular music for cornet and piano; also a "Te Deum," and many arrangements of orchestral compositions (for string or wind instruments), including a symphonic poem, "The Chariot Race"; scene historical, "Sheridan's Ride"; and two suites, "The Last Days of Pompeii" and "Three Quotations." He was married, in 1879, to Jane, daughter of Henry and Louisa Bellis, of Pennsylvania.

**PERKINS, William Oscar**, musician, was born in Stockbridge, Vt., May 23, 1831, son of Col. Orson and Hannah (Rust) Perkins. Both parents were able musicians, his father being long noted as a vocalist and music teacher. The Perkins family came from England, and settled in Plymouth, Mass., whence branches spread throughout the northern, southern and western states. Two of Mr. Perkins' brothers also became distinguished as musicians, Henry Southwick and Jule Edson, the latter becoming the husband of the prima donna, Marie Rose, and being, at the time of his death, in 1875, primo basso of Her Majesty's opera in London. He was carefully trained in musical studies by his father. As a boy he performed creditably on several instruments, and had a high soprano voice, which later developed into a bass of large compass. He attended school at Taftsville, Vt., where the family settled, and entered Kimball Union Academy, where he pursued a classical course and was graduated in 1854. While at college he was the acknowledged leader in all musical undertakings of the students. In 1854 he went to Boston, and there studied at the Boston Music School, continued his academic studies in Harvard University, and was bass singer in the quartette choir of the Charles Street Church. In the following winter he organized a male quartette, the Mendelssohn Vocal Quartette, with which he made a concert tour in the eastern and middle states. Much of the music rendered was arranged and composed by the young leader. In 1856 he returned to Boston, but left soon to teach for two years in the New Brunswick, N. J., high school, after which he returned to Boston and established himself as a teacher of instrumental and vocal music, and composition, and as a choral conductor. In this last capacity he was particularly successful, becoming, in 1858, choir conductor at Boston Music Hall, of Theodore Parker's religious society; and his reputation spread, being more and more frequently called upon to conduct musical performances throughout the northern states and Canada. He also took a vigorous part in political life, participating in the anti-slavery movement; wrote frequently on a variety of subjects for American periodical publications, and appeared in public as a lecturer. He became an excellent linguist, conversant with the French, Italian, German and Spanish languages, and made a study of scientific, economic and religious questions. The years 1871-72 he spent in Europe

at various places, and returning to Boston, he continued his labors there until 1882, when he removed to New York city. For several years he was an instructor in the Ohio Normal Academy of Music, a summer school for the special instruction of teachers of music, and at various times was associated with other schools of a similar character. The degree of doctor of music was conferred upon him by Hamilton College, New York, in 1879. During 1882-86 he resided in New York, and then, for the following eight years, made his home in London, England, where he continued to teach, deliver lectures and to write. Returning to America in 1891, he spent a year in the southern states, and then returned to Boston, where he afterwards resided. Among Dr. Perkins' most distinguished pupils are: Jules E. Perkins, the famous basso; Mrs. Webster Norcross, who made her debut in the opera "Faust," in 1894, at Covent Garden Opera House, London, in company with Melba and the de Reszke brothers; Mrs. Elizabeth Wright Shaw, opera and concert singer, of Boston, and the male quartette known as the "Meister Glee Singers," of London. His first musical work, "The Choral Harmony," was published in 1859, and in the course of his career was followed by more than sixty volumes of works which are well known in America and England. Among the subjects of which his public lectures treat, are: "The Origin and Use of Music"; "Biography of Musicians"; "Music as a Means of Education"; "The History of Music"; "The Human Voice"; "Vocal Acoustics"; "The Spiritual Power and Curative Influence of Music"; "Psychology"; "The Origin of Evil"; "Buddhism and Christianity," and "England and the English." Among his more successful journalistic writings were his analytical criticism of Verdi's "Aida," from Milan; Bach's "Passion Music," and of Sullivan's "Pinafore"; "Letters from Italy," and "Letters from London." Among his later musical works may be mentioned: "Part-Songs for Mixed Voices"; "Part-Songs for Men's Voices"; "The Ariel"; "Sacred Music for Women's Voices"; "Sacred Music for Men's Voices," and "New Anthems for Mixed Voices." The "Musical Herald" of London, said of Dr. Perkins: "He has a long and successful record as a bass singer, conductor, composer and vocal trainer, also as a writer and lecturer. . . . He has been for several years a resident of London, where he is very prominent in musical, literary and social circles. . . . He has trained and brought out many talented pupils here, among the most noted of whom are the Meister Glee Singers, whose performances surpass, in beauty and excellence, anything ever before heard in London." Dr. Perkins possessed, in an unusual degree, the power to control large bodies of singers and audiences, and to impart instruction; hence his great success as a conductor, lecturer and teacher. His intellectual ability gave him a marked standing among those with whom he associated.

**BIRD, Arthur**, composer, was born at Mount Auburn, Cambridge, Mass., July 23, 1856, son of Horace and Elizabeth (Hoar) Bird. His father, the second son of Joseph and Mary (Cutter) Bird, of Watertown, Mass., at an early age showed a talent for music, and after a course of instruction from Lowell Mason and George J. Webb, began teaching music in Cambridge, at the age of eighteen. His effort proving a success, he gave his entire life to the cause he had espoused, and for nearly fifty years conducted singing-schools in the neighborhood of Boston, until his name was a household word in thousands of homes. He was a member of the Academy of Music, Boston, and also of the Händel and Haydn Society. Arthur Bird attended the public school in Watertown, and was graduated at the

high school in Belmont. From early childhood he displayed a great fondness for music, and possessed an unusual talent for free improvisation, so that at twelve years of age he was appointed organist of the First Baptist Church in Brookline. In 1875 he went to Berlin, Germany, to study piano and organ with Rohde, Haupt and Loeschhorn, and remained until the summer of 1876. Then returning to Boston, he accepted the positions of organist and choir-master at the Kirk, Halifax, N. S., and head piano-master at the young ladies' seminary in that city. His organ recitals were very popular. In 1881, returning to Berlin, he again studied with Haupt and Loeschhorn, devoting particular attention to counterpoint and orchestration with Heinrich Urban. The summers of 1885 and 1886 were spent in Weimar with Liszt, who took a great interest in Bird's compositions, and often had them played at his soirées. In February, 1886, Bird gave his first public concert in Berlin with the Philharmonic orchestra, conducting personally an overture, symphony and a suite. The critics were unanimous in their praise, and particularly emphasized the fact that Bird was a born American. At the All-Musikverein concerts, in June, the same year, his "Carnival," for orchestra, was played for the first time (Sondershausen), and was greeted with rounds of applause and a public congratulation from Liszt. In July he conducted with great success his second suite, for orchestra, by invitation of the committee of the North American Singing-bund, in Milwaukee, Wis. Mr. Bird's compositions include, besides those already mentioned, an American comic opera "Daphne"; "Rubezahl," a romantic and fantastic ballet; symphony in A major, for grand

orchestra; an introduction and fugue, for grand orchestra; three suites, in F D C majors; Oriental music, for flute and orchestra; suite for ten wind instruments; ten original compositions, for Mason & Hamlin organ; op. 38; two compositions, for violin and piano; a large number of works for piano (two and four hands); and songs and part songs. Mr. Bird resides in Berlin, Germany. He was married in Peterborough, England, in 1888, to Wilhelmine, daughter of Julius Waldmann, of Hanover, Germany.

**CAPPA, Carlo Alberto**, musician, was born at Alessandria della Paglia, Sardinia, Dec. 9, 1834. His father was a major of the 11th infantry in the Sardinian army, and served under the great Napoleon in his campaign against Russia. He was wounded in the retreat from Moscow, and died when his son was but four years old. At the age of ten Carlo entered the Royal Academy at Asti, to which only the sons of soldiers are admitted. After five years in the academy, he enlisted with the band of sixth lancers (Cavallegere d'Aosta), and was at the battle of Novara in 1849. He was for six years in the army service as first trombone in the band. He then enlisted in the U. S. navy for a two years' cruise on board the frigate Congress, under the command of Com. Breeze, and arrived in America Feb. 22, 1858. He first associated himself with Kendall's band, Boston, Mass., making a tour of the principal cities of the United States; but subsequently joined Shelton's celebrated New York band, conducted by Grafulla, who became leader of the 7th regiment band in 1859.

Mr. Cappa followed him, and remained with him until his death. In 1869 Mr. Cappa became first trombone of Thomas' orchestra, and continued that connection for seven years; and also for seven years played the euphonium with the Mapleson Opera Co. He accompanied the 7th regiment to Washington when it answered Pres. Lincoln's call for 75,000 volunteers. In 1881 Mr. Cappa became leader of the 7th regiment band, and the celebrity which it attained was in a great measure due to his untiring energy and ability as a leader. He was particularly free from affectation, and conducted his band with a dignified composure that betokened a thorough knowledge of his art. His repertoire was unexcelled either in this country or in Europe, and by his concerts in Central park, New York city, Coney Island, Brighton Beach, etc., and those at Quebec, San Francisco, Louisville, Salt Lake City, New York centennial, Cincinnati, St. Louis, the maritime exhibition at Boston, and elsewhere, his reputation became truly national. Mr. Cappa arranged the music for the centennial celebration at Newburgh, N. Y., and had charge of the 2,000 singers who sang at the concert. At the Louisville exposition he was publicly complimented by the board of managers, decorated by the festival chorus and elected conductor for the following year by a large majority of the popular vote taken on the last day of the exposition against the following competitors: Damrosch's orchestra and Gilmore's band, each organization having played engagements for several weeks. At Minneapolis he was decorated and elected an honorary director of the exposition by the directors. Mr. Cappa did much to popularize classical music, and his public concerts in Central park were important factors in advancing the musical education of the masses. He had the happy faculty of satisfying the popular taste, and his programmes were selected with an unvarying good judgment that struck a chord in the heart of the general public. He composed a number of pieces that were equally well received; the most prominent being "Sardinian March," "Grand Rounds" and "Battle of Gettysburg." The last, his most remarkable production, is a realistic composition and has received the highest commendation everywhere. Mr. Cappa was identified with the 7th regiment

C. A. Cappa.

for over thirty years. He was as popular with his band as he was with the public, and as highly esteemed by his comrades of the Lafayette Post, Grand Army of the Republic. He was married, in 1862, to Elizabeth Seyder, an American lady, by whom he had seven daughters and a son. Mr. Cappa died in New York city, Jan. 7, 1893.

**WHITNEY, Samuel Brenton**, organist and composer, was born in Woodstock, Vt., June 4, 1842, son of Samuel and Amelia (Hyde) Whitney. He attended the public school, and subsequently the Vermont Episcopal Institute at Burlington, and studied music under various teachers until he went to New York, and became a pupil of Carl Wels. In 1866 he returned to Vermont, and in the course of the following four years served as organist in Christ Church, Montpelier, Vt.; St. Peter's, in Albany, N. Y., and St. Paul's, at Burlington, Vt. He resumed the study of music at Cambridge, Mass., under Prof. John K. Paine, whom he also assisted as organist of Appleton Chapel. In 1871 he was appointed organist of the Church of the Advent in Bos-

ton, and this position he has since continued to hold. Under his management, the Church of the Advent choir has become celebrated throughout New England, and Mr. Whitney is probably the best known organist in Boston. He has frequently been engaged as conductor of choir festival associations of Massachusetts and Vermont. At various times he has trained many choral societies in and about Boston, and has been particularly successful in training and developing boys' voices. Excelling in the performance of liturgical music, of which he is a passionate admirer, he is an advocate of the more elaborate forms of the Episcopal service, and especially identified with the inception of the vested choir in New England churches. An eminent Boston authority on music has said that "Mr. Whitney, by his wonderful mastery of the preludes, fugues and toccatas of Bach, most of which are so impressed upon his remarkable memory that he rarely uses notes; by his style, so brilliant and pleasing, and his improvisations, so solid and rich, has won much credit in and beyond professional circles." Mr. Whitney established in the New England Conservatory of Music, in which he was for a time teacher of the organ and church music, a church music class, for instructions in interpretation of sacred music for the vocal pupils, and to teach to organ pupils the management of the organ in church music. He has been professor of organ and a lecturer at the Boston University, and a member and examiner in the American College of Musicians. He has composed a trio for pianoforte and strings, many solos and arrangements for both pianoforte and organ and church services, Te Deums, miscellaneous anthems, and sacred and secular songs, the most successful of which are: two full communion services, with full orchestral and organ accompaniment, which have several times been given in Boston as well as elsewhere; the hymn, "The Son of God Goes Forth to War," which is sung all over the country; "Consecration Anthem," composed for and sung at the consecration of the Church of the Advent, Boston; anthem, "O God, My Heart Is Ready"; "Magnificat" and "Nunc Dimittis" in B flat and E flat; ballad, "Looking in the River," reproduced in the publication, "Famous Songs and Those Who Made Them." Mr. Whitney is a member of the Harvard Musical Association of Boston.

S. B. Whitney.

**PICKETT, Albert James**, historian, was born in Anson county, N. C., Aug. 13, 1810, son of Hon. William R. Pickett. He was educated in Virginia, and studied law under his brother, William D. Pickett, but disliking this profession, became a planter, first in Autauga county, Ala., later in Montgomery county. In 1836 he was acting adjutant to Gov. Clay in the Creek troubles. As foreman of the grand jury in 1844 he represented to the court the evil to be apprehended from the influx of negroes into the state, and, when the matter was considered in the legislature, he published a reply to the objections raised against the proposed prohibition. In 1851 he issued his "History of Alabama, and, incidentally, of Georgia and Mississippi" (2 vols.), based on the published accounts of the early explorers and on the narratives of Indian chiefs and traders from whom he had received statements in the early days of the state. It ran through three editions the year of publication, and was again reprinted at Sheffield, Ala. After the publication of

this work Col. Pickett devoted himself to the preparation of a "History of the Southwest," but his work was never completed. He died in Montgomery county, Ala., Oct. 28, 1858.

**STONE, Frederick Dawson**, librarian, was born in Philadelphia, Pa., April 8, 1841, son of John and Mary (Whetstone) Stone, of English descent. He received his education at the Union Academy in Philadelphia. After a journey abroad, for business purposes (1859-60), he entered the house of John Stone & Sons, and although at no time a member of the firm, he remained in it until the retirement of his brothers, in 1876. During the emergency campaigns of 1862 and 1863 he served as a member of the Gray Reserves (now the famous 1st regiment),

and was present at the shelling of Carlisle. He was always interested in gathering books and prints, but in 1866 he began to collect in earnest historical material, particularly such as related to America. He was especially fond of extra illustrating historical and biographical works, doing the inlaying with his own hands, and in the selection of books as well as prints showed rare judgment. His knowledge of the details of printing, engraving and binding was not only thorough but minute; as for his knowledge of prints, it seemed to be instinctive, and it may well be doubted if any of his contemporaries surpassed him in this department.

In March, 1863, he was elected a member of the Historical Society of Pennsylvania, and soon was placed on important committees, notably that on publication. In January, 1869, he became a member of the council, and served until February, 1877, when he was elected librarian. He has written for the "Pennsylvania Magazine of History and Biography," of which for a time he was editor, and with John Bach McMaster, he edited "Pennsylvania and the Federal Constitution, 1787-83" (1888). In June, 1893, he was appointed a member of the Valley Forge park commission by Gov. Pattison, and served as secretary. He was elected a member of the American Philosophical Society, May 17, 1895, and in June of the same year received the honorary degree of Litt. D. from the University of Pennsylvania. He was a member of the History and the Philobiblion clubs; he was an honorary member of the Genealogical Society of Pennsylvania, and a corresponding member of the New England Historic and Genealogical Society; the Maryland Historical Society; the Wyoming Historical Society, and the Minnesota Historical Society. He took an enthusiastic part in promoting the success of the great public celebrations that were held in Philadelphia in the period of 1876-89; the centennial exhibition; the bicentennial celebration of the landing of Penn; the centennial jubilee of the constitution, and the centenary of the inauguration of Washington. Dr. Stone was married, Nov. 9, 1865, to a distant relative, Annie E., daughter of Adam K. and Hannah (Steele) Witmer, of Paradise, Lancaster co., Pa. They had two sons, one of whom, Witmer Stone, is well known as a naturalist. Dr. Stone died in Philadelphia, Aug. 12, 1897.

**BALDWIN, Augustus Carpenter**, jurist and congressman, was born at Salina, Onondaga co., N. Y., Dec. 24, 1817, son of Jonathan and Mary (Carpenter) Baldwin. His father, a native of Canterbury, Conn., early settled at Salina, N. Y., where he engaged in mercantile business; his mother was a

daughter of Joseph Carpenter, of Lancaster, N. Y. The original American ancestor was Henry Baldwin, a native of Devonshire or Hertford, England, who settled at Woburn, Mass., about 1640. Mr. Baldwin was educated partly in Salina and partly at Lancaster, whither he removed with his widowed mother in 1828. He entered active life in 1831 as an apprentice in the office of the Buffalo "Bulletin," but in 1836 engaged in teaching at Canterbury, Conn.; later attending the Plainfield Academy for a short time. In 1837 he removed to Michigan, then recently admitted as a state, and while alternately teaching and studying at the Branch State University, at Pontiac, read law with Hon. O. D. Richardson, of that place. On his admission to the bar in 1842 he entered professional practice at Milford, Oakland co., where he remained for seven years, and then removed to Pontiac, which has since been his home. For two years he was in partnership with Hon. Hester L. Stevens, and since 1851 has been associated with Hon. Charles Draper, and through an increasing and profitable practice has become an acknowledged leader of the bar. He is also prominent in politics as a Democrat, and as early as 1840 was elected school inspector for Bloomfield township, Mich. In 1843 and 1845 he was elected to the Michigan house of representatives; in 1846 commanded the 5th brigade, Michigan militia, under the then existing military system; during 1853-54 was prosecuting attorney for Oakland county, and in 1860 a delegate to the Democratic convention at Charleston, S. C., and Baltimore. In 1862 he was elected to the 38th congress, and serving one term, was a member of the committees on agriculture and of expenditures in the interior department, and in January, 1865, a prominent advocate of the 13th amendment. During the civil war he was active in behalf of the preservation of the Union, in raising money and troops, but was opposed to the denationalization of the southern states and the "Confiscation Act" at the close of the struggle. In 1864 he was a delegate to the Democratic convention in Chicago, and in 1866 to the peace convention in Philadelphia. In 1874 he was elected mayor of Pontiac, and in 1875, circuit judge, for a term of six years, although re-

signing after serving four, to resume the practice of his profession. Among other important business connections he is solicitor of the Pontiac, Oxford and Northern railroad. From 1868 until 1886 Judge Baldwin was a member of the city board of education. For eighteen years he was a trustee of the State Asylum for the Insane at Pontiac, the location of which he was partly instrumental in securing, and is also a trustee and the president of the Michigan Military Academy, in the founding and maintaining of which he has been constantly active, and to which he has transferred his valuable library of nearly 7,500 volumes. A Mason from early manhood, he is at present past eminent commander of Pontiac commandery No. 2, Knights Templars. He has ever found complete recreation from his professional labors in his fine library, his collection of works of art, paintings and statuary, and in the supervision of farming lands. Judge Baldwin has been twice married: first, in 1842, to Isabella, daughter of Charles Churchill, of Bloomfield, Mich., and second, in 1894, to Flora E., daughter of Hon. Friend Belding, of Troy, Mich. He has one daughter, Augusta, who is now the wife of Dr. Edmund A. Christian, medical superintendent of the Eastern Asylum for the Insane, Pontiac, Mich.

*F. D. Stone*

*Aug. C. Baldwin*

**RICH, Hiram**, banker and journalist, was born at Gloucester, Mass., Oct. 28, 1832, son of Stephen and Nancy (Adams) Rich. He is connected with the distinguished Adams family, of Massachusetts, and his father was a mariner of Mount Desert, Me. Having been educated in the public schools of his native town, he was first employed as a clerk in an outfitting store in 1850, and in 1856 became a book-keeper in Boston. He entered the banking business in 1857, and in 1865 became cashier of the Cape Ann National Bank of Gloucester, where he has since resided. He has been a contributor of poetry to the "Atlantic Monthly," "Century," and other leading magazines, and read the poem at the 250th anniversary of the founding of Gloucester. He is a member of the Cape Ann Historical Society. Mr. Rich was married, Nov. 17, 1861, to Mary Adelia Procter, of Gloucester, Mass. They have three children.

**DRAPER, Lyman Copeland**, historian and educator, was born at Hamburg (now Evans), Erie co., N. Y., Sept. 4, 1815, and was of the fifth generation from James Draper, who emigrated from England about 1650, and settled at Roxbury, Mass. (now Boston Highlands). One of his grandfathers, Jonathan Draper, was a soldier in the Continental army under Washington; the other fell in the defense of Buffalo against the British in 1813, while his father was twice captured by the British during the same war. While still an infant he removed, with his parents, to Springfield, Erie co., Pa., and from there went to Lockport, N. Y., where his father, Luke Draper, became a grocer, tavern-keeper and farmer. Until the age of fifteen years the boy worked hard and had very little schooling; then for three years he was a clerk in village stores, picking up whatever schooling he could obtain and reading with avidity all books that fell in his way. He was particularly interested in the revolutionary war, read everything he could find upon that subject, and treasured the conversation of veterans of the army. In 1833 he went to Mobile, Ala., to reside with a cousin, the wife of Peter Rensen, a cotton factor of that city, and while there devoted himself to collecting historical information, especially regarding Weatherford, a famous Creek chief. In 1834-36 he studied at Granville College (now Denison University), Granville, O. In the meantime, the Rensens removed to the neighborhood of Alexander, N. Y., and offered young Draper a home with them, which led to his attending the seminary at Stockport, where he was a close student and a careful historical reader. At this time he conceived the idea of writing a series of biographies of trans-Alleghany pioneers, and began correspondence with prominent men, especially those living in Ohio, Virginia, Kentucky, Tennessee and South Carolina. In 1840 he began the work of visiting pioneers, revolutionary soldiers and Indian chiefs in their homes, and for nearly a quarter of a century made this his chief occupation. In his journeys of discovery, largely through dense wildernesses, he traveled in all over 60,000 miles, and as he was the first historian in this field, he collected an immense amount of material that otherwise would have perished and of information through personal interview that otherwise would not have been recorded. In 1857 he computed that his material comprised "some 10,000 foolscap pages of notes of the recollections of warrior-pioneers, either written by themselves or taken down from their own lips, and well nigh 5,000 pages more of original manuscript journals, memorandum books and old letters." Among the original manuscripts was George Rogers Clark's narrative of his famous expedition in 1778. The material covered the entire history of the wars from 1742—the date of the first skirmish with the Indians in the valley of Virginia—to 1813-14, when Tecumseh was killed and the

Creeks were defeated. In 1841, being at Pontotoc, in northern Mississippi, he became part owner and editor of a small weekly journal, the "Spirit of the Times," but soon sold out, receiving in payment a tract of wild land on which he had lived. Part of the year 1842 he spent in Buffalo, N. Y., as a clerk in the office of the Erie canal. His relatives, the Rensens, having removed to Philadelphia, he joined them, after a short residence near Baltimore, and there remained until October, 1852. While in Philadelphia he added miscellaneous Americana to his collection, including files of newspapers, and his library became celebrated, exciting the admiration of such historians as Bancroft and Parkman. In 1852 Draper removed to Madison, Wis., having been invited to assist in the reorganization of the State Historical Society. In 1853 he became one of the executive committee, and in 1854 corresponding secretary of the society. In the thirty-three years that he held this position the library increased from fifty volumes to about 60,000, and a museum containing many thousand objects of interest was formed. He traveled thousands of miles to collect materials with reference to the early history of Wisconsin, and the results of his labors appear in the first ten volumes of the "Wisconsin Historical Collections," which were edited by him. In 1858-59 he was state superintendent of public instruction, and by his administrative ability infused new life into the educational system. He was also, *ex officio*, a regent of the University of Wisconsin and the state normal schools. In 1871 the university conferred on him the degree of LL. D., the degree of M. A. having been conferred by Granville College in 1851. On Jan. 6, 1887, he resigned his secretaryship, and was made honorary secretary for life. He projected many works which were left incomplete or unpublished at his death. Among these were a "Life of George Rogers Clark," "Life of Daniel Boone," a volume on the "Mecklenburg Declaration of Independence" and "Border Forays and Adventures," the last prepared with Consul W. Butterfield. His principal work was "King's Mountain and its Heroes" (1881), which has been highly praised as a storehouse of information concerning warfare in the Carolinas during the revolutionary period. Bancroft called it "a magnificent volume," and Gen. Joseph E. Johnston said it was the most interesting historical work he had ever read. Other works were: "Madison, the Capital of Wisconsin" (1857), and Forman's "Narrative of a Journey Down the Ohio and Mississippi in 1789-90," which he edited and published in 1888. His first book, prepared with William A. Croffutt, was "The Helping Hand: An American Home Book for Town and Country" (1870), a decided digression for an historian. Dr. Draper made a specialty of autograph collecting, and one of his most valuable contributions to the "Wisconsin Historical Collections" (Vol. X.) was an "Essay on the Autographic Collections of the Signers of the Declaration of Independence and of the Constitution," which was issued separately in 1889. He frequently contributed to encyclopædias. Dr. Draper was married, in 1853, to his cousin, the widow of his friend, Peter Rensen. She died in 1888, and on Oct. 10, 1889, at Cheyenne, Wyo., he was married to Mrs. Catherine T. Hoyt, who survived him. He died at Madison, Wis., Aug. 26, 1891.

**COOKE, Nicholas**, first state governor of Rhode Island (1775-78), was born in Providence, Feb. 3, 1717, third child of Daniel and Mary (Power) Cooke. He followed the sea for years, becoming a shipmaster; and then engaged in mercantile business in Newport, also carrying on rope-making and distilling, and acquiring a large fortune, part of which he invested in lands in Rhode Island, Connecticut and Massachusetts. In February, 1762, Samuel Ward proposed to the general assembly that Gov. Hopkins and himself should cease their contest for the governorship and that a coalition ticket should be formed giving the office of deputy-governor to a Providence man, either Nicholas Cooke or Daniel Jenckes. This proposal for peace was not acceptable to either party; but Cooke, as a supporter of Hopkins, was brought forward more prominently, and in 1768, when the rival governors concluded their amnesty and Josias Lyndon went into office as a representative of the Ward faction, Cooke was elected deputy-governor. In May, 1775, he was again elected to the same office. At the special town meeting convened in Providence, in August, 1765, to discuss the Stamp Act, Cooke was one of a committee appointed to draft instructions to the Providence deputies in the general assembly, and the patriotic spirit shown on that occasion was again manifested soon after he was elected deputy-governor a second time. Capt. Wallace, of the royal frigate *Rose*, had annoyed the commerce of the colony considerably, and in June, 1775, Cooke was instructed to write him, requesting reasons for his arbitrary and unlawful acts, and demanding the restoration of a packet detained by him. The deputy-governor's letter was imperative and its language forcible; but when Wallace replied he asked who Cooke was and if the colony was not in a state of rebellion. A few hours later an armed sloop, commanded by Capt. Abraham Whipple, captured a packet, which had been armed and used as a tender to the *Rose*, running her onto the shore of Conanicut island. "To Capt. Whipple," says Arnold, "is due the honor of discharging the first gun upon the ocean at any part of his majesty's navy in the American revolution." In October, 1775, Cooke and Sec. Ward were sent to Cambridge, Mass., as

members of a committee to make arrangements for a renewal of the Continental army, and had hardly returned home when, Nov. 7th, he was elected governor in place of the long-suspended loyalist, Joseph Wanton. It was believed that whoever became chief magistrate would, in case the British captured Rhode Island, lose his life; and it was necessary that a man of tried worth and known courage should be chosen. Says a Rhode Island historian: "Stephen Hopkins, then preparing for his journey to take his seat in congress, and Joshua Babcock, the oldest member of the house, were requested to wait on Mr. Cooke.

Both houses were waiting in solicitude for the return of their messengers. They stated the urgency of the case. Mr. Cooke pleaded his advanced age and the retired habits which unfitted him for meeting the expectations of the assembly. They replied that they considered his duty required him to make a favorable report. He finally consented, although nothing but the critical state of the country would have induced him to do so."

Gov. Cooke remained in office until May, 1778, and then, worn out by the labors and responsibilities of his position, retired. His record as a patriot was a noble one, and justifies the remark that he "was one of the most eminent public characters of which our country can boast." Soon after Washington had accepted the command of the Continental army, Gov. Cooke wrote him a congratulatory letter, assuring him of the hearty coöperation of Rhode Island; and in August, in response to a personal appeal for ammunition from Washington, he forwarded to Cambridge 1,300 pounds of lead, and soon after dispatched the greater part of a cargo of powder which a trading vessel had brought into the port of Providence. In November, 1775, he urged the Rhode Island delegates in the Continental congress to propose to that body that the manufacture of saltpetre be encouraged in order to supply the army, and stated that he himself had manufactured it with success, on a small scale.

*Nicholas Cooke*

After the British occupied Newport, and at other critical times, he fulfilled all the requirements of a prudent, farseeing and energetic officer. During his administration, on May 4, 1776, Rhode Island issued her declaration of independence; but he did not live to see his beloved commonwealth absolutely free. Gov. Cooke was appointed a trustee of Rhode Island College (Brown University) in 1776, representing the Congregationalist denomination in the corporation, and continued in office until his death. He was married, Sept. 23, 1740, to Hannah, daughter of Hezekiah Sabin, and had twelve children. The inscription on his monument says "he was honored with the friendship and confidence of Washington." Gov. Cooke died Nov. 14, 1782.

**GREENE, William**, second governor of Rhode Island (1778-86), was born at Warwick, Aug. 16, 1731, son of Gov. William and Catherine (Holden) Greene. His mother was a daughter of Benjamin, and granddaughter of Randall Holden. He was admitted a freeman of the colony in May, 1753; in October, 1774, was on a committee with Thomas Aldrich to finish the court-house in East Greenwich; and in August, 1772, was appointed by the assembly, a director of a lottery for the benefit of John Greene & Co., Griffin Greene and Nathaniel Greene & Co., whose iron-works had been burned. He was elected to the assembly from Warwick in 1773, 1774, 1776 and 1777, and was in attendance when that body repealed the act of allegiance to King George. In February, 1774, he was one of a committee to procure gold and silver coin for the expedition into

Canada. On July 18, 1776, the Declaration of Independence having been proclaimed, he was appointed one of a committee to proceed to the houses of Edward Thurston and Daniel Coggeshall, who were suspected of treason, and demand correspondence and "papers relating to the disputes between the independent states of America and Great Britain or of a political nature." In August, 1776, he was chosen first associate-justice of the superior court, Metcalf Bowler being chief-justice, and in February, 1778, succeeded the latter. On Dec. 10, 1776, a council of war was appointed, the British having taken possession of Rhode Island, and Judge Greene was one of its ten members. In May, 1777, he was elected speaker of the house of representatives, and in October, 1777, was again appointed a member of the council of war. In December, 1777, he was sent, with Jabez Bowen, to represent Rhode Island at New Haven in the convention of northern states, according to the recommendation of congress. In May, 1778, he was elected governor, to succeed Nicholas Cooke, and Jabez Bowen was elected deputy-governor. "It illustrates the simple manners as well as the physical vigor of the men of revolutionary times," says Arnold, "that Gov. Greene, although possessed of an ample fortune, was accustomed two or three times a week, during the sessions of assembly at Providence, to walk up from Warwick, or we might say from Greenwich, as he resided on the dividing line of the two towns, and home again in the afternoon." Gov. Greene remained in office until May, 1786, and during the most trying years of the war for independence. At the close of the conflict the once prosperous commonwealth was almost hopelessly prostrated. Thousands of its inhabitants had been reduced to beggary; its commerce had been ruined, its island and shore towns had been subjected to the ravages of hostile fleets and bands of Tories; its currency had depreciated; its treasury had been drained; and yet it had submitted to the heavy taxes laid upon it by congress, and had furnished its quota of men whenever

called on. Its privateers won triumphs on the ocean, and its troops, with "obstinate bravery," as Washington described them in a letter to Gov. Greene, bore the brunt of the fight at Trenton and Springfield; while at Yorktown "the first sword that flashed in triumph above the captured heights" was that of Capt. Olney, leader of the Rhode Island regiment. The historian, Dr. Henry E. Turner, characterizes the letters written by Gov. Greene during this period as showing "unwavering patriotism and eminent ability. . . . The most vivid imagination can hardly form an adequate picture of the distresses of the people. . . . Calm, strong, immovable, he passed through that cruel ordeal with a reputation for wisdom and integrity accorded to but few men, even in that period of exceptional superiority." In 1786 a party that sought to relieve the financial distress of the state by the establishment of a paper money bank gained sufficient strength to nominate a candidate for governor, and in May Gov. Greene made way for John Collins, retiring to his estate at Warwick. His wife was Catharine, daughter of Simon and Deborah (Greene) Ray, of Block Island, and great-granddaughter of John Greene, 2d, and Phebe Sayles. She bore him two sons and two daughters. His oldest son, Ray Greene, who was married to Mary M. Flagg, of Charleston, S. C., was attorney-general of Rhode Island in 1794-97, and U. S. senator in 1797-1801. The latter's son, William, was lieutenant-governor of Rhode Island in 1874-72. He died at Warwick, R. I., Nov. 29, 1809.

**COLLINS, John**, third governor of Rhode Island (1786-90), was born in Newport, June 18, 1717, and belonged to a prominent family. He was an assistant in 1776, and in September of that year was appointed, with Joshua Babcock and Joseph Stanton, Jr., deputies to convey a letter from Gov. Cooke to Gen. Washington at New York, informing him of the condition of the colony, and asking advice as to the best means of defending it. In May, 1778, he was one of the four delegates chosen to represent the state in congress; but in December, 1779, was requested not to resume his seat in that body for the present, as one representative was considered sufficient until the Articles of Confederation should be adopted. At the election in May, 1780, he was the only one of the old members returned, and he served until May, 1781, when William Ellery took his place; but was re-elected in May, 1782. In November, 1782, he went to Washington once more as bearer of a letter from the house of deputies to the president of congress, giving their reasons for rejecting the impost act. He remained at the capital and in congress until May, 1783. The state at that time was not only divided into two parties,—patriot and loyalist,—but, in addition, was distracted by questions of state sovereignty and finance. The agricultural communities were hostile to any movement tending to increase the power of the general government at the expense of the individual states and contended for paper currency, while the seaport towns and mercantile classes favored a closer union of the states and contended for specie currency. In 1786 the paper money party carried the election; Collins was chosen governor, and a paper money bank of £100,000 was made, although a numerous signed remonstrance against such a measure had been presented to the assembly some months previous. No sooner were the new bills issued than they began to depreciate, and the assembly was forced to pass an act compelling persons to receive them on the same terms as specie on penalty of a heavy fine and disfranchisement. This and similar acts were declared void by the court, and were repealed in 1787. Gov. Collins was not in office when Rhode Island entered the Union. The struggle connected with this step was severe, says Arnold, "for leading

patriots as well as the great mass of the people were at first opposed to the constitution." On Jan. 17, 1790, a bill to call a convention to decide the question passed the lower house and came to the senate, where there was a tie, owing to the absence of one of the members. Gov. Collins, giving as his reason the distressed condition of the state resulting from disconnection with the Union, cast his vote in favor of the proposed convention. This act lost him popularity, and the Anti-Federal party seized their opportunity, putting Arthur Fenner into the chair in May at the head of a coalition ticket. Subsequently Gov. Collins was elected a representative to congress, but did not take his seat. He died at Newport, March 8, 1795.

**FENNER, Arthur**, fourth governor of Rhode Island (1790-1805), was born in Providence in 1745, son of Arthur and Mary (Olney) Fenner. His grandfather, Capt. Arthur, as he came to be called, was born in England in 1622, and emigrated to Providence in the early years of the colony. He was put in charge of the garrison of seven men at Providence during King Philip's war, and held other important offices. His house, which was called "the castle," whose chief feature was its enormous chimney, remained

in greatly altered state for about 150 years. By his first wife, Mehitable, daughter of Richard Waterman, he had six children. His son, Arthur, known in history as Arthur Fenner, Jr., was a prominent citizen of Providence, and also served in the army, being appointed an ensign in one of the companies that took part in the invasion of Canada in 1759. Arthur Fenner, the governor, was one of the committee of inspection, recommended by the Continental congress and appointed by the town, which held its first meeting Dec. 24, 1774. He was clerk of the court of common pleas in Providence for many years. In March, 1790, the contest between Federalists and Anti-Federalists in Rhode Island reached its height, the long delayed convention to decide upon the adoption of the constitution having been called, and Gov. Collins having become unpopular in consequence. Deputy-Gov. Owen was offered the governorship by the Anti-Federalists, but declined to serve. "A movement," says Arnold, "was made in Providence to form a coalition party. The Newport committee united with them in proposing to Arthur Fenner, an Anti-Federalist, . . . to head a ticket upon which there should be a Federalist deputy-governor and a nearly equal number of assistants from each party. Fenner, in a modest letter to the committee, referred the subject to the freemen." The Anti-Federalists triumphed, and on May 5th the general assembly declared Fenner governor and Samuel J. Potter deputy-governor. Opposition to entering the Union was so strong, particularly in the country districts, that final action on the subject was delayed until the last week in May, and when, on the 29th, a decision was reached the vote stood thirty-four to thirty-two in favor of adopting the Constitution. "The first state to strike a blow for freedom was the last to recognize a system by which that freedom could best be preserved." During Gov. Fenner's administration a great impetus was given to commerce and manufacture and to trade with adjoining states, the tariffs that had existed having been abolished. In 1791 Providence had more vessels than New York, and Newport and

Bristol owned many. Gov. Fenner was very popular, and was continued in office, serving at the time of his death, Oct. 15, 1805. His son, James, was governor in 1807-11 and 1824-31.

**MUMFORD, Paul**, acting governor of Rhode Island (1805), was born at South Kingstown, March 5, 1734, son of William and Hannah (Latham) Mumford. He was a grandson of Thomas Mumford, and a descendant of Thomas Mumford who settled at Pettaquamscutt (South Kingstown) in 1657. His father was one of six brothers noted for their height, and popularly known as the "thirty-six foot Mumfords." He was graduated at Yale College in 1754, and then studied medicine, but abandoned that profession for the law, and settled in Newport. In 1774 he was elected to the general assembly, and served until Newport was occupied by the British, when he retired to his farm at Barrington. He was a prominent member of the council of war, and occasionally appeared with his musket. On July 7, 1777, the assembly appointed Stephen Hopkins, ex-Gov. William Bradford and Paul Mumford to attend a convention of the New England states at Springfield, Mass., to consider the question of currency and the defense of Rhode Island. In May, 1777, he was appointed judge of the court of common pleas, and a year later was elevated to the bench of the superior court, where he served until May, 1781. In 1779 he was chosen to the upper house of the general assembly, and served two years. From May, 1781, to June, 1785, he was chief-justice of the state, and again from May, 1786, to May, 1788. In 1787 the refusal of John Weeden, a butcher of Newport, to receive depreciated paper money in payment of a debt from John Trevett was followed by an appeal from the latter to Chief-Justice Mumford, who convened a special court to try the case. The constitutionality of acts of the general assembly respecting paper money was involved, and the right of the assembly to question decisions of the court was resented by the four associate judges. At the next election the paper money party gained the ascendancy and removed the associate judges, but retained Chief-Justice Mumford, who appears to have avoided committing himself. From April, 1801, to March, 1803, Judge Mumford was a state senator. On the death of Gov. Arthur Fenner, Oct. 15, 1805, Judge Mumford was appointed acting governor, but died a few weeks later.

**SMITH, Henry**, acting governor of Rhode Island (1805-06), succeeded Paul Mumford; but no other information concerning him can be obtained.

**WILBOUR, Isaac**, acting governor of Rhode Island (1806-07), was born at Little Compton, R. I., April 25, 1783. He was a descendant of Samuel Wilbour, who emigrated to Boston as early as Dec. 1, 1633, joined the Hutchinson party, and with William Coddington and others purchased the island of Aquidneck (Rhode Island), and settled at Portsmouth in 1638. He acquired considerable property in land at Portsmouth and Taunton, besides his estate in Boston, to which he returned late in life. William Wilbour, a grandson of Samuel, was one of the original settlers of Scaconnet (now Little Compton), and his descendants there are numerous. Isaac Wilbour was carefully trained in the principles of the Society of Friends, of which his parents were members. He began holding public office before he attained his majority, and in 1801 was sent to the general assembly. In 1805 he was returned, and was speaker of the house. In that year the people of the north part of Gloucester petitioned to be set off in a separate town; but the political jealousy existing between the commercial parts of the state and the agricultural districts revived, and a tie resulted,

whereupon Speaker Wilbour cast his vote in favor of the bill. The action of the senate was adverse, and in 1806, when the bill again came up, there was a tie in that body; but Isaac Wilbour was now a member of the senate, and gave the decisive vote. The petitioners were anxious to give his name to the new town, but he was unwilling, and it was called Burrillville, after Hon. James Burrill. In 1806 he was lieutenant-governor, and as there was no election that year he became governor ex-officio, and served until the following spring, when he was sent to congress, and served two years. In 1809 Francis Malbone, senator from Rhode Island, died, and ex-Gov. Wilbour was appointed by Gov. Fenner to fill the vacancy, but declined on account of the ill health of his wife. In 1818 he was appointed associate justice of the supreme court, as he had a thorough knowledge of the form and principles of law, although he was not educated a lawyer. Soon, through the retirement of Hon. James Fenner, Judge Wilbour became chief-justice, and was re-elected from 1819 to 1826, resigning in 1827. "After his retirement to private life," says one of his biographers, "he was much devoted to the interests of religion, and his voice, so often heard in courts of law and halls of legislation, was now often heard in prayer and exhortation in the Friends' meeting-house in Little Compton." Gov. Wilbour was married, May 17, 1786, to Hannah, daughter of Deacon Philip Tabor, of Westport, Mass., who bore him three sons and three daughters. He died Oct. 4, 1837.

**FENNER, James**, fifth, ninth and fourteenth governor of Rhode Island (1807-11, 1824-31, 1843-45), was born in Providence, Jan. 2, 1771, son of Gov. Arthur Fenner. After receiving a classical education, he entered Brown University, and was graduated with the highest honors of his class in 1789. Association with his father, and his own abilities, led him to enter public life early, and, as a Democrat of the Jeffersonian school, he exerted great influence in politics. For several years he represented Providence in the general assembly. In 1805 he was chosen U. S. senator, and served from Dec. 2d of that year until the spring of 1807, when he was elected governor. Through successive elections he held office until May, 1811. In 1824 he was again elected governor, and was re-elected each successive year until 1831. During the Dorr rebellion in 1842, he sided with the "law and order party"; and on Nov. 5th of that year presided over the convention, held at East Greenwich, to decide the question of submitting a new constitution to the people. This constitution, the one now in force, having been adopted, he was re-elected governor, and held office for two years. He was married in November, 1792, to Sarah, daughter of Sylvanus and Freelove (Whipple) Jenckes, who died in 1844, leaving four children: Almira, Sarah, Freelove and Arthur. In 1825 Gov. Fenner received the degree of LL.D. from Brown University. He was known as a man of "iron will, inflexible resolution, vigorous intellect and unconquerable energy," and the admiration and respect of the people of Providence and of the state at large was expressed at his funeral by "civil and military honors such as have been accorded to few if any citizens of Rhode Island." His last years were spent on his estate, named "What Cheer," where he died, April 17, 1846.

**JONES, William**, sixth governor of Rhode Island (1811-17), was born in Newport, Oct. 8, 1753, fourth child of William and Elizabeth (Pearce) Jones. His grandfather, Thomas Jones, was a native of Wales. His father, who died in 1759, entered the privateer service in the war against France, and rose to be first lieutenant of the noted vessel the Duke of Marlborough, commanded by

Robert Morris. William Jones received a fair education, and began to earn his living as a carpenter, but in January, 1776, obtained a commission as lieutenant in Babcock's (subsequently Lippitt's) regiment, one of two raised by order of the general assembly for the war of independence. Early in September he received a captain's commission, and with the regiment, under Col. Lippitt, left the state on the 14th for the relief of Long Island, joining Washington's army at Harlem Heights. Eventually the regiment was incorporated with McDougall's brigade, and formed part of the division under Maj.-Gen. Lee, until the latter was taken prisoner, when Col. Hitchcock was appointed commander. The term of this regiment was to expire on Jan. 18, 1777, but a stirring appeal from Gen. Washington induced them to volunteer for another month, although the severity of the winter campaign in New Jersey had well nigh discouraged them. The repulse of the British at Assanpink bridge on Jan. 2d was largely due to the Rhode Island troops, and at the battle of Princeton their battery was so conspicuous that Gen. Washington thanked Col. Hitchcock in the presence of the army. Capt. Jones returned to Rhode Island in February, 1777, but in February, 1778, again entered the service, this time as captain of marines on board the Providence, one of the two frigates ordered by congress to be built in Rhode Island, and commanded by Abraham Whipple. His first important service, though not of a belligerent character, was the bearing of despatches from congress to the American commissioners in Paris. In the summer of 1779 the Providence and two other ships captured ten ships, bound from Jamaica for England, off the banks of Newfoundland, and brought eight of them to Boston as prizes. On Nov. 24, 1779, the Providence, together with three frigates, sailed for Charleston, S. C., and was there at the time the British reduced the city, in the spring of 1780. The crews and guns of all the American ships but one had been sent ashore to reinforce the batteries, and Capt. Jones was one of those who were made prisoners of war. On being released on parole, he returned to Providence, where he engaged in the hardware business in connection with his brothers, and subsequently on his own account. He was admitted a freeman of Providence in 1788. After serving as a justice of the peace, he was sent, in 1807, to the general assembly, and was thrice re-elected, acting as speaker in 1809 and 1810. In April, 1811, he was elected governor by the Federalists, and held office for six years, retiring from public life when he left the gubernatorial chair. He was a man of courtly manners and of unblemished life. He was a member of the Beneficent Congregational Church; president of the American Bible Society and of the Peace Society, and a fellow of Brown University. He was married in Providence, Feb. 28, 1787, to Anna, daughter of Samuel Dumm. She bore him one child, a daughter, Harriet, who became the wife of Thomas C. Hoppin. The latter, by a special resolution of the Society of the Cincinnati, succeeded Gov. Jones as a member of that order. Gov. Jones died in Providence, April 9, 1822.

**KNIGHT, Nehemiah Rice**, seventh governor of Rhode Island (1817-21), was born at Knightville,

in the town of Cranston, Providence co., Dec. 31, 1780, son of Nehemiah Knight, who was an Anti-Federalist representative in congress from 1803 until 1808. His early life was spent on his father's farm. Although he did not receive a liberal education, his natural ability was such that he was never at a disadvantage among men who possessed college diplomas. In 1802 he represented Cranston in the

general assembly, and doubtless would have been re-elected had he not removed to Providence, where he resided for the rest of his life. He was clerk of the court of common pleas for Providence county from 1805 until 1811, being supplanted by a Federalist. During the war of 1812 he received the unsolicited appointment of collector of internal revenue for the district of Rhode Island, and retained the position until he was elected governor in 1817, at which time he also resigned the position of clerk of the circuit court for the district of Rhode Island, which he had held since June, 1812. He became chief magistrate as a result of the growth of the Anti-Federalist party, and he was successively re-elected until 1821. At that time public sentiment was adverse to free schools, and few were in existence. Gov. Knight repeatedly urged the legislature to establish a public school system, and in 1820 a committee was appointed to prepare and report a bill establishing free schools, but no report was made, and it was not until 1828 that a bill was passed committing the state to such action. In January, 1821, Gov. Knight was unanimously elected by the legislature to the U. S. senate to fill the unexpired term of Hon. James Burrill, deceased. In January, 1823, he was re-elected for a full term, and served through elections in 1828 and 1835 until 1841, owing his election the last time to the national Republican party, with which he had become identified. His course in congress reflected great credit upon Rhode Island and upon Sen. Knight himself. In 1843 he represented Providence in the convention that passed the present constitution of the state. The remaining years of his life were spent in attending to private interests and to his duties as president of the Roger Williams Bank, of which he was chosen head officer in 1817. He was married early in life to Lydia Waterman, who survived him but a few months. Gov. Knight died in Providence, April 18, 1854.

**GIBBS, William Channing**, eighth governor of Rhode Island (1821-24), was born in Newport in 1790. He was of English descent, and related to the great pulpit orator and controversialist, William Ellery Channing. Several families by the name of Gibbs emigrated to New England in the seventeenth

century, and before the middle of the eighteenth, one branch settled in Rhode Island. William Gibbs' grandfather, George, removed to New York city, but the latter's son, also named George, returned to Rhode Island. On account of his interest in and his services to science Brown University conferred upon him the honorary degree of M.A. in 1800 and Yale College the same degree in 1808. For several

years William Channing Gibbs represented Newport in the general assembly, and when advanced to the position of chief magistrate he gave equal satisfaction to his larger constituency. He was major-general of the Rhode Island militia for several years. Gov. Gibbs was married, in 1822, to Mary, daughter of Elias Kane, of Albany, N. Y., who bore him six sons and four daughters. Gov. Gibbs died in Newport, Feb. 24, 1871.

**ARNOLD, Lemuel Hastings**, tenth governor of Rhode Island (1831-33), was born at St. Johnsbury, Vt., Jan. 29, 1792, only child of Dr. Jonathan Arnold and Cynthia Hastings, his third wife. His father, a native of Gloucester, R. I., was a surgeon in the revolutionary army; served in the general assembly of Rhode Island, and was the author of the declaration of independence passed by that body in May, 1776; succeeded William Ellery in the Continental congress, where he served in 1782-84, and aided Vermont in securing her boundary rights; founded the town of St. Johnsbury on land ceded to him in return for his services, and died there in 1793. Lemuel Hastings Arnold was graduated at Dartmouth College in 1811. Among his classmates were Hon. Ames Campbell, chief-justice of New Hampshire and professor of law at Harvard College; Joel Parker, chief-justice of New Hampshire; Dr. Daniel Poor, the missionary, and Judge Ether Shepley, of Maine. In the autumn of 1811 he went to Providence, R. I., and studied law with James Burrell, Jr., the husband of his half-sister, Sally Arnold. He was admitted to the bar in March, 1814, but did not practice, having decided to engage in manufacturing business. He represented the city of Providence in the general assembly from 1826 until 1831, one year excepted, and succeeded James Fenner as governor of the state in 1831. Up to that time the governors of the state, as a rule, had been identified with commerce. During his administration, what was known as the Obey lane riot, broke out in Providence; but this he quelled in a most summary and effective manner, and it is a common saying in Rhode Island that there has never been a riot there since. During his second term, in the summer of 1832, the Asiatic cholera broke out, and caused widespread alarm among the people. All bore witness that he, by his firmness, calmness, cheerful spirit and the timely sanitary measures which he adopted, did much to allay their fears and restore tranquility. During the Dorr rebellion he served in the executive council of the state with James Fenner, Richard R. Randolph, Edward Carrington, Samuel F. Mann and Nathan F. Dixon as his associates. Having removed from Providence to South Kingston he was elected representative to congress from that district, and served one term (1845-47). Gov. Arnold was married, in June, 1819, to Sally, daughter of Maj. Daniel Lyman, who served in the revolutionary army, and Mary Wanton, great-granddaughter of Gov. Gideon Wanton. They had three sons and six daughters. She died in February, 1837, and in June, 1847, he was married to Catherine Shannard, of Washington, D. C. His oldest son, Lemuel Hastings Arnold, enjoyed the distinction of being the only soldier who was wounded in the Dorr rebellion. His son, Richard Arnold, served through the civil war, and at its close was brevetted major-general in the regular army. His son, Daniel Lyman Arnold, was a most gallant

soldier, but was killed in battle early in the war. His daughter, Sally, was the wife of Gen. Isaac P. Rodman, who was mortally wounded in the battle of Antietam. His grandson, Lemuel H. Arnold, 3d., is a lawyer of New York city. Gov. Arnold died at Kingston, June 27, 1852.

**FRANCIS, John Brown**, eleventh governor of Rhode Island (1833-38), was born in Philadelphia, Pa., May 31, 1791, son of John and Abby (Brown) Francis. He was a great-grandson of Trench Francis (uncle of the noted Sir Philip Francis), who was attorney-general of Pennsylvania from 1741 until 1755, and grandson of Trench Harris, for many years agent for the Penn family and first cashier of the Bank of North America. The father of John Francis became a resident of Providence soon after the latter's birth, but died in a few years, leaving the boy to the care of his maternal grandfather, John Brown, the leading merchant of the town. Young Francis fitted for college at the university grammar school, and then entered Brown, where he was graduated in 1808. After spending a year in the counting-house of his relatives, Messrs. Brown & Ives, he began study in the law school at Litchfield, Conn., intending to use his knowledge for private ends rather than for the public benefit. His grandfather Brown died about this time, bequeathing him a large estate, and for several years he devoted himself to the management of it. His mother died not long after, and in 1821 he went to Warwick, R. I., to live at the country-seat of the Browns, Spring Green. He represented Warwick in the general assembly from 1821 until 1829, and in 1831 was sent to the state senate. Previous to 1832 he had been a Federalist and then a national Republican, but in that year he was elected governor by a coalition of Anti-Masons and Democrats, and thereafter was allied with the Democratic party. After voluntarily leaving the governor's chair in 1838 he retired from politics; but in 1842 he was elected to the state senate as a representative of the "law and order" party. In 1844 Hon. William Sprague, U. S. senator, resigned, and Gov. Francis was chosen to succeed him. On the expiration of the term, in March, 1845, he was re-elected to the Rhode Island senate, and was annually re-elected until 1856. He exerted great political influence in the state, and he was, perhaps, as influential in connection with the cause of education. From 1828 until 1857 he was a trustee of Brown University, and from 1841 until 1854 he held the office of chancellor. Gov. Francis was married, in 1822, to Anne, only daughter of Nicholas Brown,

*John Brown Francis*

of Providence, who died in 1828, leaving two daughters. In 1832 he was married to a cousin, the daughter of Thomas Willing Francis, of Philadelphia, who, with a son and two daughters, survived him. "Gov. Francis was," says a biographer, "regarded by the people among whom he always lived with a mingled affection and respect which they have accorded to no other public man of his time." He died at Spring Green, Warwick, Aug. 9, 1864.

**SPRAGUE, William**, twelfth governor of Rhode Island (1838-39), was born at Cranston, Providence co., R. I., Nov. 3, 1799, son of William and Anne (Potter) Sprague. His father, who was the first to introduce calico-printing into America, and was as successful a merchant as a manufacturer, was a descendant of Jonathan Sprague, an able Baptist minister and speaker of the general assembly in 1703. His maternal grandmother was a Williams, and a lineal descendant of the "apostle of liberty." He received a good education, and passed from the schoolroom to his father's mills at Cranston, where

with his brother, Amasa, he acquired a thorough acquaintance with the business of manufacturing cotton cloth and printing calicoes. The sons were soon admitted as partners, and in 1836, on their father's death, assumed the style of A. & W. Sprague. Their properties in Warwick and Coventry as well as Cranston became very extensive, and they came to be the most extensive manufacturers of cotton goods in the world. As early as 1832 Gov. Sprague entered public life as a representative of Cranston in the general assembly, and from 1832 until 1835 he was speaker of that body. In 1835 he was elected to the U. S. house of representatives by the Democrats, and served from Dec. 7 until March 3, 1837, when he declined a renomination. He was then elected governor of the state. In 1842 he was elected to the U. S. senate, to succeed Hon. Nathan F. Dixon, and served from Feb. 18, 1842, until Jan. 17, 1844, when he resigned, the death of his brother throwing the whole weight of their vast business upon his shoulders. He was chosen presidential elector in 1848 on the Taylor and Fillmore ticket. He was president of two banks and of the Hartford, Providence and Fishkill railroad.

Gov. Sprague was married to Mary Waterman, of Warwick, who bore him a daughter, Susan, and a son, Byron, who, with his cousins, Amasa and William, continued the firm of A. & W. Sprague. His nephew, William, was governor in 1860-63. Gov. Sprague died in Providence, Oct. 19, 1856.

**KING, Samuel Ward**, thirteenth governor of Rhode Island (1839-43), was born at Johnston, Providence co., R. I., May 23, 1786, son of William Borden and Welthian (Walton) King. He was a grandson of Josiah King and his second wife, Mary, daughter of Maxey and Meribah (Borden) King. His maternal grandparents were John and Mercy (Greene) Walton, the latter the daughter of Samuel and Sarah (Coggeshall) Greene, of Warwick. Samuel Greene was a brother of the first Gov. William Greene, and Samuel Ward King was related also to Brig.-Gen. Nathanael Greene, and through the marriage of a cousin, Zilpha King, to Samuel Cranston, he was connected with a family which gave Rhode Island two of her colonial governors. Samuel Ward King, after a partial course of study at Brown University, studied medicine with Dr. Peter Ballou, of Smithfield, there being no medical college at that date, and on Aug. 5, 1807, received a medical diploma at Providence. While carrying on his practice, or at a time when patronage was slight, he served as cashier of the Agricultural Bank at Olneyville, R. I. In 1812, about two months after war with Great Britain was declared, a privateer schooner sailed from Providence, and seventeen days later, Aug. 20th, was captured by a British vessel, and taken to Barbadoes. The captain, first lieutenant and surgeon were paroled, and the last-mentioned, Dr. King, as the Providence "Gazette" recorded, returned to Providence on Nov. 19th. That this was Samuel Ward King is said to be proved by a parole document found among his papers after his decease. According to family tradition, however, he was surgeon on board the ships Wasp and Hornet, and was on board the latter when she captured the British sloop-of-war Frolic off the coast of North Carolina, Oct. 18, 1812, only to be captured herself a little later. Dr. King was a witness of the fight between the U. S. frigate Chesapeake and the British frigate Shannon off Boston harbor, in June, 1813, and attended Capt. James Lawrence in his last moments, having been called on board to assist the acting surgeon. In memory of that event and in honor of the gallant American commander he named his first-born

*Wm Sprague*

son James Lawrence. After the war he resumed the practice of medicine and surgery at Johnston (Olneyville). In 1820 he was elected town clerk of Johnston, and held that office until 1843, when he declined a re-nomination. Dr. King served as governor's assistant in 1839, and later in the year, as there was no election of governor or lieutenant-governor, he was chosen to act as chief magistrate. In 1840 he was elected by popular vote, and served two terms. At that time suffrage in Rhode Island, still based on the charter of Charles II., was limited to possessors of a certain amount of real estate and to their eldest sons, and thereby two-thirds of the citizens were debarred from voting. Thomas Wilson Dorr, a member of the legislature, who, as a second son, was one of the disfranchised, after attempting in vain to secure the adoption of a more liberal constitution, organized a suffrage party in 1840, and in 1842 was chosen governor by the disaffected. Gov. King, who was re-elected to office that same year under the old charter, was an advocate of reform; but when Dorr's supporters took up arms, he construed this as rebellion against the lawful government, proclaimed martial law, and called out the state troops. Dorr attempted to seize the state arsenal at Providence, but was prevented; and then, as the excitement increased, Gov.

*Jonathan King*

King appealed to the national government, which recognized him as the lawful magistrate. A last attempt at armed resistance was made by the suffragists at Chepachet, near Providence, June 25, 1842; but, realizing the hopelessness of his course, Dorr ordered his friends to disperse, and left the state, a large reward for his apprehension being offered by Gov. King. The course of Gov. King during Dorr's rebellion was wise and conciliatory, and went far toward allaying party strife. Gov. King was married at Johnston, May 20, 1813, to Catherine Latham, only child of Olney and Mary (Waterman) Angell, granddaughter of Daniel and Phebe (Olney) Angell, and great-granddaughter of Stephen and Martha (Olney) Angell. Mrs. King was born July 6, 1795, and received her middle name from an ancestress of her mother, Frances, daughter of Lewis Latham, falconer to King Charles I. Mrs. King bore her husband ten daughters and four sons, and died May 4, 1841. Gov. King died at Providence, Jan. 20, 1851, and was laid by the side of his wife in the private burial ground of the Kings at Johnston, R. I. A handsome monument, erected by their children, marks the spot. "Few men," said the writer of an obituary, "have enjoyed in their day to a greater degree the confidence of the public, and few men in their private lives have exhibited greater amiability and genuine kindness of heart."

**JACKSON, Charles**, fifteenth governor of Rhode Island (1845-46) was born in Providence, March 3, 1797, eldest child of Richard and Nabby (Wheaton) Jackson. He was fitted for college at a public school, and entered Brown University, where he was graduated in 1817. He then studied law in the office of Hon. James Burrill, and was admitted to the bar in 1820. He practiced but a short time, and then began the manufacture of cotton goods, with a small mill at Scituate in 1823. A little later

he bought the water privilege above the site of the present village of Fiskeville, built a factory, and called the village which grew up about it, Jackson. Both Jackson and Fiskeville became thriving manufacturing places, thanks to his efforts. Later he became a member of the Crompton Co., and retained an active interest in the firm almost to the time of his death. The rubber manufacturing business in Providence was started by him, a patent having been obtained from Charles Goodyear, the inventor, and after a time he united with Dr. Isaac Hartshorne, Earl P. Mason and Duty Greene to form the Providence Shoe Co. He began also the manufacture of fire-arms, opening at Bristol, but later removing the plant to Providence, where large buildings were put up and a company formed. When the demand for rifles lessened, the manufacture of locomotives was undertaken, and the Burnside Rifle Works became the Rhode Island Locomotive Works. With this corporation Mr. Jackson remained connected until forced by advancing years to give up business cares. He was often a member of the state legislature, and was a firm supporter of Gov. King in his course during the Dorr rebellion. Having shown executive ability as a representative and as speaker of the house, Mr. Jackson was elected chief magistrate in 1845. The year previous, under Gen. Fenner, Dorr had been condemned to imprisonment for life, but shortly after Jackson began his duties as governor, the general assembly passed an act discharging from prison all persons convicted of treason against the state, and this was approved by the chief magistrate. As a consequence of his action, Gov. Jackson alienated many old friends, and his personal character, as well as his administration, was bitterly attacked, but in time his course was vindicated. Gov. Jackson was noted for his genial disposition and for his skill as a story-teller. Although his ancestors had been Baptists, he was never connected with any denomination. He was, however, a believer in most of the great truths set forth in the Bible, and in his latter years was fond of studying theological topics. He was married, Nov. 20, 1827, to Catharine, daughter of Samuel Dexter, of Providence, who died at Jackson, Scituate, in June, 1832. He was again married, Nov. 24, 1836, to Phebe, daughter of Joseph Tisdale, of North Kingston, who survived him with three of their seven children. Gov. Jackson died in Providence, Jan. 21, 1876.

*Charles Jackson*

**DIMAN, Byron**, sixteenth governor of Rhode Island (1846-47), was born at Bristol, R. I., Aug. 5, 1795, eldest son of Jeremiah and Hannah (Luther) Diman. In his boyhood he attended a school kept by the rector of St. Michael's Church, Rev. Alexander V. Griswold (subsequently bishop), and was known as a devoted student. From the school-room he passed to the counting room of James De Wolf

afterwards U. S. senator, and remained in business relations with the latter until his death in 1837. Mr. Diman was identified with the chief interests of Bristol, especially with the whale fishery and manufacturing. He was at one time treasurer and afterward president of the Bristol Steam Mill; a director of the Pokanoket Mill, and for many years was president of the Bank of Bristol. From early man-

hood he took a deep interest in politics, as a Whig, served for many years in the state legislature, and in 1839 was a delegate to the convention at Harrisburg, Pa., that nominated Gen. Harrison for the presidency. When the Dorr rebellion broke out he was a member of Gov. King's council, but he marched with other volunteers to Chepachet, where Dorr's followers had gathered. On the adoption of the new state constitution in November, 1842, he was elected lieutenant-governor, and served until 1846, when, on the disruption of the Law and Order party, he was elected governor. He refused re-election, and as persistently refused to become a candidate for the office of U. S. senator, retaining official connection with the state only as commissioner of the indigent blind, deaf and dumb. He joined the Republican party on its organization, issued the call for the first meeting in its interests held in Bristol, and was an enthusiastic supporter of Pres. Lincoln. He was a student all his life, and acquired a profound knowledge of English literature, general history, and local antiquities. By his first wife, Abby Alden Wight, he had four children; by his second, Elizabeth Ann Liscomb, one child. Gov. Diman died at Bristol, Aug. 1, 1865.

**HARRIS, Elisha**, seventeenth governor of Rhode Island (1847-49), was born at Cranston, Providence co., in 1791, son of Joseph Harris, and descendant of William Harris, who emigrated to America in the ship *Lion* with Roger Williams, and was one of the original proprietors of Providence, and later of Pawtuxet. Elisha Harris was educated at the public schools of his town, and was for a time at the East Greenwich Seminary. Soon after leaving school he became book-keeper at the mills at Phoenix, then called the Roger Williams Mills. Subsequently acquiring the water privilege next above, he entered upon the manufacturing business for himself in 1822. Possessed of good mercantile habits, he succeeded in developing a considerable business, which is yet under the control and

management of his descendants. The village of his creation is a very handsome one, and is known as Harris. Although too modest to seek public office, he conscientiously accepted it, when assured that it was but duty to do so. He was lieutenant-governor in 1846-47 and governor, 1847-49. He belonged to the Whig party until its dissolution, and then became a Republican, and was a presidential elector in 1860. He was a lifelong member of the Methodist church and a liberal giver to the educational and religious institutions under its control. He was president of the Bank of North America in Providence

for many years. He was married to Sarah, the daughter of William Taylor, of Providence, who survived him for many years. Besides a son, who died in infancy, he had two daughters, Catherine G. and Eliza A. F. The former is the wife of Hon. Henry Howard, the latter and younger dying unmarried. Gov. Harris died at Harrisville, R. I., Feb. 1, 1861.

**ANTHONY, Henry Bowen**, statesman and eighteenth governor of Rhode Island (1849-51), was born at Coventry, Kent co., R. I., April 1, 1815, son of William and Mary Kinneent (Greene) Anthony. His ancestry on both sides was mostly of Quaker persuasion. He was descended from John Anthony, who came from England about 1640 and settled on Aquilonock Island, and from John Greene, one of

Roger Williams' associates and an original purchaser of Shawmut (now called Old Warwick). William Anthony was a native of Providence and a prosperous cotton manufacturer at Coventry; his wife was a daughter of James Greene, of Warwick. The son was fitted for college at Coventry and at a private seminary in Providence, and was graduated at Brown University in 1833. He then entered the office of a brother in Providence, intending to make manufacturing his business, but after five years' experience turned to newspaper work and became editor of the Providence "Journal," to which he had contributed during his college days. When, a few years later, the agitation for securing an enlargement of the suffrage divided the state, the "Journal," by supporting the "law and order" party, did much to secure its triumph. In 1840 Mr. Anthony became joint proprietor with Joseph Knowles and John W. Vose, and retained his proprietorship throughout life, the firm style becoming Knowles & Anthony in 1848, and Knowles, Anthony & Danielson in 1863. He became widely known for the vigor of his editorials, especially on political matters, for his brilliant but genial satire and for a native dignity and courtesy that made him very popular in society. He gave the "Journal," already one of the leading newspapers in New England, a still higher position in the journalistic field, and tempting offers to edit newspapers in other cities frequently came to him. In 1849 he was elected on the Whig ticket governor of his native commonwealth. So satisfactory was his record in this high office that he was returned in 1850, but declined the proffered renomination in 1851. At the first election he received a majority of 1,547, and at the second 2,760. He returned to his editorial work and devoted himself to it until March, 1859, when he took his seat in the U. S. senate as a Union Republican and as the successor of ex-Gov. Philip Allen. It was an eventful period in the history of the senate, for Jefferson Davis and other southern leaders already were inclining their hearts toward secession, and Sumner, Foster, Chandler, Henry Wilson and a few others of their stamp led the Republican minority. He was elected as a Republican, but at the same time was not openly allied with the abolitionists, and throughout the civil war he gave ardent support to the government. As a member of the committee on public affairs, he helped to create a naval force and to select its officers; he favored liberal pensions for the wounded and for widows and orphans, and he aided in framing the reconstruction measures. On the trial of Pres. Johnson he voted for impeachment. He also served on committees on mines and mining and on post-offices and post-roads, and was for eighteen years chairman of the committee on public printing, where his experience was of the greatest value in reforming the department and in diminishing its expenses. Gov. Anthony continued in the senate by repeated re-elections until his death. In March, 1863, March, 1871, and January, 1884, he was elected president *pro tem.*, but on the last occasion declined on account of failing health. He was a member of the national committee appointed to accompany the remains of Pres. Lincoln to Illinois in 1865; was one of the senators appointed to attend the funeral of Gen. Winfield Scott in 1866, and in that same year was a delegate to the Loyalist convention in Philadelphia. In de-

H. B. Anthony

bate Anthony was always noted for clearness of statement and soundness of argument. His style of oratory was eloquent and graceful, and repeatedly, upon the decease of members of the senate, he was called on to deliver memorial addresses. Among his best known oratorical efforts were his address at the completion of the equestrian statue of Gen. Greene, near the capitol, which owes its existence mainly to his exertions; speeches on the occasion of the presentation by the state of Rhode Island to the national government of this statue and that of Roger Williams, and three on Charles Sumner. He was very firm in holding to his conclusions when the question of right and wrong came under consideration, and was especially tenacious of his relation to Rhode Island, having a commendable pride in the institutions of his state and fondness for her traditions. Gov. Anthony bequeathed to Brown University about 6,000 volumes, constituting what is known as the Harris collection of American poetry. It was begun early in the century by Judge Albert G. Greene, author of the familiar ballad "Old Grimes is Dead," and was increased by Caleb Fiske Harris, who was a kinsman of Gov. Anthony. Gov. Anthony was married, Oct. 16, 1838, to Sarah Aborn, daughter of Gen. Christopher Rhodes, of Pawtucket, a descendant of Zachariah Rhodes, an associate of Roger Williams. She died in New York city, July 11, 1854. Gov. Anthony died in Providence, Sept. 2, 1884.

**ALLEN, Philip**, nineteenth and twentieth governor of Rhode Island (1851-53), was born in Providence, Sept. 1, 1785, eldest son of Zachariah and Anne (Crawford) Allen. He was one of the first in this country to engage in calico printing, and began the business in Providence about the year 1834, using wooden blocks and cloth imported from India. Philip Allen prepared for college under Jeremiah Chaplin, subsequently president of Waterville College (now Colby University), Maine, and in 1803 was graduated at Rhode Island College (now Brown University). He at once engaged in business, dealing extensively in West India products, and next turned his attention to cotton manufacture. In 1812 he built a mill on the Woonasquatucket river, about eight miles from Providence, and around this the village of Allenville (now Enfield) grew up. Later he established the Allen print-works in the northern part of Providence, and his brother, Crawford Allen, established similar works in Pawtucket. Still another brother, Zachariah, carried on the manufacture of cotton goods for many years, and became a noted inventor. During 1827-36 Philip Allen was president of the Rhode Island branch of

*Philip Allen*

of the United States Bank. He was a representative from Providence in the general assembly in 1819, 1820 and 1821, and served as one of the commissioners for the settlement of the state debt. In 1851 he was elected governor by the Democrats, and in 1852 and 1853 was re-elected, but resigned before completing his term, having been elected, May 4, 1853, to the U. S. senate. He opposed the repeal of the Missouri compromise, although he supported in general the administrations of Pierce and Buchanan. He served on the committees on commerce and naval affairs, and his personal experience gave his advice great weight in matters relating to manufactures. He was married, in 1814, to Phoebe, daughter of Benjamin Aborn, of Providence, who bore him eleven children. Gov. Allen died in Providence, R. I., Dec. 16, 1865.

**LAURENCE, William Beach**, statesman, jurist and acting governor of Rhode Island (1852), was born in New York city, Oct. 23, 1800, son of Isaac and Cornelia (Beach) Laurence. His father, who was a wealthy merchant, was descended from one of three brothers who emigrated from England in 1644 and received a patent of land on Long Island, the territory now constituting the towns of Flushing, Hempstead and Newtown. His mother's father was the Rev. Abraham Beach, for many years rector of Trinity Church, New York. William Beach Laurence entered Rutgers College at the age of twelve, but two years later became a student at Columbia College, where he was graduated with high honors in 1818. After studying law in the office of William Slosson, of New York, and at the law school at Litchfield, Conn., he spent two years (1821-23) in Europe, part of the time in the study of law in Paris. Through his father, who had been a presidential elector in 1816, he received from Pres. Monroe letters of introduction to Lafayette and Lord Holland, and through the U. S. diplomatic representatives was enabled to enter court circles. On his return to New York Mr. Laurence was admitted to the bar, and gave his attention mainly to international law. In 1826 he was appointed secretary of legation at London, under Gallatin, and in 1827 was appointed chargé d'affaires

*Wm Beach Laurence*

for the ratification of foreign treaties concluded by Mr. Gallatin. He selected the arbiter for the settlement of the boundary of the northern and northeastern frontier of the United States, and his correspondence on the subject with Lords Dudley and Aberdeen gave him a high reputation as a diplomat as well as an expounder of international law. From London he went to Paris, where, under the Rives treaty of 1821, he presented claims for indemnity for spoiliations during the reign of Napoleon in violation of the laws of nations. On his return to New York Mr. Laurence formed a partnership with Hamilton Fish, and delivered at Columbia College and before the Mercantile Library Association lectures on political economy in which he defended free trade. He promoted the construction of the Erie railroad, being on the executive committee, and was an active member of the New York Historical Society, of which he was vice-president in 1836-45. About 1845 he bought Ochre Point, at Newport, R. I., where he built a summer residence, which in 1850 became his permanent home. In 1851 he was elected lieutenant-governor, and in 1852 served as acting governor, aiding while chief magistrate in abolishing the laws for the imprisonment of debtors and in defeating the passage of the Maine liquor law by the general assembly. In 1853 he was a member of the state constitutional convention. In 1872 and 1873 he lectured on international law in the law school of Columbian College, Washington, D. C. In 1873 he increased his reputation, already great, by his argument before the British and American joint high commissioners in Washington in the case of the ship *Circassian*. The suit involved more than \$500,000, and Gov. Laurence obtained for his clients a reversal of the decision of the U. S. supreme court, the only instance of the kind known. He was an original member of the Institute of the Law of Nations, and he was the first one to receive the title of D.C.L., a degree conferred by the regents of the University of the State of New York. The degree of LL.D. was conferred on him by Brown University while

he was in Europe. Gov. Laurence was a voluminous writer. His works include a translation of Barbé Marbois' "History of Louisiana" (1830); "Institutions of the United States" (1832); "Discourses on Political Economy" (1834); "History of the Negotiations in Reference to the Eastern and Northeastern Boundaries of the United States" (1841); an enlarged edition, with annotations, of Wheaton's "Elements of International Law" (1855; new ed. 1863); "Commentaire sur les Éléments du droit International" (4 vols., 1868-80); "The Treaty of Washington" (1871); "The Indirect Claims of the United States under the Treaty of Washington, of May 8, 1871, as Submitted to the Tribunal of Arbitration at Geneva" (1872); "Belligerent and Sovereign Rights as Regards Neutrals During the War of Secession" (1873); and "Études sur la Jurisdiction Consulaire et sur l'Extradition" (Leipzig, 1880). Gov. Laurence was married in New York city, May 19, 1821, to Esther R., daughter of Archibald Gracie, a prominent merchant. One of their children, Gen. Albert Gallatin Laurence, distinguished himself during the civil war, and another, Isaac, was the Democratic candidate for governor of Rhode Island in 1878. Gov. Laurence died in New York city, March 26, 1881.

**DIMOND, Francis M.**, acting governor of Rhode Island (1853-54), was born at Bristol, Bristol co., R. I., in 1796. He went to Cuba when a young man, and thence to Hayti, serving some years as U. S. consul at Port-au-Prince. From Port-au-Prince he drifted to New Orleans, where he resided for several years, and then went to Vera Cruz, Mexico, to become U. S. consul. The knowledge he gained of the country and its politics was of great service to the U. S. government when war with Mexico was declared; and when the siege of Vera Cruz was planned he was summoned to Washington to furnish a map of the harbor, which he easily did from memory. He sailed from Havana, intending to witness the bombardment of Vera Cruz, but was shipwrecked; and, after spending two days and two nights in an open boat, arrived at his destination after the city had capitulated. He was official interpreter while the army remained in occupancy, and

was appointed collector of the port. Some years later he returned to Rhode Island to live, and was

elected lieutenant-governor for 1853-54. Gov. Philip Allen was re-elected in 1853, but not long after the opening of his third term was chosen U. S. senator, and Lieut.-Gov. Dimond succeeded him. Gov. Dimond was one of the promoters of the Southern Pacific railway, and was president of the company which had charge of its construction. He died at Bristol, R. I., in 1858.

**HOPPIN, William Warner**, twenty-first governor of Rhode Island (1854-57), was born in Providence, R. I., Sept. 1, 1807, son of Benjamin and Esther Phillips (Warner) Hoppin. His family is an ancient one, having settled in Massachusetts in 1653, migrating thence to Rhode Island a century later, and was closely related to the Cushing, Cotton, Rawson, Phillips and other old New England families. For generations the Hoppins have been distinguished for intellectual vigor and patriotism as well as for high social position. Benjamin Hoppin, grandfather of the governor, held a commission in the Rhode Island militia under George III., but resigned to enter the Continental army as a captain in Col. Christopher Lippitt's regiment. William Warner Hoppin was graduated at Yale College in 1828, on that occasion delivering the class oration by request of his fellow students, and then entered the Yale Law School. In 1830 he was admitted to the bar, and

settling in practice in Providence, steadily rose to prominence. He was elected to the common council of the city in 1838, and served about four years. In 1845 he relinquished law practice, and with his family went to Europe, where he remained two years. For five years (1847-52) he was a member of the board of aldermen of Providence, and in 1853 was sent to the state senate, where he secured the adoption of a ten-hour labor law after great opposition. He was elected governor on the Whig ticket in 1854; was re-elected in 1855 and 1856, but declining a fourth nomination, returned to the practice of his profession in 1857. He was often spoken of as a candidate for the national house of representatives, but as often refused to allow his name to be used. In 1857 he was urged to become a candidate for the national senate, but withdrew in favor of his friend, James F. Simmons. In 1858, however, he consented to stand, and in the first informal ballot of the legislative caucus received a plurality of votes, but finally was defeated by Henry B. Anthony. In 1861 he was one of the five delegates from Rhode Island to the peace congress at Washington, and made a conciliatory speech before that body. During the civil war he was active in support of the Union, both by personal influence and contributions of money; and his services were recognized in his election as honorary member of the Loyal Legion. He was president of the state branch of the National Union League, which he represented at the convention that nominated Grant for the presidency. In 1866 he was returned to the state senate; from 1867 until 1872 he was a registrar in bankruptcy, a position offered by his personal friend, Chief-Justice Chase; in 1875 he served in the state house of representatives. On ceasing to hold public office Gov. Hoppin devoted himself to private affairs and to various plans for the benefit of the public. He was treasurer of the Providence and Fishkill railroad, and was influential in obtaining the charter for its construction. He was president of the Providence Dyeing, Bleaching and Callendering Co., founded by his family, and one of the first, if not the first corporation of the kind in this country, and was connected officially with many of the business and charitable institutions of Providence. His religious connections were with the Congregationalists, and he was a member of the Beneficent Congregational Church of Providence. On the revival of the Rhode Island branch of the Society of the Cincinnati, Gov. Hoppin joined it as the representative of his grandfather. He was married, June 26, 1836, to Frances A. F. Street, of New Haven, Conn., a descendant of Rev. Nicholas Street, called by the First Church of that town, in 1656, to be its associate pastor, and sister of Augustus Russell Street, the founder of the Yale Art School. Two sons, Frederick Street and William Warner, survive their father. Gov. Hoppin died in Providence, April 19, 1890.

**DYER, Elisha**, twenty-second governor of Rhode Island (1857-59), was born in Providence, July 20, 1811, son of Elisha and Frances (Jones) Dyer. He was a descendant of William Dyer, who, with his wife, Mary, settled in Boston in 1635, and was exiled with William and Anne Hutchinson in 1637. He helped lay the foundations of Pocasset (Portsmouth); became clerk of the colony of Rhode Island, and was later commander of the naval forces sent against the Dutch. His wife, who, on revisiting Boston, was banished for succeeding the persecuted Friends, re-

*F. M. Dimond*

turned in 1660, defying the authorities, and was executed. Their grandson, John, progenitor of Gov. Dyer, was married to Freelove Williams, a great-granddaughter of the founder of Rhode Island. Gov. Dyer's father was a native of Gloucester, and at the age of ten was apprenticed to a Scotchman, John

Fitton, who carried on a commission business, which, together with a large share of his property, he bequeathed to young Dyer. The latter thereupon formed the firm of Elisha Dyer & Co., and continued the commission business until 1835, when he began the manufacture of cotton cloth at North Providence, starting the Dyerville mill. His wife, Frances Jones, was a descendant of Gabriel Bernon, one of a number of Huguenot refugees who settled in Rhode Island. Gov. Dyer was educated in private schools in Providence and Plainfield, Conn., and at Brown University, where he was graduated in 1829. He immediately became a clerk in the commission house of Elisha Dyer & Co., and in 1831 was admitted a partner. His moral principles led him to condemn the sale of liquors—one of the firm's chief sources of revenue—and he prevailed upon his father to discontinue it, regardless of consequences. On the establishment of the Dyerville Co., he became its agent, and on his father's death, in 1854, became sole owner. He carried on the business until 1867, when failing health compelled him to retire. Gov. Dyer took, or was forced to take, in response to urgent appeals from his fellow-citizens, many positions of trust. In 1835 he joined the Rhode Island Society for the Encouragement of Domestic Industry; became its secretary, and later its president, and was an honorary member from 1839 until 1878. He was a member of the Providence school committee (1843-54); president of the Exchange Bank, and director after it became a national bank (1837-79); second vice-president of the Rhode Island Art Association in 1853; member of the Windham County (Conn.) Agricultural Society, and of the United States Agricultural Society, of which he was made president in 1853; member of the Butler Hospital Corporation and of the Providence Dispensary; vice-president of the Lake Erie Monument Association; member and director of the Providence Athenæum; director of the Providence Young Men's Bible Society, and its president in 1843; member of the Rhode Island Historical Society, and one of its trustees (1845-48); member of the American Association of Arts and Sciences; president of the Young Men's Christian Association (1857-58); trustee of the Fireman's Association, Gaspé Co., No. 9; vice-president of the Roger Williams Monument Association, and chairman of the executive committee; a founder and manager of the Providence Aid Society; honorary member of the Board of National Popular Education; member of the Rhode Island Horticultural Society; director of the Plainfield and Providence railroad; originator of the Providence and Springfield railroad; one of the corporators of the Narragansett Valley railroad, the charter of which was drawn by him, and director, in 1851, of the Rhode Island Steamboat Co. Gov. Dyer was allied with the old-line Whig party until its dissolution, and then became a Republican. He was a delegate to the state Whig convention at South Kingston in 1839, and secretary of the body; delegate of the Whig jubilee and festival in New York city in 1839; chairman and first vice-president of the Young Men's Whig convention in Providence in 1840, and delegate to the similar convention in Baltimore in the same year, serving as chairman and

VOL. IX.—26,

making an address to 10,000 people. In 1840 he was elected adjutant-general of Rhode Island, and was re-elected for five successive years. During Dorr's rebellion he had almost entire charge of the plans of the state government. In 1851 the temperance party nominated him for mayor, but he was defeated; and in 1853 he was nominated for state senator, but failed of election. He was a delegate to the several Whig state conventions during the period 1851-55. In 1857 he was elected chief magistrate of the commonwealth; in 1858 was re-elected, and would have been renominated in 1859, but declined in favor of Thomas G. Turner. On the occasion of his retirement the Providence "Post," a Democratic paper, said: "It is not often that men thus voluntarily decline an honorable office, and especially when the office may be used as a stepping stone to others of still greater value and importance. . . . We have from the first looked upon him as an honorable, high-minded opponent, and a straightforward, conscientious man; and candor compels us to say that he has never failed to reach the standard we set up for him. His abilities have been equal to his official duties, and his integrity has been equal, so far as we know or suspect, to every assault which the intrigues of professed friends have made upon it. He retires from an office, which he did not seek, wholly unscathed." During the civil war Gov. Dyer's patriotism was at white heat, and he bore arms himself, as well as encouraged others to take them up. When a young man he had belonged to the 1st light infantry of Providence, and later in life he was made an honorary member of the Newport artillery company and of the Providence marine corps company. In September, 1861, he was chosen captain of the 10th ward drill company, and in May, 1862, his son, Elisha, being prevented from continuing in the service, went to Washington, where he served three months as captain of company B, 10th regiment Rhode Island volunteers. In 1863 Gov. Dyer represented the Rhode Island Society for the Encouragement of Domestic Industry at the International Agricultural exhibition, Hamburg; in 1869 he was elected president of the National Musical Congress in Boston; in 1871 he represented Rhode Island at the International exhibition in London, and in 1873 he was appointed honorary commissioner to the Vienna exposition by Pres. Grant. Gov. Dyer was a ready and interesting speaker, and made a number of addresses on education, agriculture, music, and other subjects outside of politics. He was the author of "A Summer's Travel to Find a German Home" (1864), and occasionally contributed to the press. He was a member of the Protestant Episcopal church, and in 1852 was a delegate to the diocesan convention. He was married, Oct. 8, 1838, to Anna Jones, daughter of Thomas C. Hoppin, of Providence, who bore him seven children, four of whom are living: Elisha, Anna Jones, Gabriel Bernon and William Jones. Gov. Dyer died in Providence, R. I., May 17, 1890.

**TURNER, Thomas Goodwin**, twenty-third governor of Rhode Island (1859-60), was born at Warren, Bristol co., R. I., Oct. 24, 1810, son of William and Abiah (Goodwin) Turner. His father was captain of the packet Hannah and Nancy, plying between Warren and Newport, and had as assistants his sons, William and Thomas. At the age of fourteen Thomas Goodwin entered the dry-goods store of Mr. Cahoon in Newport, as a clerk, and during spare hours educated himself by reading. Returning to his native town, he became a partner

Thomas G. Turner

of Martin L. Salisbury in the dry-goods and merchant-tailoring business, and later in the manufacture of neck-stocks. About 1860 he sold out his interest and removed to Providence, to become president of the Equitable Fire and Marine Insurance Co., and this position he retained until he died. During the Dorr rebellion he served as colonel of militia, and was in command at Acote's hill. He was a director of the Warren Manufacturing Co.; of the First National Bank of Warren, and of the Mechanic's Machine Co.; the City National Bank and the City Savings Bank of Providence, and of the Providence, Warren and Bristol Railroad Co. He represented Warren in the general assembly, senate and house for several years; twice was chosen presidential elector, and for two years (1857-59) was lieutenant-governor. Elected governor in 1859, he performed his duties with marked ability. He exhibited marked patriotism during the civil war, and he was chosen by Pres. Lincoln first collector of internal revenue for the first district of Rhode Island. He was a trustee of Brown University; a member of the board of the American Baptist Missionary Union, and an active member of the Rhode Island Historical Society. He was married, April 4, 1833, to Mary Pierce, daughter of Jonathan and Rosamond Luther, of Warren, who bore him seven children, three of whom lived to years of maturity. Gov. Turner died at Warren, R. I., Jan. 3, 1875.

**SPRAGUE, William**, twenty-fourth governor of Rhode Island (1860-63), was born at Cranston, Providence co., Sept. 12, 1830, son of Amasa and Fanny (Morgan) Sprague, the latter a native of Groton, Conn. He was educated in the schools of Cranston, East Greenwich and Scituate, and at Irving Institute, Tarrytown, N. Y. At the age of fifteen he entered the store at Cranston connected with the large cotton manufacturing and calico-printing business of A. & W. Sprague, the firm consisting of his father and his uncle, Gov. William Sprague. At the age of sixteen he removed to Providence, to enter the counting-house of the firm, and two years later became a book-keeper. Amasa Sprague died in 1843, leaving a large estate, consisting chiefly of firm property, to his sons, William and Amasa, who in 1856, on the death of their

uncle, succeeded to the management of the business, and their cousin, Byron, being a silent partner, continued the firm style. "For miles the Sprague properties extended in Warwick and Coventry, in the Pawtuxet valley, and consisted not only of the mills, but also of the villages and extensive tracts of land." They managed nine great mills in Rhode Island and Connecticut, capable of an output of 800,000 yards of cloth, and of 1,400,000 yards of printed calicoes per week, and their plant was said to be the largest in the world. The firm failed in October, 1873, in consequence of the monetary crisis of that year. Gov. Sprague engaged also in the manufacture of iron and of locomotives, and was an owner of railroads and steamships. He made several improvements in the processes of calico printing, perfected a mowing machine, and used the first rotary machine for making horseshoes. Gov. Sprague took an interest in military affairs early in life, and in 1848 joined the marine artillery company of Providence, and rose from the ranks to the position of colonel. He made the company the equal of any military force in the United States in efficiency. In 1859 he visited Europe, and made a special study of its military establishments. In 1860 he was elected

governor, and anticipating the civil war, had the infantry and artillery of the state in readiness for emergencies. He made great exertions to raise troops in response to Pres. Lincoln's call for three months' men, and offered the national government a regiment and a battery of light horse artillery. The "war governor," as he was called, went immediately to the front, and was in the first battle of Bull Run, July 21, 1861, where his horse was shot under him. He served during the Peninsular campaign, and for his bravery and his patriotic services in general was commissioned brigadier-general, but was not mustered into service, being unwilling to give up his position as governor. He was re-elected governor in 1861 and 1862, but was absent in the field most of the time, and the duties of his office were performed by John R. Bartlett. In large measure it was due to him that Rhode Island won an enviable reputation for the high character, number and bravery of the men she contributed to the Federal army. In the spring of 1863 Gov. Sprague was elected to the U. S. senate, and resigned the governorship, William C. Cozzens, president of the senate, acting in his place until the regular election in May. Gov. Sprague was a member of the committees on manufactures and on military affairs, and chairman of the committee on public lands. His term extended from March 4, 1863, until March 3, 1875, and he left congress to resume his business as a manufacturer. Brown University gave him the degree of M. A. in 1861, and he was elected one of its trustees in 1866. He was married, Nov. 12, 1863, to Catharine, daughter of Hon. Salmon P. Chase, secretary of the U. S. treasury, who bore him a son, William, and three daughters.

**BARTLETT, John Russell**, acting governor of Rhode Island (1861-62) and author, was born in Providence, Oct. 23, 1805, son of Smith and Nancy (Russell) Bartlett, of Massachusetts families. He went to school first in the Canadian cities of Kingston and Montreal, afterwards attending the academy at Somerville, N. Y. He was educated for a business life, and entered a mercantile house in his native city, which he left to enter a banking house. During the nine years that he was thus employed, he pursued his studies along various lines, and took an active interest in intellectual projects generally, being one of the founders of the Providence Athenaeum. In 1837 he gave up banking, and entered a commission house in New York city; but this failing, he soon afterwards opened, in partnership with Charles Welford, a bookstore for the importation and sale of choice foreign works. The two learned partners were authorities on almost every subject treated in the works they collected, and their bookstore soon became a popular resort for literary men. At this time Mr. Bartlett was a member of the Franklin Society of Rhode Island and the New York Historical Society, before which he occasionally lectured. Together with Albert Gallatin, he founded the American Ethnological Society, to the proceedings of which he contributed extensively. In 1847 he published an independent work on this subject, "The Progress of Ethnology," and in the following year a volume, entitled "A Dictionary of Americanisms; a Glossary of Words and Phrases Usually Regarded as Peculiar to the United States," which immediately became a recognized standard on the subject, running through four editions before 1878, and being translated into Dutch in 1854. He retired from business in 1849, and was in the next year appointed by Pres. Taylor commissioner to establish the boundary between the United States and Mexico, under the treaty of Guadalupe Hidalgo, and for the next three years, aided by experts, he made surveys and explorations, supplemented by astronomical, magnetic, meteorological, geological and botanical

*William Sprague*

observations. Owing to differences of opinion at Washington, the survey was not completed, and Mr. Bartlett returned home to publish, in 1854, the results of his experiences in a work entitled "Personal Narrative of Explorations and Incidents in Texas, New Mexico, California, Sonora and Chihuahua, Connected with the United States and Mexican Boundary Commission." This book contains a variety

of information interestingly given, which can scarcely be obtained from any other existing work. While in that region he collected material for a work on the ethnology of the Indian tribes in the states contiguous to the Mexican boundary, but this was never written. In 1855 Mr. Bartlett was elected secretary of state, and held office through successive re-elections until 1872. On the departure of Gov. Sprague for the seat of war he became by virtue of office acting governor, and served in this capacity one year. During his administration as secretary he became deeply interested in the history of Rhode

Island, and for ten years occupied himself arranging and editing the state records. The results appeared in ten volumes (1856-65), entitled "Records of the Colony of Rhode Island and the Providence Plantations," the work being brought down to the adoption of the U. S. constitution in 1792. He also published "A History of the Destruction of His Britannic Majesty's Schooner Gaspé in Narragansett Bay, June 10, 1772" (1862); "Index to the Acts, Etc., of the General Assembly of Rhode Island, 1758-1862" (1863); "Bibliography of Rhode Island with Notes, Historical, Biographical and Critical" (1864); "Memoirs of Rhode Island Officers in the War of the Rebellion" (1867). "History of the Norton Family, of Newport, R. I." (1878), and "Naval History of Rhode Island" (1880). Among other works were "Literature of the Rebellion" (1866); "Bibliotheca Americana," a catalogue of books relating to America in the John Carter Brown Library at Providence (4 vols., 1865-67); "Primeval Man and his Associates" (1868); "Genealogy of the Russell Family" (1878). Gov. Bartlett was married, May 15, 1831, to Eliza Allen, daughter of Christopher Rhodes, of Pawtuxet (Warwick), who bore him three sons and four daughters. She died in 1853, and in 1863 he was married to Ellen, daughter of Nelson S. Eddy, of Providence. He died in Providence, R. I., May 28, 1886.

**COZZENS, William Cole**, acting governor of Rhode Island (1863), was born in Newport, Aug. 26, 1811. He was educated in a well-known school kept by Levi Tower, and then entered the dry-goods store of Edward W. Lawton, who was lieutenant-governor of Rhode Island (1847-49), and continuing in the business, became one of Newport's prosperous merchants, and head of the firm of William C. Cozzens & Co. In 1854 he was elected mayor of Newport, succeeding Hon. George H. Calvert, the first to hold office under the revised charter. During his term Newport was visited by the cholera, and his efforts to improve the sanitary conditions of the city were untiring. He was sent to the lower house of the general assembly several times, and in 1861 was elected to the senate, of which, in 1863, he

was chosen president. When, in March, 1863, Lieut.-Gov. Samuel G. Arnold was elected to the national senate, to succeed Hon. James Simmons, resigned, Mr. Cozzens, by virtue of his office as president of the senate, became governor. His term was short, extending only until May, when James Y. Smith was elected to the office, but during that time he displayed great wisdom in dealing with matters of public polity. Gov. Cozzens was president of the Redmond Library several times, and was one of its directors for a number of years. About 1857 he became president of the Rhode Island Union Bank. He was influential in securing for the city the tract of land now called Town Park and in having the Old Colony railroad extended to Newport. He was a warden of Zion (Protestant Episcopal) Church for many years. He delivered an historical address in 1863 that was published under the title, "History of Long Wharf, Newport." Gov. Cozzens died at Newport, Dec. 17, 1876.

**SMITH, James Youngs**, twenty-fifth governor of Rhode Island (1863-66), was born at Popponoe Village, Groton, New London co., Conn., Sept. 15, 1809, son of Amos Denison and Priscilla (Mitchell) Smith. His father was a sea captain, but owned a farm that had been in the possession of the family since the settlement of Groton in 1650; his mother was a descendant of the famous John Alden and Priscilla Mullens. At the age of thirteen James Y. Smith left his father's farm to become a clerk in a store at Salem, Conn., of which, in three years' time, he became chief manager. He then joined his brother, Amos Denison Smith, who was associated in the lumber business with James Aborn in Providence. Amos D. Smith retired from the firm in 1828 to engage in the manufacture of cotton goods at Johnston, and in 1830 James Y. Smith formed a partnership in the lumber trade with a nephew of Mr. Aborn, under the name of Aborn & Smith. In 1837 he became sole proprietor of the business, which had grown to great proportions. In the same year he began to invest in the manufacture of cotton goods, and in 1843 disposed of his interest in the lumber business and formed a partnership with his brother, Amos, under the style of A. D. & J. Y. Smith. They bought mills at Willimantic, Conn., and Woonsocket and Providence, R. I., and in addition to manufacturing, engaged in a wholesale trade in merchandise. In 1862 Mr. Smith retired from this firm to carry on business in his own name, and after the civil war organized the James Y. Smith Manufacturing Co., and built a mill for manufacturing shirtings at Elmwood, Cranston (now a part of Providence). In 1866 and 1873 his sons-in-law, Charles A. Nichols and Gen. Horatio Rogers, were admitted to the firm, and the style became James Y. Smith, Nichols & Rogers. For several years Gov. Smith served in the general assembly, and in 1855-56 was mayor of Providence. In 1861 the Republicans nominated him for governor, but the Democrats and disaffected Republicans united to elect William Sprague. In 1864 he was again a candidate, and again was opposed, chiefly because he would not commit himself to any candidate for the U. S. senatorship, but was elected, and in 1865 was re-elected by a majority from every town and ward in the state, a case without parallel in the history of Rhode Island, and probably of any other state in the Union. Gov. Smith's course during his administration was that of a sagacious and uncompromising patriot. He contributed largely from his

*John A. Russell*

*James Y. Smith*

*Wm. C. Cozzens*

private fortune to aid the national government, and succeeded in filling all the quotas of the state by voluntary enlistment, thus avoiding the necessity of resorting to a draft. During the rest of his life Gov. Smith was in active service on behalf of his fellow citizens, on school committees, church building committees, boards of charitable societies, commissions under the city government and the like. For three years he was president of the Providence board of trade. At the time of his death he was president of a bank of discount and of two savings banks; a director in eight insurance companies, also serving as president of several, and a director of the Providence and Worcester and the New York and New England railroad companies. Few public men have been as highly honored during their lifetime or followed to the grave with as sincere lamentation by rich and poor alike. He was married, Aug. 13, 1835, to Emily, daughter of Thomas Brown, of Providence, proprietor of extensive cotton mills at Scituate. Their only son died in childhood; two daughters survived their father. Gov. Smith died in Providence, R. I., March 26, 1876.

**BURNSIDE, Ambrose E.**, twenty-sixth governor of Rhode Island (1866-69). (See Vol. IV., page 53.)

**PADELFORD, Seth**, twenty-seventh governor of Rhode Island (1869-73), was born at Taunton, Mass., Oct. 3, 1807, son of John and Mary (Heath) Padelford, and descendant of Jonathan Padelford, who came to New from Old England in colonial times. He was educated in the common schools of Taunton, and then while still a lad removed to Providence, where he entered a wholesale grocery store. Not many years later he engaged in the business for himself, and continued it for forty years, accumulating considerable wealth. In 1837-41 and

1851-52 he was a member of the city council; in 1837-41, 1851-53 and 1864-73 served on the city school committee, and in 1852-53 represented Providence in the lower house of the general assembly. He was chairman of a committee to call a meeting of citizens, March 7, 1854, to protest against the introduction of slavery into Nebraska, and was a vice-president of a meeting, June 7, 1856, to denounce the assault of Preston S. Brooks on Charles Sumner. In 1863 he was elected lieutenant-governor, and held the office for two years. He was presidential elector on the Grant ticket in 1868, and in 1869 was elected governor, serving by repeated elections until 1873, when he declined to accept further nomination. By virtue of his office he was chairman of the state board of education and chairman of the trustees of the state normal school, in whose establishment he had taken a deep interest. From May, 1873, to January, 1877, he was one of the commissioners of the sinking fund of Providence. In March, 1861, he was elected a director of the Bank of North America, and soon after president, an office held through life. At different times he was vice-president of the New England Emigrant Aid Society; director of the Providence Athenæum; president of the Rhode Island Association for the Benefit of the Freedmen; member of the Rhode Island Historical Society; member of the Providence Aid Society; trustee of the Benefit Street Ministry-at-large, and president of the corporation for five years; auditor of the Rhode Island Hospital; one of the vice-presidents of the Society for the Prevention of Cruelty to Animals, and of the Rhode Island Bible Society. Gov. Padelford was one of the founders of the Westminster Congregational (Unitarian) Society in 1828, and

was president of its board of trustees seven years. In 1869-71 he was president of the Channing Conference; in 1866-70 was a vice-president of the American Unitarian Association, and from 1870 until his death was a vice-president of the National Unitarian Conference. "Gov. Padelford," says one of his biographers, "won his way from obscurity to prominence and honor, by the exercise of prudence, industry and perseverance." In every position he filled he endeavored faithfully, conscientiously and according to his best judgment, to perform every duty which belonged to it, even to the slightest detail. This was especially manifest in his administration as governor of the state. He had, what is too often wanting in official life, the sense of personal responsibility. He was a man of great persistence of purpose, of unwearied industry, of deep convictions and good impulses. His faith in divine Providence in all the circumstances of life was unshaken, and from the beginning to the end he endeavored to illustrate with constancy the principles of religion and duty which he had cherished in his early days. He was married, Oct. 19, 1834, to Louisa Rhodes, who bore him two daughters, and again, Oct. 2, 1845, to Mrs. Mary (Barton) Pierce. Gov. Padelford died in Providence, Aug. 26, 1878.

**HOWARD, Henry**, twenty-eighth governor of Rhode Island (1873-75), was born at Cranston, R. I., April 2, 1826, son of Jesse Howard. His father was judge of the state court of common pleas and for about twenty-five years treasurer of the People's Savings Bank of Providence. He was educated at the academies at Fruit Hill, Seekonk and Smithville, and the University Grammar School, Providence. His intention of entering college was frustrated by ill health, and he went into active business life instead. Later, however, he entered on the study of law in the office of ex-Gov. Hoppin, with whom he shortly formed a partnership. He was also in partnership successively with Hon. Thomas A. Jenckes and Hon. Jerome B. Kimball. In 1858 he returned to business life, and since that time has been connected with the Harris Manufacturing Co., of which he has been president for many years, and with other enterprises. He is also a director of the National Bank of North America. Pres. Hayes appointed him one of the assistant commissioners to the industrial exposition at Paris in 1878, where he made a special study of the textile exhibits of the various countries, giving the results in a detailed report to the government. Gov. Howard entered political life in 1857, being then elected to the general assembly from Coventry, where he had taken up his residence. He was re-elected in 1858, but resigned after a few months. In 1856 and 1876 he was a delegate to the national Republican conventions, and in 1872 he was a presidential elector. In 1873 he was elected governor on the Republican ticket by a very large majority, and in 1874 was re-elected with no opposing nomination. He declined to become a candidate in 1875. Gov. Howard is a man of superior ability as a writer and lecturer, and has contributed letters of travel and other prose articles, also poetry, to the Providence "Journal" and other newspapers. He was married at Coventry, Sept. 30, 1851, to Catherine G., daughter of Gov. Elisha Harris. His children are Jessie H., the wife of Edward C. Bucklin, treasurer of the Harris Manufacturing Co.; Elisha Harris, local agent of the mills of the same company, and Charles T. Howard.

**LIPPITT, Henry**, twenty-ninth governor of Rhode Island (1875-76), was born in Providence, Oct. 9, 1818, son of Warren and Eliza (Seamans) Lippitt. He was a descendant of John Lippitt, who came to Rhode Island in 1638, and in 1647 was one of the commissioners who organized the colony under parliamentary charter. John Lippitt's great-grandsons, Christopher and Charles, served in the revolutionary army. They were among the pioneer manufacturers of Rhode Island, and, with others, organized in 1809 the Lippitt Manufacturing Co., of which Warren, son of Charles and father of Henry, became treasurer in 1840. Henry Lippitt received a good education at the academy of Kingston, R. I., and soon after removed to Warren, where he was employed for four years as a clerk. In 1835 he returned to Providence, and for three years was book-keeper for Josiah Chapin & Co., the largest cotton merchants in that city. In 1838 he and Edward Walcott became associated as Walcott & Lippitt, commission dealers in bale cotton and print cloths chiefly, with Amory Chapin as a special partner. Two years later Mr. Walcott retired and Mr. Chapin took his place as an active partner, and the firm style became Amory Chapin & Co. In 1846 Mr. Chapin died, and a younger brother of Mr. Lippitt, Robert L., was admitted to the firm. In 1848 the brothers, with their father and other capitalists, bought the large Tiffany Mill at Danielsonville, Conn., and the next year reorganized the business as the Quinebaug Manufacturing Co. From 1850 until 1853 Henry and Robert Lippitt manufactured cotton goods at Newport, in the Coddington Mill, hired for the purpose. In 1854 they purchased an interest in the Social and Harrison mills at Woonsocket, having sold their stock in the Quinebaug Co., which became Henry Lippitt's solely on his brother's death in 1858. In 1874 a new brick mill of 60,000 spindles was erected; about the same time the Globe Mill, of 44,000 spindles, was purchased, and the capital of the company was increased from \$600,000 to \$1,000,000. From the beginning Gov. Lippitt has been treasurer of the company, which, on the admission of Charles H. Merriman in 1859, became H. Lippitt & Co. From 1862 to 1866 he was a large owner in the Manville Co. Mills at Lincoln, R. I. In 1865 H. Lippitt & Co., with others, changed the cotton machinery in the Harrison Mill, and began to manufacture fancy cassimeres and overcoatings, the firm style being the Lippitt Woollen Co., the president, Gov. Lippitt, and the capital stock, \$400,000. In 1883 a new mill, the Nourse, was completed, and the three mills, now operated by the Social Manufacturing Co., have a capacity of 2,855 looms, 137,776 spindles, and employ 1,450 operatives. Their product consists of twills, sateens, fancy and cotton goods. In 1862 Gov. Lippitt acquired a controlling interest in the Silver Spring Bleachery, situated in Providence, and in 1864 organized the Silver Spring Bleaching and Dyeing Co., which now has a capital of \$500,000. Of this he is also president. Since 1838 his annual business has been at least \$300,000, and several times has reached \$4,000,000. In addition, Gov. Lippitt is president of the Rhode Island National Bank; Rhode Island Institution for Savings; Wheaton Hotel Co.; Providence Opera House Association; Dyer Street Land Co; Colonia Warehouse and Dry Dock Co. of South America, and treasurer of the Social Manufacturing Co. He was one of the organizers and the first vice-president of the Providence board of trade, and its second president for three years.

*Henry Lippitt*

Gov. Lippitt became interested in military affairs soon after returning to Providence, and in 1840 and 1842 took part in the re-organization of the Providence marine corps of artillery. He rose from subordinate positions to the rank of lieutenant-colonel, and commanded a portion of the company, then armed and drilled as infantry, through the Dorr rebellion. He aided in repulsing the "Suffragists," who attacked the arsenal; commanded the leading section, May 18, when the Dorr forces were attacked on Atwell avenue, and was conspicuous in the capture of their fort on Acote's hill in June, being the third man to enter. In 1862 he was commissioner for the county of Providence on the enrolling and drafting of men under the call of Pres. Lincoln. In 1875 he was nominated for governor of the state by the Republicans. At the state convention there was a division between those who favored Lippitt and those who claimed that his nomination was secured in advance by the advocates of a license system. The dissatisfied members withdrew, and styling themselves the National Union Republicans, passed resolutions asserting that the nomination of Mr. Lippitt for governor was secured by measures destructive to the integrity and purity of the Republican party and perilous to all its interests. Rowland Hazard, of South Kingston, was nominated for governor and Daniel E. Day, of Providence, for lieutenant-governor. The Prohibition party, failing to secure a candidate, joined with the Independent Republicans, while the Democrats nominated Charles B. Cutler, of Warren. The whole number of votes cast was 22,258, of which Hazard received 8,724; Lippitt, 8,368, and Cutler, 5,166. As a majority of all the votes cast is necessary to elect in Rhode Island, the choice devolved upon the legislature, which elected Mr. Lippitt, governor. In 1876 Gov. Lippitt was renominated, his opponents being Albert C. Howard, Prohibitionist, and William B. Beach, Democrat. The votes cast numbered 19,037, of which Lippitt received 8,689; Howard, 6,733, and Beach, 3,599, and again the choice devolved upon the legislature, with the result that the Republican candidates were seated. The Centennial exhibition in Philadelphia was held during Gov. Lippitt's administration, and he took a most commendable part in the efforts to have Rhode Island's exhibit sustain her reputation, especially in the department of manufactures. Gov. Lippitt was married, Dec. 16, 1845, to Mary Ann, daughter of Joseph Balch, M.D. She bore him eight sons and three daughters. His son, Charles Warren Lippitt, was chief of the gubernatorial staff during his service as governor, and was himself chief magistrate in 1895-97. Gov. Lippitt died in Providence, R. I., in 1891.

**VAN ZANDT, Charles Collins**, thirtieth governor of Rhode Island (1877-80), was born in Newport, Aug. 10, 1830, son of Edward and Lydia (Collins) Van Zandt. He was a grandson of Wynant Van Zandt, of New York, a member of one of the

*Charles Collins Van Zandt*

oldest Knickerbocker families, whose wife, Maria Underhill, was a native of Westchester county, N. Y., where her family owned large estates obtained by royal grant. Gov. Van Zandt's mother was the daughter of Hon. Charles Collins, of Bristol, R. I., for nine years lieutenant-governor of Rhode Island, and granddaughter of Hon. William Bradford, of Mount Hope, a lineal descendant of Gov. William Bradford, of Plymouth Colony. Charles Collins Van Zandt was educated at school in Newport and Shrewsbury, N. J., and at Tripi<sup>a</sup> College, Hartford, Conn., where he was grad<sup>u</sup>ak-

in 1851. After studying law with Hon. Thomas C. Perkins, of Hartford, and Hon. Alfred Bosworth, of Warren, R. I., he was admitted to the bar in 1853. He began practice in Newport, and for many years after 1855 was city solicitor, and meantime for two years (1855-57) was clerk of the state house of representatives. In 1857 he was elected a member of the house of representatives from Newport, and was re-elected many times. He was speaker of the house in 1858-59, 1866-69 and 1871-73. He was a member of the state senate in 1873-71, and was chairman of the judiciary committee. In 1873 he was elected lieutenant-governor, and served two years; in 1877 was elected governor by the Republicans, and served three years, declining a renomination. He took a prominent part in political campaigns; canvassed the middle states in 1864 with Gov. Morton, of Indiana, and Gov. Brough, of Ohio; was chairman of the state delegation at the Chicago convention (1868) that nominated Gen. Grant for the presidency, and held a similar position at the convention at Cincinnati that nominated Rutherford B. Hayes for the presidency. Gov. Van Zandt has been called on frequently to deliver orations and poems before assemblies of various kinds. Notable among these are the orations on the occasion of the laying of the corner-stone of the state soldiers' and sailors' monument and the semi-centennial of the Rhode Island Society for the Encouragement of Domestic Industry, and the poems delivered before the army of the Potomac and the Grand Army of the Republic at New Haven and the centennial poem before St. John's Lodge, F. & A. M., of Rhode Island, not to mention in detail a number before universities and colleges. The position of U. S. minister to Russia was offered him by Pres. Grant, but he declined. After his death a volume of his "Newport Ballads"

was published by the Newport Historical Society, as they related to the quaint characters of former days in Newport. The book was arranged by his widow. The entire edition sold at once. Gov. Van Zandt was married, Feb. 12, 1863, to Arazelia, daughter of Judge Albert Gorton Greene, of Providence, R. I. He died June 4, 1894.

**LITTLEFIELD, Alfred Henry**, thirty-first governor of Rhode Island (1880-83), was born at Scituate, Providence co., April 2, 1829, son of John and Deborah (Himes) Littlefield. As early as 1721 some of the name, descendants of Edmund Littlefield, who in 1637 emigrated from England to Massa-

chusetts, settled at New Shoreham, Block Island. Several of this branch of the family were elected to the general assembly of Rhode Island, Capt. William, whose daughter, Catharine, became the wife of Gen. Nathanael Greene, served in the revolutionary war; and the immediate ancestors of Gov. Littlefield were so conspicuous as patriots that during the revolution they were obliged to flee to the mainland. Alfred Littlefield was educated in the township of Warwick, whither the family removed in 1831, and then, at an early age, entered the Sprague mills at Warwick, where he remained until 1844. In 1845 he became a clerk in the dry-goods house of Joseph M. Davis, of Central Falls, Providence co., and also engaged in a small way in putting up skein and spool cotton. In 1851, after several years' service as clerk to his brother, George L. Littlefield, he was admitted to partnership with him, and the firm confined its business to the manufacture of thread at Central Falls. A store at Haydenville, Mass., opened in connection with their brother, Daniel G. Littlefield,

was sold to the latter in 1853. A dry-goods store at Pawtucket also came under the supervision of Littlefield Bros., but was sold in 1854. In the same year they joined the firm of David Ryder & Co., thread manufacturers at Pawtucket, and four years later purchased the entire interest, their firm style again becoming Littlefield Bros. In 1889 an incorporated company was organized, of which Gov. Littlefield was president. Their mill employed about 150 operatives, had a capacity of 7,000 spindles, and produced hosiery yarns, skein cotton and three-cord thread for spools. Gov. Littlefield was one of the incorporators of the Pawtucket Hair Cloth Co., and was one of its directors since its organization in 1861. He was also a director of the First National Bank of Pawtucket; Pawtucket Gas Co.; Royal Weaving Co., and Pawtucket Street Railway Co. Originally a Whig, he joined the Republican party on its formation, and during the civil war was a zealous supporter of the national government, and gave frequent and generous assistance to the families of soldiers. In 1864 he was appointed division inspector of the state militia, with the rank of colonel, and held office for five years. From June, 1873, to June, 1877, he was a member of the town council of Lincoln, and in 1876-77 represented the town in the general assembly. In 1878 he was elected to the state senate, and in 1879 was re-elected. In March, 1880, he was nominated for governor by the Republicans, and at the election received 10,224 votes, while the Democratic nominee, Kimball, received 7,440, and the Prohibition candidate, Howard, 5,047. As the law required a majority vote, the election devolved upon the general assembly, and he was chosen governor by a vote of eighty-two Republicans against twenty Democrats. In 1881 the total vote for governor was 16,201—Gov. Littlefield received 10,849 votes; the Democratic candidate, Kimball, 4,756; the Prohibition candidate, Allen, 253, and the Greenback-Labor candidate, 285. In 1882 the total number of votes cast was 15,523, of which Gov. Littlefield polled 10,036. In his annual message, in 1882, he advised the establishment of a state industrial school for pauper and vagrant children. He also urged that the public school system be changed so as to better fit the people for the development of the manufacturing and mechanical industries of the state. To this end he suggested the employment of thoroughly trained teachers only and the introduction of the elementary principles of physics and mechanics. During Gov. Littlefield's first term of office the state entertained as its guests the representatives of the French government who came to this country to attend the centennial anniversary of the surrender of the British forces at Yorktown. Gov. Littlefield was married, Feb. 9, 1853, to Rebecca Jane, daughter of Ebenezer and Jane (Padwell) Northup, of Central Falls, R. I., who bore him four children, of whom two sons survive. He died in Lincoln, R. I., Dec. 21, 1893.

**BOURN, Augustus Osborn**, thirty-second governor of Rhode Island (1883-85), was born in Providence, Oct. 1, 1834, son of George Osborn and Huldah (Edly) Bourn. His original American ancestor, Jared Bourn, settled in Boston about 1630, later removing to Roxbury and then to Portsmouth, R. I., which he represented in the colonial legislature in 1654-55, and finally to Swansen, Mass. In the last-named place he built a block-house that was the refuge of the inhabitants of the neighborhood during King Phillip's war. Augustus O. Bourn was educated in the public schools of Providence and at Brown University, where he was graduated in 1855, and then entered the employ of his father, who was a manufacturer of india-rubber goods and one of the first in the state to make india-rubber shoes. In 1859 he became a member of the firm, and continued in

the business until about 1864, when he founded at Bristol, R. I., the National Rubber Co. In 1867 the machinery of the Providence manufactory was transferred to Bristol and the capital consolidated. The company employed nearly 1,100 hands, and gave work to at least half of the population of Bristol. Its yearly output had a value of more than \$2,000,000. Mr. Bourn was treasurer of the company until its existence ceased in 1887, and since that time has been engaged in the rubber business in Providence, being sole proprietor of the Providence Rubber Shoe Co., which employs about 300 hands. Gov. Bourn was connected for many years with the Providence horse guards, and rose to the rank of lieutenant-colonel. In 1878 he was appointed lieutenant-colonel of the 1st battalion of Rhode Island cavalry. From 1876 to 1883 and from 1886 to 1888 he represented Bristol in the state senate. From 1877 to 1882 he was chairman of the committee on finance and a member of the judiciary committee. He was the author of the "Bourn Amendment" to the constitution of Rhode Island. In its original form the constitution limited the voting power of foreign born citizens to owners of real estate. At the session of 1887 various acts looking to an enlargement of the franchise in respect to those citizens were introduced into the legislature, and among them an act by Gov. Bourn granting naturalized citizens equal franchise rights with those of native birth, which was reported in its original form by the joint special committee, passed by two legislatures, and adopted by a vote of the people. In 1883 he was nominated for governor by the Republicans, and received 13,068 votes, his opponent, William Sprague, candidate of the Democrats and Independents, receiving 10,201, and the candidate of the Independent Democrats 726. He was re-elected in 1884 by a total of 15,936 votes; Thomas W. Segar, Democrat, received 9,592,

and the scattering votes numbered 13. In 1889 he was appointed by Pres. Harrison U. S. consul-general to Italy, and retained this responsible post until 1893. He then returned to the United States and resumed the rubber business in Providence. He is a member of numerous societies and organizations, among them the What Cheer Lodge of Masons and Calvary Commandery of Knights Templars. Before the state senate he delivered the memorial addresses on Pres. Garfield, Gen. Burnside, Hon. John F. Tobey and Henry B. Anthony; and before the citizens of Bristol, R. I., a memorial address on the

death of Gen. U. S. Grant. These, together with others of his public addresses, have been printed in pamphlet form for private distribution. Gov. Bourn was married, Feb. 26, 1863, to Elizabeth Roberts, daughter of David U. and Mary Mansfield (Wentworth) Morrill, and has three sons and two daughters.

**WETMORE, George Peabody**, thirty-third governor of Rhode Island (1885-87), was born in London, England, Aug. 2, 1846, second son of William Shepard and Anstice (Rogers) Wetmore. He is a descendant of Thomas Whitmore, a native of the west of England, who emigrated to Boston in 1635, and removed to Wetherfield, Conn., about 1640. Seth Whitmore, great-grandson of Thomas, was a deputy to the general court from Middletown, Conn., from 1586 to 1771; a magistrate of the town; judge of the county court, and one of the justices of quorum

of Hartford county. By his second wife, Hannah Francis, of Middletown, he had several children, including Seth, Gov. Wetmore's grandfather. The latter, for many years, was a lawyer at St. Albans, Vt. His wife was Nancy, daughter of Gen. William Shepard, of Westfield, Mass., brigadier-general in the Continental army and representative in congress in 1797-1803. Their son, William Shepard, was born at St. Albans in 1801, and when still very young entered the employ of two of his uncles, named Wright, merchants of Providence, and in a short time was given the position of supercargo on one of their ships. Later he went into business for himself, at Valparaiso, Chili; in 1829 retired and returned to the United States; in 1833 formed at Canton, China, the great house of Wetmore & Co.; from 1837 to 1844, was a member of the firm of Wetmore & Cryder, of New York; in 1847 retired from business with a large fortune, and removed to Newport, where he built an elegant villa. He was an intimate friend of George Peabody, the banker, for whom his son was named, George P. Wetmore was graduated at Yale in 1867,

and then studied at Columbia Law School, New York city. His life, from 1875 to 1883, was spent mainly in European travel, but during that period he lived in Newport; in 1880 was a presidential elector-at-large, and in 1881 was, by Gov. Littlefield, appointed to receive the delegates of the French republic, who, after attending the celebration of the surrender of the British at Yorktown, visited Rhode Island. His reception to Pres. Arthur on the occasion of the latter's visit to Newport in the summer of 1883 was a brilliant social event. In 1885 he was nominated for the governorship by the Republicans, and received at the election 12,563 votes, nearly 4,000 more than the Democratic candidate. In 1886 he was re-nominated by acclamation, and polled 14,340 votes against 9,944 cast for Amasa Sprague, Democrat. He was re-nominated in 1887, but dissatisfaction with their party leaders led a number of Republicans to vote the Democratic ticket, and Gov. Wetmore was defeated. He was married in New York, Dec. 22, 1869, to Edith M. Ketchum, one of a family whose residence in that city dates from 1692. They have several children.

**DAVIS, John William**, thirty-fourth and thirty-seventh governor of Rhode Island (1887-88, 1890-91), was born at Rehoboth, Bristol co., Mass., March 7, 1826. His father, John Davis, 3d, of Rehoboth, a farmer, as were all his ancestors in this country, held many places of public trust by election of his fellow-citizens and by court appointment in the settlement of estates in bankruptcy and probate. His mother was Nancy, daughter of William Davis, of Rehoboth, but not of the same family as his father. On the paternal side he is descended from James Davis, of Marlboro, Wiltshire, England, who about 1630 settled at Newbury, Mass., and in 1640 became one of the founders of Haverhill; on the maternal side he descends from John Davis, of London, who emigrated to Rhode Island in 1679, settling in Newport. His paternal grandfather, John Davis, 2d, then a lad of fifteen, assisted an uncle, Capt. Joseph Barny, in the quartermaster's department of Gen. Sullivan's army, beleaguering the British on Long Island. His father's maternal grandfather, Stephen Bullock, was captain of a company in Sullivan's army at the battle of Long Island. Subsequently he represented Rehoboth in the general court; in 1797-99 represented his district in the U. S. congress, and in 1803-05 was a member of the governor's council of Massachusetts. William Davis, of Newport, Gov. Davis' maternal grandfather, was forced to flee from Newport when the British took possession, and tak-

Wetmore Crest

Augustus D. Bourn

ing refuge in Rehoboth, he was there married to a daughter of Capt. Peleg Peck, of Swansea, who was in active service in the revolutionary army in 1776-82. Gov. Davis was educated in the public schools of Rehoboth and in a private school in Pawtucket, R. I. Being the eldest son, he was, at an early age, charged with the care of the sheep and cattle on his father's farm, later aiding in planting and harvesting and in marketing the produce of the fields. From 1844 to 1850 he was engaged in the business of mechanical masonry, teaching public schools in the winter time. The winter of 1847 was spent in Charleston, S. C., and that of 1849 in New Orleans, La. In 1850 he became a dealer in grain in Providence, and was thus engaged until 1890. He then occupied himself with the care of his own estate and with that of others committed to his charge. In 1877 he took up his residence in Pawtucket. Gov. Davis has always been a Democrat, and as such was elected a member (his first public office) of the Pawtucket town council, and its president in 1882 and 1885. He was appointed by his party an alternate delegate from Rhode Island to the national Democratic convention at Chicago in 1884, and took an active part in the nomination of Mr.

Cleveland. He was chosen a state senator by the town and city of Pawtucket in 1885, 1886 and 1893, and was appointed by Pres. Cleveland appraiser of foreign merchandise for the Providence U. S. customs district in 1886. He was elected governor of the state in 1887 and in 1890; having been for the last five years the Democratic nominee for that office, and receiving at each election, except the second, the majority vote, and in each canvass a larger vote than had ever before been polled for any candidate for the office in Rhode Island. Owing to the peculiar requirement in the state of a majority of all the votes cast to elect (otherwise the choice to be made by the general assembly), he lost the third and fifth elections, the assembly choosing the minority candidate in his stead. In 1897 he served as mayor of Pawtucket. During the civil war Gov. Davis was enrolled in the infantry, and later served in the Providence horse guards. While living in Providence he was a member of the Franklin Lyceum, and was active in the affairs of the Matheson Street Methodist Episcopal Church. He was married in 1855 to Lydia W. Kenyon, who died in 1859; again, in 1862, to Emily P. Goffe, and for the third time, in 1895, to Marietta P. Pearce. He has two daughters by his second wife.

**TAFT, Royal Chapin**, thirty-fifth governor of Rhode Island (1888-89), was born at Northbridge, Worcester co., Mass., Feb. 14, 1823, son of Orsinus and Margaret (Smith) Taft. He descends through seven generations from Robert Taft, a native of Scotland, who was one of the first settlers of Mendon, Mass., in 1680, being a selectman in the following year. His grandfather, Jacob Taft, served in the revolutionary war as a private in Capt. Joseph Chapin's Uxbridge company at the battle of Lexington; as sergeant in Col. Joseph Read's regiment at the battle of Bunker Hill. He was educated in the public schools of Uxbridge, Mass., and at Worcester Academy, and then engaged in the manufacture of cotton and woollen goods in the employ of Royal Chapin, of Providence, R. I. At the end of five years (1849) he was admitted a partner with Mr. Chapin, under the style of Royal Chapin & Co.; but in 1851 he formed an association in the same line of business with Standish Bradford, of Pawtucket. The firm thus formed continued until 1885, under the successive styles of

Bradford & Taft; Bradford, Taft & Co., and Taft, Weedon & Co. After three years of virtual retirement from active business, he purchased a considerable interest in the Coventry Co., cotton manufacturers. In addition to this interest, he is treasurer of the Bernon mills of Georgiaville, R. I., and president of the Quinnebaug Co., of Brooklyn, Conn. He was a member of the city council of Providence in 1855-56, and represented the city in the state legislature in 1880-84. At the Centennial exposition in Philadelphia in 1876 he served as a commissioner from Rhode Island. He was elected governor, on the Republican ticket, April 4, 1888, and served for one year, declining renomination on account of the pressure of his private business. He is president of the Merchants' National Bank of Providence; is vice-president of the Providence Institution for Savings; is president of the Rhode Island Hospital; is president of the Boston and Providence railroad, and is a director of the New York, New Haven and Hartford railroad. He was lieutenant and captain in the Rhode Island horse guards for several years. He was married, Oct. 31, 1850, to Mary Frances, daughter of Dr. George B. Amington, of Pittsford, Vt. They have two daughters and two sons.

**LADD, Herbert Warren**, thirty-sixth and thirty-eighth governor of Rhode Island (1889-90, 1891-92), was born in New Bedford, Mass., Oct. 15, 1843, son of Warren and Lucy Ladd. He was graduated at the high school of his native town in 1860 and entered the wholesale dry-goods house of Tucker & Taber, where he remained until July, 1861. Then obtaining a long-desired position on the staff of the New Bedford "Mercury," he soon became a valued assistant, both in the business department and as a reporter, and going to the field of war in 1862 with the 43d and 44th Massachusetts regiments, he sent back an account of their first engagement, which was published in the Boston "Journal," before the New York press learned of the battle. The first Sunday newspaper ever published in New England, outside of Boston, was an extra "Mercury," issued by young Ladd to announce the battle of Fredericksburg. His letters while he was in the army were admirable examples of what such communications should be, and journalism was deprived of one of its ablest exponents when business claimed him. In 1864 he entered the dry-goods house of White, Brown & Co. in Boston, but seven years later removed to Providence, and with a Mr. Davis, of Boston, formed the firm of Ladd & Davis, establishing a large dry-goods house on Westminster street. The firm name, after undergoing several changes, became merged into the corporate title of the H. W. Ladd Co., of which Gov. Ladd is president. He distinguished himself by his public spirit on becoming a citizen of Providence; founded the Commercial Club; became vice-president of the board of trade; president of the Rhode Island Society for the Prevention of Cruelty to Children; aided in obtaining better terminal railway facilities, and has ever shown a great interest in the militia of the state. He was one of the organizers of the Providence Congregational Club, and is a member of the Press Club, and the Hope, Squantum and Pomham clubs. From the first he has been a generous patron of Brown University, and among his gifts was an astronomical observatory, erected in 1891, in the eastern part of the city, which has given opportunity for advanced study leading to post-graduate degrees. In 1889 he was the Republican

candidate for governor. A few days before the Republican state convention met, the general assembly with the aid of Republican votes passed a resolution proposing to rescind the prohibitory amendment of 1886. As this showed a change of policy on the part of the Republicans, the resolution was strongly opposed by those of them who believed that prohibition had not had a sufficient trial, and they joined with other supporters of the amendment in forming a law-enforcement party, nominating James H. Chace. The latter received 3,597 votes; Ladd, 16,870; John W. Davis, Democrat, 21,289, and Harrison H. Richardson, Prohibitionist, 1,346. There being no choice by the people, the general assembly in grand committee voted, and placed Mr. Ladd in the chair. In his inaugural address, he urged the erection of a new state house, and was appointed by the assembly one of the commissioners to consider plans and recommend a site for it. The prohibitory amendment having been repealed, and a high license law enacted, the Republicans who left their party on that account, with others, formed a Union Reform party in 1890, and nominated Arnold B. Chace. Gov. Ladd was re-nominated, and polled 18,988 votes, against 20,548 for ex-Gov. Davis, Democrat. The Union Reform and Prohibition candidates polled 752 and 1,820 votes respectively, and the choice again devolved upon the general assembly, which elected ex-Gov. Davis. In 1891 ex-Gov. Ladd and ex-Gov. Davis were again rivals, the former receiving 20,995 votes and the latter 22,249, the general assembly deciding the issue, and seating Ladd. Gov. Ladd's administrations were acceptable to the people, and were brilliant socially, the chief events being dinners given at Newport to Pres. Harrison and ex-Pres. Cleveland. Gov. Ladd was married in Providence, May 25, 1870, to Emma, daughter of Caleb G. Burrows, a prominent merchant. She died in 1889.

**BROWN, Daniel Russell**, thirty-ninth governor of Rhode Island (1892-95), was born at Bolton, Tolland co., Conn., March 28, 1848, son of Arba Harrison and Harriet M. (Darb) Brown. His father was a thrifty farmer, and to add that he was an abolitionist is equivalent to saying that he possessed moral as well as physical courage. Russell Brown left the farm at an early age, having shown a decided aptitude for study, to enter an academy at Manchester. He continued his studies in Hartford, and then entered the employ of a hardware merchant in Rockville, Conn., whence he returned to Hartford two years later to become head salesman in a similar establishment. Within three months he formed a partnership with William Butler & Son, the style becoming Butler, Brown & Co., and in 1877 the firm of Brown Brothers & Co., as it then became, was the largest establishment of the kind in the United States. As soon as he became a citizen of Providence (1870) he began to take an intelligent and active interest in municipal and state affairs, but never allowed his enthusiasm in politics to injure his commercial relations. In 1880 he was elected to the common council, and served for four years. The Republicans nominated him for mayor in 1886, but he declined, two years later accepting the office of presidential elector. In 1892 he was elected governor, receiving 27,461 votes, and John W. Davis, Democrat, 25,433. The total vote was 54,679, the largest ever cast in the state. In 1893 he was again a candidate; David S. Barker, Jr., being the nominee of the Democrats, and Henry B. Metcalf, of the Prohibitionists. The votes for the respective candidates were 22,015, 21,830 and 3,265, and there being no choice by the people, the matter devolved upon the general assembly, and Gov. Brown was elected. At the opening of the spring session the Democrats had control of the house, and proceeded to unseat a hold-

over Republican member on the ground that certain votes cast for his rival at the election had been erroneously rejected, and another holdover on the ground of his election to the senate. Having gained a majority of the grand committee they invited the senate to join them in canvassing the returns of the election in April, and in declaring the result. This the senate declined to do, alleging that the house had acted illegally, and carried a resolution of adjournment until January, 1894. The house laid this resolution on the table, whereupon the senate informed the governor that a difference existed between the two houses as to the date of adjournment, and Gov. Brown adjourned the general assembly until Jan. 30th. The house refused to recognize the order, claiming that the senate could not adjourn for a longer period than two days until it had joined the house in grand committee for the purpose of counting and declaring the votes cast, and that the governor could not legally adjourn the assembly until the grand committee had acted. The state supreme court upheld Gov. Brown. A special election was held in November to decide on an amendment to the constitution, making election to the governorship depend upon a plurality vote, and on Dec. 4th, Gov. Brown announced its adoption by an overwhelming vote. At the January, 1894, session of the assembly, the house of representatives declared that Gov. Brown was not elected in 1893, but invited him together with the senate to meet it in grand committee, and canvass the votes cast the year previous. The senate, as before, refused, and the house declared that as this refusal was a violation of the constitution, and as certain ballots had been illegally thrown out, as claimed, the senate was in rebellion, the Republican officials were usurpers, and that a Republican form of government did not exist in the state. The Democrats, at their state convention in 1894, charged that the U. S. senatorship had been bought "in combination with an ambitious man, who having once been elected governor, has perpetuated himself in office for a year beyond the time for which he was chosen, by lawless defiance of the courts and laws, and now seeks further lease of power." The vote that year was the largest ever cast in Rhode Island. Gov. Brown polled 29,179 votes, and David S. Barker, Jr., Democrat, 22,924, the former's plurality being 6,255. Gov. Brown is a member of the Beneficent Congregational Church in Providence; of the Young Men's Christian Association, and of over thirty other benevolent, literary and social organizations. He was married at Providence, Oct. 14, 1874, to Isabel, daughter of Milton and Mary (Guild) Barrows. They have three children.

**LIPPITT, Charles Warren**, fortieth governor of Rhode Island (1895-97), was born in Providence, R. I., Oct. 8, 1846, eldest son of Henry and Mary Ann (Balch) Lippitt, grandson of Warren and Eliza (Seamans) Lippitt. He is a lineal descendant of John Lippitt, a land-holder in the Providence Plantations in 1638; in the ninth generation from Roger Williams, the founder of Rhode Island; in the seventh generation from John Cushing, judge of the superior court of judicature of Massachusetts (1728-37), and in the tenth generation from Samuel Gorton, founder of Warwick, R. I. After his graduation at Brown University, in 1865, he pursued a post-graduate course with private tutors in Providence and at Cambridge, and afterwards traveled exten-

*D. Russell Brown*

sively in America and in Europe. In 1869 he commenced business in his father's office in connection with the Social Manufacturing Co., the Lippitt Woolen Co. and the Silver Spring Bleaching and Dyeing Co. In 1871 he was elected treasurer of the Silver Spring Bleaching and Dyeing Co., and still holds that position. He was elected president of the Franklin Lyceum in 1875-76. During the term of Henry Lippitt, his father, as governor of Rhode Island (1875-77), he served as colonel and chief of his personal staff. For a number of years he was a member of the executive committee of the Providence board of trade; in 1878, 1879, 1880 was elected first vice-president, and in 1881-82 president. In 1880 he was elected vice-president of the National board of trade. During 1878-84 he served three years as secretary, two years as vice-president and one year as president of the Providence Commercial Club, declining a re-election as president. In 1880 he was elected president of the Garfield and Arthur Republican Club of the second ward, Providence. After the death of his father, in 1891, he was elected president of the Social Manufacturing Co., which office he has since held. He also succeeded his father, in 1891, as a director of the Rhode Island National Bank of Providence. In 1895 he was elected vice-president, and in 1896 president, of the bank, which position he now holds. His entire business life has been passed in connection with manufacturing enterprises conducted within the state of Rhode Island. In 1894 he was chairman of the Rhode Island Republican state convention. At various times he has served as chairman of Republican city and congressional conventions, and has always been identified with the Republican party. In 1895 and 1896 he was elected governor of the state of Rhode Island. At the Republican national convention in 1896 he was a candidate for the position of vice-president, receiving the unanimous support of his state delegation for the position. Gov. Lippitt, on the 4th of July, 1895, delivered the oration before the Rhode Island Society of the Cincinnati, of which he is a member. In February, 1896, by invitation of the Union League Club of Brooklyn, N. Y., he delivered the principal address at the meeting on the anniversary of Lincoln's birth. In May, 1896, he delivered an address upon the tariff before the Republican Club of New York city, which was afterwards printed and circulated as a campaign document in the national election of that year. In 1896, by invitation of the city of Cleveland, O., he delivered the oration on Perry's victory day, Sept. 10th of that year, at the centennial celebration of Cleveland. At the request of the national Republican committee, Gov. Lippitt delivered a number of addresses in New York, New Jersey and Pennsylvania in support of Pres. McKinley, and closed the campaign in Philadelphia before a large and enthusiastic audience. In 1897 he was elected president of the Brown University Alumni Association of Providence, and in 1898 the president of the National Association of the Finishers of Cotton Fabrics. He was married in Providence, February, 1886, to Margaret Barbara, daughter of Alexander and Charlotte Barbara (Ormsbee) Farnum, and has had six children.

**DYER, Elisha**, forty-first governor of Rhode Island (1897- ), was born in Providence, R. I., Nov. 29, 1839, son of Hon. Elisha and Anna Jones (Hopkin) Dyer. His father was governor of the state in 1857-59. He entered Brown University in 1858, but two years later went to Germany for a course at the School of Mines, Freiberg, Saxony, and at the University of Giessen, where he was graduated the same year with the degree of Ph. D. He returned to Providence in the autumn of 1860. In 1856-58 he was connected with the 1st light infantry

company, state militia, as a private; in April, 1858, being commissioned colonel and aide-de-camp on his father's staff. He was one of the first in the state to enlist when Pres. Lincoln called for three months' volunteers, and as fourth sergeant of Capt. Tompkins' battery of Rhode Island light artillery, started for Washington. On April 18, 1861, while in charge of unloading the battery at Easton, Pa., he was injured, and a few days later was overcome with heat, and was discharged on surgeon's certificate. He never fully recovered. In 1862 he was re-elected lieutenant of the marine artillery, one of the oldest military organizations, having held that position before entering the army. In May of that year the battery re-enlisted, and Lieut. Dyer desired to accompany it, but was rejected on the ground of physical disability. He was, however, appointed major by Gov. Sprague, and detailed to aid in recruiting and drilling men for the battery. On Sept. 28, 1861, he was commissioned lieutenant and commissary, Providence marine corps of artillery, and served until June 7, 1862, being then commissioned major by Gov. Sprague to fill a temporary vacancy. In 1863-66 he was colonel and aide-de-camp on the staff of Gov. James Y. Smith. In 1867 the marine artillery company was reorganized, and he entered the ranks as corporal. Two years later he was elected lieutenant-colonel, commanding the company, but in 1871 resigned. In 1872-74 he was again commander. In 1875, under a new militia law, the artillery of Rhode Island was consolidated, and he became commander of the battalion. In 1875-78 he was a member of the board of examiners of the state militia. In 1882-95 he was adjutant-general of the state, with the rank of brigadier-general. Being relieved from active duty at his own request, he was retired with the rank of brigadier-general. As adjutant-general he made many changes and improvements in the equipment of the military organizations; organized the present machine-gun battery and the naval battalion; by direction of the general assembly, corrected and completed the war records of the state, and served as the first secretary of the state board of soldiers' relief, and subsequently as a member of the board. In 1877 he was elected to the state senate from North Kingston, and served on the judiciary committee and as chairman of the committee on militia. In 1878 he was appointed by a convention of militia officers one of a commission to report a new militia law to the general assembly. In 1877 Gov. Van Zandt appointed him a member of the joint select committee on the reception of Pres. Hayes and his cabinet. In 1878-83 he was a member of the state board of health for Washington county, in which North Kingston, one of his places of residence, is situated. In 1880-81 he was a representative to the general assembly from the fourth ward of Providence. In 1888-97 he was a member of the school committee of Providence. In 1890-92 he served on the board of aldermen. For several years

he was a member of the financial committee of the Rhode Island Society for the Encouragement of Domestic Industry. Since 1870 he has been a director of the Union Bank and of the Union Savings Bank of Providence. He was elected governor on the Republican ticket in 1897, 1898 and 1899, on the second occasion polling the largest plurality ever given any candidate for the office. He is a chemist by profession, and has applied his knowledge in various branches of manufacture, in

*Elisha Dyer*

which from time to time he has been engaged. Gov. Dyer is a member of St. John's Lodge, F. and A. M.; Royal Arch Chapter; St. John's Commandery; Aleppo Temple of the Mystic Shrine, and of the Ancient Scottish Rite. He is a comrade of Rodman Post, G. A. R.; of A. E. Burnside Camp, of Sons of Veterans, and the Massachusetts Commandery, Loyal Legion. He is a member of the Hope and Squantum clubs, Providence Athletic Association, and of the University Club, New York city. Gov. Dyer was married in Providence, Nov. 26, 1861, to Nancy Anthony, daughter of William and Mary B. (Anthony) Viall. They have three sons: Elisha, Jr., of New York; George R., major of the 12th New York volunteers in the Spanish-American war, serving throughout the entire campaign in Cuba, and Hezekiah Anthony, an artist of Providence.

**NEILL, Edward Duffield**, clergyman and educator, was born in Philadelphia, Pa., Aug. 9, 1823, son of Henry and Martha R. (Duffield) Neill. After passing through the sophomore class of the University of Pennsylvania, he entered Amherst College, where he was graduated in 1842. He spent one year at Andover Theological Seminary, and completed his theological studies under the supervision of Rev. Albert Barnes and Dr. Thomas Brainerd, of Philadelphia, being licensed to preach in 1847 by the presbytery of Galena, and ordained in the spring of 1848. He first preached to the lead miners at a hamlet near Galena, Ill., but having learned that a new territory was to be formed north of Iowa, he proffered his services for that field, and on April 23, 1849, arrived at the then struggling settlement of St. Paul, Minn. He held services first in the school-house, and during the following summer in the one hotel of the town, the Central House, which was also used as a temporary capital. By September the first Protestant church building in St. Paul was completed by Dr. Neill, and in November he organized the First Presbyterian Church. By request, he delivered the first annual address on Jan. 1, 1850, before the Minnesota Historical Society, of which he was subsequently secretary for about ten years and contributor of numerous articles to the five printed volumes of its historical collections. During 1851-53 Dr. Neill was first territorial superintendent of instruction, and, by his efforts, in February, 1853, a charter was obtained for the Baldwin School. Later he occupied several months in developing its boys' department, now known as the preparatory department of Macalester College. In 1854 he resigned his position as pastor of the First Presbyterian Church, but continued his ministrations for a part of the next year, then becoming minister-at-large for the city, with the object of advancing the general interests of Christianity. On Dec. 24, 1855, he organized the House of Hope of the Presbyterian church, and continued its pastor until 1860. He prepared some of the most important sections of the city board of education charter which was passed by the legislature in 1856; was elected an inspector from the ward in which he lived, and later made secretary, a position which he held for several years. After Minnesota's admission to statehood, in 1858, Dr. Neill was elected chancellor of the state university. Finding it embarrassed by a heavy debt, he prepared a communication to congress asking for an additional grant of land, which, after several years, was obtained. He also secured the passage of a charter by the legislature of 1860, providing for the selection of five regents by the governor. By a bill passed in the same year, the chancellor of the university was made ex-officio superintendent of public instruction, and the double office was at once conferred upon Dr. Neill. Early in 1861 he endeavored to create a department of applied science, in

the hope that its expenses might be met by private subscription. By his encouragement, David B. Reid, M.D., an eminent chemist, who had been president of the Royal Medical Society of Edinburgh, delivered the first course of scientific lectures, which, however, were interrupted by the outbreak of the civil war. As state superintendent, in 1860 Dr. Neill cordially cooperated with Dr. J. D. Ford and others in establishing the first normal school at Winona. In April, 1861, he enlisted as chaplain of the 1st Minnesota regiment, and after the army of the Potomac rested at Harrison's Landing on the St. James river, Dr. Neill was appointed hospital chaplain, and was assigned to South Street Military Hospital, Philadelphia. He resigned the chaplaincy in January, 1864, and next month was appointed to arrange the correspondence of Pres. Lincoln, and, as his secretary, to sign land patents. He remained on duty at the president's house after his assassination. When Pres. Grant was inaugurated he was nominated consul at Dublin and its dependencies, and confirmed by the senate, but after about two years he resigned, and returned to Minnesota with the determination of building up a college for young men upon a broad Christian basis. A large vacant stone edifice, built for a hotel, and owned by the late Charles Macalester, of Philadelphia, he leased for \$100 monthly, and began to develop his plans to reorganize the College of St. Paul, founded in 1854. The result was Macalester College. Before Mr. Macalester's death, after correspondence with Dr. Neill, a codicil to his will was arranged, by which the building, upon certain conditions, should become the property of trustees, appointed by Dr. Neill, to carry out the plan of a Christian, but not a sectarian, institution. After a few years, the enterprise being sufficiently established, Dr. Neill resigned the presidency, to take effect as soon as \$30,000 were raised toward the endowment of the president's chair. It was not until 1884 that a successor was chosen, however, and then, by agreement with the trustees, before retiring from the presidency, Dr. Neill remained in the faculty as senior professor in history, literature and political economy, also college librarian. In the hope that in years to come the Reformed Episcopal church would be a home for many who preferred a liturgy in public worship, Dr. Neill in 1874 united with the few under Bishop Cummins, who organized a church protesting against the growing sacerdotalism and sacramentarianism in the Protestant Episcopal church. For a number of years he was pastor of Calvary Reformed Episcopal Church, St. Paul, but before his death returned to the Presbyterian fold. Dr. Neill was the author of many magazine and review articles and several books, which are much valued by advanced historical students: "A History of Minnesota" (1858); "Terra Marie; or, Threads of Maryland Colonial History" (1867); "Virginian Company of London" (1868); "English Colonization of America" (1871); "Founders of Maryland" (1876); "Virginia Vetusta, the Colony Under James I." (1885); "Virginia Carolorum" (1886), and "Concise History of Minnesota" (1887). The degree of D.D. was conferred on him by Lafayette College. He was married, in October, 1847, to Nancy, daughter of Richard Hall, of Worcester county, Md. They had five children. Dr. Neill died in St. Paul, Minn., Sept. 26, 1893.

*Edward Duffield Neill*

**MUNKITTRICK, Richard Kendall**, author, was born in Manchester, England, March 5, 1853, son of Richard and Augusta (Thorburn) Munkittrick. His father was Irish and his mother an American of Scotch parentage. While still an infant he removed to America with his parents, and was educated in private and public schools. His taste for poetry and literature was early developed, and in 1875, after trying several uncongenial occupations, he determined to adopt the profession of a writer, to which he has since devoted himself with success and acceptance. Since 1877 he has contributed occasional verse to the leading magazines, writing in both serious and comic vein. He has issued several books: "Farming" (1891); "The Moon Prince" (1893); "The Acrobatic Muse," humorous verses (1897), and "The Slambangase" (1898). Mr. Munkittrick has made gradual progress in the literary field, but his success is assured. He is one of the gentlest and most retiring of men, but his literary productions have attained recognition for their high order of merit. He was married, July 5, 1883, to Jeanne A., daughter of Maledon and Mary (Grant) Turner.

**VAUGHAN, Elbert Hunter**, founder and first president of Soule College, Kansas (1894- ), was born on a farm near Bristol, Tenn., Jan. 9, 1849, son of Kennolly Greene and Rachel Anderson (Butler) Vaughan. His father was a farmer and a son of Rev. John Vaughan, a Methodist minister, who was for twenty years sheriff of Grayson and Carroll counties, Va.; his mother was a daughter of Capt. William Butler, of Tennessee, distinguished in the war of 1812. The first of the family in America was his great-grandfather, John Vaughan, of an English family closely related to Cardinal Vaughan, and he settled in Virginia toward the end of the eighteenth century. Elbert H. Vaughan was an active and industrious boy, but when nine years of age a protracted over-exertion brought on hemorrhage of the lungs and spinal trouble, so that for years he could not walk without crutches, and was very delicate. In spite of this he was obliged to assist in the farm work, his father being very poor, until having almost unaided acquired a rudimentary education, he was able,

by teaching in a country school, to pay a man to take his place on the farm. By this time, although still delicate, he had somewhat improved in health. In 1870 he walked 100 miles to college; obtained employment with a farmer to pay for his board; entered King's College, and afterwards the East Tennessee Wesleyan University. He was graduated there in 1875; at Drew Theological Seminary in 1878, and later in post graduate university work, receiving successively the degrees of A. B., A. M., B. D., Ph. D. and D. D. While studying he also engaged in teaching, preaching and other employments to earn his expenses. He was afterwards nine years in the Virginia

conference, holding the office of secretary for seven years, and after filling pastorates at Hillsborough, Manassas and Norfolk, was for four years presiding elder on the Roanoke district; while there he established Roanoke Seminary, and left it out of debt. At the same time he repaired old churches and built new ones, until the value of church property in the district was increased sixty-five per cent., and clear of debt. Removing to the state of Kansas in 1887, he was pastor of Trinity Church at Winfield for three years; was afterwards vice-president of the Southwest Kansas College in that city, and in 1893 removed to Dodge

City to take charge of the First Methodist Episcopal Church. As at that time there was no institution for higher education in a territory 400 miles square, of which Dodge City was the centre, Mr. Vaughan made strenuous efforts to establish one. Through his instrumentality, Hon. Asa T. Soule, a prominent Presbyterian layman of Rochester, N. Y., donated \$52,000 to purchase a campus of forty acres and erect

suitable buildings. He further promised to endow the institution suitably, but his untimely death in 1895 left it literally penniless. Soule College was opened in September, 1895, with Dr. Vaughan as first president. He served the first three years without salary, and in addition made large contributions to its support. As a result of his efforts the institution is free from debt, and is rapidly advancing to prominence among the Methodist colleges of the Southwest. It has an able faculty; offers courses in classics, science and philosophy, and is attended not only by natives of Kansas, but students from other states, and from foreign countries. Dr. Vaughan has also been partially instrumental in establishing a Methodist seminary at Nagasaki, Japan, and aided in establishing the Grant Memorial University at Chattanooga, Tenn. He was a delegate to the general conference of the M. E. church in 1884, and was appointed by the board of bishops a delegate to the centennial conference, Baltimore, Md., in 1886. He was married, Aug. 15, 1883, to Emma Virginia, daughter of John and Mildred Blanche (Lee) Tennyson, of Brooklyn, N. Y. Her father was a near relative of Lord Tennyson, and her mother, a niece of Gen. Robert E. Lee. She is secretary of the college, head of the music department, and an efficient helper in conducting the institution.

**ROSECRANS, Sylvester Horton**, first R. C. bishop of Columbus, O. (1868-78), was born at Homer, Licking co., O., Feb. 5, 1827, son of Crandall and Johanna Rosecrans. The family, of Dutch origin, emigrated to this country from Amsterdam, and settled in Pennsylvania, near Wilkes-Barre. The name was originally spelled Rosenkrantz. The parents of Sylvester Horton were Methodists, and came to Ohio from Pennsylvania, where he was sent to Kenyon College. While at this institution, his brother, who was at West Point, became a convert to the Catholic religion, and wrote to Sylvester to this effect, giving the reasons for his conversion. He followed the train of thought thus suggested, and the result was that he also became converted. He was received into the Catholic church in 1845, and left Kenyon, and entered St. John's College, Fordham, where, in 1846, he was graduated with distinction. Mr. Rosecrans decided to become a priest, and was sent by Bishop Purcell to the College of the Propaganda, Rome, for his theological studies. He stood high in the college, and won the honors of the institution, a doctor's cap. In 1852 he was ordained

E. H. Vaughan

a priest at Rome, and after traveling through Europe returned to his native country to devote himself to the missions in Ohio. Dr. Rosecrans was first stationed at St. Thomas' Church, Cincinnati, and afterwards made one of the assistant priests at the cathedral, and also filled a chair in the theological seminary. In 1859 Archbishop Purcell opened a college in connection with the seminary, of which he appointed Dr. Rosecrans president. He remained in this position until the outbreak of the civil war, when the college was closed. Dr. Rosecrans was appointed coadjutor to Archbishop Purcell in 1862, and was consecrated in the Cincinnati cathedral by that prelate, Aug. 15th, under title of bishop of Pompeiopolis and auxiliary of Cincinnati. For the subsequent six years he assisted Archbishop Purcell, and on March 3, 1868, was appointed first bishop of Columbus, O. This diocese then comprised the territory of Ohio south of 40° 4', and lying between the Ohio and Scioto rivers, as well as the counties of Franklin, Delaware and Morrow. There were forty churches and forty priests in the diocese, and about 40,000 Catholics. Bishop Rosecrans at once assumed administration of his see, and took active measures for promoting the affairs of the diocese. He built new churches, established schools, and greatly augmented the number of his clergy. In 1871 he erected St. Aloysius' Seminary for young men. He never ceased to perform the work of a parish priest, visited the schools frequently, was confessor for the Sisters of the Good Shepherd and the Sacred Heart, and believed the proper place of a bishop was in his see, laboring for the welfare of his flock, and, as Bishop Foley said of him, "he loved his diocese, and was seldom heard of as absent from it." His biographer says of him: "No inconvenience, no trouble, no suffering, no illness that could be overcome was ever allowed to interfere with his daily work or disarrange any appointment. Punctuality and exactness in the

work of the ministry were distinguished traits of his whole career. He was a manly example of the frank, open and just character of the American citizen." Bishop Rosecrans was twice elected president of the Alumni Association of St. John's College, Fordham, and in 1874 delivered the first annual address. His crowning work was the building of St. Joseph's Cathedral, at a cost of \$220,000. He received some censure for the means adopted to raise funds for its erection, and had he lived to take his seat in the third plenary council of Baltimore, he would doubtless have united with his colleagues in enacting the decree which now condemns such methods of procuring money. On Oct. 20, 1878, the cathedral was dedicated with much solemnity, a large number of prelates from a distance taking part in the ceremonies. Bishop Rosecrans had been unwell for some time, but was unremitting in his labors, and on the afternoon of the day the cathedral was dedicated, as the congregation was assembling for vespers, he was seized with a hemorrhage from the lungs, and died in a few hours. His death occurred at Columbus, O., Oct. 20, 1878.

**WATTERSON, John Ambrose**, second R. C. bishop of Columbus, O. (1880-99); was born at Bairdstown, Pa., May 27, 1844, son of John Sylvester and Sarah Salome (McAfee) Watterson. His paternal ancestors came from the Isle of Man in 1762; they were Episcopalian in faith. His great-grandfather, John Watterson, settled near Abbotstown, Pa., where

he was married to Catherine Spes, a Presbyterian. They had one son, John, born in 1774, who by their death from yellow fever was left an orphan at seven years of age. Being taken in charge by a Catholic family named Eck, he was brought up by them in that faith, and was married to one of the daughters. The bishop's ancestors were pioneers of Catholicity in western Pennsylvania, and his father's house in Blairsville was the stopping place for missionaries. So famed was this house for its hospitality to the clergy that it was humorously known in the vicinity as "The Priest's Hotel." He conceived his first desire to be a priest while listening to the experiences of these hard-worked missionaries, and this ambition was further strengthened by the interest and influence of Father Jacob A. Stillinger, pastor of the Church of Saints Simon and Jude, and director of the parochial school in Blairsville, where John received his early education. His mother, one of those strong, earnest, self-sacrificing women, had great influence on her son's life. After four years' study, under the Benedictines at St. Vincent's College, he entered Mount St. Mary's College, Emmitsburg, Md., at the age of seventeen, and was graduated in 1865 with highest honors and with the degree of B.A. After his ordination by Rt. Rev. Michael Donmenc, Bishop of Pittsburg, in St. Vincent's Abbey, Aug. 8, 1868, he accepted a professorship at Mount St. Mary's College. Here in time he became pastor of the parish church, vice-president of the college, and after the resignation of Rev. John McCloskey, in 1878, he was unanimously chosen its president. In 1879 he received the degree of D.D. from the faculty of Georgetown College. During these years Dr. Watterson was known over the country as a scholar and an orator. In March, 1880, he was appointed bishop of Columbus, and was consecrated in that city Aug. 8, 1880. His affability and ready courtesy made him a favorite with his people, and in 1893, at the silver jubilee of his ordination, the citizens of Columbus, irrespective of creed, tendered him a banquet, at which Gov. McKinley was present and delivered an address. The bishop was a strenuous opponent of the liquor traffic, and his advanced position and famous edict in 1894 "withdrawing his approbation from every Catholic society, or branch, or division thereof, in the diocese that has a liquor dealer or saloon-keeper at its head, or anywhere among its officers, and suspending every such society itself from the rank and privileges as a Catholic society until it ceases to be so officered," and also commanding his priests "if there are saloon-keepers in your parish who call themselves Catholics and yet carry on their business in a forbidden or disedifying way, or sell on Sunday either openly or under any sort of guise or disguise, in violation of civil law, and to the hurt of order and religion and the scandal of any part of the community, you will refuse them absolution unless they promise to cease offending," were strongly commended by the right-thinking people of the entire country. This decree was promptly appealed from to Monsignor Satolli, the papal ablegate, but the bishop was immediately sustained, and always insisted upon the enforcement of the decision. Bishop Watterson took great interest in all educational movements. His force of character, his great ability and learning, and his distinguished appear-

*J. A. Watterson*

*John A. Watterson*

ance and episcopal bearing were everywhere recognized, won him hosts of friends among members of all denominations and made him a power and a leader. He died in Columbus, O., April 17, 1899.

**DOLBEAR, Amos Emerson**, physicist, teacher and inventor, was born in Norwich, Conn., Nov. 10, 1837, son of Samuel and Eliza (Godfrey) Dolbear, the former a native of Hancock, Vt.; the latter a native of Newport, R. I. His father was a paper manufacturer in Norwich. Amos Emerson, of New Hampshire, a great-great-grandfather, was a leader in the wars with the Indians, and also served in the revolutionary war. The parents of Amos Dolbear died when he was a child, and he was brought up by distant friends on a farm in New Hampshire.

At the age of sixteen he began work in a pistol factory in Worcester, Mass., and became expert in a short time. In 1855 he accompanied some acquaintances to the West, and settled in southwestern Missouri, where for four years he taught school. In 1859-62 he worked in Mason's locomotive works, Taunton, Mass., where he finished his apprenticeship; in 1862-63 taught school at Milford, N. H.; in 1866 was graduated at Ohio Wesleyan University, Delaware, O., and received from that institution, in 1869, the degree of A.M. He then took a course in mining engineering at Michigan University, receiving the degrees of A.M. and M.E. in 1867; the degree of Ph.D. in 1883.

In 1867-68 he was assistant professor of natural history at Kentucky University; in 1868-74 was professor of physical science at Bethany College, West Virginia. In 1874 he became professor of physics and astronomy at Tufts College, Massachusetts, and still (1899) holds that position. In 1853 he invented the string telephone, and in 1864 the electric writing telegraph, which was improved in 1879. The latter was described in the "New England Journal of Education" and the "Journal of the Telegraph" in 1880. The model was left at the Western Union office in New York city; was judged to have no commercial value, and was destroyed there soon after. Gray's telautograph is a modification of this invention. A modification of this, for talking, was invented in 1864, and was called a "talking machine," but the model was lost and the scheme forgotten until 1876, when he revived it and made an instrument which in principle was the same as what is now called the Bell telephone. The model, completed in September, consisted of a straight bar permanent magnet, with a vibrating armature of thin iron to talk against and to listen to. It did not depend upon a battery for either transmitting or receiving speech. Bell's telephone, exhibited at Philadelphia in July, 1876, employed an electro-magnet and required a battery, which he continued to use until the following winter. On Jan. 30, 1877, a patent for the permanent magnet telephone was issued to Bell, whereupon Prof. Dolbear, although he had never patented his device, contended that the invention was his, and appealed to the Western Union Telegraph Co., which adopted his claim, had a patent application drawn for it, and with some other inventions began to do work in New York. This made it needful for the Bell Co. to combine with the Western Union. Prof. Dolbear's claim was never adjudicated, but the Western Union paid him for the invention. He then invented the static telephone (1879), radically different from the other in structure and principle. The electrical conditions for working one were inoperative in the

other; the only similarity was that they both employed electricity. An injunction was issued by the Bell Co., and the case dragged in the courts for six years, when the supreme court decided that Bell had not patented a device, but a new principle—the electric transmission of speech—and that Prof. Dolbear was an infringer. On one occasion, while working with the static telephone, he found that he was not connected with the transmitter wire, yet could hear as distinctly as though with the usual connections. He found he could hear fifty feet away, though insulated as perfectly as possible. This was followed by the invention of a special receiver without means for connecting to any circuit; that is, without wires in the ordinary sense. The waves from the transmitting device, scattering in every direction, enabled as many persons to hear as could be provided with suitable receivers within the limits of the energy employed. The patent office refused his application for a patent for telegraphing without wires, made in 1882, on the ground that it was "contrary to science and would not work." Finally, in 1886, a patent was allowed. Meanwhile experiments were continued. The transmitter contained an induction coil and a Morse key in its primary circuit. The secondary of the induction coil had one terminal in the earth, the other in the air for discharge. The air wire was sometimes attached to a gilt paper kite flying four or five hundred feet high, and the receiver gave loud responses to the Morse signals anywhere in the range of several hundred feet. The idea in this work was that having two similar automatically acting induction coils at any assignable distance apart, each one provided with a Morse key, and permitting each coil to discharge its secondary into the earth and air, the one positive, the other negative, there would be an earth current between the two, and not elsewhere, the aerial wires and waves from them would enable one to hear at one coil the particular signals made at the other. Prof. Dolbear read a paper on "Telegraphy Without Wires" at the meeting of the American Association for the Advancement of Science at Montreal in 1882. His work in that year demonstrated the existence of electric waves in space, though the waves were long ones,  $\frac{1,400,000}{46}$  miles, and this was six years before Herz did his work. Ever since 1882 Prof. Dolbear has taught his classes of these electric ether waves, and has used the expression "electric radiation." In 1882, also, Prof. Dolbear invented the air space cable, which decreases the static capacity of electric cables and increases the rate of telegraphic work in them. This is now in use in more than 100,000 miles of telephone lines, and is extensively manufactured in Europe as well as America. Among his other inventions are: a gyroscope worked by electricity (1861), which in 1866 was improved and made to demonstrate the rotation of the earth; a vacuum tank for maintaining a vacuum for immediate use in laboratories (1869); Lissajou's forks for enlarged projections of Lissajou's figures (1872); the opeidoscope, for showing forms of voice vibrations (1873); the magneto-telephone, substantially as we have it to-day (1876); the rotaphone, a new kind of telephone receiver (1878); the open coil ammeter (1879). The last is the same as that in common use to-day in electric light stations; but through improper drawing of the patent specifications, the invention passed from Prof. Dolbear's control. In 1888 he invented the acoustic mill, a device for producing rotations from sound vibrations. His chief publications are a set of "Chemical Tables" (1871); "Art of Projecting" (1875); "The Speaking Telephone" (1877); "Matter, Ether and Motion" (1892); "Modes of Motion" (1897); "Natural Philosophy," text-book (1897). He is a fellow of the American Association for the Ad-

vancement of Science and of the American Academy of Arts and Sciences; member of the American Academy of Political Science, and has been president of the American Psychological Research Society. He received a silver medal in Paris in 1881 and a gold medal in London in 1882 for the static telephone. Prof. Dolbear is a member of the Twentieth Century Club of Boston. He was married at Milford, N. H., in August, 1869, to Alice J., daughter of Phineas B. and Janet (Needham) Hood.

**HOGUN, James**, patriot, was born in Ireland at an unknown date. He removed to Halifax county, N. C., some time in the first half of the eighteenth century; was a member of the Halifax county committee of safety in 1774, and represented that county in the provincial congresses at Halifax in April and November, 1776. His first appointment was as paymaster of the 3d regiment, Col. Sumner; but on Nov. 26, 1776, he was elected colonel of the 7th regiment, and marched north along with Col. James Armstrong, of the 8th regiment, reaching Pennsylvania in time to take part in the battles of Brandywine and Germantown, September–October, 1777. In 1778 he again marched north with 600 nine-month Continentals, gathered from eleven counties and organized by him, and reaching Philadelphia in August, marched thence to Washington's headquarters at White Plains, N. Y.; his regiment was engaged in throwing up fortifications at West Point in November, 1778, while the other four North Carolina regiments, constituting the brigade under the temporary command of Col. Thomas Clark, were at Fredericksburg, N. Y., on the Connecticut line. Hogun was not only the senior officer of the North Carolina troops, but had won promotion by bravery and been made brigadier-general, Jan. 9, 1779. He remained in service during 1779, and when, in February, 1780, Charleston, S. C., was threatened, he passed south with the North Carolina brigade to aid in its defense. Gen. Lincoln surrendered Charleston on May 12, 1780, and of the 5,000 prisoners only 1,800 were regulars, most of them being members of Hogun's brigade. The militia were paroled, but the regulars, with Hogun at their head, were conveyed to Haddrell's Point, in the rear of Sullivan's Island, S. C., where they suffered the greatest privations, being forbidden the privilege of fishing to replenish their scanty stores, and even threatened with deportation to the West Indies. Of the 1,800 imprisoned with Hogun only 700 were finally paroled. Hogun was offered his parole, but he felt that his departure would be unjust to his men and afford the British an opportunity for recruiting among them. He fell a victim to his sense of duty, and fills an unknown grave. Gen. Hogun was married, Oct. 3, 1751, to Ruth Norlect, of Halifax county, N. C., and had one son, Lemuel Hogun. He died in 1780.

**DRYDEN, John Fairfield**, insurance president, was born at Temple Mills, near Farmington, Me., Aug. 7, 1839, son of John and Elizabeth Butterfield (Jennings) Dryden, of sturdy New England stock. His paternal ancestors came from Northamptonshire, England, where family traditions traced connection with John Dryden, the famous poet. He was educated in the schools of Worcester, Mass., and entered Yale College in 1861, with a view to preparing himself for the profession of law, but during the closing year of his course, when it was expected that he would be graduated with high honors, his health broke down, and he was compelled to abandon study and seek rest and recuperation. Becoming interested in the subject of life insurance, he studied the matter thoroughly, and became convinced that the benefits of sound life insurance could be placed within reach of the wage-earning classes by

issuing small policies with weekly or monthly payment of premiums, similar to those in England. He determined to take steps for a practical solution of the business in America, and formulated a plan and prepared a table of industrial rates that could be successfully operated and applied to American conditions. In 1873 he went to Newark, N. J., and there disclosed his plans to several business men, who became converted to his ideas. This was the turning point of his career. Together they procured the passage of an act by the New Jersey legislature, authorizing the formation of a company to transact business on Mr. Dryden's plan. Under this law a Friendly Society was organized, and for two years issued policies, which experimentally demonstrated the soundness and success of the principles. On Oct. 13, 1875, the Prudential Insurance Co. of America was organized, and to it were transferred all rights, titles and interests of the Friendly Society, together with whatever contracts and obligations existed on its books. This was the real birth of "industrial insurance" on this continent and the culmination of Mr. Dryden's hopes, for which he had so long and ardently labored, and also established the justice of the designation by which he has subsequently been familiarly known, as the "Father of Industrial Insurance in America." In 1876 he visited England to observe on the ground the practical workings of the system there, and was accorded every facility and shown the most courteous attention by the officials of the great companies. The results of his investigations were submitted to the board of directors of the Prudential, and proved most satisfactory and beneficial. Mr. Dryden was secretary of the new company for six years, and in 1881 he was elected president. Its first year's premium receipts were less than \$15,000. Its 1899 receipts, twenty-four years from its birth, exceeded \$17,000,000, while the soundness of its invested assets places the Prudential in the front rank of financial institutions in America. In the inauguration and successful application of the principles of industrial insurance here, Mr. Dryden is justly entitled to a foremost position as a benefactor of his age and country. In 1875 less than two per cent. of the American people had their lives insured. In 1899 over seventeen per cent. are insured, and twelve companies are insuring, on the industrial plan, approximately \$1,000,000,000, as the practical result of the "mustard seed" which he planted less than a quarter of a century previous in the establishment of the pioneer industrial life insurance company in America. His foundation principle of life has been the golden rule of perfect equity and justice, and under his administration no equitable claim for life insurance against the company has ever been contested at law. Mr. Dryden is vice-president of the Fidelity Trust Co., Newark; a director of the Merchants' National Bank, Newark, and also of the United States Casualty Co., New York; a member of the board of trade, Newark, and of the chamber of commerce, New York. His clubs are the Essex; the Essex County, Country and Newark Athletic of Newark; Union League and Lotos of New York, and Blooming Grove Park Association, Pike county, Pa. In 1864 he was married to Cynthia Fairchild, of New Haven, Conn., and they have a son, Forrest F. Dryden, and a daughter, Susie F., wife of Col. Anthony R. Kuser, of Trenton, N. J.

**ATKINSON, Edward**, economist, was born in Brookline, Mass., Feb. 10, 1827, son of Amos and Anna G. Atkinson, of old New England stock. He was educated at private schools, and at a little over the age of fifteen "went to work in a practical way," as he has expressed it. His life has been mainly spent in the conduct of manufacturing companies, and of late years in the conduct of factory mutual insurance. His leisure moments have been applied to public work, in writing and lecturing on economic subjects. His suggestions and observations have been published in pamphlets and periodicals and in

books. He has contributed to the "Atlantic Monthly," the "International Review," the "Fortnightly Review," "Harper's Magazine," "Harper's Weekly," "North American Review," the "Century Magazine," the "Forum" and the "Popular Science Monthly." His pamphlets and books include: "Cheap Cotton by Free Labor" (1861); "The Collection of Revenue" (1866); "Argument for the Conditional Reform of the Legal Tender Act" (1874); "Labor and Capital: Allies, not Enemies" (1880); "What is a Bank?" (1881); "Right Method of Preventing Fires in Mills" (1881); "The Railway and the Farmer" (1881); "The Distribution of Products" (1885); a series of monographs on economic questions (1885); "Bimetallism in Europe" (1887); "The Wheat Supply," reprinted from "Bradstreet's" (1888). Among his public addresses, most of which have been published in the proceedings and transactions of the various organizations before which they were delivered, are: "Address on Banking," at Saratoga, N. Y., before the American Banking Association (1880); address at Atlanta, Ga., on the International Cotton Exposition, in 1880 and 1881; "Insufficiency of Economic Legislation," before the American Social Science Association; "What Makes the Rate of Wages?" before the British Association for the Advancement of Science, at Montreal (1884); "Application of Science to the Production and Consumption of Food," before the American Association for the Advancement of Science (1885); "Common Sense in Regard to the Silver Question," before the American Bankers' Association (1885); addresses on the labor question, before the workmen of Providence, R. I. (1886); "Paper Mill Fires," before the American Paper Manufacturers' Association (1886); commencement address, State University of South Carolina; "Consumption Limited—Production Unlimited" (1889); "Slow Burning Construction," "Century Magazine" (1889); "The Industrial Progress of the Nation" (1889); "Future Situs of the Cotton Manufacture," "Popular Science Monthly" (1890); "Common Sense Applied to the Tariff Question," "Popular Science Monthly" (1890); "Credit, the Main Factor in Making Prices," American Bankers' Association (1890); "Future Situs of the Principal Iron Production of the World," "Manufacturers' Record," Baltimore (1890); "The Land of the Sky and its Possibilities," review of the South, "Manufacturers' Record" (1891); "Taxation and Work" (1892); "The Science of Nutrition," (1892), tenth edition, 1898; "Torrens' System of Registering Land Titles," "Century Magazine" (1892); "Personal Liberty," "Popular Science Monthly" (1892); "Does the South Know Beans?" "Manufacturers' Record," Baltimore (1893); "New Source of Wealth, Peanuts," "Manufacturers' Record" (1893); "Nutrition of the Soil, the Plant, the Beast and the Man,"

State Board of Agriculture, Massachusetts (1894); "Forecast of the Future Commercial Union of the English-Speaking People," British and American Associations for the Advancement of Science (1894); "True Money: What it is; How to Make it Plenty," "Chattanooga Tradesman" (1895); "The Battle of the Standards," "Forum" (1895); "The Cost of Government," "Harper's Weekly" (1895); "Commerce Destroyers," "Journal of Commerce" (1895); "Jingoism and Silver," "North American Review" (1895); "Paramount Control of the Commerce of the World," "Engineering Magazine" (1897); "Development of the Resources of the Southern States," an address to the Atlanta Chamber of Commerce (1898); "Sheep in the Cotton States" (1898); "The Cost of a National Crime"; "The Hell of War and Its Penalties," and "Criminal Aggression, by Whom Committed" (1899). Mr. Atkinson's work for the last twenty years in the conduct of factory mutual insurance, a system which had been established many years before, has led to the development of the science of prevention of loss by fire, and to the reduction in the cost of insuring between \$700,000,000 and \$800,000,000 worth of factory property to a small fraction of what it cost in former days. In this practice, in which cognizance is taken of every point of construction, occupation and apparatus, the special hazards of textile factories, paper mills, cordage factories, machine shops, including large wood-working establishments, have been rendered safer and better risks from the point of view of the underwriter than the average church, schoolhouse, asylum or hospital building. The influence of this practice has modified the industrial architecture of the country, and is leading to better conditions of construction and provisions for the safety of city warehouses. Mr. Atkinson regards his invention of the Aladin oven as the work which will entitle him to credit in future years. In this apparatus two pounds, or a little over two pints, of kerosene oil, burned in a common lamp, does the work of cooking in every variety of about 120 pounds of coal burned in a common cooking-stove; the work being done in a much better manner, more wholesome and in every way beneficial. There are no patents in force upon this apparatus.

**STRONG, Josiah**, clergyman and author, was born at Naperville, Du Page co., Ill., Jan. 19, 1847, son of Josiah and Elizabeth C. (Webster) Strong. He is in the eighth generation from John Strong, who came to New England in 1630, finally settling at Northampton, Mass. He became a ruling elder in the First Church (Congregational); had seventeen children, sixteen of whom lived to rear families, and is now represented by about 30,000 descendants. Josiah Strong's mother was a granddaughter of David Webster, a colonel in the revolutionary army. Josiah Strong, Sr., and his wife removed from New England to Illinois not long after that state was admitted to the Union. In 1852, they settled at Hudson, O., in order that their children might enjoy the educational advantages offered by Western Reserve College, an institution which has since been removed to Cleveland, O., with the name Adelbert College. Here Josiah pursued an academic course, and was graduated in 1869. He was offered the principalship of the college preparatory department, but declined, and went at once to Cincinnati to study theology in Lane Seminary. In 1871, he was ordained to the Congregational ministry, and accepted a call to a home missionary church in Cheyenne, Wyo. In 1873-76, he served in Western Reserve College as chaplain, and instructed classes in natural theology and rhetoric. From 1876-81 he was pastor of the First Congregational Church at Sandusky, O., and while there became profoundly interested in the re-

Edward Atkinson

religious and material condition of the United States. Five years later, he accepted the secretaryship of the Ohio Home Missionary Society, in order to avail himself of the special facilities which the office would afford for the study of the great home missionary problem in all its aspects. In 1884-86, Dr. Strong was pastor of the Vine Street Congregational Church, Cincinnati. In 1886, he published "Our Country: Its Possible Future and its Present Crisis." The work was described in the "Christian Union" (now the "Outlook") as "a storehouse of facts, in which the author has shown as much skill in grouping as he has painstaking in accumulating." "He shows," continues the critic, "the danger from over-accumulation and concentration of capital; from the restlessness and discontent of labor; from the preponderance in many sections of foreign populations; from the growth and power of Mormonism; from the aggressions of the liquor traffic; from the unchanged assumptions of Rome. He writes, not in a panic, but as one hopeful of victory. No one can read this little book without realizing that . . . the solution of the slavery question has not left us without other questions quite as large." This book has had a circulation in the English language of nearly 170,000, and nearly the whole has been republished, a chapter more or less at a time, in pamphlet form, or in the daily press of the United States, Canada and Great Britain. It has also been translated into a number of European languages. The American Board of Foreign Missions ordered 80,000 of one of the chapters in pamphlet form for distribution in the United States, and received contributions to the amount of \$30,000 in response. A revised edition of the book, based on the census of 1890, was issued in 1891. This volume led to his election as general secretary of the Evangelical Alliance for the United States, which office he assumed in November, 1886. In 1893, he published "The New Era," which has had a circulation of 46,000. It was published at the same time in London, and permission has been given to translate it into French and to publish it in Switzerland. Early in 1898 appeared "The Twentieth Century City," which reached the thirteenth thousand in the course of a few months. Dr. Strong continued general secretary of the Evangelical Alliance until June 1, 1898, when he resigned in order to organize the League for Social Service, the object of which is the education of public opinion and the popular conscience through the instrumentality of literature distributed by the various young people's societies, and through a bureau of information and a lecture bureau. He has been elected president of this organization. The degree of D. D. was conferred upon him by Adelbert College in 1886. Dr. Strong was married, at Chardon, O., 1871, to Alice, daughter of Charles and Cordelia (Packard) Bisbee, who through her mother, is a descendant of John Alden.

**DUPORTAIL, Louis Lebeque**, soldier, was educated at a military school in France, and entered the engineer service. When Franklin and Deane were in France, and were empowered by congress to engage French officers for the colonial service, Duportail was one of four chosen by them; and on arriving in this country was commissioned colonel of engineers. The details of his services are not given by the historians or biographers; but these must have been important, as on Nov. 17, 1777, he was promoted to brigadier-general, and to major-general Nov. 16, 1781. He was with Washington at the battle of Monmouth, and a bas-relief figure of Duportail, designed by Kelley, is on the Monmouth monument (see illustration, Vol. I., p. 40). At the siege of Yorktown, Gen. Duportail directed the engineering operations, and Washington specially mentioned him, after the sur-

render of Cornwallis, in his dispatches to congress. Duportail returned to France after the war, and in 1782 was made a field marshal. On Nov. 16, 1790, he was appointed minister of war. He was a warm and personal friend of Lafayette, and when the latter came under the popular displeasure, and his downfall occurred, Duportail fell with him and resigned his position. He was afterwards in some military charge in the interior of France; but during the exciting period of the revolution serious accusations were about to be brought against him, and he resigned from the army and hid himself for two years in America. He sailed on his return home in 1802, but died on the voyage. Duportail was a notable and brilliant officer, and had very little respect for the generalship of the British. He declared that with 30,000 men an active and able general could have easily reduced the colonies to submission.

**KINGSBURY, John**, educator, was born at South Coventry, Tolland co., Conn., May 26, 1801, son of John and Dorothy (Leavens) Kingsbury. He attended a district school until he was fifteen years of age, and then taught for four successive winters, meanwhile fitting for college under Rev. Chauncey Booth, of South Coventry. He entered Brown University in 1822, and paid the expenses of the course by teaching during the summers. He had as classmates Edwards A. Park, subsequently professor in Andover Theological Seminary; Eleazer C. Hutchison, who became president of Kemper College; George Burgess, afterward bishop of Maine, and other young men of more than average talents; but he maintained a high standard of scholarship, and was graduated with the honor of salutatorian in 1826. Soon after, he became associated with G. A. Dewitt, who had a private school, and two years later opened a young ladies' high school, which constituted a department of Mr. Dewitt's school for a time. As an independent institution, it was wholly under Mr. Kingsbury's direction, and was the first school of high grade for young ladies to be established in Providence. A few such schools were in existence in cities like Boston and New York; but many felt that Providence could not support one, and the introduction of the higher branches of study became so much a subject of discussion that even the street boys, it is said, pointed at Mr. Kingsbury as "the man who is teaching the girls to learn Latin." A thorough and not a showy education was given, and every adverse criticism was silenced by the success of the school, which at no time under Mr. Kingsbury could accommodate the applicants for admission. A few years after he began his independent work, a fine building for the use of the school was erected in Benefit street, and for years this was regarded as a model building, exciting so much interest that visitors were attracted from a distance. In 1858, Mr. Kingsbury gave up the school, to be succeeded by Prof. John L. Lincoln, and the occasion of the close of his career as a teacher was celebrated by a gathering of former pupils and citizens, presided over by Pres. Wayland, who observed: "There is hardly a family amongst us which, in some of its branches, does not acknowledge with gratitude the benefit of his instructions and personal influence." Mr. Kingsbury now became state commissioner of public schools, but held the position for one year only. From 1859 until the end of his life he was president of the Washington Insurance Co. For many years he was secretary of the Providence Franklin Society, subsequently was

keeper of its cabinet, and for a time served as president. He aided in founding the American Institute of Instruction in 1830, was a councillor of its board (1830-37), a vice-president (1837-55) and president (1855-57). In 1844, he was chosen a member of the board of trustees of Brown University, and during 1853-74 was a fellow of the institution and secretary of the corporation. In 1856, the university conferred on him the degree of LL.D. He aided in raising a fund for its better endowment, and bequeathed it a collection of shells and a number of valuable books. For several years he was a trustee of the Butler Hospital for the Insane, and for eight years was a corporate member of the American Board of Commissioners for Foreign Missions. For more than twenty years Mr. Kingsbury taught a Bible class in the Richmond Street Congregational Church, and fully 400 young men, many of whom were students in the university, came under his instruction. He was married, in Providence, Aug. 19, 1834, to Mary M., daughter of Hon. Thomas and Mary (Mackie) Burgess. She bore him three sons and six daughters. Mr. Kingsbury died in Providence, Dec. 21, 1874.

**VREELAND, John Beam**, jurist, was born in Newark, Essex co., N. J., Dec. 30, 1852, son of George Washington and Sarah Maria (Smith) Vreeland. He is of Dutch and English extraction, his progenitors on both sides having settled in Bergen county in the early part of the eighteenth century, just in time to participate in the revolutionary war. Having taken a course in the Newark High School, he moved, in 1868, to Morristown, N. J. Two years after his arrival, he began the study of law with F. G. Burnham, and completing the same with Col. F. A. De Mott, was admitted to the bar as an attorney and solicitor in chancery in November, 1875, and as counselor in June, 1879. The supreme court appointed him a commissioner, June 7, 1882, and Chancellor McGill appointed him a special master in chancery, 1892. He has also served as deputy-county clerk, acting prosecutor of the pleas of Morris county, a member of the county board of registration and city counsel of Morristown. He is prominently, as well as permanently, identified with the best interests of his city, county and state. He is a representative Republican, and in 1895 was elected state senator from Morris county, for a term of three years, by a plurality of over 1,500. During 1897-98, he served as chairman of the committee on revision of the laws and state hospitals, and was on these on railroads and canals, education, finance, commerce and navigation. He is a popular, because a safe, counselor, retaining the confidence of the community. In appreciation of his ability and worth, he was appointed president-judge of the court of common pleas for Morris county by Acting-Gov. Foster M. Voorhees; confirmed by the senate without a dissentient voice on

March 9th, and installed, April 1, 1898, to the satisfaction of his many friends. In religion, he is a follower of Calvin's system of theology, and for many years has taken a lively interest in the South Street Presbyterian Church, of which he is a devoted member. He was married, in 1878, to Ida A. Piotrowski, after whose death he was married, in 1897, to Ida King, daughter of James M. and Sarah E. (Rumsey) Smith. He has two daughters.

**COMFORT, Samuel**, U. S. consul, inventor, soldier and manufacturer, was born near Morrisville,

Bucks co., Pa., May 5, 1837, son of George and Susan (Lower) Comfort. His parents were members of the Society of Friends, of which both his grandfathers, Samuel Comfort and Abraham Lower, were well-known ministers, and his great-great-grandfather, John Woolman, one of the earliest advocates of emancipation, was a distinguished member. Samuel Comfort early evinced exceptional talent in mathematics and other scientific studies, and while still attending school, employed his leisure hours in his workshop, designing and constructing many curious and ingenious mechanical devices. Before his twenty-fourth year he had secured more than a dozen patents in the United States and Great Britain, and at that time was credited with having contrived more new mechanical movements than any other living inventor. On Oct. 8, 1861, he enlisted in an independent cavalry company, known as the Anderson troop, Capt. William J. Palmer, which served as the body-guard of Gen. D. C. Buell, commanding the army of the Cumberland. Comfort was present with Buell's army in its various movements, and at the battle of Pittsburgh Landing, and

was sent north from there with the sick and wounded, having contracted typhoid fever. On recovering his health, he rejoined his company in northern Alabama; but a relapse of fever at Huntsville resulted in his honorable discharge from the service on account of physical disability, at Murfreesboro, Tenn., Sept. 3, 1862. His health being restored, he again entered the army, and was mustered into the service as first lieutenant on July 10, 1863. On July 25th he was made captain of an independent company of cavalry, recruited by himself and equipped at his own expense, under special authority from the governor of Pennsylvania. Capt. Comfort was promoted to the rank of major, March 1, 1865, and was finally mustered out of service, July 13, 1865. His regiment experienced much hard service, distinguishing itself in many actions in West Virginia and in the final struggle around Richmond, and was with Sheridan on Lee's surrender at Appomattox Court House, as part of Gen. Devens' 2d brigade of Gen. Merritt's 1st division. With the exception of a few days' furlough, Maj. Comfort was never absent from his command from July, 1863, until the close of the war. He was wounded in the right arm while in command of the skirmish line at the battle of Newmarket, Va., May 15, 1864, but, although disabled, remained with his men until the battle, which lasted two days, ended in the defeat of the Federal troops. After the conclusion of peace, he was engaged in business in New York city, and in manufacturing agricultural machinery at Newtown, Pa., until 1871, when he entered the firm of Pickering, Chambers & Co., petroleum refiners, of Titusville, Pa. This business was later on incorporated as the Keystone Refining Co., and finally merged in the Standard Oil Trust. With the last-named concern Maj. Comfort became more or less prominently identified, both at home and abroad, and for nineteen years (1879-98) represented its interest in many foreign countries. For the last six years of that period he has been the manager of the company's business in western India, with headquarters in Bombay. For two years (1894-96) he was U. S.

*S. Comfort*

*J. B. Vreeland*

vice consul, and for two years (1896-98) U. S. consul at Bombay, India. He was for about ten years (1875-85) largely interested in producing crude petroleum and natural gas in Pennsylvania, New York and Ohio. Mr. Comfort is a man of unusual energy and enterprise, thorough in all duties, business and official, and a noble example of American manhood. Socially he enjoys a wide popularity. He is a member of the Military Order of the Loyal Legion of the United States and the Army and Navy Club, in New York city; of the Royal Bombay Yacht Club and the Bombay Club, of Bombay; and the Club of Western India, in Poona, India. He is also a member of various Masonic societies in America and India. He was married, Oct. 16, 1866, to Elizabeth Jenks, daughter of John Barnsley, of Newtown, Pa., a relative of the late Gen. U. S. Grant. They have one daughter, Emma Walraven Comfort, who, in 1891, became the wife of Harry Crookshank, pacha, now (1899) British comptroller of the Diara Sanieh in Egypt.

**TOLMAN, Herbert Cushing**, philologist and educator, was born at Norwell, Mass., Nov. 4, 1865, the only son of James T. Tolman. He is of Puritan ancestry, tracing his lineage back to John Alden, of whom he is an eighth descendant. When fourteen years of age his parents removed to Hanover, Mass., where he attended the Rockland high school, where a thirst for knowledge and a special delight in the Greek and Roman classics gave him an impulse for deeper study. Entering Yale University in 1884, he maintained a high degree of scholarship throughout his entire course, ranking among the foremost of his class. Here he took up the subject of Sanskrit under Prof. W. D. Whitney, whose reputation as a philologist is world-wide, and continued his work under him for four years. While in the university, Mr. Tolman received all the prizes that were offered for Latin and Greek scholarship, including the one founded by Bishop Berkeley in 1733. His merit was recognized by his election as a member of the Phi Beta Kappa Society, and on graduation, by his appointment as one of the commencement speakers. He then became a graduate fellow in the university, and continued as such until he began his work as instructor in that institution. In June, 1890, his alma mater conferred on him the degree of Ph.D. Dr. Tolman has made a thorough study of the Persian and the Zend, and stands among the leading scholars of that department. Connected with his researches in this line he has issued a complete vocabulary of the old Persian cuneiform inscriptions, and has in course of preparation the original text of the inscriptions, together with the grammatical elements of the language. In addition to this work he has been preparing, with Dr. W. R. Harper, the first of a series of Latin authors, based upon the inductive method. In 1895 he became professor of Greek language and literature in Vanderbilt University.

**GARRETT, Thomas Harrison**, banker, was born in Baltimore, Md., Feb. 11, 1849, second son of John W. Garrett, who for twenty-six years was president of the Baltimore and Ohio railroad. His education was received in Princeton College, where he was graduated in 1868. Soon after, he entered the banking-house of Robert Garrett & Sons, founded by his grandfather, Robert Garrett, in which his father and brother were at the time partners, and of which he later became the virtual head. Mr. Garrett was also a director of the Baltimore and Ohio Railroad Co., and took an active part in the management of its affairs, and was also actively connected with the management of a number of other large corporations and financial institutions. In 1870, he was married to Alice, daughter of Horatio L. Whitridge, and had three sons. He was cool, conservative and keen, and had developed into a busi-

ness man of fine abilities and promise, when his career was suddenly terminated by his death, which occurred near Baltimore, Md., June 7, 1888.

**MAHANY, Rowland Blennerhassett**, statesman, was born in Buffalo, N. Y., Sept. 28, 1864, son of Kean and Catherine (Reynolds) Mahany. He received his early education in the public schools of his native city, and was graduated at the high school in 1881. After working for a while on a farm in Chautauque county, he became an instructor in the Buffalo Classical School for one year. In 1882, he entered Hobart College, and while there stood at the head of his class. Two years later he went to Harvard University. There he attained distinction, winning a prize the first year, taking a prominent part in the Harvard Union, the St. Paul Society, and the Phi Beta Kappa Society, and winning the prizes awarded to the best speakers in the junior and senior classes, and was graduated, *summa cum laude*, in 1888. He delivered the poem at Gettysburgh, July 1, 1888, at the unveiling of the monument of the 9th veteran regiment of New York volunteers. After returning to his home in Buffalo he was, for a time, connected as associate editor with the Buffalo "Express," but soon resigned to become an instructor in history and literature in the Buffalo high school.

In 1890, Mr. Mahany was offered the position of secretary of legation to Chili, which position was declined by him. In 1892, he was appointed envoy extraordinary and minister plenipotentiary to Ecuador. Soon after his arrival at Quito, he was stricken with the dread fever of that place, and was obliged to return home. He was immediately nominated for congress on the Republican ticket, and although defeated he reduced the Democratic majority over 1,000 votes. In 1893, he returned to Ecuador. It was said at the time that Mr. Mahany was the youngest diplomat in the world to hold the position of foreign minister, and also the youngest man ever appointed in the United States to such an office. While in this position he concluded the Santos treaty in only nineteen days, negotiations for which had remained unsettled for nearly ten years. In 1894, he was elected to the 54th congress on the Republican ticket, and he was placed on several important committees by Speaker Reed. During his first term Mr. Mahany secured an appropriation of \$2,200,000 for the Buffalo harbor, and obtained the letting of contracts for the completion of the federal building in that city to the sum of nearly \$1,000,000 additional. In 1896, he was re-elected to congress with a plurality of nearly 4,000 votes.

**CONVERSE, John Heman**, manufacturer and banker, was born at Burlington, Vt., Dec. 2, 1840, son of John Kendrick and Sarah (Allen) Converse. Deacon Edward Converse, first of the name in this country, came to Massachusetts in the ship Lion, with Winthrop, in 1630, and settled in Charlestown, where he established the first ferry to Boston, later devoting its earnings to the support of Harvard College, whose founder was his personal friend. He was selectman of Charlestown (1634-40), and was an early settler of Woburn; joined in establishing the first church, of which he was deacon; served the town as selectman, and in 1660 represented it in the

colonial assembly. His son, Sergt. Samuel Converse, wedded Judith, daughter of Rev. Thomas Carter, pastor of the church in Woburn. Samuel Converse, 2d, aided in founding Thompson, Conn., and in organizing its first church. Joel, great-grandson of Sergt. Samuel, removed from Connecticut to Lyme, N. H., and was the father of nine children, the youngest of whom was John Kendrick. The latter was graduated at Hampden-Sidney College, Virginia, in 1827, and at Princeton Theological Seminary in 1832. He was one of the editors in Richmond, Va., about 1828, of the "Literary and Evangelical Magazine" and the "Southern Religious Telegraph"; pastor of Congregational churches at Burlington, Winooski and Colchester, Vt., for twenty-three years in all; for many years principal of the Burlington Female Seminary, and for several years superintendent of public schools in Burlington. Since his death a handsome new public school building there has been named, after him, Converse School. His wife, Sarah, was a daughter of Hon. Heman Allen, of Milton and Burlington, Vt., congressman from that state (1832-41), and Sarah, daughter of Dr. Jonathan Prentiss, of St. Albans. On her father's side she traced her descent, through Enoch Allen, of Ashfield, Mass., a soldier in the revolution, and Samuel Allen, and Edward Allen, 2d, his father, of Deerfield, Mass., both of whom were prominent in various colonial wars, back to Edward Allen, 1st, who, according to tradition, was a Scotchman, and had been a soldier in Cromwell's army. He settled at Ipswich, Mass., and afterwards at Suffield, Conn. The Prentiss family descends from Valentine, an Englishman, who joined the church at Roxbury, Mass., in 1632. Some of his descendants settled at New London, Conn., and were prominent in civil and military affairs. John H. Converse was fitted for college at the Burlington Union high school, and was graduated at the University of Vermont in 1861, leaving a record for superior scholarship and for the display of intellectual and moral force. After graduation, Mr. Converse was connected for three years with the editorial staff and business management of the Burlington "Daily and Weekly Times." In 1864 he removed to Chicago, where he was engaged as superintendent's clerk, Galena division, Chicago and North Western railroad. In 1866 he was appointed chief clerk to Dr. Edward H. Williams, general superintendent Pennsylvania railroad, at Altoona, Pa. In 1870, when Dr. Williams entered the firm of M. Baird & Co., proprietors of the Baldwin Locomotive

Works, Philadelphia, Mr. Converse entered the employ of the firm as corresponding clerk. Three years later he became a member of the firm, whose style is now Burnham, Williams & Co., and still remains thus connected (1899), having as his department the general business management of the vast establishment, with its regular product of 1,000 locomotives per annum. The interests of Mr. Converse outside of this special line of business are extensive. He is a director in the Philadelphia Trust, Safe Deposit and Insurance Co.; vice-president for Pennsylvania of the National Association of Manufacturers; director in the Philadelphia Saving Fund, the Philadelphia National Bank, and the Real Estate Trust Co.; member of the board of city trusts, thus being a trustee of Girard College; a trustee of the Presbyterian Hos-

pital, the administration building of which institution was erected at his expense, and secretary of its board; president of the national relief commission; treasurer of the Christian League of Philadelphia; president of the Sound Money League of Pennsylvania, of the Fairmount Park Art Association, and, in 1896-98, of the Manufacturers' Club of Philadelphia, an organization of much weight and influence as regards public questions in national finance and political economy. He is also a director of the Pennsylvania Academy of Fine Arts, and for several years has been president of the New England Society of Pennsylvania. During the war with Spain he was one of the executive committee of the Pennsylvania sanitary commission. His gifts to churches and educational institutions have been munificent. For the University of Vermont, of which he is a trustee, he has built a dormitory, Converse Hall, and several houses for the use of members of the faculty, and, in addition to frequent contributions to meet special needs, has founded the Converse prize for proficiency in public debate. The degree of LL.D. was conferred on him by this institution in 1897. Mr. Converse's summer home is at Rosemont, near Philadelphia, and his house is filled with objects of art and souvenirs of travel that testify to the exercise of good taste as well as to the possession of ample means. He was married, in Brooklyn, N. Y., July 9, 1873, to Elizabeth Perkins, daughter of Prof. James and Mary Johnson (Bishop) Thompson, and has three children.

**MENEFEE, Richard Hickman**, congressman, was born at Owingsville, Bath co., Ky., Dec. 4, 1809, son of Richard Menefee, an early emigrant from Virginia. His father, a potter by trade and a man of limited education, raised himself to very respectable attainments in knowledge by the strength of his mind and his natural love of information, and was held in such high repute by the community that he was repeatedly elected to the legislature and served one term in the senate. Until he was twelve years of age, young Menefee was instructed almost exclusively by his mother, and then entered a public school for the first time. Two years later his mother was re-married, and he was removed from school to earn his own living, obtaining work in a tavern at Owingsville. He also worked on a farm in the summer months, and managed at irregular times to continue his studies until he was fifteen years of age, when he began to teach. Not long after this he had a quarrel with his stepfather, and removed to Mount Sterling, Ky., from that time on taking sole care of himself. With the money he had earned by teaching and a sum raised by the sale of a slave that came to him from his father's estate, he paid his way through the public school at Mount Sterling, and then, at the age of eighteen, entered the junior class of Transylvania University. The rules of that institution forbade the reception of degrees by students under age, but the young man's attainments, especially in languages and mathematics and his struggles to get an education led Pres. Holley to secure a temporary suspension of the rules, and young Menefee was admitted to the final examination with his class, bearing off first honors. He then returned to Mount Sterling to tutor privately and to study law, and in 1830 was admitted to the bar. In 1832 he was appointed commonwealth's attorney, and settled at Mount Sterling, where he continued to practice with success until August, 1832, when he was elected member from Montgomery county to the state house of representatives. During the session he was heard upon every question of state policy, his master-effort being on the bill to repeal the law of 1833, prohibiting the importation of slaves, his speech being in favor of retaining the law on the statute books as a means of

checking the increase of an evil. In 1837 he was elected to the lower house of congress by the Whigs, after a spirited campaign, in which his powers as an orator were brilliantly exhibited. His versatility and precocity in handling difficult questions astonished even his friends, and compelled his adversaries on the Democratic side to admit that he was a powerful antagonist. Indeed, some declared him to be "the most extraordinary man of his age who had until then appeared in congress." He had every reason to look forward to a higher position in the national council; but at the end of his term he voluntarily retired from political life, and returned to Kentucky. He located in Lexington, and immediately entered on a lucrative practice. Business came to him rapidly and in increasing volume, and he seemed destined to occupy a seat on the supreme bench; but his health soon began to fail, and in September, 1840, he appeared at the bar for the last time. Mr. Menefee was married, in 1830, to the eldest daughter of Matthew H. Jouitt of Lexington, the portrait painter, who bore him several children. Hon. Thomas F. Marshall, on April 12, 1841, delivered a glowing address on Mr. Menefee's life and character before the Law Society of Transylvania University. Mr. Menefee died at Frankfort, Ky., Feb. 21, 1841.

**REYNOLDS, George Greenwood**, jurist, was born at Amenia, Dutchess co., N. Y., Feb. 7, 1821. He received a thorough education, first at the Amenia Seminary, and afterward at Wesleyan University, Middletown, Conn., where he was graduated in 1841. He studied law, and being admitted to the bar, in 1844, practiced in Ulster county, and later in Poughkeepsie, N. Y. In 1854, he removed to Brooklyn, N. Y., where he soon advanced to the front rank of the bar. He continued in a highly successful practice until, in 1860, he was elected judge of the city court of Brooklyn, for a six-year term. On the expiration of his first term, he was, on Oct. 21, 1872, renominated by the Democrats and the liberal Republicans, and elected the following November for a term of fourteen years. For this court, at its trial terms and its special general terms, Judge Reynolds labored with great earnestness and brilliant ability during the period of his tenure of office, and to the entire satisfaction of both the bar and the public. Under the appointment of the governor, he held the circuit in the supreme court of Kings county for one year. After his retirement from the bench, in 1886, he resumed the active practice of law. His extensive legal knowledge has been invariably at his command, and his arguments always well conceived. The same qualities made him valuable and eminent as a judge. He has held the honorable offices of president of the Brooklyn Bar Association, and president of the board of trustees of Wesleyan University, which, in 1871, conferred on him the degree of LL.D. In 1890, he was a member of the judiciary commission, meeting at Albany. In 1891, associated with A. G. McDonald, he represented the city of Brooklyn in the celebrated water-works purchase contract made by Mayor Chapin, and succeeded in reducing the agreed price from \$1,250,000 to \$570,000. He was married, in 1846, to Harriet Townsend, of Milton, Ulster co., N. Y. They have one child.

**DAILEY, Abram Hoagland**, jurist, was born in Sheffield, Mass., Oct. 21, 1831, son of William and Eliza Dailey, of English, Irish and German ancestry. His ancestor on his father's side was Hugh Dailey, who wedded a Miss O'Brine, by whom he had a large family: six of his sons came to this country about 1720 and settled in New York, Virginia and Ohio. He was educated at the Williston Seminary of Massachusetts, and commenced the study of law in the office of Ex Gov. Briggs, at

Pittsfield, Mass., being admitted to the bar at Lenox in 1855, and practicing in Great Barrington, Mass., for three years. In 1858 he removed to Brooklyn, N. Y., where he has ever since resided, and pursued the practice of his profession when not holding an official position. In 1863 he was elected justice of the fourth district court of the city of Brooklyn, which office he held for nearly four years, when he resigned to resume the practice of his profession. He soon became eminent as a successful advocate. In 1871 he was nominated by the Republicans for the office of district attorney of the county of Kings, and was declared defeated by his opponent, Hon. Winchester Britton. His defeat was attributed to election frauds, and the following winter he assisted in framing a system of registration and other safeguards which have since been, by legislative enactment, adopted in most of the states of the Union. In 1875 he was nominated for the office of surrogate of the county of Kings. His adversary was declared elected, but Judge Dailey successfully contested his election in the courts. Since then he has mainly devoted his energy and ability to the practice of his profession. Judge Dailey is a firm believer in spiritualism, and for many years has been a prominent advocate of its doctrines. He believes that man is related to both the spiritual and physical world, and that both are governed by the reign of absolute law. He does not believe in the supernatural, and claims that all we know of deity is what is learned from manifestations through nature. He contends that matter is eternal, and is manifested in physical and ethereal forms through the operations of force-producing spirit; that spirit survives the disintegration of physical forms through death; that in man the vital principle is soul, and, having passed through the evolutionary stages of plant and animal existence, the advent of man is probably the culmination of the upward tendency of life upon the earth. That force is not recognized apart from matter and spirit, and that the operation of force upon spirit, and of spirit upon matter, are very little understood, but are open fields for investigation, which has been, and still is, hindered and discouraged through the ignorance and prejudice of religious denominations. That as force is invisible, so also is the soul; but that spirit becomes visible to the clairvoyant sense, and may, under certain conditions, become manifested to our ordinary senses, establishing the survival of the spiritual part of man, which at death passes into spiritual realms encircling the earth, the immediate station of each individual being determined by laws of adaptation and correspondence. He has written several published essays upon "Hypnotism: its Relation to Medico-Legal Jurisprudence"; was a member of the psychical congress which convened at Chicago during the Columbian exposition, where he read a voluminous paper upon the psychical features of the celebrated case of Mollie Fancher, of Brooklyn, and has published a book on her life. He is a member of the Writers' Club of Brooklyn, and is ex-president of the Medico-Legal Society of New York, and at

present one of its trustees. He is literary in his tastes, and has written several poems which have attracted considerable attention.

**TRUMBULL, James Hammond**, philologist and historian, was born at Stonington, Conn., Dec. 20, 1821. His earliest American ancestors were John and Elizabeth Trumbull, who emigrated from Northumberland to New England about 1636. A number of eminent scholars are descended from these common progenitors, and among them James Hammond held a prominent place. He entered Yale College in 1838, but was prevented by illness from completing his undergraduate course. In 1842-43, he assisted in the preparation of catalogues of the

*James Hammond Trumbull*

mammalia, reptiles, fishes and shells of Connecticut. In 1847, he made his home in Hartford, Conn., having been appointed assistant-secretary of state in that year, in which office he served two terms. In 1858, he was again appointed assistant-secretary of state, holding the office until, in 1861, he was elected secretary of state, and remained so during the civil war. In Hartford, he associated himself with the Connecticut Historical Society, and served it as corresponding secretary (1849-63), and subsequently as president for twenty-five years. He also fulfilled the duties of trustee and librarian of the Watkinson free library of Hartford, trustee of the Wadsworth Athenaeum, state librarian of Connecticut, and for a short time was lecturer on Indian languages at Yale College. He prepared a dictionary and vocabulary to Eliot's Indian Bible, which, it was said, no other man had the ability to read. The various honors which were conferred upon Dr. Trumbull were in recognition of his merits as historian and philologist. By his historical research he threw considerable light on the early history of New England, and as a philologist was the accepted authority on matters pertaining to Indian dialects. His publications comprise a quantity of articles written for magazines and various learned societies, and a number of larger works, some of which, though only edited by him, were made practically new by his learned annotations: "The Colonial Records of Connecticut" (1850-59); "Historical Notes on Some Provisions of the Connecticut Statutes" (1860-61); "The Defense of Stonington against a British Squadron in 1814" (1864); "Roger Williams' Key into the Language of America" (1866); "Thomas Lechford's Plain Dealing; or, News from New England" (1867); "The Origin of McFingal" (1868); "The Composition of Indian Geographical Names" (1870); "The Best Method of Studying the Indian Languages" (1871); "Some Mistaken Notions of Algonkin Grammar" (1871); "Historical Notes on the Constitution of Connecticut" (1872); "Notes on Forty Algonkin Versions of the Lord's Prayer" (1873); "On the Algonkin Verb" (1876); "The True Blue-Laws of Connecticut, and the False Blue-Laws Invented by the Rev. Samuel Peters" (1871); "Indian Names of Places in and on the Borders of Connecticut, with Interpretations" (1881); "Memorial History of Hartford County, Conn. (2 vols., 1886). Yale College conferred the honorary degree of M.A. on Mr. Trumbull in 1850, and of LL.D. in 1871; Harvard similarly honored him, and Columbia gave him L.H.D. He was a member of nearly all the learned societies of the country, and in several of them, held the office of president. He also attained

distinction as a bibliographer, particularly as the compiler of the catalogue of the Brinley library. Dr. Trumbull was married, in Hartford, in 1855, to Sarah A., daughter of David Franklin and Anne (Seymour) Robinson. Their daughter, Annie Eliot, has published a number of stories, of high order. He died at his home in Hartford, Aug. 5, 1897.

**BAXTER, James Phinney**, merchant and author, was born at Gorham, Me., March 23, 1831, son of Elibu and Sarah (Cone) Baxter. His father was a prominent physician, and was in the active practice of his profession until nearly eighty years of age. The subject of this sketch received his early education in the schools of Portland, and, taking an academic course at Lynn, Mass., finished his studies under private tutors. It was intended that he should pursue the legal profession, but the business world holding out more alluring prospects to a young and ambitious man, he finally engaged in mercantile and manufacturing enterprises, which proved successful. He organized and was the first president of the Associated Charities of Portland, of the Portland Society of Art, and Gorges Publication Society, and he built and donated to the city its public library building, in which the Maine Historical Society has accommodations for its library and collections. He has held many offices of trust, among which are the trusteeship of the Portland Savings Bank, and the Portland Trust Co.; president of the Maine Historical Society, the Portland public library, and the Merchants' National Bank, and the Portland Publishing Co. In 1881, he received the honorary degree of A.M. from Bowdoin College. Though actively engaged in business affairs, he has found time to devote himself to study and authorship. He began at an early age to contribute to the "Home Journal," edited by N. P. Willis and George P. Morris, and he has contributed largely to other publications. In 1898, he represented New England, in lectures on the United States, before the American Geographical Society, in Washington, D. C. When, in 1882, the Maine Historical Society celebrated the seventy-fifth anniversary of the birth of the poet Longfellow, he was unanimously selected to deliver the poem on the occasion. He is one of the foremost among literary workers of the state of Maine. His diligence in this field is shown by the fact that no less than thirteen titles of his publications appear in the annual report of the American Historical Association for the year 1890. He was appointed one of the advisory council of the World's Congress auxiliary to the World's Columbia exposition on historical literature, and read a paper on "Pre-Columbian Discovery," at Chicago, before the American Historical Association during the exposition. His published works are as follows:

*J. P. Baxter*

"Lans Laureati," a poem delivered before the Maine Historical Society on the celebration of Longfellow's seventy-fifth birthday (Portland, 1882); "A Greeting to the Mentor," a poem delivered on the eightieth birthday of Prof. Packard, Longfellow's tutor (Portland, 1883); reprinted in the "Maine Historical Quarterly," 1890; "The Great Seal of New England" (Cambridge, 1884); "Idyls of the Year"; "The Trelawny Papers"; "George Cleeve and His Times"; "The British Invasion from the North"; "Documentary History of Maine"; "Early Voyages to America"; "Sir Ferdinando Gorges and His Province of Maine"; "The Abnakis" ("New England

Magazine," 1890); "Reminiscences of a Great Enterprise" (1890); "The Campaign Against the Pequakets: Its Causes and Its Results" (1890); "The Beginning of Maine" (1891); "A Lost Manuscript" (1891); "Isaac Jogues, A. D. 1636" (1891); "The Abnakis and their Ethnic Relations" (1892); "The Pioneers of New France in New England" (1893); "Christopher Levett, and His Voyage to Casco Bay, in 1623" (1894), and is now publishing, under the auspices of the Maine Historical Society, the "Documentary History of Maine." He has been mayor of Portland for four successive terms, during which period he established, by contributing his salary, a public manual-training school, built a new high school, a state armory, and greatly enlarged and improved the public parks of the city. He has given a great deal of attention to agriculture, having studied in Europe the various systems in vogue there, and his model farm at Mackworth island, in Portland harbor, where he has an extensive herd of St. Lambert Jerseys, is widely known. He has been twice married: first, on Sept. 18, 1854, to Sarah K. Lewis, daughter of Capt. Ansel Lewis, of Portland, Me.; and, second, on April 2, 1872, to Mchetael Cummings, daughter of Abel Proctor, of Peabody, Mass. He has had a family of eleven children,—six sons and five daughters,—eight of whom, namely, six sons and two daughters, are now living.

**PRATT, Charles**, merchant and philanthropist, was born at Watertown, Mass., Oct. 2, 1830, son of Asa and Eliza (Stone) Pratt. His father (1794-1878), a native of Malden, Mass., and a skilled and successful cabinet-maker and influential citizen of Watertown, was a son of Jacob Pratt, a farmer of Malden, and was descended from John Pratt, who, with his brother, Lieut. William Pratt, came to America in 1632 in the ship with Rev. Thomas Hooker. They accompanied Hooker to Hartford, Conn., in 1636, and from there the family scattered throughout New England. At the age of ten he went to work upon a farm in his native town, continuing for about three years, and attending school during the time in the winter months. He then spent a year as clerk in a Boston grocery store, and then apprenticed himself to a machinist in Newton, Mass., and earned a sufficient sum to give him a year of schooling in the Wilbraham (Mass.) Academy. At the age of nineteen he entered the office of a firm dealing in paints and oils, in Boston, and began his memorable business career, which continued with uninterrupted success for forty years. The wise injunction, "Waste neither time nor money," which is inscribed over the fireplace in the reading-room of the "Astral Flats," at Greenpoint (borough of Brooklyn), was the motto of his life and the secret of his success. During his business career in Boston he became interested in the Mercantile Library as a student; and this, together with his subsequent connection with the New York Mercantile Library, had a marked influence on his life. In 1851 he moved to New York city, and entered the house of Sebanck & Downing, dealers in oil, paints and glass, at 108 Fulton street, continuing to do business at this location for twenty-five years. In 1851 he purchased the oil part of the business of Sebanck & Downing, and became associated with C. T. Reynolds and F. W. Devoe, continuing the business under the firm-name of Reynolds, Devoe & Pratt. In 1864 Mr. Devoe retired from the firm, and the business was continued under the name of Reynolds, Pratt & Co., which was succeeded by the firm of Charles Pratt & Co., and later by the Pratt Manufacturing Co. Mr. Pratt was among the first to discern the possibilities of the petroleum trade, when that began to be developed in the great oil field of Pennsylvania, in 1860. He commenced the refining of the crude

oil, erected a large factory at Greenpoint, and his "Astral Oil" soon became a celebrated commodity in the market of the world. When the Standard Oil Co. began absorbing the minor oil firms, Charles Pratt & Co. made good terms with the Rockefellers and H. M. Flagler, who managed the trust with \$100,000,000 capital. The firm of Charles Pratt & Co. then succeeded to the management of Mr. Pratt's affairs, the refining business being entirely delegated. To sell a good article and to carry on business upon business principles were the ideas governing his life. His career was marked by strict attention to his own branch of the business, without indulgence in outside speculations or in the interests alien to his trade. The gifts of Mr. Pratt to the industrial institution bearing his name, and to the Adelphi Academy, both in Brooklyn, have given an impetus to these institutions which will affect the training of thousands of young minds in future years. His attention was first called, in 1867, to an academy kept by Mr. Lockwood. He sent his children to this school, and two years later, when it was incorporated as the Adelphi Academy, he became one of the trustees, and continued as such, active and observant in the discharge of his duties, until his death. On the death of Mr. William Ives Biddington, in 1879, Mr. Pratt became president of the board of trustees. Largely by his generosity, the building occupied by the school at Lafayette avenue and St. James place was doubled in size in 1880. Six years later Mr. Pratt gave \$100,000 to put up a new building for the school, and afterwards increased the gift to \$160,000, with which the present handsome and commodious structure on Clifton and St. James places was erected. With its equipment, the building cost \$200,000. Mr. Pratt's gifts to the institution amounted in all to more than a quarter of a million of dollars. It has more than a thousand pupils of both sexes, and furnishes a complete high-school and academic training for children from six to sixteen years of age. But by his generous interest in public education and the need of training in the higher branches in connection with training in manual trades, a far greater educational enterprise was set on foot, in 1887, in the Pratt Institute, on Ryerson street, a short distance from Adelphi Academy. In its plan and practical scope it is one of the leading institutions of the kind in the country, and furnishes manual training in connection with high-school education, and also affords an opportunity for instruction in trades and useful arts to apprentices, clerks and others employed during the day. It combines the best features of the Cooper Institute classes, the leading manual-training schools, cooking-schools, art schools and classes in domestic economy. Underlying the practical ends of the training it offers, there are principles which elevate it and its works out of the sphere of mere mechanical training of eyes and hands. It is based upon an appreciation of the dignity, as well as the value, of intelligent handiwork and skilled manual labor, and upon the theory that where it is possible to at once train mind, eye and hand, the most symmetrical development will be secured. It furnishes opportunities for this broader, more complete and harmonious education. With the instructions proper it teaches habits of thrift. It tries to nourish those qualities which produce a spirit of self-reliance, and, above all, its system is such that it teaches that personal character is of greater consequence than ma-

terial production. It also has a good library, which is free to the citizens of Brooklyn, with over 20,000 members and a circulation of above 300,000 volumes per year, together with a branch of "The Astral." Connected with the institute there is a very able corps of professors and instructors, over 100 in number, and in 1891 there were over 3,500 students in attendance, with the numbers constantly increasing. An important feature of the institution is its system of lecture courses. It is intended that these shall bear directly upon the work of the institution in all its phases, thus including practical instruction

upon those matters which pertain to right modes of living, the problems of political and social life, domestic economy, sanitary science, literary culture, ethics, etc. The institute occupies three large buildings: the main building, the mechanics' art building and the trade-school building. These buildings cover a floor space of several acres; and another, the library building, has been recently erected at a cost of several hundred thousand dollars, to furnish additional accommodations for students, as well as for the public features of the institute work, such as a museum, lecture hall and library. It is liberally endowed, the capital being invested largely in real estate, included in which is a series of seven six-story apartment houses, known as "The Astral." Mr. Pratt was noted for his many unostentatious deeds of charity. His religious affiliations were with the Baptist denomination, and he was one of the founders of the Emmanuel Church, on Lafayette avenue, Brooklyn. He was a man of broad sympathies and unflinching generosity, making use of his extensive income to benefit every worthy object which came within his knowledge. It is said that the last business he transacted before his death was the signing of a check for \$5,000 for the Brooklyn board of charities, to which he was a frequent donor. To honor the memory of his father, he established the Asa Pratt fund for a free reading-room in his native town. Mr. Pratt was twice married: first, in December, 1854, to Lydia Ann, daughter of Thomas Richardson, of Belmont, Mass., who died in August, 1861; second, in September, 1863, to her sister, Mary Helen Richardson. By the first marriage he had one son, Charles M. Pratt, now a director and officer of the Standard Oil Co., and one daughter, Lydia Richardson, wife of Frank L. Babbott, of Brooklyn, N. Y. By the second marriage he had five sons, Frederic B., George D., Herbert L., John T. and Harold I. Pratt; and one daughter, Helen F. Pratt.

He died in New York city, May 4, 1891, and was buried in the family mausoleum, Desoria, L. I.

**PECK, Charles H.**, pioneer, was born in the city of New York, Sept. 21, 1817, son of Stephen and Catharine B. (Walter) Peck. Both parents were of English descent and connected with some of the oldest and most prominent families in New England and New Jersey. On the death of her husband, in 1820, Mrs. Peck removed with her two children to the home of her father, John Walter, a farmer of Monmouth county, N. J. Here Charles H. Peck was reared, pursuing his studies in the common schools until he was about seventeen years of age, when he returned to New York, preferring the profession of his father, a builder, to farming. In New York city he entered the office of an architect and builder, and for four years pursued professional studies. In the year 1838, at the age of twenty years, he resolved upon seeking place and fortune in the great West; and leaving New York, made his way by the primitive methods then in vogue to Buffalo, at the head of Lake Erie. There he embarked upon a vessel bound for Chicago, at that time scarcely more than a frontier town, whose attractions young Peck found insufficient to hold him; and he traveled for some time in northern Illinois, quite undecided upon a location. Turning southward, he struck the Fox river, and, with a companion, constructed a small boat, which they navigated to the confluence with the Illinois river. Then proceeding down the Illinois to Beardstown, they abandoned their boat, and started out across the country for St. Louis, Mo., arriving there in the autumn of 1838. Mr. Peck, by his pleasing address and determined spirit, soon found employment in a building enterprise, which was the starting-point of his successful career; and from that time forward his industry and efficiency as an architect and builder and his courage and integrity as a man kept him straight on the road of industrial success. Probably no man now living (1899) has done more for the material and industrial prosperity of St. Louis and the state of Missouri. His remarkable foresight enabled him to anticipate the rapid growth and development which half a century would bring to St. Louis; and he accordingly laid his plans to help on and share the profits of the building industry. Beginning work as a master-builder, he soon effected large contracts. He has been identified with the construction of a great number of buildings, which rank among the largest and most ornate in St. Louis. He has also cooperated in the development of the various important enterprises of the city and state, being a pioneer in the iron industry of Missouri, and justly to be styled the "father" of the enterprise which placed the mineral wealth of that state on the markets of the world. He was for many years a director of the Missouri Pacific railroad; an incorporator and director of the Vnlean Iron Works and the Bessemer Steel Works, which ranked among the largest and most productive in the United States; an incorporator and director of the Mechanics' Bank and Provident Savings Institution, and for years vice-president of the St. Louis Gaslight Co. He was incorporator and president of the City Mutual Fire Insurance Co., and held important offices in various other corporations. Political ambition seems never to have moved Mr. Peck, although he has faithfully discharged all the duties of citizenship. He was married, in 1840, to Rebecca Adams, a resident of St.

Chas H Peck

Louis, but a native of Philadelphia. His family consists of seven sons and two daughters.

**CAMPBELL, William Shaw**, U. S. consul, was born in New York city, July 26, 1818, son of Alexander and Mary Campbell. His father, of good Scotch-Irish stock, came to New York as a young man about 1785, and established himself there as a merchant. The son was educated in private schools, and on leaving school entered an important commercial house, in which it was intended he should become a partner; but the firm was ruined by the commercial disasters of 1837. In 1840, Mr. Campbell went to Europe on a sailing packet, and spent two years traveling by the stage and post-coaches then in use, throughout eastern Europe. He sent accounts of his travels to several journals of New York and other cities, and these were published with the title of "Letters from the Heart of Europe." In 1843, he was appointed U. S. consul at Rotterdam, Holland, and this position he filled with signal ability for twenty years. During that time he entertained, at his own expense, all distinguished Americans who visited Rotterdam, and among them several who afterwards became presidents of the United States. He benefited American trade by introducing, to his own pecuniary loss, American petroleum in Holland, and overcoming the difficulties which met its first entrance. As it was believed to be a dangerous explosive, he was not allowed to store it on shore, and was put to the expense of keeping it in lighters. At the present day Rotterdam is one of the most important places in the north of Europe for its distribution. Great warehouses have been especially built for its storage, and especially constructed tank steamers are now regularly engaged in its transportation. In 1862, Mr. Campbell was transferred to the consulate at Dresden, Saxony, where he remained until 1871. There he witnessed the beginning and growth of the American colony, was appointed first president of the American Club on its organization, and was among

*W. S. Campbell*

the leaders who commenced the establishment of the American church, by fitting up a hall in which divine service was held until the present beautiful structure was built. In the absence of an American diplomatic agent at the Saxon court, he had the unusual honor of presenting his compatriots at court functions. While upholding the national dignity, all his duties involved a heavy personal expense, which far exceeded his official income. In 1871, on his return to America, he went to California, and while there lost what remained of his private fortune, being lured into unfortunate mining speculation during a period of unexampled excitement. He was then obliged to accept the office of notary public, which he held for several years. In 1887, he visited England unofficially; then he went to New York, and filled a civil appointment in the U. S. quartermaster's service until 1893. In that year he reluctantly consented to re-enter the consular service, and was appointed to serve at Newcastle-on-Tyne. After four years of very fruitful service there, he was displaced by the new home administration. Before leaving Newcastle, he was the recipient of

highly complimentary resolutions passed by the mayor and council, the Merchants' Exchange, the Association of Steamship Owners and Underwriters, and other commercial bodies. Mr. Campbell was married, in New York, May 10, 1843, to Josephine, daughter of Dr. Jacob Rabinow, a descendant of an old Knickerbocker family. They had four daughters, one of whom married Adj.-Gen. Kelton, of the U. S. army.

**LATROBE, Benjamin Henry**, architect and civil engineer, was born in Yorkshire, England, May 1, 1764, son of Benjamin Latrobe and Anna Margaret, daughter of John Frederick Antes, of Pennsylvania. He was the great grandson of Count Henri de Bouval de la Trobe, who fled from France to Holland after the revocation of the Edict of Nantes; entered the service of the prince of Orange in 1685, and accompanied him to Ireland; was severely wounded at the battle of the Boyne, and, at the close of hostilities, settled in Dublin. At an early age he was sent to a Moravian seminary in Saxony, and afterwards completed his education at the University of Leipzig. In 1785 he entered the Prussian army as a cornet of hussars. After participating in several severe engagements and receiving honorable wounds, he resigned his commission in 1786, and returned to England to practice his chosen profession. In 1789

*B. H. Latrobe*

he became surveyor of the public office and engineer of London. His political views, however, led him to look to the United States as a more congenial home; and upon the death of his first wife, an English lady, he decided to emigrate. Owing to the war then existing between France and England, he determined to take passage in an American brig, the *Elisa*, and accordingly set sail on Nov. 25, 1795, from the port of London, leaving two children to follow him at a later date. The captain seems to have been an ignorant brute, with an overmastering fear of Algerian pirates. This kept him in the North Atlantic, and resulted in a tempestuous voyage; so that the vessel did not reach Norfolk, Va., its destination, until May 20, 1796. Fortified by letters of introduction to many prominent Virginians, Mr. Latrobe's abilities and experience soon obtained recognition, and he became engineer of the James river and Appomattox canal; he also built the Richmond penitentiary and many private residences in and around Richmond. Moving afterwards to Philadelphia, he erected a number of important buildings, and constructed the first water-works in that city, pumping from the Schuylkill by steam, the pump-house occupying the present site of the public buildings at the intersection of Broad and Market streets; this was in 1800. In 1803 Mr. Latrobe was appointed surveyor of the public buildings in Washington by Pres. Jefferson, succeeding Thornton, Hatfield and Hoban as architect of the old capitol. He perfected the designs of Dr. Thornton, and altered those for the interior of the south wing, with the approval of the president. After the destruction of the capitol by the British in 1814, the reconstruction of the building was placed in his hands. In the execution of this work he designed the corn-stalk column in the north wing, as well as the tobacco-plant capitals in the circular colonnade of the south wing; thus originating what may be called an American order. He also utilized the handsome breccia marbles of the Potomac quarries in the columns of

the old house of representatives and senate chamber. He was succeeded by Charles Bullfinch in 1817, who carried out Mr. Latrobe's designs. Among other works, he prepared the original plan of the Chesapeake and Delaware canal; designed and built the Baltimore cathedral and the present custom-house. In 1812 he joined Robert Fulton in building, at Pittsburgh, the Buffalo, the fourth steamboat that descended the Ohio river. Mr. Latrobe's first wife, Lydia Sellon, bore him two children: Henry Latrobe, an engineer, died in New Orleans; the daughter became Mrs. Nicholas Roosevelt, of New York. His second wife was Mary Elizabeth Hazlehurst, of Philadelphia, who survived him with three children—a daughter and two sons. In 1820, while constructing the New Orleans water-works, he was seized with yellow fever, and died after a short illness.

**LATROBE, John Hazlehurst Bonval**, lawyer, was born in Philadelphia, Pa., May 6, 1803, eldest son of Benjamin Henry Latrobe, Sr., and Mary E. Hazlehurst. During his father's residence in Washington as surveyor of the public buildings, he began his education at Georgetown College; and upon the removal of his parents to Baltimore, continued his studies at St. Mary's College, then one of the best institutions of learning in the country. In 1816, Mr. Latrobe entered the U. S. Military Academy at West Point, during Gen. Thayer's superintendency.

Here he remained until 1820, when the death of his father in New Orleans compelled his resignation, just before his graduation, and when at the head of his class. Returning to Baltimore, he entered the office of his father's friend, Gen. Robert G. Harper, as a student of law, and was admitted to the bar in 1825. In 1828 he became counsel to the Baltimore and Ohio railroad, which position he held until his death. He was the founder of the Maryland Institute, and after its destruction by fire, in 1835, actively aided in its reorganization. In conjunction with Gen. Harper, one of the founders of Liberia,

he prepared the first map of that republic, and named the first rivers and settlements. He aided in obtaining from the Maryland legislature an appropriation of \$275,000 for the transportation of emigrants to Africa, and was mainly instrumental in establishing the Maryland colony at Cape Palmas, for which he framed the constitution and ordinances. It was his close connection with the interests of the American Colonization Society that led to his election as president on the death of Mr. Clay in 1853. He afterwards became president of the American branch of the Association for the Exploration of Africa, and was invited to attend the first meeting of the parent association by the king of the Belgians. In 1849 he became a member of the board of visitors to West Point, and was made president. Mr. Latrobe was also president of the Maryland Historical Society for many years, which position he continued to occupy until the day of his death. During his connection with the Historical Society he contributed many papers of interest, which are published in its archives. In the intervals of a busy life, he delivered many addresses, among them: "The Capitol and Washington at the Beginning of the Present Century" (1881); and published a number of volumes, including a "Biography of Charles Carroll of Carrollton" (1824); "Justices' Practice" (1828; 7th edition, 1880); "Scott's Infantry and Rifle Tactics," condensed (1828); a "Picture of Baltimore" (1832); a "His-

tory of Mason and Dixon's Line" (1854); "Personal Recollections of the Baltimore and Ohio Railroad" (1858); "Hints for Six Months in Europe" (1869); "Odds and Ends," a volume of poems; "History of Maryland in Liberia" (1885); "Reminiscences of West Point" (1887), and a number of other works of varied character. Mr. Latrobe's economy of time was one of his most valuable traits, and aided him in the accomplishment of an endless amount of work. In addition to his professional and literary work, he was an ardent painter, and his home was filled with the products of his pencil and brush; he would, during the summer months, at his country-house, rise with the dawn and paint until breakfast time. He was married, near Natchez, Miss., in 1833, to Charlotte V., daughter of Gen. Ferdinand Leigh and Mary Claiborne. She was a descendant of William Claiborne, a Puritan of distinguished English lineage, and the original settler of Kent Island, Md. She bore him four sons and two daughters. Of the sons, Osmun, served on Gen. Longstreet's staff with the rank of colonel from the battle of Bull Run to the surrender at Appomattox. R. Stuart, now a prominent attorney of Baltimore, fought throughout the civil war in the Maryland cavalry of the Confederate army. Ferdinand C., a lawyer, was seven times mayor of Baltimore, and also served in the legislature. Mr. Latrobe died in Baltimore, Md., Sept. 11, 1891.

**LATROBE, Benjamin Henry**, civil engineer, was born in Philadelphia, Pa., Dec. 19, 1807, second son of Benjamin Henry and Mary E. (Hazlehurst) Latrobe. He was graduated at St. Mary's College, Baltimore, in 1825; studied law, and was admitted to the bar, practicing in connection with his brother, John, in Baltimore. The law, however, was not congenial to him; civil engineering was the profession of his choice—possibly an inheritance. In 1827 the Baltimore and Ohio railroad was organized, and soon began its active career. Intense interest was aroused, and as civil engineers were in demand, Mr. Latrobe soon found a field for his ambition, and entered the service of the Baltimore and Ohio Railroad Co. in 1831, Jonathan Knight being chief engineer. He soon rose to the rank of principal assistant, and in 1832 located the line from Baltimore to Washington, and subsequently the line from the Point of Rocks to Harper's Ferry. In 1835 he was appointed engineer of location and construction, and built the road from Harper's Ferry to Cumberland, which was opened for travel in November, 1842. Upon Mr. Knight's retirement, about this time, he was appointed chief engineer of the Baltimore and Ohio railroad, and devoted all his energies to the extension of the road across the Alleghenies to the Ohio river—a work involving many problems unsolved at that date, in relation to heavy grades, long tunnels and the capabilities of the locomotive engine. The scheme was looked upon by many as chimerical, involving, as it did, grades of 116 feet per mile for permanent work and 500 feet per mile for temporary tracks across the Kingwood tunnel. All difficulties, however, were overcome through Mr. Latrobe's firm faith, backed by a few far-sighted friends in the directory, and in 1852 the road was opened to Wheeling. Subsequently the branch to Parkersburg was built, and finally the Pittsburgh and Connellsville, of which Mr. Latrobe was president and chief engineer. Subsequently Mr. Latrobe was engaged in important enterprises all over the country. Among other responsibilities, he was consulting engineer of the Hoosac tunnel and of the Portland and Ogdensburg railroad. He was also one of the board to whom John A. Roebling submitted his plan for the construction of the New York and Brooklyn suspension bridge. The construction of the Baltimore and Ohio railroad and its branches was, however, his life-work,

*John H. Latrobe*

and the successful solution of the many novel problems involved made it a monumental work in its day, and brought Mr. Latrobe in close communication with his professional brethren, by whom he was highly esteemed for his engineering talent as well as his genial manner and noble Christian character. He was married, in Salem, N. J., in January, 1833, to his cousin, Ellen, daughter of Isaac and Maria Hazlehurst, who bore him two sons and three daughters. Mr. Latrobe retired from active professional work about 1875, and died in Baltimore, Md., after a short illness, Oct. 19, 1878.

**LATROBE, Charles Hazlehurst**, civil engineer, was born in Baltimore, Md., Dec. 25, 1833, son of Benjamin H. and Ellen (Hazlehurst) Latrobe, and grandson of Benjamin Henry Latrobe, the architect. Mr. Latrobe entered the employ of the Baltimore and Ohio railroad in 1850 as a civil engineer, and continued the practice of his profession in the service of various railroad companies, principally in the South, until 1862, when he entered the Confederate army as a first-lieutenant of engineers. At the close of the war he returned to Maryland, and recommenced the practice of civil engineering, making iron bridge-building a specialty; planning and erecting, in connection with his associates, many important structures in the United States and in South America. In 1878 he entered the service of the city of Baltimore, as engineer of the Jones Falls improvement, involving the erection of many important city bridges. The improvement of the falls being nearly completed in 1886, Mr. Latrobe became the general superintendent and engineer of public parks for Baltimore. He was married, in Tallahassee, Fla., in 1861, to Letitia, daughter of Robert and Letitia Gamble, who bore him one son and two daughters.

**LATROBE, Ferdinand Claiborne**, lawyer, was born in Baltimore, Md., Oct. 14, 1833, son of John H. B. and Charlotte V. (Claiborne) Latrobe. He was educated in the schools of his native city and

at St. James' College. After graduation, he was clerk in a business house, and then, making his professional studies in his father's office, was, on his admission to the bar in 1860, appointed assistant counsel to the Baltimore and Ohio railroad. In 1868, he was elected to the legislature, and in 1870 was re-elected, during his first term serving as chairman of the ways and means committee, and during his second as speaker. Among other notable services performed by him was the originating and carrying through of a law providing for the reorganization of the state militia, and in 1870 he was appointed judge-

advocate-general to effect the reforms therein contemplated and provided for. In 1875, Mr. Latrobe was elected mayor of Baltimore. In 1878, he was called to fill an unexpired term as mayor, and in 1879, was elected for the full term of two years. In 1883, 1887, 1891 and 1894, he was again elected mayor, and then withdrew from public office, although he continued to be prominent in Democratic politics. He is a prominent Mason, and is past-master of Fidelity Lodge of Baltimore. Mr. Latrobe has been twice married: first, in 1863, to Louisa, eldest daughter of ex Gov. Thomas Swann. Their only child, Thomas Swann Latrobe, died in 1894, aged twenty-five years. He was again married, in 1880, to Ellen, daughter of John R. Penrose, of

Philadelphia, who bore him three children—Ferdinand C., Charlotte and Virginia.

**DES ROCHERS, John Mowbray**, merchant, was born in New York city, Dec. 29, 1859, of Huguenot descent. On the maternal side he descended from the Mowbray and Howard families of England. Mr. Des Rochers was educated at public and private schools in New York until the death of his father, when he went to live with his maternal uncle, John Mowbray, a retired merchant. In 1879 he settled at Jacksonville, Fla., and engaged in the sawmill and lumber business, forming, four years later, a partnership in that industry with C. G. Elliott, which lasted until the latter's death in 1888. Since that date Mr. Des Rochers has continued to engage by himself in the lumber trade, purchasing from the mills of Georgia and Florida, and shipping to the principal Atlantic ports and to the West Indies and South America, his business being one of the most extensive and beneficial industries carried on in the South. His offices at Jacksonville, Fernandina and Brunswick, Ga., receive his personal supervision; and he is, therefore, kept so busy that he has not been able to find time to devote to political affairs, although frequently requested to accept nomination. Mr. Des Rochers was married, in 1882, to Maria S., daughter of Capt. H. C. Hewlett, an officer in the Confederate navy. He has two sons, Oliver and Edward, and a daughter, Grace.

*J. M. Des Rochers*

**BULL, Henry**, attorney-general of Rhode Island, was born Nov. 23, 1687, grandson of Henry Bull of Newport, who was twice governor of Rhode Island. He was left an orphan in early childhood; was brought up by an aunt, Mrs. Mary (Bull) Coggeshall, who had him apprenticed to a carpenter. After learning the trade, he followed it for several years, but had an ambition to fill a higher station, and accordingly turned to the law. A Rhode Island historian, in referring to his efforts to acquire facility in speaking, says: "When he had made up his mind to practice law, he went into the garden, to exercise his talents in addressing the court and jury. He then selected five cabbages in one row for judges, and twelve in another for jurors. After trying his hand there for a while, he went boldly into court and took upon himself the duties of an advocate; and a little observation and experience there convinced him that the same cabbages were in the courthouse which he thought he had left in the garden—five in one row and twelve in another." In addition to his natural abilities, he was endowed with an attractive face and commanding figure, and with graceful manners as well. At different times he represented Newport in the general assembly. He was elected attorney-general in 1721, and was re-elected in 1722, was speaker of the house of representatives in 1728-29; was member of a committee to revise the laws of the colony in 1728, and also served on a legislative committee in 1728-29, during a controversy with Massachusetts over the boundary line between the two colonies. In 1749, the court of common pleas was established, and Judge Bull was appointed its first chief justice. He was twice married: first, to Martha Odlin, by whom he had four sons and three daughters; and the second time to Phebe Coggeshall, by whom he had seven sons and three daughters. Judge Bull died at Newport, R. I., Dec. 24, 1771.

*Ferdinand C. Latrobe*

**BARR, Edward**, merchant, was born in Lancaster county, Pa., June 29, 1845, son of John and Barbara (Kinport) Barr. When a mere boy he enlisted in company B, 1st Pennsylvania reserves, and served in the battle of Fredericksburg, receiving favorable mention from the captain of his company for his gallantry during this action. At the close of the war he entered the service of Morris, Tasker & Co. in Philadelphia, with whom he remained ten years, when he went to New York, and entered into business for himself, which was incorporated in 1883 as the Edward Barr Co. He is a member of the chamber of commerce; the Hamilton and Crescent clubs of Brooklyn; one of the vice-presidents and Republican clubs of the Apollo

*Edward Barr*

of the same city; is the president of the Lake George Country Club, at Hague, Lake George, and the New York director of the Brownlow Mining and Milling Co. of Denver, and the Church Club of the diocese of Long Island; a trustee of the Brooklyn City Dispensary, and the representative of St. Martha's Sanitarium in the Brooklyn Hospital Saturday and Sunday Association, of which he is treasurer. For a number of years he was treasurer of the Sheltering Arms Nursery of Brooklyn, and under Mayors Strong and Schieren was treasurer of the New York and Brooklyn Bridge,

until the change of administration, Jan. 1, 1898. He has been a member of the board of directors of the Manhattan Fire Insurance Co. for sixteen years, and was elected vice-president of the company in 1898. He is a member of the Underwriters' Club of New York, and also of George Washington Post No. 103, G. A. R., of the state of New York. He was from its inception the secretary of the League of Loyal Citizens of Brooklyn, which he started in a small room with four others, from which the organization grew until it had a membership of 78,000 voters opposed to the consolidation of Brooklyn with New York. He was married at St. George's, London, in 1872, to Julia L., daughter of the late Gilbert Cumming Weld. They have four daughters, Josephine Elise Weld, Julia Kinport, Mary Godfrey and Elise Adeline Rush Barr.

**HENTZ, Nicholas Marcellus**, educator and scientist, was born in Versailles, France, July 25, 1797. Even at an early age he showed a remarkable talent for miniature painting, and attained considerable proficiency in the art. In 1813 he entered the Hospital Val de Grace as a student in medicine, and remained busied with his studies and duties as hospital assistant until the fall of Napoleon, when his father was proscribed and obliged to flee to America. The family spent a few weeks in New York city and Elizabeth Town, and then settled at Wilkes-Barre, Pa., in April, 1816. For some years the son was engaged in Philadelphia and Boston as a teacher of French and miniature drawing; was then tutor in the family of a Mr. Marshall on Sullivan's island, near Charleston, S. C.; later taught at the Round Hill School, Northampton, Mass., and in 1824 became professor of modern languages in the University of North Carolina. There he remained until 1830, and from that time to 1849 was in charge of female seminaries and academies at Covington, Ky.; Cincinnati, O.; Florence, Tuscaloosa and Tuskegee, Ala., and Columbus, Ga. His health then failing,

he removed to Mariana, Fla. During his long life as a teacher he was one of the pioneers in American entomology, and became during his time the highest authority on American spiders. He began the study of the spider when little or nothing had been published on its life-history, and all his leisure was given to the study of its habits and to the collection, description and representation of the various species. His scientific writings first appeared in "Silliman's Journal," and in the reports of the Philadelphia Academy of Arts and Sciences and the Boston Society of Natural History. Some years ago the last named society collected and republished his arachnological writings with notes by J. H. Emerton and William E. Holden. He was married early in life to Carolina Lee, daughter of Gen. John Whiting, of Lancaster, Pa. She was well known in her day as a novelist and poet. Prof. Hentz died in Mariana, Fla., Nov. 4, 1856.

**ALLEN, Samuel Louis**, pioneer, was born at Canasaraugh (now Sullivan), Madison co., N. Y., April 12, 1808, son of Roland and Sarah (Chapman) Allen. His mother was a daughter of Benjamin Chapman, a captain in the revolutionary war, who served eight years under a commission from Gov. Clinton, of New York, and was commended for his valor. Samuel L. Allen attended school at the neighboring village of Chittenango, N. Y., but early in life left home to seek his living. For a while he worked on the Erie canal, then engaged in the manufacture of edge-tools at Chittenango, and finally in mercantile business at Baldwinsville, N. Y. In 1838 he removed to Texas, settling first at Nacogdoches, and later removing to Houston, a town founded by his brothers, Augustus Chapman and John Kirby Allen. There he started the first saw-mill in that portion of Texas, and for several years conducted a prosperous trade, giving employment to large numbers. He conducted his business on an enterprising basis, selling lumber to those desiring to build at very reasonable figures, and as a consequence, the city grew rapidly.

He donated all the lumber used in building the First Presbyterian Church of Houston, which, save the old missions at San Antonio, was the largest church in the state. Mr. Allen was one of the principal owners and promoters of the first cotton press in Texas, the plant being located in Houston, and for many years did a very large business; also established the first cotton commission and forwarding house in Texas, and his business in this line extended to all parts of the state. He aided in establishing banks, and contributed to the building of railroads and other enterprises that have made Houston now a city of 75,000 population. Being a man of finest business ability, he rarely undertook a venture that did not succeed. It has been justly said that no other one man did more to found the prosperity of Houston than Mr. Allen. His numerous enterprises constantly afforded occupation for all the unemployed in the place, and his devotion to the upbuilding of the city originated many valuable improvements by which he is still remembered. Mr. Allen was married in 1860 to Margaret Eveline, daughter of Thomas T. Caffrey, of Yazoo county, Miss., whom he met while she was visiting Houston with her mother. He had one child, a son, Augustus Chapman Allen, a well-known attorney of Houston. Mr. Allen died at Houston, Tex., Oct. 12, 1895.

*S. L. Allen*

*S. L. Allen.*

**FISK, Wilbur**, first president of Wesleyan University (1831-39). (See Vol. III., p. 177.)

**OLIN, Stephen**, second president of Wesleyan University (1839-41, 1842-51), was born at Leicester, Vt., March 2, 1791, and was graduated at Middlebury College, Vermont, in 1820. He taught school in Abbeville district, S. C., for three years, joined the South Carolina conference in January, 1824, as a Methodist Episcopal preacher, and was then stationed at Charleston, S. C. He was ordained as deacon, Jan. 13, 1825, at Milledgeville, Ga., and on the 1st of the next January became professor of *belles-lettres* in the University of Georgia, and remained there until 1833. He received examination as elder, Nov. 20, 1828. In March, 1834, he was inaugurated first president of

His abilities as a teacher were of a high order, his method of instruction most suggestive, and his scholarship broad and thorough. As a preacher he was truly remarkable, both for force and elegance of diction. His two only baccalaureate sermons (1846 and 1851) were subsequently published in a volume entitled, "Youthful Piety" (1853). His manner exhibited a lofty dignity, although with no trace of haughtiness. He received the degree of D.D. from Middlebury College (1832), from the University of Alabama and also from Wesleyan University (1834). In 1845 Yale College gave him LL.D. Several volumes from his pen have been published, among them, "Travels in Egypt, Arabia Petraea, and the Holy Land" (1843); and, posthumously, "Greece and the Golden Horn" (1854); and "College Life and Practice" (1867). His "Life and Letters" appeared in 1853, edited by his wife. After nine years of faithful service to Wesleyan University, he died Aug. 16, 1851, sincerely revered by all who knew him.

**BANGS, Nathan**, third president of Wesleyan University (1841-42), was born in Stratford, Conn., May 2, 1778. His early education was limited, such as it was, being largely the fruit of his persevering industry and love of study. In 1799 he went to Canada, where for three years he was engaged in teaching and land-surveying. He became an itinerant Methodist minister in 1802, preached in various places in Canada, and won a wide reputation as a successful preacher. Later he removed to New York city, where he filled a pastorate and several important denominational offices, and in 1820 became secretary and manager of the Methodist Book Concern. He was also editor of the "Methodist Magazine" from 1820; of the "Methodist Quarterly Review" when it superseded the former in 1832, and of the "Christian Advocate" from 1828. Under his management both the book and magazine departments were greatly enlarged, and placed upon a permanent basis. He also exercised a censorship over the publications of the house, and labored earnestly to establish a high standard of denominational literature. In 1836 he was appointed secretary of the Methodist Missionary Society, of which he was one of the founders, and thereafter devoted his time and energy to its management. From this important post he was called to the presidency of Wesleyan University in 1841, to supply the temporary vacancy caused by the illness of Pres. Olin, his brilliant record in important business trusts making him a fitting incumbent of that high office, despite his lack of a university education. He accepted the trust with reluctance, believing his greater sphere of usefulness to be elsewhere, and cheerfully resigned upon the return of Pres. Olin, at the end of 1842. His administration was too short to be noted for any great action, but his resignation was entirely voluntary, and from a sense of duty. The annual "tree day" of the Wesleyan students was established, and the many fine trees on the campus are the result of the movement then inaugurated for beautifying the grounds. After resigning the presidency he returned to New York city, where he filled pastorates for the next ten years, then retired, and devoted the remainder of his life to literary pursuits. He was a voluminous writer and an able controversialist. Among his works are: "Errors of Hopkinsianism" (1815); "Predestination Examined" (1817); "Reformer Re-

Randolph-Macon College (Methodist Episcopal), in Mecklenberg county, Va., taking the chair of mental and moral science, *belles-lettres*, and political philosophy, but in 1837 he was forced, by infirm health, to leave this position on an indefinite furlough, although the college had prospered greatly under his care. Spending some time in Europe, Egypt, and Palestine, he returned to the United States in 1840, having been chosen, in 1839, to the presidency of Wesleyan University, and nominally filled the office for two years, having been succeeded by Rev. Nathan Bangs. In 1842 he returned to this office, introduced a strict course of discipline in its administration, and was successful in securing endowments for the college, as well as in raising its religious tone. In 1850 he was offered the presidency of Genesee College, New York, but declined. His activities were not confined to the world of education, but were equally important in religious matters. He played an important part in founding the Evangelical Alliance in 1846, and was thereafter largely identified with its activities. His conception of a college course was eminently conservative, both as to subject and method. In 1844 he contracted the curriculum by the omission of modern languages, but made the teaching on other subjects all the more thorough and careful, especially the classics, in which he was deeply versed. His continued ill health, originally the result of over-study in his own college days, prevented his constant presence in the class-room—a matter which he deeply regretted.

formed" (1818); "Methodist Episcopacy" (1820); "Authentic History of Missions under the Care of the Methodist Episcopal Church" (1832); "The Original Church of Christ" (1836); "History of the Methodist Episcopal Church (4 vols., 1839-42); "Essay on Emancipation" (1848); "Letters on Sanctification" (1851); "Life of Arminius," and many others of a doctrinal or controversial character. He also published many sermons. The degree of D.D. was conferred on him by Wesleyan University. His death occurred in New York city, May 3, 1862.

**SMITH, Augustus William**, fourth president of Wesleyan University (1852-57), was born in Newport, Herkimer co., N. Y., May 12, 1802. He was graduated at Hamilton College in 1825, and immediately began his career as a teacher in the Onondaga Conference Seminary, Cazenovia, N. Y. In 1831, at the foundation of Wesleyan University, he became professor of mathematics and astronomy, and held the chair until 1857, when he was elected president. Rev. John McClintock had previously been offered the office, but refused. During his administration his ability as a practical manager was required for the task of increasing the absurdly small endowment under which the university had hitherto labored, to the jeopardizing of its existence and usefulness. In conjunction with Prof. H. B. Lane he obtained subscriptions to the amount of \$100,000, four-fifths of which was paid in, and greatly relieved the dire necessity. Among the contributors to this fund was Isaac Rich, who began his long line of benefactions to the institution with a gift of \$20,000. Daniel Drew also gave \$5,000. Pres. Smith, although of a retiring and scholarly temperament, was possessed of exceptional executive ability, and his administration was characterized by several such achievements of notable service. On Aug. 5, 1857, he resigned the presidency, and two years later, in 1859, became professor of natural philosophy in the U. S. Naval Academy, Annapolis, Md. He was one of a corps of astronomers sent by the U. S. government to Labrador, in 1860, to observe the annular eclipse of the sun. Pres. Smith was a "modest, unassuming man, of thorough culture," and a very successful instructor. He published several excellent mathematical treatises. The degree of LL. D. was conferred on him by Hamilton College in 1850. He died at Annapolis, March 22, 1866.

**CUMMINGS, Joseph**, fifth president of Wesleyan University (1857-75), was born in Falmouth, Cumberland co., Me., March 3, 1817. He was graduated at Wesleyan University with the highest honors in 1840, began teaching in the seminary at Amenia, N. Y., where he became principal in 1843, and joined the New England conference of the Methodist Episcopal church and was ordained to preach in 1846. For the next seven years he filled pastorates in Malden, Chelsea, and Boston, Mass.; was professor of theology in the Methodist general Biblical Institute, Concord, N. H. (1853-54), and was president of Genesee College, Lima, N. Y. (1854-57). In 1857, he was chosen president of Wesleyan University, the first alumnus to fill the office, and entered upon his highly successful administration of eighteen years. During his incumbency the buildings of the university were increased by several generous donations by alumni and others. By the munificence of Isaac Rich, Rich Hall, library building, was opened in 1868, the alumni subscribing \$27,500 as a library fund. At the commencement, 1871, was opened the Orange Judd Hall of Natural Science, erected at the cost of \$100,000 by Orange Judd, an alumnus of the class of 1847. Memorial Chapel was dedicated on the same day. A new charter for the university, limiting the board of trustees to forty members, each conference electing one member, the alumni and joint-board the remainder, was obtained in 1870.

In 1871, by vote of the board of trustees of the university, it was decided that women should be admitted to equal standing with men students. Four women were graduated in 1876, and since then there have been a few in every class. The president's house, having been disused from 1883, was fitted up as a female dormitory; but the building formerly used as a boarding-school was later rented for the purpose. Wesleyan's move in the direction of coeducation was a radical one at the time, she being one of the first of New England colleges to adopt the practice. In 1872, also, the graduate department was resumed after many years' suspension. Pres. Cummings possessed eminent ability as an educator, and his devotion to the interests of the institution was tireless. After resigning the presidency in 1875, he continued for two years in the chair of mental philosophy and political economy. He resumed pastoral duties in 1877, holding successive charges at Malden and Cambridge, Mass., until 1881, when he accepted the John Evans professorship of moral and intellectual philosophy at Northwestern University, Evanston, Ill., with the presidency of the institution. Equally prominent in educational and ecclesiastical affairs, he was a delegate to the Methodist Episcopal general conference in 1864, 1876, 1880, and 1884. The degree of S. T. D. was conferred on him by Wesleyan in 1854, and by Harvard in 1861, and that of LL. D. by Northwestern University in 1866. Dr. Cummings published an edition of Butler's "Analogy of Religion" (1875), and beside numerous sermons and addresses, "Life of the late Daniel Stillman Newcomb" (1855), and "An Elective Presiding Eldership in the Methodist Episcopal Church" (1877). He died suddenly, of heart-failure, in Evanston, Ill., March 7, 1890.

**FOSS, Cyrus David**, sixth president of Wesleyan University (1875-80), and Methodist Episcopal bishop, was born in Kingston, N. Y., Jan. 17, 1834, son of Rev. Cyrus and Jane (Campbell) Foss. His father was an able and devoted Methodist minister, prominent in the abolition movement, who died under fifty years of age, leaving four sons. His mother was a woman of strong sense and deep piety, and her great ambition was to train her sons in the footsteps of their father. Her three surviving sons became ministers. In his boyhood Cyrus D. Foss attended school during the winter months, and assisted his father (who was then broken in health) on a little farm. After a thorough preparatory course of study in the Amenia Seminary, New York, he was admitted to Wesleyan University. In 1854, at the age of twenty, he was graduated at the head of his class, and was at once employed as teacher of mathematics in Amenia Seminary, remaining for three years, and during the last year being principal. He entered the ministry in the New York conference in 1857, and was stationed at Chester, Orange co., N. Y., during 1857 and 1858. For the next sixteen years he was pastor of six of the most prominent churches in the cities of Brooklyn and New York. After declining the presidency of a Western college, and a professorship in a theological seminary, he was, in 1875, elected president of Wesleyan University, Middletown, Conn. His earnest desire was to remain in the pastorate, for which his love was deep and strong, and in which his labors had been crowned with success. But so general was the conviction throughout the church that he ought to heed this call, and so emphatically was that

conviction expressed by the trustees, faculty, alumni, and other friends of the university, that he yielded his preference, and accepted the place. For five years he discharged the duties of his office in a masterly manner, and the friends of the institution rejoiced that it was under such a leader. Through his efforts \$375,000 was added to the endowment. In March, 1876, the trustees reported that the available funds of the university had suffered considerable decrease, owing to the depression in financial matters, and as the annual outlay was more than double the income, a heroic effort was necessary to save the institution from bankruptcy.

Pres. Foss recognized the gravity of the situation, and at his suggestion a committee of the alumni appealed to all graduates to assist the university, with the result that over \$40,000 was subscribed at once. He was chosen by the New York conference at the head of its delegation, to represent it in the general conference in 1872, 1876 and 1880. In 1878 he visited the general conference of the Methodist Episcopal church, South, as a delegate to present the fraternal salutations of the Methodist Episcopal church, and in 1886 he visited the British Wesleyan conference at its session in John Wesley's historic

London, on a like errand. At the general conference of 1880 he was elected and consecrated a bishop, at the same time resigning the presidency of the university. In 1870 Mr. Foss received the degree of D.D. from his alma mater, and that of LL.D. from Cornell College, Iowa, in 1879, and again from the University of Pennsylvania in 1889. He has been a frequent contributor to the religious papers of his own church, and to the "Independent," and has gained a wide reputation as an able and brilliant writer. Articles from his pen have also appeared in the "Sunday-School Times," the "North American Review," and other periodicals. He has also published many sermons and addresses for special occasions. In 1881 he delivered an address at Middletown, on the semi-centennial of the university. In his administration of the episcopal office, Bishop Foss is characterized by rare good judgment and firmness. These qualities, combined with a kind and sympathetic nature, have enabled him to perform the difficult duties of his office with great acceptability to the church. He is a man of well-rounded character, possessing the qualities of a great preacher, administrator, and leader of men. As a pulpit orator, he ranks among the foremost in the Methodist church. At times eloquent, he is always simple, direct, and convincing, and commands the attention of his audience by forceful and earnest presentation of truth, rather than by flights of rhetoric.

**BEACH, John W.**, seventh president of Wesleyan University (1880-87), was born at Trumbull, Fairfield co., Conn., Dec. 26, 1825. Entering Wesleyan, he was graduated in 1845, and then taught for several years in Amenia Seminary. In 1854 he was ordained a Methodist minister, and filled pastorates in New York city, at various places along the Hudson, and at New Haven, Conn., being presiding elder in 1880, when he was elected president of Wesleyan University. During the first years of his administration the endowment of the institution was largely increased, principally through the generosity of Geo. I. Seney, who, during the three years from 1880 to 1882, gave at various

times \$325,000, for founding scholarships and increasing the general reserve funds. His benefactions, coupled with those of others, had aggregated nearly \$800,000 in 1883, when he became involved in the unfortunate financial crisis. During Pres. Beach's administration the scholarly interests of the university were greatly augmented. The courses of study were modified in 1886, so as to make the required work slightly less, and offered opportunity for better co-ordination of all the departments. In 1882 Wesleyan united with eight other colleges in founding the American School of Classical Study at Athens, Greece, under whose auspices have been made many valuable contributions to archaeological science. Pres. Beach's preference was, however, for pastoral work, in which lay, he believed, his greatest possibilities of usefulness. He accordingly resigned in 1887, and has since filled again the important post of a presiding elder in his denomination.

**RAYMOND, Bradford Paul**, eighth president of Wesleyan University (1889- ), was born near Stamford, Conn., Apr. 22, 1846. During the winters he attended the public schools at Stamford, and in the summer was employed on his father's farm. Having passed the requisite examinations before he was fifteen years old, he obtained a position, and taught school in Stamford for three years, during that time partially preparing himself for college. Shortly after his eighteenth birthday he enlisted in the 48th New York infantry, and served until the close of the war, being honorably discharged in September, 1865. In April, 1866, he removed to Red Wing, Minn., for the purpose of engaging in business; but being thrown with college students, and finding the commercial outlook not as bright as he had anticipated, he decided to carry into effect his long-cherished ambition, and entered Hamline University at Red Wing, in September, 1866, and remained for three years. Here, by a strange opportunity, began his career as a practical college manager. At the close of the winter term of his junior year the college suspended, on account of failure of funds, and young Raymond, with a degree of energy and enterprise truly remarkable in so young

a man, hired the buildings, secured a sufficient number of the students to ensure the salaries of the professors, and continued the college until the end of the current year. In the fall of 1869 he entered Lawrence University, Appleton, Wis., and was graduated in the class of 1870. He afterward attended the theological school of Boston University, completing the course in 1873. At the theological school he began the study of philosophy, which he has since made a life-study, and in pursuit of which he went to Germany, and studied with Luthardt at Leipzig; and Hermann Lotze of the philosophical faculty, and Ritschl and Schulze of the theological faculty at Göttingen. In 1873 he was married to Lula A. Rich, daughter of a Methodist clergyman of Minnesota. In 1883, during the third year of his pastorate at Nashua, N. H., he accepted a call to the presidency of Lawrence University, Appleton, Wis., entering immediately upon a most successful administration. His methods attracted many students to the college, and gained it valuable friends. His labors were rewarded by additional endowments, a fine new women's hall, and a steady increase in the number of students. His particular

C. D. Foss

B. P. Raymond.

field as a teacher has been psychology, metaphysics, and the philosophy of religion, and he possesses, in an eminent degree, the power of illuminating philosophical principles. His lectures always attain the desired end, laying the foundation of a theistic system of thought in the student's mind, making that the normal mode of thinking. He was elected president of Wesleyan University in December, 1888, and assumed his office in September of the following year. During the two years subsequent to the resignation of Pres. Beach, the administrative functions of the university were directed by Prof. J. M. Van Vleck, a graduate of 1850, and since 1853 professor of mathematics and astronomy to his alma mater. His brief incumbency of office was characterized by increased interest and activity on the part of the alumni, associations being formed throughout the country, and greatly increasing the fame and prosperity of the institution. A new era was fairly begun. Under Pres. Raymond, Wesleyan has attained a greater degree of prosperity than ever before, and has a most auspicious outlook. Daniel Ayres, M. D., of Brooklyn, N. Y., whose benefactions had already been numerous, added to them in October, 1889, by the deed of eighty-six acres of land, valued at \$30,000, for the endowment of a chair of biology, further increasing it by a gift of \$250,000 in December of the same year. A movement was at once started by the alumni to raise a similar amount. Pres. Raymond has received the degree of Ph. D. from Boston University, D. D. from the Northwestern University, and LL. D. from Lawrence University.

**ARNOLD, George**, author, was born in New York city, June 24, 1834. His early life was spent in Alton, Ill., where his parents resided until 1849, when they removed to the settlement of Four-crores at Strawberry Farms, Monmouth co., N. J. Showing a capacity for drawing, he was placed in a painter's studio at the age of eighteen, but he soon developed a stronger taste for literature, and before he was twenty-five years of age had become a popular contributor to "Vanity Fair," and other periodicals. His first decided success was a series of humorous articles entitled the "McArone Papers." At the outbreak of the civil war, Mr. Arnold enlisted in the Federal army. He was stationed for a period at one of the forts on Staten island. His poems were collected after his death by William Winter, and published in two duodecimo volumes, the names of which are: "Drift: A Sea-shore Idyl and Other Poems" (1866), and "Poems, Grave and Gay" (1866). They are of unequal merit, but show that, had he lived, he might have achieved an enviable position as a poetical writer. He died at Strawberry Farms, N. J., Nov. 3, 1865.

**BERNHEIM, Gotthardt Dellmann**, clergyman and historian, was born in Iserlohn, district of Westphalia, Prussia, Nov. 8, 1827, son of Rev. John H. Bernheim, a Lutheran clergyman, who emigrated to America in 1832, and settled in Pennsylvania. Young Bernheim was graduated at the Classical and Theological Seminary, then at Lexington, S. C., and entered the Lutheran ministry in 1849. His first charge was at Charleston, S. C., where he organized and assumed the pastorate of the Second English Lutheran church. In 1858 he was called to St. John's and Bethel churches in Cabarrus county, N. C., and while working here was instrumental in the organization of North Carolina College, a Lutheran institution at Mount Pleasant, N. C.; of St. Paul's Lutheran Church, Wilmington, and of St. Mark's Church, Charlotte. He was pastor of St. Mark's Church (1861-65); returned to Mount Pleasant in 1866, and took charge of Mount Pleasant Female Seminary, for the purchase of which he had collected money in the North, and then made it the

property of the North Carolina synod. He also organized Ebenezer Lutheran Church in Rowan county, N. C. He was pastor of St. Paul's Church, Wilmington, N. C. (1870-82), where he preached in English and German; and was president of North Carolina College (1882-83). In June, 1883, he went to Phillipsburg, N. J., but returned to Wilmington, and took charge of St. Matthew's Church of that city in the spring of 1892. In connection with this congregation he also serves St. Luke's Church, Newbern, N. C., which he organized in 1895. He received the degree of D. D. from North Carolina College in 1877, and has published a "History of the German Settlements and of the Lutheran Church in North and South Carolina" (Philadelphia, 1872); "Localities of the Reformation"; "History of St. Paul's Evangelical Lutheran Church, Wilmington" (Wilmington, 1879); and in 1881 began to edit and publish "At Home and Abroad," a monthly literary journal that was continued for two years and a half.

**SARGENT, John Osborne**, lawyer and journalist, was born at Gloucester, Mass., Sept. 20, 1811. He was graduated from the Boston Latin School in his fifteenth year, and then entered Harvard College, where he was duly graduated in 1830. During his college career he was a member of the Porcellian Club and was a co-editor of the "Collegian" with Oliver Wendell Holmes. He afterward studied law with William Sullivan of Boston, and in 1833 was admitted to the Suffolk bar, and formed a partnership with Thomas C. Amory. He subsequently served one term as representative from Suffolk in the Massachusetts legislature, and in 1838 became associate editor of the New York "Courier and Enquirer." He had previously written a number of forcible political leaders in the Boston "Atlas," and now took an active part in the exciting campaign that elected Harrison and Tyler, both as a political writer and speaker. In 1841 he returned to New York and resumed his law practice. He assisted and counseled John Ericsson, delivered a lecture illustrating his inventions, which was subsequently published in the leading scientific journals of Europe, and prosecuted successfully Ericsson's claim against the United States for constructing the Princeton. He made frequent visits to Washington, and again became interested in Whig politics. He first became editor of "The Battery" in that city, and was afterward associated with Alexander C. Bullitt in "The Republic," a daily journal started in support of Taylor's administration. Mr. Sargent continued his journalistic work until the end of Fillmore's administration. He then occupied himself mainly in literary work, edited volumes of the British Poets, and wrote various legal and political pamphlets. He traveled abroad and devoted much attention to the study of languages. He translated Anastatius Grun's "Der Letster Ritter," which was published under the title of "The Last Knight, a Romance Garland." He also translated a number of the odes of Horace (which after his death, were published in a volume entitled "Horatian Echoes"), and occasionally contributed to the leading periodicals. He retired from the active practice of his profession in 1872, and thenceforward divided his time between his home in New York city and his beautiful farm on Laurel lake, near Lenox, Mass. Mr. Sargent served as a member of the board of overseers of Harvard and as president of the Harvard Club in New York. He died Dec. 28, 1891.

John O. Sargent

**BOGARDUS, Annetje Jansen**, (commonly known as Anneke Jans), wife of Everardus Bogardus, was born in Holland about 1600. In 1630 she sailed for "Nieuw Nederland" with her first husband, Roeloff Jansen, a man of importance in his home village of Maasland. The Jansens spent a few years at Rensselaerswyck, and then moved down the river to New Amsterdam, where they had obtained in 1636 a grant of a farm or *bouweery* of sixty-two acres. Roeloff Jansen died almost as soon as the removal was effected, and in 1638 Anneke became the wife of Dominie Bogardus. After the death of the latter in 1647, she removed to Beverwyck. At her death she left a considerable property to her children, in which was included the farm known as the Dominie's Bouweery, her own right to which had been confirmed by Gov. Stuyvesant in 1654. The farm has had an interesting history. In 1667, during the English occupation, Gov. Nichols confirmed the right of the heirs. The latter deeded it to Gov. Lovelace in 1670, but all his estates were confiscated by Andros in 1674, and turned over to the crown. In 1677 it was leased to Dirk Secker, under the name of Duke's Bouweery, and in 1697 as King's Farm, to the Trinity Church corporation, for seven years, at a rent of sixty bushels of wheat. This lease being annulled by an act of the colonial legislature in 1699, Gov. Combury issued a new lease in 1700, and in 1705, acting for Queen Anne, made a permanent grant of it to the church. In 1760, Cornelius Brouwer asserted his claims as a Bogardus heir. This was the first of a long series of law suits. For some time after it the excitement ran so high that there were a number of hostile encounters between the heirs and the adherents of the church. Crops were destroyed, fences were torn down and burned, an old woman was kicked in the eye, and five men were wounded with bird-shot. Hannah Marsh, a woman of sixty-three, narrowly escaped having her head dipped in a pail of grog, and several marauding parties came near being scalded at the hands of one of the heirs in possession, Mrs. Broad. The case was rarely out of the courts for over a century. In 1807, 1830, 1834 and 1847 (when one man brought nine suits), the heirs were defeated. The state has brought suits against the church and the heirs against the state, to force it to recover from the church and restore to the heirs. All these suits have been unsuccessful, and the church still remains in actual possession.

**PRESTON, William**, lawyer, statesman and soldier, was born in Jefferson county, Ky., Oct. 16, 1816, son of William and Caroline (Hancock) Preston. His great-grandfather, John Preston, came from county Derry, Ireland, in 1739, and settled in Augusta county, Va., having, with John Patton and Alexander Breckenridge, received from the London council a grant of 120,000 acres of land. His grandfather, William Preston, a colonel in the revolution, was wounded at the battle of Guilford, and died before the close of the war. His father was a major in the U. S. army, who served with distinction under Gen. Anthony Wayne, and having inherited from his father a tract of 1,000 acres of land in Jefferson county, granted for services in the revolution, he settled there; his mother was a daughter of Col. George Hancock, of Fotheringay, Va., an officer in the revolution and a member of the 4th U. S. congress. William Preston, 2d, received a classical education at St. Joseph's College, Bardstown, Ky., and continued his studies at New Haven, Conn. He was graduated at the Harvard Law School in 1838, afterwards being admitted to the bar in Louisville, Ky. He was lieutenant-colonel in the 4th Kentucky infantry in the war with Mexico; was a member of the constitutional convention of Kentucky in 1849; a member of the state legislature during 1851-53, and

presidential elector for the state at large in 1852. In 1853-57 he was a member of congress; was envoy extraordinary and minister plenipotentiary to Spain during 1858-61, being recalled, at his own request, on the appearance of trouble between the states. He espoused the cause of the Confederacy, participating in the battle of Shiloh, when, as a member of the staff of Gen. Albert Sidney Johnston, he held that great commander in his arms as he expired on the field. Having been commissioned major-general by the Confederate government, he won high praise as a brave and skillful commander, and later became envoy extraordinary and minister plenipotentiary to Mexico. In 1869 he was a member of the state legislature, and a delegate, in 1868 and again in 1880, to the Democratic national convention. He was married, in 1840, to Margaret Howard, daughter of Robert Wickliffe, of Lexington, Ky. He died in Lexington, Sept. 27, 1887.

**EVANS, Edward Payson**, author and educator, was born at Remsen, Oneida co., N. Y., Dec. 8, 1833, son of Evan and Mary Anne (Williams) Evans, both natives of North Wales. Soon after their marriage they emigrated to the United States, where their children, four sons and two daughters, were born. Evan Evans, who was a Presbyterian minister, removed with his family to Michigan when his son Edward was ten years of age, and the latter was graduated at the state university in 1854. He was principal of an academy at Hernando, Miss., in 1855, and professor in Carroll College, Waukesha, Wis., in 1856-57. He went to Europe in 1858 for purposes of study, and spent about three years at the universities of Göttingen, Berlin and Munich, and in travel. In 1861-70 he was professor of modern languages and literature in Michigan University, and then resigned, going to Europe with his wife, to whom he was married in 1868. Munich, Germany, has been their home ever since, and they have devoted themselves continuously to literary work. Mr. Evans has published the following works: "Abriss der Deutschen Literaturgeschichte" (1869); "German Reader," to accompany Otto's Grammar (1870); translation of Stahl's "Life of Lessing," with introduction and notes (2 vols., 1866); translations of Coquerel's "First Historical Transformations of Christianity" (1867); "Animal Symbolism in Ecclesiastical Architecture" (1896); "Evolutional Ethics and Animal Psychology" (1898); "Beiträge zur Amerikanischen Literatur und Kulturgeschichte" (1898); "The Criminal Prosecution and Capital Punishment of Animals" (1899). He has devoted himself to the study of oriental languages, especially Sanskrit, Zend and modern Persian, and has published some of the results of these researches in the "Atlantic Monthly," "Unitarian Review" and "Allgemeine Zeitung." He is a regular contributor to the "Nation," "Popular Science Monthly," "Die Nation" (Berlin) and other leading journals, American and German. He was married, May 23, 1868, to Elizabeth Edson, a daughter of Dr. Willard Putnam Gibson, of Pomfret, Vt., and Lucia Field Williams. Her maternal grandfather was Hon. Jesse Williams, of Woodstock, Vt. She was born in Newport, N. H., March 8, 1833; began to write in early youth, and became a contributor to the "Atlantic Monthly," "North American Review," the "Na-

Edward P. Evans

tion," the "New Quarterly Review" and other periodicals. She has published in book form: "The Abuse of Maternity" (1875); "'Laura, an American Girl," a novel (1884); "A History of Religion" (1892); "Story of Kaspar Hauser" (1892); "Story of Louis XVII. of France" (1893); "Transplanted Manners," a novel (1895); "Confession," a novel (1895); "Ferdinand Lassalle and Helene von Dönniger: A Modern Tragedy" (1897).

**JACKSON, Samuel Macauley**, educator, was born in New York city, June 19, 1851, son of George T. and Letitia J. A. (Macauley) Jackson. His father was a native of Dublin, Ireland, but settled in the city of New York in 1834, and was favorably known in business circles and as an elder in the Collegiate Dutch Church; his mother was a daughter of Samuel Macauley, M.D., a prominent physician of the same city, and a niece of Rev. Thomas McAuley, first president of Union Theological Seminary, New York city. Mr. Jackson was educated in private and public schools of New York city, and in 1865 entered the Free Academy (now the College of the City of New York), where he was graduated in 1870. While in college he was a member of the Phi Gamma Delta fraternity, and took high standing in English literature and philosophy and other branches. After graduation he began study at the Princeton Theological Seminary, but the next year he went to Union Seminary, where he completed the course in 1873. During 1873-75 he studied in the University of Leipzig, and traveled over the continent of Europe and in the Orient. He became pastor of the Presbyterian Church at Norwood, Bergen co., N. J., in 1876, and there continued until 1880, being also for the last two years engaged as assistant editor of Schaff's "Bible Dictionary."

After resigning his pastorate he accepted the position of associate and managing editor of the "Schaff-Herzog Encyclopædia of Religious Knowledge" (1880-84). He wrote the elaborate chapter on the "Literature of the Eastern and Western Churches During the Middle Age" for Schaff's "History of the Christian Church" (1884-85); was co-editor with Dr. Schaff of the "Encyclopædia of Living Divines" (1885-87); edited "The Concise Dictionary of Religious Knowledge" (1888-91), which first appeared as a supplement to the "Magazine of Christian Literature"; compiled that elaborate and unique work, "The Bibliography of Foreign Missions," incorporated with Vol. 1. of the "Encyclopædia of Missions" (1891); was associate editor of the "Standard Dictionary" and "Johnson's Universal Cyclopædia" during 1893-95; editor of "Heroes of the Reformation," now in course of publication, and for which he wrote the biography of "Zwingli" (1899), and editor of "Handbooks for Practical Workers in Church and Philanthropy" (1898). During 1889-91 he was editor of the "Magazine of Christian Literature." He was secretary of the American Society of Church History from its organization in 1888 until its amalgamation with the American Historical Association in 1896, and since that time has been secretary of its section of church history. Since 1888 he has been a member of the executive committee of the Charity Organization Society of New York city, and for nearly the same period has been connected

with the New York Prison Association in a similar capacity. In 1895 he accepted the chair of church history in the New York University, where he still continues. The degree of A.M. was conferred on him by the College of the City of New York in 1876; LL.D. by Washington and Lee University in 1892, and D.D. by the New York University in 1893. He is a member of the Century, City and Reform clubs and Aldine Association.

**LONGSTREET, William**, inventor, was born in New Jersey, Oct. 6, 1759. In childhood he removed to Augusta, Ga., where he early displayed a marked aptitude for mechanics. He invented and patented an improvement in cotton-gins called a breast-roller, which was operated by horse-power. At an early age he devoted his attention to the steam engine, and on Feb. 1, 1788, an act was passed by the general assembly of Georgia securing "to Isaac Briggs and William Longstreet, for the term of fourteen years, the sole and exclusive privilege of using a newly constructed steam engine invented by them." He applied this new power to his cotton-gin with gratifying results, but the apparatus was shortly afterwards destroyed by fire. The Augusta (Ga.) "Herald" of Dec. 23, 1801, printed an account of this fire, "which broke out in the house containing Mr. Longstreet's steam engine," and concludes: "This accident seems to have been particularly unfortunate, as the ingenious proprietor of the works had, we understand, the day before completed a new boiler which had, on trial, been found to equal his utmost expectations, and enabled him with a single gin and with a very trifling expense of fuel to give from 800 to 1,000 weight clean cotton per day." He also constructed a portable steam saw-mill, which he patented. A number of these saw-mills were erected throughout the state, and an account is given of the destruction of one of them near St. Mary's, Ga., by the British in 1812. Longstreet also directed his attention to the application of steam-power to the propulsion of boats; and in the archives of the state of Georgia is preserved a letter, dated Sept. 26, 1790, addressed by Longstreet to Gov. Telfair, in which he solicits the governor's assistance and patronage, beginning: "I make no doubt but you have often heard of my steam-boat and as often heard it laughed at," which indicates that at that date he had made considerable progress with his experiments. There is no record preserved, however, of the method of propulsion, whether by oars, as contrived by Rumsey, or by paddle-wheel, which was the distinctive feature of Fitch's invention. It is stated that he finally obtained sufficient money to construct a steam-boat according to his idea and to operate it on the Savannah river in 1806, but this cannot be verified. The Augusta "Herald" of Nov. 10, 1808, however, has an editorial on Longstreet's successful experiments "with his new invented steam-boat," and refers to "the different essays he has made" previously. His son was Augustus B. Longstreet, author and president of the University of Mississippi and South Carolina College. William Longstreet died in Augusta, Ga., Sept. 1, 1814, and was buried in St. Paul's churchyard there.

**HENRY, Serepta M. (Irish)**, evangelist and temperance reformer, was born in Albion, Pa., Nov. 4, 1839, daughter of H. N. and Mary A. Irish. She descends from early New England colonial stock on both sides, her father's ancestors being Quakers. Her maternal grandfather was a surgeon in the revolutionary army, and his son a captain of militia in the war of 1812. Her father followed the profession of an architect until about 1840, when he devoted himself to the missionary work of the Methodist church, and was sent to northwest Illinois, then the abode of roaming Indian tribes and flocks of

*Samuel Macauley Jackson.*

wild deer. His daughter remembers distinctly seeing the Indians assemble near the little parsonage, stack their arms at the gate, and enter, and she retains in her possession a wampum garter which a chief took off and tied about her neck, because, as a little child, she kissed his papoose. Until she was nineteen her father was her teacher, and then she entered Rock River Seminary, at Mount Morris, Ill. She was married, March 7, 1861, to James W. Henry, a teacher and poet of considerable power, who a few days after their marriage offered himself as a volunteer at Lincoln's first call for men for the support of the Union, and being refused, because he lacked a fraction in height, raised a company of men and again offered his services in 1864. This time he was accepted, and served until the close of the war, participating in all the actions of the closing campaign. In his absence, Mrs. Henry, who from early childhood had shown decided evidences of literary power, published her first book, a collection of verse, entitled "Victoria: With Other Poems," and when, at the close of the war, her husband returned with health shattered, to die four years later, after a lingering illness, she supported her three young children by continuing to write as well as by teaching. In 1872 she settled at Rockford, Ill., having accepted a position as teacher in the high school, which she soon resigned, however, for literary work, taking a contract to write a series of books, entitled "After the Truth," for the "Youths' Library," of the Methodist Episcopal church. While thus engaged she became deeply interested in the cause of temperance reform, as represented in the women's crusade, and in March of 1874, called a meeting of the women of Rockford, Ill., then her home, which resulted in opening up many lines of work which have become national. Since that date Mrs. Henry has traveled extensively throughout the United States and Canada, expounding the principles of the W. C. T. U. from the evangelistic standpoint, and furthering the cause of temperance reform by many useful suggestions and expedients. She organized the Cold Water Army (now called the Loyal Temperance Legion), which applies normal Sunday school methods to teaching temperance truth. She also founded the W. C. T. U. Institute, by which the objects and methods of the W. C. T. U. are taught. Continuing also to write, she has published in all seventeen books, most of which are of a popular character, while some are used as text-books for those who are interested in studies of home and child life. Miss Willard said of her work, "Pledge and Cross," that it "had the largest sale of any book of its kind, and conveys the very essence of the Gospel temperance crusade." She was a contributor to the "Ladies' Repository" and other magazines in her young girlhood, and has long been known by her poetical works as well as by her stories for young people.

**HAWKS, John**, soldier, was born in Deerfield, Mass., Dec. 5, 1707. His father was Eliezer Hawks, who was with Capt. William Turner in the famous Turner's Falls fight of King Philip's war. His grandfather was John Hawks, the first American ancestor of this branch of the family who settled originally in Connecticut, and removed to Hadley, Mass., in 1659. In 1744, at the breaking-out of King George's war, the subject of this sketch was one of three placed in charge of the building of "mounts" for the protection of his native town. In 1746 he was stationed at Fort Massachusetts (near what is now the city of North Adams Mass.) under Capt. Ephraim Williams, the founder of Williams College. For bravery in a personal encounter with Indians he was made a sergeant, and in June, when Capt. Williams was sent into Canada by Gov. Shir-

ley, of Massachusetts, he was left in command of the fort. In August the fort was assaulted by a force of more than 700 French and Indians, under the command of Pierre François Rigaud de Vaudreuil, a brother of the governor of Canada, and although Serget. Hawks had but twenty-one men, eleven of whom were sick, he held the fort for twenty-eight hours, surrendering at last because of lack of ammunition and with honorable terms. The defense was one of the notable events of the war. In 1748 he was sent to Canada by Gov. Shirley with Pierre Raimbault St. Blein, a young French cadet, the grandson of M. Raimbault, governor-general of Canada, to be exchanged for English captives. The difficult and dangerous mission was successfully accomplished. He served also through the fourth and last inter-colonial war. In 1754 he received a commission as lieutenant from Gov. Shirley, and from that year until 1757 he had charge of the line of Colrain forts. He held the command until made a major under Col. Israel Williams. In 1758 he commanded a company under Gen. Abercrombie at the attack on Fort Ticonderoga, and the following year was with Lord Amherst at the capture of that place. In 1759-60 he served as lieutenant colonel in the successful Canadian campaign that closed the war. As a civilian he was prominent, being selectman of his town for nine years, and holding several other offices of trust and honor. He was married to Elizabeth, daughter of John Nims, of Deerfield, and died there in June, 1784.

**BRAEUNLICH, Sophia (Toepken)**, journalist, was born at Long Island City, N. Y., July 2, 1854, daughter of Frederick and Mary Toepken. When very young she lost both parents, and thereafter was cared for by her aunt, Mrs. Henry Grahf's, of Brooklyn, with whom she resided during the remainder of her life. Her education was carefully conducted both in this country and in Germany, where she spent several years. She was married to Conrad Robert Braeunlich, but almost immediately lost her husband, and with a view of supporting herself she entered upon a course of preparation for office work in the celebrated Packard's Business College, of New York city, where she proved an excellent scholar. In 1879 she secured a position as amanuensis in the office of the "Engineering and Mining Journal." In this position she immediately gave evidence of remarkable business capacity, a wonderfully systematic mind, great quickness of perception and a memory of unusual retentiveness, and her promotions to increasing responsibilities were numerous and rapid. Beginning at the bottom, she made herself thoroughly acquainted with all the details of the work in every department, until, in 1885, she was advanced to the position of exchange news editor and reader. In 1888 she was elected, and continued until her death, secretary and treasurer of the Scientific Publishing Co., while she still continued to discharge her former duties, and in both capacities she displayed the greatest ability, earning well merited commendation from her associates. On Jan. 1, 1890, she was appointed business manager of the company, a unique position, indeed, for a woman, and one in which she found full scope for her remarkable executive ability and great sagacity, infusing new life into every department

and maintaining a most precise oversight of every detail. Both the "Engineering and Mining Journal" and the "Mineral Industry" felt the influence of her enthusiastic devotion to her duties in devising and adopting the most approved methods for increasing circulation, obtaining advertisers, improving the quality of the published matter and systematizing the office work so as to secure the utmost efficiency. Mrs. Braemlich was a member of the Professional Woman's League and the Woman's Press Club, in both of which she was an honored and influential member, although, with characteristic reserve, she ever refused to take part in their public proceedings. She was the first American woman elected a fellow of the Imperial Institute of Great Britain. She was a delegate to the international geological congress at St. Petersburg, Russia, in 1897. As one of the first women in New York to adopt a professional career, her success was the well earned result of her remarkable business talents, her tireless industry and her entire devotion to the highest standard of duty and of honor. She died in New York city, Aug. 11, 1898.

**SCHENCK, Noah Hunt**, clergyman, was born at Pennington, near Trenton, N. J., June 2, 1825, descendant of Roelof Martense Schenck, who emigrated from Holland to New Amsterdam in 1650. He was graduated at Princeton College in 1844, and entered upon the study and practice of law, first at Trenton and then at Cincinnati, O. He later studied theology at the Gambier Seminary, and in 1853 was admitted to holy orders by Bishop Melvaine, of Ohio, at Grace Church, Brooklyn, N. Y. In 1854 he was admitted to the priesthood by Bishop Melvaine at St. James Church, Zanesville, O. His first charge was at Hillsboro, O., where he labored three years (1853-56), and was instrumental in erecting one of the most beautiful Gothic churches in the state. Then invited to the rectorship of the parish with which the college at Gambier, O., is connected he carried through a work there of very

great interest, and one remarkable for its spiritual results, seventy-four persons receiving confirmation at one time, of whom forty-eight were students. Trinity Church, Chicago (1857-59), and Emanuel Church, Baltimore (1859-67), were his next charges. While he was rector of Trinity he founded and edited the "Western Churchman." On May 1, 1867, he became rector of St. Anne's Church, Brooklyn, and soon after, in addition to pastoral duties, accepted a position on the editorial staff of the "Protestant Churchman," New York city. In 1868 the diocese of Long Island was formed, and Dr. Schenck was placed at once at the head of several of

its most important committees. He was repeatedly chosen as one of the deputies to the general convention of the church, and was active and influential in the various departments of Christian effort of a public character, and especially in promoting the cause of missions, in which he was enlisted with enthusiastic interest. In social life his friends were numerous; in the parish he was a faithful and earnest pastor, and as a spiritual adviser he was eminently useful. During his ministry at St. Anne's he presented for confirmation about 1,000 persons. As a preacher he was equally distinguished. Large of person and of impressive presence, he commanded attention by these endowments and by his strong, sonorous voice and graceful manner, combined with

the fact that he spoke out of a full mind, with readiness of language, great clearness of thought, and an impassioned eloquence of illustration that entranced his hearers. St. Anne's Church, originally on Sands street, took a new site at Clinton and Livingston streets about the time he became rector. Here was erected, at a cost of \$350,000, a magnificent church edifice, which he opened Oct. 20, 1869. In 1865 he received the degree of D.D. from Princeton College. He was the author of numerous sermons and addresses; a collection of these was published in 1885. Dr. Schenck was married, Nov. 14, 1850, to Anna Pierce, daughter of Col. Nathanael Greene Pendleton, of Cincinnati, O., and sister of George H. Pendleton, U. S. senator from Ohio. They had twelve children, of whom ten survived him. He died in Brooklyn, N. Y., Jan. 4, 1895.

**THAYER, James Bradley**, lawyer and professor of law, was born at Haverhill, Essex co., Mass., Jan. 15, 1831, second son of Abijah Wyman and Susan (Bradley) Thayer. His father, a native of Peterborough, N. H., was a printer and editor by profession; his mother was a daughter of Jonathan Bradley, of Andover, Mass. He was educated in the public schools of Philadelphia, whither his parents had removed in 1835, and later at Amherst and Northampton, Mass. In 1848 he entered Harvard College, where he was graduated A.B. in 1852, standing ninth in a class of eighty-eight. For two years he taught a private school at Milton, Mass.—he had previously taught at the academy there—and, meantime, having begun the study of law, he entered the Harvard Law School in 1854. In 1856 he received the degree of LL.B., and also the first prize in his class for an essay on "The Law of Eminent Domain," which was published in the "Massachusetts Law Reporter" in the following autumn. He was admitted to the bar of Suffolk county in December, 1856, and in the following March began practice in partnership with Hon. William J. Hubbard, so continuing until the senior's death in 1861. In the latter year he was appointed by Gov. Andrew successor to his late partner as master in chancery for Suffolk county, a position held by him for the next ten years. Meantime, in March, 1865, he joined the law firm of Chandler, Shattuck & Thayer, which, in February, 1870, became that of Chandler, Thayer & Hudson. In December, 1873, Mr. Thayer was chosen Royall professor of law in the Harvard Law School. He entered on the active duties of this office in the following October. In 1893 he was transferred to the Weld professorship, which he still holds (1899). Prof. Thayer was formerly a frequent contributor to the editorial columns of the Boston "Daily Advertiser," the New York "Evening Post," and the "Nation," and has published various articles in the "American Law Review," "North American Review" and "Harvard Law Review." He was the responsible editor, though neither the nominal nor the real editor, of the 12th edition of Kent's "Commentaries" (1873). His principal publications are: "Letters of Chauncey Wright" (1877); "A Western Journey with Mr. Emerson" (1884); "Cases on Evidence" (1892); "Origin and Scope of the American Doctrine of Constitutional Law" (1893); "The Teaching of English Law in Universities" (1895); "Cases on Constitutional Law," two vols. (1895), and "A Preliminary Treatise on Evidence" (1898). Mr. Thayer is a fellow of the American Academy of Arts and Sciences and a member of the Massachusetts Historical Society. The degree of LL.D. was conferred on him by the Iowa State University in 1891, and by Harvard in 1894. On April 14, 1861, he was married to Sophia Bradford, daughter of Rev. Samuel Ripley, formerly of Waltham, Mass., and has two sons and two daughters.

*N. H. Schenck*

**ARNOLD, Welcome**, merchant, was born at Smithfield, R. I., Feb. 5, 1745, son of Jonathan and Abigail Arnold. He received a good common-school education, and began business for himself when he was about twenty-four years of age, with a capital of only a few hundred dollars. In the spring of 1773 he entered into partnership with Caleb Green, under the firm name of Green & Arnold, the connection continuing until February, 1776, when the partnership was dissolved. In 1776 Mr. Arnold embarked alone in mercantile business, and became extensively concerned in navigation. It is said that during the course of the revolutionary war thirty vessels were lost by capture, in each of which he was part owner. Notwithstanding these reverses, Mr. Arnold accumulated wealth, especially from his connection with the West India trade. His political life began in 1778 with his election as a representative to the general assembly. He enlisted as a volunteer in the forces which were raised in Providence to join the famous expedition of Gen. Sullivan, but on account of the many hardships to which he was exposed, Mr. Arnold was completely prostrated by sickness, and barely escaped with his life. He continued to represent the town of Providence in the general assembly, and in the darkest period of the revolutionary struggle he was fertile in devising means to meet the depressing emergencies of the times. He was speaker of the house five times during the period 1780-95. During the agitation which for years existed in the state in connection with the paper-money question, Mr. Arnold was unflinchingly a "hard currency man." He was one of a high court of commissioners to sit in judgment on certain matters in dispute between the states of Connecticut and Pennsylvania, in which the former claimed large tracts of land in the latter. The court decided against the claims of Connecticut. Mr. Arnold took an active part in the adoption by the state of the Federal constitution. The last years of his life were among his busiest and most prosperous. He was liberal to the First Baptist Society, with which he worshipped, and from 1783 to his death he was a trustee of Brown University. His death occurred Sept. 30, 1798. Samuel Greene Arnold, the historian, was his grandson.

**VEDDER, Charles Stuart**, clergyman, was born in Schenectady, N. Y., Oct. 7, 1826, son of Albert A. and Susan (Fulton) Vedder. In 1851 he was graduated at Union College, Schenectady, and subsequently taught in that institution for one year, after which he entered the Theological Seminary of the synods of South Carolina and Georgia at Columbia, S. C., in 1860. He was licensed to preach by the Charleston presbytery in the following year. He entered immediately upon the duties of pastor of the Presbyterian church in Summerville, Berkeley co., S. C., and remained there until he was called, in 1866, to the Huguenot church of Charleston, of which he is still the spiritual teacher. During his lengthy pastorate, Dr.

Vedder has gained an enviable reputation, as well for the pious and sympathetic fulfillment of every duty of his office, as for his eloquence and scholarship. He has a wide historical knowledge and fine poetic sensibility, his occasional poems being far above the average of such productions. In the cause of education, temperance and philanthropy, he has been an ardent worker,

and has succeeded in winning, in a remarkable degree, the affectionate admiration of his parishioners and fellow citizens. He was married to Helen A., daughter of Ashley Scovel of Albany, N. Y.

**FLOWER, Lucy Louisa (Cones)**, educator, was born in Boston, Mass., May 10, 1837, daughter of Charlotte (Hayen) and Samuel E. Cones, both members of old New England families. She lived in Portsmouth, N. H., with her parents until the year 1853, when her father received an official appointment from his friend Pres. Pierce, necessitating removal to Washington. Miss Cones was educated at Paeker Collegiate Institute, Brooklyn, N. Y., but owing to illness in the family, was obliged to leave before graduation. She was employed for a time at draughting in the U. S. patent office, but her preference was for teaching, and in 1859 she went to Madison, Wis., to fill an engagement. In the following year she was appointed assistant in the Madison High School, which was then the preparatory department of the Wisconsin University.

In 1862, for financial reasons, the public schools of Madison were closed, but the use of the high school building was given to Miss Cones to conduct a private school of the same grade, which she did with great success until the end of the year, when the schools were opened. In the same year, on Sept. 4th, she was married to James M. Flower, a lawyer of Madison, and in 1873 they removed to Chicago. In 1875 Mrs. Flower became a member of the board of management of the Half Orphan Asylum, and later a member of the board of the Chicago Home for the Friendless, a position she still retains. In 1886 the condition of the homeless boys in the city excited her sympathies, and she prepared and presented to the legislature of Illinois a bill for a state industrial school on the model of the one in Coldwater, Mich. Although the bill was defeated, public interest in the subject was aroused and as a result an industrial school under private management was established. In 1880 she was prominent in organizing the Illinois Training School for Nurses, which has under its care the nursing in the county and Presbyterian hospitals and is the largest institution of the kind in the country. Ever since its foundation, Mrs. Flower has been either its president or its vice-president. In 1888 the Lake Geneva Fresh Air Association was organized, and for three years she had entire charge of the selection of the eighty children who are usually sent into the country by this organization. In May, 1890, she was elected president of the Woman's Club of Chicago, and discharged the duties of the office with great tact and energy. In June, 1891, she was appointed a member of the Chicago school board, being the third woman to hold that position, and served until her term expired, in June, 1894. Although her reappointment was urged by prominent men and women of both political parties, the mayor refused to accede to their demands, on the ground that she was unacceptable to his political friends both because she was a Republican and a woman. She was immediately brought forward by the Republican women of Chicago as their candidate for trustee of the University of Illinois and received 482,000 votes, her plurality being 184,000. During the Col-

Lucy L. Flower.

Charles S. Vedder.

umbian exposition she held a number of responsible positions, including that of chairman of the moral and social reform congress, and she is still one of the leaders in educational, charitable and reformatory movements in the great city. Fine executive ability, shrewd common sense, and perfect health combine to give her exceptional advantages. She is an active member of St. James Episcopal Church, and for many years was prominent in its charitable work. Her husband is one of the most distinguished members of the Chicago bar.

**LESQUEREUX, Leo**, botanist, was born at Fleurier, canton of Neuchâtel, Switzerland, Nov. 18, 1806, of French Huguenot ancestry. It was the hope of his father, who was a manufacturer of watch springs, that the boy would follow his trade, while his mother had set her heart upon his entering the ministry. A love of nature possessed him from early childhood, and his delight was to climb the mountains about his home, his adventurous spirit leading to a fall when he was about ten years of age, and the injury to the hearing of one ear. He was sent to an academy in Neuchâtel, where he had as fellow-students, Arnold Guyot and August Agassiz, brother of Louis, and while there he paid his tuition fees by teaching. His parents being unable to pay his expenses at a university, he became professor of French in a young ladies' academy at Eisenach, in Saxe-Weimar, partly that he might learn the German language, preparatory to entering the University of Berlin. He remained at Eisenach several years and then, becoming engaged to one of his pupils, returned to Switzerland, and soon became principal of an academy at La Chaux de Fonds; but his deafness increased to such an extent that, after three years, he was obliged to abandon teaching and take up the work of engraving watch cases in order to support his family, for, by this time, he was married. The new occupation told upon his health, and going back to Fleurier he became his father's partner, but seized every opportunity to continue his botanical studies; his special subjects of investigation being mosses and fossil plants; and some papers published by him brought about an acquaintance with Louis Agassiz, at that time professor of natural history in the Academy of Neuchâtel. Some time after, the cantonal government offered a gold medal for the best treatise on peat bogs and the means of replenishing them, and Lesquereux gained the prize, awarded in 1844. His theories on the subject were approved by scientists like Agassiz, and he was appointed director of bogs bought to be worked by the government.

Later he explored the peat bogs of northern Europe under the patronage of the king of Prussia. The revolution of 1847 disturbed all European countries to such an extent that it was harder than ever for Lesquereux to make a living, and in 1848 he emigrated, with his wife and five children, to the United States, landing in Boston in September and at once becoming a member of the family of his old friend, Louis Agassiz, now settled at Cambridge. He aided the latter in arranging and classifying the botanical collections he had made during his visit to Lake Superior, until Christmas day, when he began another journey, going as far as Columbus, O., to become the assistant of William S. Sullivant, the bryologist. Late in 1849 he explored the mountains

of the southern states at the suggestion of Mr. Sullivant, and brought back a collection rich in mosses and other plants. The result of their joint labors in this department of botany appeared two years later in the "*Musci Americani Exsiccati*" (1856, 2d ed., 1865), the profits from this sale being generously given to his assistant by Mr. Sullivant, who had borne the entire expense of preparation and publication. Lesquereux was of great help to Sullivant in the examination of the mosses collected by the Wilkes south Pacific exploring expedition, and by Whipple's Pacific railroad exploring party, and lastly in the preparation of the "*Icones Muscorum*" (Cambridge, 1864). Lesquereux's interest in paleobotany was stimulated by his explorations in the United States, and he began a series of extensive researches, especially in the coal formations of Ohio, Pennsylvania, Illinois, Kentucky and Arkansas, in connection with the geological surveys of these states, furnishing memoirs to the reports of the various surveys. The first memoir, on the Pennsylvania coal flora, appeared in 1848, together with a "*Catalogue of the Fossil Plants which have been Named or Described from the Coal Measures of North America*"; the second (two vols. with atlas, 1880), was the result of work done in connection with the second geological survey of Pennsylvania, and ranks as the most important work on carboniferous plants yet published in the United States. In 1868 geological surveys of some of the territories were begun by Prof. Ferdinand V. Hayden, and from time to time Lesquereux was called upon to work up the collections; especially the fossils. His papers, published in the reports of surveys from 1870 to 1874, are of great importance. Mr. Sullivant collected materials for a "*Species Muscorum, or Manual of the Mosses of the whole United States*," but at his death, in 1873, it was not completed. Prof. Asa Gray urged Lesquereux to carry on the work, and he complied; but some years later his sight became impaired, and Prof. Thomas P. James of Cambridge, Mass., was secured to finish the microscopical work; the "*Manual*," after other delays, appearing in 1884. Lesquereux was the author of some fifty publications, including reports and monographs, and two books entitled "*Letters written on Germany*" (Neuchâtel, 1846), and "*Letters written on America*" (1847-53). He left a treatise on the "*Flora of the Dakota Group*," which was published, in 1891, as "*Monograph XVII.*" of the U. S. geological survey. He was a member or correspondent of many scientific organizations in Europe and America, and was the first elected member (1864) of the National Academy of Sciences. In 1875 Marietta College conferred upon him the degree of LL.D. Dr. Lesquereux's wife was a daughter of Gen. Von Wollskel, an *attaché* of the court of the duke of Saxe-Weimar. Her death occurred not long before his own. Several children were born to them, and four sons and a daughter survived their parents. Dr. Lesquereux died at Columbus, O., Oct. 25, 1889.

**HENDERSON, John Steele**, lawyer and congressman, was born near Salisbury, Rowan co., N. C., Jan. 6, 1846, son of Archibald Henderson, a farmer and member of the North Carolina council of state under Goys, Reid and Ellis. William Henderson, brother of his paternal great grandfather, Richard Henderson, commanded a brigade at the battle of Eutaw Springs, and served with distinction through the revolutionary war. John Steele Henderson was prepared for college at Dr. Alexander Wilson's school, Melville, N. C., and entered the University of North Carolina in 1862, leaving in 1864 to enter the Confederate army as a private in company B, 10th regiment, North Carolina state troops. At the close of the war he began the study of law under Judge Nathaniel Boyden, and in January, 1866, entered Judge Pearson's law school, at Rich-

L. Lesquereux

mond Hill, N. C. Mr. Henderson obtained a county court license in June, 1866, and a license to practice in the superior court in 1867. He accepted the appointment of register of deeds for Rowan county in June, 1866, but resigned that office in 1868. He was elected, in 1871, a delegate to the proposed constitutional convention, and in 1872 was spoken of as a candidate for the general assembly, but declined a nomination. His election as a member of the state constitutional convention occurred in 1875; of the state house of representatives in 1876; and of the state senate in 1878. He was a member of the commission elected by the general assembly to codify the statute laws of North Carolina; and two volumes, entitled "The Code of North Carolina," were published in 1883. Mr. Henderson was elected presiding justice of the inferior court of Rowan county in June, 1884; was elected to the forty-ninth congress, by the Democrats, from the seventh district of North Carolina; and was re-elected to the fiftieth, fifty-first, fifty-second and fifty-third congresses. In the two latter he was chairman of the committee on post-offices and post roads, and was highly praised for his efficiency. The degree of LL. D. was conferred on him by Trinity College, N. C., in 1890.

**DAGGETT, Mary (Stewart)**, author, was born in Morristown, O., May 30, 1854, daughter of John and Nancy (McGregor) Stewart. Her father, a Presbyterian clergyman and doctor of divinity, was widely famed as a pulpit orator of the progressive school of orthodox opinion. The daughter's early life was passed in Cincinnati and amid the hills of southern Ohio, and she completed her education in 1873, at the Steubenville Seminary, being valedictorian of her class. Removing with her parents to Milwaukee, Wis., she was there married, in 1875, to Charles D. Daggett, a rising young lawyer of the city. After three years' residence in Milwaukee, Mr. and Mrs. Daggett removed to Kansas City, Mo., and in 1888 they finally located in Pasadena, Los Angeles co., Cal. Her home here is one of the most attractive in the county, and is widely known by its name, Columbia Hill. Here, in the midst of grand natural scenery, she, for the first time in her life, found leisure for serious things outside of her home duties. She at once identified herself with the social and literary life of the city. As a first result, she planned and conducted the celebrated Pageant of Roses, given at the opera house in Pasadena in 1893 and 1894, which, in true poetic manner, exhibited the wealth and beauty of the floral life of southern California. It was such a signal success that it attained national reputation, being fully described by the press all over the United States. In 1895 she published her first novel, "Mariposilla," which, for its high imaginative quality, fine descriptive passages, and charming pictures of the simplicity and beauty of old Spanish life in California, achieved a wide popularity, and gave her immediate standing as an author. Mrs. Daggett possesses a vivid imagination, a keenly analytical mind and great appreciation of the beauties of nature, and her writings, like her personal influence, cannot fail to embody and stand for all that is true, pure and noble. Mrs. Daggett has four promising children, three daughters and one son, who are approaching maturity with all the advantages of a beautiful and cultured home.

Mary Stewart Daggett

**CHIPLEY, William Dudley**, soldier and railroad manager, was born in Columbus, Ga., June 6,

1840, son of William S. and Elizabeth J. (Faminy) Chipley. His father, a prominent physician and specialist in nervous diseases, was a native of Lexington, Ky., and his mother was a native of Georgia, a relative and ward of Col. James W. Fannin, who fell at the massacre of Goliad in the Texas revolution. He received his primary education in the private and public schools of Lexington, and at the age of thirteen entered the Kentucky Military Institute near Frankfort, Ky. After remaining there a year, he became a student at the Transylvania University at Lexington, where he was graduated in 1858, and soon thereafter became engaged in business in Louisville, Ky. On the outbreak of the civil war Mr. Chipley joined company C, 9th Kentucky Infantry of Breckinridge's brigade, and was appointed first lieutenant and adjutant in 1863. He was appointed commissioner of records for Kentucky troops C. S. A. by Provisional Gov. R. Hawes, with rank of lieutenant-colonel. He was actively engaged in a number of important battles, was several times wounded, and was captured at Peachtree Creek near Atlanta, and imprisoned at Johnson's island until the close of the war. Soon after his release he went to Columbus, Ga., where he was engaged in business until 1870, when he became identified with railroad management. In 1876 he removed to Pensacola, Fla., to assume charge of the Pensacola railroad, of which he had charge for a number of years. He projected and built the Pensacola and Atlantic railroad, and was its vice-president and general manager for three years. In 1884 the Pensacola and Atlantic railroad was sold to the Louisville and Nashville railroad, and he became general land commissioner for the Louisville and Nashville Railroad Co., with headquarters at Pensacola. He was mayor of Pensacola, in 1887-89 and 1893, and for nine years was a member of the board of city commissioners, and in 1894 was elected to the Florida state senate. He served for four years as vice-president of the state democratic executive committee, and was its chairman from 1888 to 1890, when he resigned. He was also vice-president of the board of trustees of the State Agricultural College, and member of the board of trustees of the Stetson University and West Florida Seminary. He was one of the three founders of the Florida Chautauqua assembly at De Funiak Springs. He is also brigadier-general of the United Confederate veterans, Florida division, and president of the board of trustees of the Confederate Memorial Association. Mr. Chipley was married on Dec. 13, 1866, to Anna Elizabeth, daughter of John R. Billups.

W. D. Chipley

**MUHLENBERG, Gotthilf Heinrich Ernst**, botanist, was born at New Providence, Montgomery co., Pa., Nov. 17, 1753, son of Rev. Heinrich Melchior Muhlenberg, the champion of Lutheranism in North America. His mother was a daughter of J. Conrad Weiser of Tulpehocken, Pa., a well-known Indian interpreter. He attended the schools in his native place until he was seven years of age, and then in Philadelphia, whither the family removed in 1761. When he was ten years of age he was sent to Germany with his elder brothers, Johann Peter and Friedrich, to study at Halle; Gotthilf to prepare himself for the ministry. Six years later, he entered the ministry, but remained only a year, and returning to Pennsylvania in 1770, was ordained and appointed assistant to his father, whose field of labor was "Philadelphia, Barren Hill and on the Raritan." From January until April, 1772, he labored among

the Lutherans in New Jersey, and also spent the year 1773 in ministering to them. In 1774 he was called to Philadelphia, the large Lutheran church there needing a third pastor, and remained until April, 1779. Like his brothers, he supported the cause of the revolting colonists with ardor, and twice had to flee into the country to escape threatened capture by the British, besides losing a large part of his estate during the war, in the loan office. During one of his enforced residences in the country he took up the study of botany, and on his return to Philadelphia, continued it, making a special study of the medicinal and economic properties of plants.

In 1780 he was called to become pastor of the Lutheran church at Lancaster, Pa., and there the rest of his life was spent. He now began to correspond with eminent botanists in this country and Europe, and to make more systematic studies of the flora of his state. By the spring of 1791 he had collected more than 1,100 plants in a circuit of about three miles from Lancaster, and had begun a series of experiments with grasses, native and foreign, to discover how often they could be cut and whether they were readily eaten by horses and cattle. He had great physical

strength, and thus was enabled to cover a large extent of country in his rambles. In addition to descriptions of the habits and peculiarities of plants and trees, he kept a careful record of animals, birds and minerals met with, and of meteorological and other natural phenomena. He not only preached to his flock, but he ministered to their bodies as well; prescribing for and distributing among them the medicines of the Halle Institute, which were regularly sent him. His first published writing on the subject of botany appeared in February, 1791, in the "Transactions" of the American Philosophical Society, and was entitled "Index Floræ Lancastrænsis." It contains 454 genera, arranged according to the Linnean system, and nearly 1,100 species, including cultivated plants. A supplement published a few years later, in the "Transactions," added 288 species. An unselfish nature that caused him to rejoice in the triumphs of others and to desire to aid them in their labors, led him as early as 1785 to conceive a scheme for a union of all the botanists of the country in the preparation of a "Flora of North America," resting "on good and definite operation," as he expressed it, and doing away with the publication of numerous conflicting works. Few of his correspondents appear to have sympathized with him, and no work of the kind appeared until 1803, when Michaux's volume was published in Paris. In 1809 Muhlenberg, with the aid of twenty-eight correspondents, began the preparation of a catalogue of the known and naturalized plants of North America: "Catalogus Plantarum Americæ Septentrionalis," and in 1813 published it. He more than doubled Michaux's list of flowering plants and ferns (1,500), and added 527 species, embracing mosses, liverworts, algae, lichens, and fungi. His description of the plants of Lancaster and vicinity, and a description of all the North American plants seen by him and preserved in his herbarium, were left in manuscript. A part of one of these, dealing with the grasses, was published in 1817, after his death. Much information acquired by him and communicated to fellow botanists was incorporated, without acknowledgement, into their own writings. The whole number of species and varieties first established by him is said to be about

100. He was given the degree of M.A. by the University of Pennsylvania in 1780, and of D.D. by Princeton in 1787. Many societies besides those of Philadelphia conferred diplomas upon him; including the Imperial Academy of Erlangen (1791); the Westphalian Natural History Society (1798); the Physical Society of Göttingen (1802); the Society for the Promotion of Useful Arts, Albany, N. Y., (1815); the Physiographical Society of Lund, Sweden (1815); and the New York Historical Society (1815). A number of species of plants perpetuate his name, owing to the grateful recognition of his services to science, by later botanists. About the year 1805 Mr. Muhlenberg had a severe attack of illness, brought on by excessive mental labors, and on recovery was found to be in intellect on a level with an untaught child, having no power to recall anything that he had previously learned. It was necessary to begin with the rudiments, and so, instructed by a daughter, he set to work to master the alphabet, and then the construction of words and sentences; gradually learning to read. Suddenly, one day, his lost knowledge returned to him, and he remained in full possession of it to the end of his life. He was married in 1774 to Catherine, daughter of Philip Hall of Philadelphia, and had two sons: Henry Augustus, at first a clergyman and then a congressman and diplomat, and Frederick Augustus, a physician in Lancaster. Mr. Muhlenberg died at Lancaster, May 23, 1815.

**MEADE, William Kidder**, miner and legislator, was born in Clark county, Va., Sept. 20, 1851, son of William Washington and Virginia (Meade) Meade. His family is of English extraction and was one of the earliest settled in Virginia. Among its most distinguished members were Col. Richard Kidder Meade, an aide-de-camp of Gen. Washington and great-grandfather of Mr. Meade, and Bishop William Meade, his great uncle. Mr. Meade spent his early years on his father's farm, and received his education in private schools. At the age of seventeen he joined a prospecting party going from Denver, Col., to Elizabethtown, a mining camp in the northern part of New Mexico. He remained there nearly three years, engaged in placer mining and clerking, and then, after visiting Virginia for a short time, he resumed mining, in Utah, Nevada and California, finally locating in Arizona early in 1876. For about a year he labored in the Silver King mine in Pinal county. In 1878 he was elected to the territorial legislature; serving as a representative of his county, first in the house and then in the council. He was sent as a delegate to the Democratic national convention in 1884, and he played a conspicuous part in the nomination of Grover Cleveland, thereafter serving as a member of the national committee until 1888. Pres. Cleveland appointed him U. S. marshal for Arizona in 1885, and, serving until the spring of 1890, he was again appointed in 1893. He was a commissioner for the Columbian exposition in 1892, and was energetic in securing an adequate representation of the resources of Arizona. Starting in life with little or nothing, Mr. Meade has amply demonstrated what may be done by honesty and industry, and few men in Arizona stand so high in public esteem as he. On July 16, 1887, he was married, in Los Angeles, to Mrs. Helen (Street) Stevens, a native of California.

W. K. Meade.

**BLACKBURN, William Maxwell**, author and educator, was born at Carlisle, Ind., Dec. 30, 1828, son of Alexander and Delilah (Polk) Blackburn. His ancestors, on first coming to America, settled in Bucks county, Pa., but subsequently removed to Kentucky, Ohio and Indiana. He received his early education in district schools and an academy at La Porte, Ind., and taught at similar institutions previous to entering upon a college course at Hanover College, Indiana, where he was graduated, June, 1850. He then studied for the Presbyterian ministry at Princeton Theological Seminary from 1850 until 1854, and, after completing his course, held pastorates at Three Rivers, Mich.; Erie, Pa.; Trenton, N. J.; Chicago, Ill.; and Cincinnati, O. Beginning in his early ministry by contributions to the "Princeton Review," he occupied his leisure continuously with writing; and while preaching and administering the affairs of his pastorates he became known both in America and England, first, as a successful author of Sunday-school books, and later for works on subjects of wider interest. In 1868, the position was offered him of professor of biblical and ecclesiastical history in what is now McCormick Theological Seminary at Chicago, and, without desisting from his work as a preacher, he accepted and filled the chair until 1881. From 1884 until 1886, he was president of the Territorial University of North Dakota, and later was appointed president of Pierre University, at East Pierre, S. D., which, in 1898, was removed to Huron, S. D. This institution, founded in 1883, is under the control of the Presbyterian synod of South Dakota, but in education is non-sectarian; it is co-educational, and tuition is proportionally inexpensive, although there are academic, normal, collegiate, business and musical courses. The president received the honorary degree of D. D. from Princeton in 1870, and that of LL. D. from Wooster University. Besides several Sunday-school books, including a series of juvenile tales entitled "Uncle Aleck's Stories," he has published a "History of the Christian Church for Nearly Eighteen Centuries"; "Geneva's Shield"; "Exile of Madera"; "Judah, the Maccabee"; "The Rebel Prince"; "College Days of Calvin"; "St. Patrick and the Early Irish Church"; "Admiral Coligny and the Rise of the Huguenots"; "The Theban Legion." Some of his Sunday-school books have been republished in England, notably the first, entitled "The Holy Child," which has been widely praised. Dr. Blackburn was married, in 1854, at Valparaiso, Ind., to Elizabeth Powell, a lady of New England parentage. Their only son is Rev. Charles S. Blackburn, now a missionary at Orooniah, Persia.

**ANTHON, Henry**, clergyman, was born in New York city, March 11, 1795. His birthplace was at 11 Broad street, where his parents then resided, and which was in a neighborhood at that time lined on either side, not with warehouses and offices as now, but with substantial dwellings, which had been erected in the old colonial days. Some of these being great Dutch houses of yellow brick, with their antiquated gables, formed a most interesting feature of that part of the city. He received his early education in the New York schools, and entered Columbia College, where he was graduated in 1813. He immediately entered upon his preparation for the ministry under the direction of Bishop Hobart, who at that time presided over the diocese of New York. In 1815 he was ordained deacon in Trinity Church, and shortly after became rector of St. Paul's at Red Hook on the Hudson river, where at the same time he discharged missionary duty in the adjacent villages. In 1819 the new parish church of Red Hook was consecrated by the bishop, and Mr. Anthon was admitted to priest's orders. At this time his health

being somewhat impaired, he sailed for South Carolina, and remained there until the spring of 1821. His visit to the South gave him great popularity, and he received many invitations to positions of influence in that part of the country. On his return to New York he accepted an invitation to the rectorship of Trinity Church, Utica. He also received an invitation to an important church in one of the southern states, and to St. Thomas, New York city, but left Utica at last in 1829 to assume the rectorship of St. Stephen's, New York city. Soon after he was invited to St. James' in Philadelphia, but declined the appointment, and in 1831 he resigned from St. Stephen's, at the earnest solicitation of the vestry of Trinity Church, to become assistant minister in that influential parish. He was chosen by the general convention of 1832, secretary of the house of clerical and lay deputies, and in the same year received the degree of D. D. from his alma mater. In 1834 he was elected, and several times thereafter was re-elected secretary of the board of trustees of the General Theological Seminary, where at the same time he discharged the duties of professor of theology and of pulpit eloquence. He was actively connected with various boards and associations, both general and diocesan, for the promotion of missionary work, or for the advancement of the church. Towards the close of 1836, he was called to be rector of St. Mark's in the Bowery, New York, and accepting the appointment, remained there twenty-four years, or until his death, engaged in a laborious ministry. Dr. Anthon was one of the leading movers in the foundation of the Protestant Episcopal Society for the Promotion of Evangelical Knowledge, and for more than thirteen years was one of its most influential members and officers. Soon after Dr. Anthon's death the building which had been erected as the Chapel of St. Mark's was set apart by the bishop of the diocese as a memorial to him, under the name of the Anthon Memorial Church. Dr. Anthon published "Historical Notices of St. Mark's Church from 1795 to 1845" (1845). From 1825 to 1836 he was a trustee of Hobart College. Dr. Anthon was married, in 1819, to Emilia, daughter of Joseph Corre, of New York. He died in New York city, Jan. 5, 1861.

**WEED, Edwin Gardner**, third P. E. bishop of Florida, and 140th in succession in the American episcopate, was born in Savannah, Ga., July 23, 1847, son of Henry Davis and Sarah Richards (Dunning) Weed. His father, a native of Darien, Conn., removed in early life to Savannah, where he became a leading merchant, and by his marriage united himself with one of the most prominent families of the city. The son was educated at an endowed school until he reached the age of thirteen, then attended the high school at Athens, Ga., until 1862, when he became a student at the University of Georgia. In February, 1864, he enlisted in the Confederate army as a private, serving in the armies of Hardee and Johnston and participating in their campaigns. He surrendered at the close of the war, and then went to New York, and thence to Germany, where he entered the Berlin University. Returning to New York, he became a student in the General Theological Seminary of the P. E. church, and upon his graduation in 1870 again went abroad to travel extensively in Egypt and Palestine and throughout Europe, going as far as the confines of Asia to attend the Nishni-Novgorod fair. Having thus stored his mind with

*Edwin G. Weed*

the knowledge which only travel can give, he returned to the United States and accepted a call to the Church of the Good Shepherd at Summerville, Ga., a suburb of Augusta, officiating there until he was elected to the episcopate of Florida. He was consecrated bishop in St. John's Church, Jacksonville, Aug. 11, 1886, being the third in succession in that diocese. During the yellow fever epidemic of 1888 he was chairman of the relief committee, and rendered valuable services to the citizens of Jacksonville by judiciously administering the funds contributed by the nation for the use of the destitute and of the plague sufferers. His close attention to the duties of this office caused him to fall a victim to the plague himself, but he fortunately recovered and resumed his administrative position until the plague was over, when he was tendered the thanks of the community. In 1892 this diocese had, under his care, been doubled, and was therefore divided, the southern division being placed under the jurisdiction of the missionary board. Bishop Weed retaining the other division, it continued to flourish, and in 1897 contained seventy-one mission stations and parishes, twenty-three clergymen, and three church schools. Bishop Weed was married, April 23, 1874, at Summerville, Ga., to Julia McKinney, daughter of Col. Thomas F. Foster, an eminent lawyer and member of congress from Georgia for two terms. His family consists of one son and three daughters.

**HAZARD, Roland Gibson**, author, was born in South Kingston, R. I., Oct. 9, 1801. At an early age he engaged in manufacturing pursuits in Peacedale, R. I., and soon became identified with all public movements. In connection with a litigation over the Union Pacific railroad he wrote a number of articles. During the civil war he did much to sustain our national credit at home and abroad. His newspaper articles on the public finances were collected and published in pamphlet form, mainly by bankers in New York for foreign readers. Collections of them were published in London, and epitomes were translated and published in Amsterdam, and had much influence there and at Frankfort on the Main, and through these and Mr. Hazard's personal interviews, European bankers who at that crisis were becoming distrustful were induced to hold and increase their investments in United States bonds. This action was taken after conference with Pres. Lincoln and the secretary of the treasury, in which an official position was suggested, but he preferred to act unofficially. He also opposed a suggestion, made at the time of the war, to increase the circulation of paper money. His arguments on this subject were published in the New York "Evening

Post" and other newspapers, and were subsequently reprinted in a pamphlet with other articles under the title of "Our Resources." About the year 1833 he began spending the winters in New Orleans for his health, and continued to do so about ten years, combining business with those visits. In the winter of 1841-42, while there, a colored citizen of Rhode Island applied to him for relief from the chain-gang. Mr. Hazard sought to obtain justice for these suffering negroes, proceeding openly through the courts of Louisiana, at a time when public sentiment there was very irritable on the subject, and he was constantly threatened by officers of the municipality, and by others, with the extremity of "Lynch-law." Mr. Hazard was fearless, and with the assistance of Mr.

Jacob Barker, succeeded in liberating a large number from the chain-gangs, and in procuring a presentment by the grand jury in New Orleans of a number of the officials, with instructions to the prosecuting officer to proceed against them immediately for cruelty to those negroes. Politically, Mr. Hazard never exhibited fondness for the arts of the selfish politician, but his whole course was marked as one of philanthropy and well-founded moral principles. He was early identified with the Free soil and anti-Slavery party, and was one of the founders of the Republican party. He with Edward Harris, of Woonsocket, attended its first convention, which met in Pittsburgh, and was on the committee on platform and resolutions. He was a delegate to the Philadelphia convention of 1856, and in that campaign many of the resolutions and addresses published in Rhode Island were from his pen. Mr. Hazard was also a member of the Chicago convention in 1860 which nominated Abraham Lincoln, and he participated in forming the platform of that convention. In 1864 he was in Europe, but in 1868 he was again a delegate to the convention at Chicago, which nominated General Grant, where he was on the committee on platform, and was the author of the financial portion. In 1851-52, in 1854-55, and in 1880-81 he was a member of the Rhode Island house of representatives, and in 1866-67 was a member of the Rhode Island senate. The citizens of his town acknowledge Mr. Hazard's benefactions in the support of their schools and churches, and in the erection of their valuable town-house. The Hazard professorship of physics, in Brown University, was founded by his endowment of \$40,000. He thrice visited Europe, where he was personally intimate with the philosopher John Stuart Mill. Dr. Channing, referring to Mr. Hazard's "Essay on Language" (his first book and his first effort in composition), said: "I have known a man of vigorous intellect, whose mind was almost engrossed by the details of an extensive business, but who composed a book of much original thought, in steamboats and on horseback, while visiting distant customers." Mr. Hazard's chief works are: "Essay on Language" (1834); "The Adaptation of the Universe to the Cultivation of the Mind" (1840); "Causes of Decline of Political Morality" (1841); treatise that had a great influence in abolishing lotteries from Rhode Island; "Fourth of July Oration on Temperance" (1843); "The Philosophical Character of Channing" (1844); "The Character and Works of the Late Chief Justice Durfee, LL.D., of Rhode Island" (1845); "The Relations of Railroad Corporations to the Public" (1849); "The Duty of Individuals to support Science and Literature" (1855); "The Resources of the United States" (1864); "The Freedom of the Mind in Willing" (1866), a 12mo of 455 pages, the second book of which is a review of "Edwards on The Will." In 1869 he published his "Causation and Freedom in Willing," a 12mo of 300 pages, consisting of two letters addressed to John Stuart Mill, which, being translated and published in the German, was extensively and favorably reviewed in the leading periodicals of Germany, and is mentioned with much favor in the "North American Review" of 1869. The degree of LL.D. was conferred upon Mr. Hazard in 1845 by Brown University. Mr. Hazard was married, Sept. 28, 1828, to Catherine, daughter of John Newbold of Bloomsdale, Pa. They had two children. He died in Peacedale, R. I., Oct. 9, 1888.

**BLUNT, James G.**, soldier, was born in Hancock county, Me., in 1826, and spent the period from his fifteenth to his twentieth year before the mast. He then removed to Ohio, and in 1849 was graduated at Starling Medical College, Columbus. Settling in Darke county, he practiced until 1856, when he removed to Anderson county, Kan. He was one of the

*R. G. Hazard*

most strenuous opposers of the introduction of slavery, and was a member of the convention that framed the constitution of the state. In July, 1861, he entered the Union army as lieutenant-colonel of the 3d Kansas volunteers. He was made commander of cavalry in the brigade of Gen. James Lane, and on April 5th was promoted brigadier-general and assigned to the command of the military department of Kansas. In the battle of Old Fort Wayne, Oct. 22, 1862, his Kansas and Cherokee troops had an hour's engagement with the Confederate troops massed at Maysville, on the western border of Arkansas, and routed them, and on Nov. 28th attacked Gen. Marmaduke at Cane-hill, again victoriously. At Prairie Grove, Dec. 7, 1862, aided by Gen. Francis J. Heron, he disastrously defeated 2,500 men under Gen. Thomas C. Hindman, thus checking the advance of the Confederates into Missouri. On Dec. 28th Gen. Blunt captured Fort Van Buren, on the Arkansas. On Nov. 29th, the same year, he was promoted major-general. In June, 1863, he was relieved of the command of the department of Kansas, and went into the field with the army of the frontier. His next great exploit was his defeat of Gen. Cooper, at Honey Springs, July 16, 1863, at Newtonia, Mo. On Oct. 28, 1864, his troops, aided by the cavalry of Brig. Gen. Sanborn, dealt the final blow to Sterling Price, forcing him out of the state into Arkansas. Gen. Blunt commanded the district of South Kansas during the latter part of the war, and on being mustered out, settled in Leavenworth. He died in Washington, D. C., in 1881.

**RILEY, Charles Valentine**, entomologist, was born at Chelsea, London, England, Sept. 18, 1843, son of Charles and Mary (Cannon) Riley. He was of Welsh ancestry. His early years were spent at Walton-on-Thames, where his parents removed, and after his eleventh year he studied at Dieppe, France, and in Bonn, Germany. At school he evinced such artistic talent that his teachers advised him to study art in Paris, but the necessity of making his own way led him to emigrate to America. Arriving in the United States in his seventeenth year, he spent three years on a farm in Illinois, where he worked with the energy of an enthusiast among the animals and in the fields, spent his leisure hours cultivating a flower garden, and his Sundays sketching, reading and studying insects. At the age of twenty he went to Chicago, where he became an editor of the "Prairie Farmer." In 1864 he saw six months of active service as a private in an Illinois regiment, then returned to his editorial work. At this time he began to contribute to the periodicals numerous articles on entomology, which gave him a world-wide reputation among scientists. In 1868 he was appointed state entomologist of Missouri, and during the nine years of his incumbency issued annually a report "On the Noxious, Beneficial and other Insects of the State of Missouri," and also founded the "American Entomologist," edited by Benjamin D. Walsh and himself. His nine reports were afterwards collected and published in book-form, and as they appeared, scientists both in Europe and America greeted with enthusiastic praise the remarkable powers of observation, both of structure and habits, there displayed; the great skill in drawing, and especially ingenious and practical devices for destroying the pests. Darwin wrote, in 1871: "There is a vast number of facts and generalizations of value to me, and I am struck with admiration at your power of observation. The discussion on mimetic insects seems to me particularly good and original." In reviewing the last of these reports, that of 1876, the London "Entomologists' Monthly" remarked: "The author, in giving full scope to his keen powers of observation, minuteness of detail, and the skill with which he has used his pencil, and at the same time

in showing a regard for scientific accuracy, maintains his right to be termed the foremost entomologist of the day." While occupied with this work, Mr. Riley had since 1873 become actively interested in the ravages of the Rocky mountain locust in the western states and territories. They affected Missouri seriously; and Prof. Riley, feeling the necessity for national action to check the pest by public lectures, writing and memorials to congress, urged the creation of a national entomological commission. This was accomplished in 1877, and Prof. Riley, Dr. A. S. Packard, Jr. and Prof. Cyrus Thomas were appointed to investigate the evil. Their work occupied five years, during which they published five illustrated reports and seven bulletins, with full discussions not only of the Rocky mountain locust and its allies, but the cotton-worm, the boll-worm, the army-worm, canker-worms and insects injurious to foreign trees. From 1878 to 1894 Mr. Riley held, with one brief intermission, the position of United States entomologist, and during his incumbency the division of entomology was organized. His successor in this position wrote, of Prof. Riley's work in this direction: "The present efficient organization of the Division of Entomology was his own original conception, and he is responsible for its plan down to the smallest detail. It is unquestionably the foremost organization of its kind in existence." Throughout his career, Prof. Riley was continually achieving new results in the art of practical entomology. He introduced with great success into California the Australian vedalia, a species of lady-bird, to combat the fluted scale, which was fast destroying the orange and lemon groves. Becoming interested in the phylloxera, the French vine-pest, he made numerous visits to France between 1866 and 1884, corresponded on the subject with French naturalists, and originated the idea of reviving etiolated French vineyards by using certain American phylloxera-proof stocks to graft upon. For his services the French vine-growers awarded him a gold medal in 1871, and presented to him a beautiful statue in bronze in 1889, while the French government conferred upon him the cross of the Legion of Honor. Prof. Riley also originated a means of protecting plants and trees from sucking insects by the use of keratene emulsions, and with the aid of W. S. Barnard invented and protected the Riley system of nozzles for spraying insecticides and fungicides. Prof. Riley was a member of many American societies, and of the entomological societies of France, Berlin, Switzerland and Belgium. He was an honorary fellow of the Entomological Society of London, and of the Royal Agricultural Society of Great Britain; for two years was president of the Academy of Science of St. Louis; founded and served for two terms as president of the Entomological Society of Washington; was one of the founders of the Biological Society of that city, and an honorary member of the horticultural societies of Illinois, Iowa, Kansas and Missouri. The degree of A.M. was conferred upon him by the Kansas State Agricultural College, and Ph. D. by the Missouri State University. He was lecturer on entomology at Cornell University and other institutions. His collection of insects was awarded a gold medal at the international forestry exhibition at Edinburgh, in 1884. Besides the works already mentioned, he published in book-form the "Potato Pest" and the "Locust Plague," and of pamphlets and magazine articles an immense num-

ber. His papers on "The Caprification of the Fig," on "The Yucca Moth and Yucca Pollination," and on "Some Interrelations of Plants and Insects" are especially fruitful in original ideas. In 1888 he attracted much attention by an address on "The Cause of Variations in Organic Forms," delivered before the American Association for the Advancement of Science. Throughout his life, Prof. Riley was in the habit of frequently visiting the home of his childhood, where his achievements made him an honored guest. N. Fream, writing in the "Journal of Royal Agricultural Society of England," described him as "the greatest agricultural entomologist of our age; a naturalist, linguist, artist, soldier, a delightful companion, or sincere friend." Prof. Riley was married, in 1878, to Emilie J., daughter of George Conzelman. He met his death by a fall from a bicycle, Sept. 14, 1895.

**COOK, Virgil Young**, merchant, planter and soldier, was born at Boydsville, Ky., Nov. 14, 1848, son of William D. and Pernicia (Dodds) Cook. His father was a successful merchant and tobaccoist; whose father, John Cook, was a pioneer, merchant and soldier, and whose grandfather emigrating from Georgia to Kentucky in the latter part of the eighteenth century, settled in Caldwell county, near Princeton. His mother was the daughter of John C. Dodds, also a pioneer

and soldier, whose father was a Continental soldier, serving with distinction with the South Carolina troops. He likewise emigrated to Kentucky, but dying on the way, his family proceeded thither, and settled near Princeton. Both grandfathers removed to Jackson's Purchase, now western Kentucky, in 1821, settling in what is now Graves county. They both served in the Indian wars, and in the Kentucky line of riflemen in the war of 1812, and both were captains in the 14th Kentucky regiment (Mitchison's), which participated in the battle of New Orleans, Jan. 8, 1815. Previous

to this service, John C. Dodds served as a captain on the staff of Brig.-Gen. John Thomas, who commanded a brigade of Kentucky militia. Virgil Y. Cook was reared in Kentucky, where he acquired an academic education and was afterwards a salesman in his father's store. At the age of fifteen he entered the Confederate army, serving in the ranks in company H, 7th Kentucky cavalry, under Gen. N. B. Forrest, until its surrender, May 10, 1865. On returning to Kentucky, he resumed his studies for a year, and then going to Arkansas, settled at Grand Glaize on the Lower White river, Jackson county, where he was engaged in mercantile pursuits until July, 1874. He then founded the station of Olyphant on the line of the St. Louis, Iron Mountain and Southern railroad, and there, again, entered actively into mercantile pursuits. In April, 1884, he settled at his present country-seat, Midland Holm, near the banks of the Upper White river in the famous Oil Trough valley, in the midst of a 5,000-acre tract, of which 3,000 acres are in a high state of cultivation. In all his business connections and enterprises he has been successful, and the result remunerative. He was appointed in 1897 a member of the board of trustees for the Arkansas University, to represent the sixth congressional district for a six years' term, and is also a director of the bank of Newport. In June,

1896, he accepted the position of adjutant-general and chief of staff of the Arkansas division, United Confederate Veterans, with the rank of colonel, and in this capacity is now serving a second term. For several years previous, he had been commander of Tom Hindman camp, No. 318, of United Confederate Veterans, with headquarters at Newport. On Aug. 17, 1897, he was appointed a major-general in the Arkansas national guard, and assigned to the command of the 1st military division of Arkansas, embracing all the territory north of the Arkansas river, composed of the 1st brigade, national guard, and comprising the 2d and 4th regiments of infantry, a squadron of the 1st cavalry and a light battery and eight brigades of the reserve militia. Gen. Cook has taken an active interest in state and national politics, and has for the past twenty years been a delegate to the Democratic state conventions and twice a delegate to national conventions. He has several times declined nominations at the hands of his party, preferring private business to public affairs, in the sense of holding offices of emolument. He was married, at Jacksonport, Ark., June 29, 1871, to Mildred, daughter of Capt. Enos Laub, a river-steamboat captain and a native of Kentucky. He has four daughters: Neva P., wife of Paul Butler of Batesville, now district attorney for the third judicial circuit; Bertha Mae, Jennie and Varina. One son, Virgil Whitfield, died Feb. 7, 1892, aged sixteen, and another, in infancy.

**DERR, Thompson**, insurance agent, was born in Durham township, Bucks co., Pa., Jan. 16, 1834, son of John and Hannah (Fine) Derr, and descendant of Johann Heinrich Dörr, who, with his family, emigrated from the neighborhood of Heidelberg to America in 1742. The Dörrs were among the more than 30,000 German Protestants who were driven out of the Palatinate in the first half of the eighteenth century and took refuge in Pennsylvania. Johann Heinrich became an elder in the old "Swamp church" (now Trinity Reformed) in Upper Milford township, Bucks co. His son Jacob served through the revolutionary war in Capt. Church's company of Gen. Anthony Wayne's regiment, 4th Pennsylvania battalion, and was wounded at the battle of Brandywine. Michael, eldest son of Jacob, was a soldier in the war of 1812, and after leaving the army returned to Bucks county, where he died in 1862, having reared a family of ten children. John Derr, eldest son of Michael, a bridge builder and lumber dealer on the Delaware, was married to the youngest daughter of John and Catherine (Melick) Fine, of Finesville, N. J., both of whom were members of old families of German origin. Philip Fine, first of his name in this country, settled in what is now Hunterdon county, N. J., about the year 1700, obtaining his lands by grants from the Indians. His son Philip, who established mills of various kinds on the Musconetcong river, and prospered thereby, was one of the founders of St. James' Lutheran Church, of Greenwich, N. J. His son John was married to Ann Catherine, daughter of Capt. Andrew Melick, whose youngest child became the mother of Thompson Derr. The Melicks derive their descent from Johannes Melich, of Bendorp, near Coblenz, Germany, a man of education and property, who emigrated to Pennsylvania in 1735; thence removed to Readington, Hunterdon co., N. J., finally making his

*Virgil Y. Cook*

*Thompson Derr*

home at Bedminster, Somerset co. His son Andrew, great-grandfather of Thompson Derr, joined the first regiment of the Continental line of the New Jersey troops on July 4, 1776, and served through the war. The parents of Thompson Derr removed to a farm near Shamokin when he was fifteen years of age; four years later, to a farm in Upper Augusta township, in the same state, where his father engaged in merchant milling as well as farming. Besides a short course at Dr. Vanderveer's academy at Easton, Thompson Derr had no schooling of advanced character. In 1856 he began active business life in a store and mill in Dry Valley, Union co. During the same year he established a local fire insurance agency at Sunbury, conducting the business, which was then in its infancy outside of the great cities. He was an ambitious worker, of great administrative power and executive ability; and, meeting with success and desiring a larger field, he removed to Wilkes-Barre in a few months. Until 1862 he was in business alone; then his brother, Henry H. Derr, became his partner, the style being Thompson Derr & Bro. They secured the confidence of the best fire insurance companies in all parts of the United States, and a vast aggregate of insurance was placed by them, large profits ensuing. He obtained a commanding position in the insurance business in Pennsylvania as one of the most trustworthy and conservative representatives and general agents. He was a director of the Miners' Savings Bank, of the Wyoming National Bank and of the Franklin Fire Insurance Co. of Philadelphia. Thompson Derr was strictly a self-made man. He owed little to any person or influence. What he accomplished was by his own unaided efforts and sound judgment, and, judged upon that basis, his city never held a more successful man. Mr. Derr's health broke down in 1882, and he was compelled to give up business. He died at Wilkes-Barre, Pa., Feb. 8, 1885, and left surviving him a sister, Mrs. Mary C. Richter, of Selins Grove, Pa., and three brothers, Henry H. Derr, John F. Derr and Andrew F. Derr.

**PETIGRU, James Lewis**, statesman, was born in Abbeville district, S. C., March 10, 1789, son of William and Louise (Gibert) Petigru. He received the names of his two grandfathers, James Petigru, a native of Ireland, who emigrated to America after his marriage, and Jean Louis Gibert, a Huguenot minister, who fled with his congregation from persecution in France, and settled in South Carolina in 1695. His father was a man of intellectual gifts and lovable character, but so little suited to provide for a family that his eleven children were cared for chiefly by their devoted mother. James Lewis, the eldest, spent more time assisting in the management of the farm than at school, but in his early years he was made familiar, by his father, with the classics and English literature, especially Pope. In 1804 he attended a famous school at Willington, where the pupils studied in the open woods, or, during unfavorable weather, under the shelter of log-cabins; and such was the success of this system of education that it is said that, even in old age, they remembered their enthusiastic love for the school and the headmaster. Petigru was a brilliant scholar, and a witty, whole-hearted boy, although he never cared for athletic sports of any kind. The only amusement of the sort in which he indulged was dancing, and in this his manner was so peculiarly original as to provoke smiles from all who witnessed his performances. On one occasion, perceiving this effect, he observed: "The ladies seem to think I am dancing for their amusement, whereas I assure them I am dancing solely for my own." From Willington he entered the University of South Carolina, and after his graduation in 1809, supported himself by teaching at Beaufort College, until he was admitted to the

bar in 1812. He then opened a law office at Coosa-whatchie, in his native district, but finding the country too much impoverished to indulge in litigation, he beguiled the time by serving as a soldier, although he was averse to the policy which had brought on war with England. In 1815 he served as solicitor of Abbeville county, and his affairs now beginning to prosper, he was married and shortly afterwards removed to Charleston, S. C. There the fame of his learning and eloquence had preceded him, and he formed friendships with the leading lawyers and judges, and became the partner of James Hamilton, thus entering at once upon a flourishing practice. When his partner entered congress, he practiced alone, and as early as 1821 was the undisputed head of the Charleston bar. In 1822 he succeeded Gen. Hayne as attorney-general of South Carolina. About this time his eldest son died, and soon afterwards his wife also, and he brought his three youngest sisters to make their home at his house in Charleston. In 1830 he became a candidate for the state senate, but was defeated. Although possessing great popularity on account of his personal character, he had rendered himself obnoxious by steadily opposing the doctrine of nullification and upholding the cause of the Union. Public feeling was running so high on this question that war seemed imminent, but it fortunately happened that while Petigru led the Union party, his friend Hamilton was at the head of the opposition; and the two, by co-operating, managed to keep the troubles from resulting disastrously until the compromise, urged by Clay at Washington, restored peace to the state. Having by this time acquired some wealth, Petigru purchased a plantation on Savannah river, but the venture proved disastrous; to one of his philanthropic dispositions slaves were an expensive luxury, and the estate itself was swept away in the losses which resulted from the mania for land speculation of 1837. For the next twenty years he labored ceaselessly at his profession, in order to pay off the debts in which his losses involved him. In 1860 he again came forward as an earnest and eloquent advocate of the Union cause, although it was so unpopular that only his personal prestige enabled him to plead for it in safety. In 1861 his house at Charleston was destroyed by fire, and his summer home on Sullivan's Island pulled down to make room for fortifications. He therefore removed to Summerville, and having been elected to the legislature, completed a codification of the state laws. After his death the venerable Judge Alfred Huger wrote the following estimate of his character:

"Original in all things, as if his character was a mosaic, he furnished the particles from his own resources. . . . Generous and brave, he would give without measure, and ask nothing in return. . . . Elevated in every sentiment, he dealt lightly with those who needed his forgiveness; uncompromising where his own rights were assailed, he was sure to put those who denied them at utter defiance. . . . He knew how to strike the hardest blows, and he knew how to receive them. If there is any man now living in South Carolina, capable of writing the history of his own times, Petigru, for the highest aspirations as to duty or honor—for the boldness of his thinkings—for the brightness of his genius . . . will be ranked with those of whom the state

has most reason to be proud." Mr. Petigru was married, in August, 1816, to a daughter of Capt. James Postell, son of Col. Postell, of Marion's brigade, in the revolutionary army. His daughter, Caroline Petigru Carson, afterwards attained some distinction as a portrait painter. He died in Charleston, S. C., March 3, 1863. His "Life," by William Grayson, appeared in 1866, and a memorial volume, including the proceedings of the Charleston bar, in 1867.

**MATHER, Margaret**, actress, was born at Tilbury, near Toronto, Canada, Oct. 21, 1859, daughter of John and Anna (Finlayson) Mather. She is said to have been connected with the old Mather family of New England. Her childhood was spent in Detroit, whence she removed to New York city to live with an elder sister. In 1878, when George Edgar began his tour as a star in Shakespearean rôles, Miss Mather was engaged as his leading lady. The parts assigned her were beyond her powers; but her fervor and energy commended her to James M. Hill, the theatrical manager, whom she met in 1881, and he provided her with competent tutors, and spent about \$40,000 on her training. She played for six years under his management, making her debut on Aug. 28, 1882, in a sumptuous production of "Romeo and

Juliet." Three years were spent in starring through the United States in romantic and Shakespearean dramas, and on Oct. 13, 1885, she made her first appearance in New York city, at the Union Square Theatre in a splendid revival of "Romeo and Juliet"; "Leah" was given in January, 1886, and the "Honeymoon" in February. During the spring of 1888 she reappeared in New York city, at the Standard Theatre, where "Juliet," the "Honeymoon," "As You Like It," "Leah," "Lady of Lyons" and "Macbeth" were performed. In 1888 she parted company with Mr. Hill, and thereafter appeared under her own management. In 1890 she produced an English version of "Joan of Arc," but it was only moderately successful. In 1895, after a three years' absence from the stage, she returned to professional life, and in 1897 appeared at Wallack's Theatre, New York city, as Imogen in a costly production of "Cymbeline." She afterward took the play on the road, and while giving it at Charleston, W. Va., fell unconscious, and in a few hours died, April 7, 1898. She was married, at Buffalo, N. Y., Feb. 15, 1887, to Emil Haberkm, a musician, and again in November, 1892, to Col. Gustav Pabst, of Milwaukee, but divorced both husbands on the ground of incompatibility of temper.

**BUNN, Henry Gaston**, chief-justice of Arkansas, was born in Nash county, N. C., June 12, 1838, son of David and Elizabeth (Thomas) Bunn. His paternal ancestors were of Saxon origin, and emigrated from England at an early period in American history. The father, a planter of moderate means, removed with his family to Fayette county, Tenn., in 1844, and two years later, seeking a more favorable location, settled in the eastern part of Ouachita county, Ark. Here, in the midst of an almost unbroken wilderness, Henry G. Bunn passed an uneventful childhood, with short terms at the county school and work on a farm. Later he attended the higher schools in neighboring towns, and was prepared for a college course. His father died in 1858. In February, 1859, he entered the freshman class, half advanced, of Davidson College, North Carolina, where he remained until the opening of the civil war. In June, 1861, he enlisted in a volunteer company, raised by Capt. J. B. McCulloch, later incorporated with the 4th Arkansas infantry, under Col. McNair, and

was given a commission as third lieutenant. In November he was made adjutant. At the battle of Pea Ridge, March 6-8, 1862, he was wounded and captured, but escaping four days after rejoined his regiment, which later with the army of Gen. Van Dorn crossed to the east side of the Mississippi river, and joined the army of Tennessee under Gen. Beauregard. In April he was commissioned lieutenant-colonel. He participated in the affair of Farmington, and others about Corinth, and commanded his regiment in Gen. E. Kirby Smith's campaign into Kentucky, during which he was commissioned colonel. He led his regiment in the battle of Murfreesboro, Tenn., Dec. 31, 1862; was under Gen. Johnston in the vain attempt to relieve Vicksburg, and was with Johnston all through the Georgia campaign. In an engagement near Atlanta, he was severely wounded and incapacitated for active service until February, 1865. His decimated brigade participated in the battle of Bentonville, N. C., March 19-20, 1865, under his command, and afterwards consolidated into one regiment, over which he was assigned as colonel by Gen. Joseph E. Johnston. After the surrender of Gen. Johnston, it returned to Arkansas, and was disbanded in good order; however, having met with a severe railroad accident on the homeward journey, by which several were killed and many were crippled for life, the colonel himself narrowly escaping. Reaching home on his twenty-seventh birthday, after four years of arduous service, he found himself without adequate equipment for civil life, and after some thought finally determined upon the profession of the law. He was admitted to the bar in 1866, and at once discovered a great natural aptitude for the calling, which, coupled with his well-earned popularity, soon brought him into an extensive practice. From force of circumstances he took an active part in politics during the six turbulent years of reconstruction. He was elected to the state senate in 1873, and was a member during the "Brooks and Baxter war." He was also a member, from Ouachita county, of the state constitutional convention of 1874; was chairman of its committee on the bill of rights, and one of its judiciary committee. After the adjournment of the convention, Col. Bunn held a number of honorary positions, among them a membership on the board of visitors and trustees of the Arkansas Industrial University for several years. He served occasionally as special judge on the supreme bench, until, May, 1893, he was appointed by Gov. Fishback chief justice of the supreme court, to fill the vacancy caused by the resignation of Chief-Justice S. R. Cantand, and discharged the duties so successfully that in the following September he was elected by popular ballot to the same position, and still remains (1899) its honored incumbent. Judge Bunn is profoundly learned in the law; but, never satisfied with his attainments, great though they be, is to-day the same close student of legal intricacies as when he first entered the practice of his profession. Well learned also in precedent, his decisions on technical points are founded on most exhaustive comprehension of both principle and practice. His long habit of study has given him a keenness of discernment which allows few points in any case to escape his deliberate scrutiny. He is to this day a staunch states-rights Democrat, and holds to the justice of the cause for which he has fought and suffered, but acquiesces in the result, and harbors no hatred. He is

H. G. Bunn

a Presbyterian of the old school, and constant in his support of his church and her activities. He was married, Sept. 6, 1865, to Louisa E., daughter of Col. W. T. M. Holmes, who was killed in the Confederate cause. She died July 5, 1866, without issue. He was married, a second time, to Aralee, daughter of Peter Connelly, also of the Confederate army. They have had nine children, of whom five survive.

**STORRS, Henry Martyn**, clergyman, was born at Ravenna, O., Jan. 20, 1827, second son of Charles Backus and Vashti Maria Storrs. He was graduated at Amherst College in 1846, and at Andover Theological Seminary in 1851, having for two of the intervening years taught school in Virginia. In January, 1852, he was installed pastor of the Lawrence Street Congregational Church, of Lawrence, Mass.; became pastor of the First Orthodox Congregational Church, at Cincinnati, O., in 1855, and was, during this pastorate, commissioned by the Freedmen's Bureau to present the cause of the then lately enfranchised negro race to the people of Great Britain, spending several months in this work abroad, in 1865. He was installed pastor of the South Congregational Church, in Brooklyn, N. Y., in December, 1867, and became corresponding secretary of the American Home Missionary Society in 1872, being annually re-elected to the same office for ten years. He undoubtedly achieved his greatest fame and did his grandest work in connection with this society, of which he was, during ten epochal years, practically the administrative head, and of whose work in planting and nourishing Christian churches and institutions throughout the new West he was the splendid, magnetically effective advocate. He declined another re-election to this important office in 1882, and was immediately called as pastor by several churches, and urged to become the president of a prominent college. He accepted the call to the pastorate of the First Presbyterian Church, of Orange, N. J.; was installed as its pastor in November, 1882, and continued to preach there until his death. Springing from an ancestral line of Christian preachers, it was natural for Dr. Storrs to be filled with the spirit of his high calling and mission. Inheriting extraordinary natural talents, he diligently strove to improve them by study, travel and tireless industry, that he might the better serve the Divine Master he loved. With a personal presence so impressive as to be almost majestic, and with mental endowments of a pre-eminent order and transcendent richness, his public addresses were wonderfully eloquent, thrilling and convincing; while in his private life and daily intercourse with his fellow-men he was genial, sympathetic, charitable and full of an irresistible charm. Henry Ward Beecher wrote of him: "His sermons are thoughtful, clear, intense, eminently spiritual; while his discourses while secretary of the American Home Missionary Society were surpassingly noble, and for abundant material, breadth of thought, vividness of emotion, comprehensive survey of the whole field, together with great flow and marching power and brilliancy, might be called models for such discourses. Altogether, he is justly regarded as one of the foremost men in the American pulpit, and a star of the first magnitude in a family constellation." He received the degree of LL.D. Dr. Storrs was married, March 10, 1852, to Catharine, second daughter of Edward Hitchcock, president of Amherst College; they had two sons and two daughters. He died at Orange, N. J., Dec. 1, 1894.

**LEWIS, Graceanna**, naturalist and philanthropist, was born on a farm in West Vincent township, Chester co., Pa., Aug. 3, 1821. Her father, John Lewis, the third of the name, was descended in the fifth generation from Henry Lewis, of Narberth, Pembrokeshire, South Wales, a friend and

companion of William Penn, who emigrated to the colonies in 1682, and settled in Pennsylvania. Many of the descendants of this Quaker settler have been prominent in Pennsylvania, among them Eli K. Price, Enoch Lewis, Dr. George Smith, historian and botanist, and Hon. Joseph J. Lewis, judge of the supreme court. On his mother's side, her father, John Lewis, through the Meredith line, was the ninth in descent from David Vaughan, of Wales, who lived about the time of Columbus. Her mother was Esther, daughter of Bartholomew Fussell, a minister in the Society of Friends, and of his wife, Rebecca (Bond) Fussell. Her father died when she was scarcely three years old, and she and her three sisters were left entirely to the care of their mother, although for two years an unsuccessful attempt was kept up to appoint trustees to administer the estate, left unconditionally in the father's will to his widow. Mrs. Lewis suffered intensely during these two years of litigation, and her experience, afterwards related to her daughters, made them zealous advocates of woman suffrage. She proved in the end a most successful business woman, and also having been a teacher before her marriage, directed the education of her daughters in their earlier years. They afterwards attended Kimberton Boarding-school for Girls; their teachers, especially Abigail and Gertrude Kimber, becoming their life-long friends. During many years preceding the civil war, Mrs. Lewis, in harmony with the principles of her husband, made her house a refuge for fugitive slaves, and, when she died, left this duty to her daughters and trusty neighbors, who fed, clothed and sent them farther on their flight to Canada. At one time there were eleven runaways in the house on the same day, who were disguised and sent on, the following night, and there was one week when the house gave shelter to forty. This work was continued for over forty years, and in that time hundreds of escaping slaves, sheltered there, must have

passed northward. Graceanna Lewis lived through the larger part of her life in the home of her infancy; but, surviving her mother and sisters, she now resides with relatives in Media, Pa. She devoted herself early in life to the study of natural history, and possessing unusual talent as a painter, her work has taken the form of a combination of descriptions with pictorial illustrations, which are recognized as of great importance in the advancement of science. Her first scientific publication was a pamphlet on "The Position of Birds in the Animal Kingdom," printed in 1869, which was the germ of some later works. In 1876, she exhibited, at the Centennial exposition, a model in wax, to accompany her "Chart of the Animal Kingdom," and this met with the approbation of Prof. Huxley and other leading naturalists. With this encouragement, she applied the same method to the construction of a "Chart of the Vegetable Kingdom," which was completed in 1885. Her other works are: "A Chart of the Class of Birds"; "A Chart of Geology, with Special Reference to Paleontology"; "Microscopic Studies of Frost Crystals," and of the "Plumage of Birds" and the "Lower Forms of Animal and Vegetable Life"; "Studies in Forestry, illustrated by Water-Color Paintings"; "Water-Color Paintings of Wild Flowers"; a series of "Leaf Charts," and a large number of illustrations for lectures on

*Graceanna Lewis*

natural history. Her work in forestry she holds as highly essential; for, to quote her own words, she regards forestry "as the legitimate successor in importance of the anti-slavery cause, the welfare of our country depending so largely on its proper administration." In 1893, she was commissioned to paint fifty representations of the leaves of forest trees for the World's Columbian exposition. Miss Lewis is a member of the Academy of Natural Sciences, Philadelphia, Pa.; the Philosophical Society of Westchester, Pa.; the New Century Club, of Philadelphia, Pa.; the Natural History Society of Lancaster, Pa.; the Natural History Society of Rochester, N. Y.; the Woman's Anthropological Society of America; the National Science Club for Women; the Woman's Club of Media, Pa., and a life member of the Delaware County Institute of Science. Until lately she has held office as secretary of the Women's Christian Temperance Union of Media, the Media Woman's Suffrage Association, and the Delaware County Forestry Association; chief of the cultural department of the Media Flower Mission, and superintendent of scientific temperance instruction for the Delaware County W. C. T. U., a work which brought her into relation with the teachers of public schools throughout the country. She now devotes her leisure time to literary work. An extended account of Miss Lewis' work is given in "Woman's Progress" for April, 1894.

**BROUGHAM, John**, comedian and playwright, was born in Dublin, Ireland, May 9, 1810, and on his mother's side was of French descent. His family was of excellent standing, and he received a careful education, first in private schools, and later at Trinity College. It was intended that he should become a physician, and he began his studies; but family reverses rendering this impossible, and following his natural bent, he made his way to London in 1830. Here he offered himself as a cadet in the East India Co.'s service, but was restrained by the recruiting

officer, who urged him to seek fitter employment. By chance he became a member of the company playing at the Queen's Theatre, in Toppingham street. He appeared for the first time as a professional actor (he had frequently appeared in amateur performances in Dublin) in the operatic extravaganza, "Tom and Jerry." In a short time he became a member of the company at the Olympic, under Madame Vestris' management, and followed her and Charles Matthews to Covent Garden, remaining with their company until its final dissolution. During these years he was advancing steadily

in reputation and in the command of his art, and wrote several plays, collaborating with Boucicault in "London Assurance," which the latter claimed as entirely his own. In 1840, he assumed the management of the Lyceum Theatre; but this venture speedily came to grief, and in 1842, Mr. Brougham was induced by Stephen Price, manager of the Park Theatre in New York, to try his fortunes in the United States. He came to New York with his wife, Emma Williams, an English actress, and made his first appearance at the Park Theatre in October, 1842. From that time until his death he was firmly identified as actor, author and manager with the history of the American stage. He conquered the New York public with ease and became the people's

favorite at once. After this he started with profit throughout the country, going as far west as St. Louis. Then, after engagements in Boston and other cities, he became a member of W. E. Burton's company, and adapted for it Dickens' "Dombey & Son," which added materially to his fortune. He was the manager of Niblo's for a brief period, and then opened Brougham's Lyceum (subsequently Wallack's), on Broadway, where he produced his own adaptation of Dickens' "David Copperfield," and himself created the part of Micawber, a rôle in which he was incomparable and unrivaled. The Lyceum proved a losing venture, and leaving it, in 1870, Mr. Brougham leased the Bowery Theatre, and produced "King John," in a manner that made

it a superb artistic success, but a lamentable financial failure. He was constantly busy both as an adapter and as a writer of original plays and burlesques, which brought him large returns, and with which he never failed to part with all possible despatch. In 1852, he became a member of the company playing under the direction of the elder Wallack, and remained with it for several years. While with the Wallack company, he was seen in all his best known parts, and created many new ones, in which he was cordially received. During that time he also wrote some of his best plays, among them the "Game of Love," "Bleak House," "A Decided Case," and "Playing With Fire." It was at Wallack's that his still well-remembered burlesque, "Pocahontas," was first produced. In 1857, Mr. Brougham again became a member of Mr. Barton's company, and remained with it until it disbanded. In 1861, he went to London, and appeared in succession at the Haymarket, Lyceum and Princess theatres. While in London his "Romance and Reality" was produced by Buckstone, and he also wrote "The Duke's Motto" for Fechter, himself creating the character of Carrickfergus in the initial production. On March 22, 1865, he was seen as Colonel O'Grady in "Arrah-na-Pogue." In the summer of 1865, he returned to New York, and in the autumn of that year played for a few months at the Winter Garden Theatre. In 1867, he was at the Olympic; and in June, 1868, he created the principal part in the "Lottery of Life," a play written by himself and produced at Wallack's. On Jan. 25, 1869, he opened Brougham's Theatre, in Twenty-fourth street, with a comedy of his own composition, entitled "Better Late than Never." This venture, like all his managerial experiments, proved an

*John Brougham.*

unfortunate one, and ended abruptly at the expiration of three months. He never again came forward as a manager, but for several years was a member of Wallack's and Daly's companies. His last appearance on the stage was made on Oct. 25, 1879, as Felix O'Reilly in Boucicault's "Rescued." Though always in pecuniary straits, and never able to appreciate the value of money, he was in his last days placed above the reach of want by the payment of an annuity, the result of benefits given for him simultaneously in several New York theatres. Mr. Brougham was twice married: his first wife separated from him, became Mrs. Robertson, and died in 1865; and his second wife, Annette Nelson (Mrs. Hodges), an actress, died in 1870. As an actor, Mr. Brougham was always magnetic and attractive, and played whatever part he essayed with grace, dash and gallantry. He was the best Irishman the stage has ever seen, and his comic earnestness elevated his excursions into burlesque to the highest form of art. He was seen at his best in his own plays and in the parts of his own creation. As a playwright and adapter he produced over seventy-five dramatic pieces, nearly all of which were successful when first presented, and many of which possessed enduring merit and charm. His last work was a drama entitled "Home Rule." He left an unfinished autobiography, which, together with selections from his miscellaneous writings and a memoir by William Winter, was published in 1881. He died in New York city, Jan. 7, 1880.

**CUDWORTH, James**, colonist, was born in England about 1612, son of Ralph Cudworth of Aller, Somersetshire, and brother of Ralph Cudworth, the Platonist. He emigrated to Plymouth colony, and in the year 1634 settled at Scituate, where he took part in the management of the political and military affairs of the colony. During 1649-56 he represented Scituate in the Plymouth general court, and during the two succeeding years served as magistrate. He was prevented from a longer tenure of office by having incurred the displeasure of his superiors, on account of his lenity to the Quakers. During King Philip's war he distinguished himself as a brilliant officer, and for a time was in command of the Plymouth forces. In 1681 he was elected deputy-governor, and in the following year was sent to England on a mission for the country. He died in London in 1682.

**MUIR, John**, geologist, naturalist and author, was born in Dunbar, Haddingtonshire, Scotland, April 21, 1838, third child of Daniel and Anne (Gilrye) Muir, the latter a descendant of the old Scotch family of Gilderoy. Daniel Muir, a grain merchant, was able to give his eight children a good education—John's, which extended over a period of eight years, comprising the ordinary English branches, Latin, French, the Catechism and the Bible. In 1849, the family emigrated to the United States, and settled near Fox river, Wis., about twelve miles from Fort Winnebago, clearing a tract of wild land for a farm. John Muir did his full share of the manual labor involved in subduing the forest, and at the same time read every book within reach, and studied mathematics, keeping his books by him in the field and working out problems on the ground or on chips from the trees he had felled. His brain was full of novel ideas, he had a decided taste for mechanics, was called a great genius by his neighbors, and he was accustomed to rise soon after midnight to make wooden clocks, mill-wheels and other appliances of his own invention. He entered the University of Wisconsin at the age of twenty-two, and completed the four years' course, paying his way through with money earned by harvesting and by school-teaching. Then he vanished in the grand American wildernesses, coming in sight from time

to time on farms and in mills and factories, when his bread-money gave out. His first botanical and geological excursions were made in Wisconsin, Indiana, Michigan and Canada, around the great lakes; the next through the southern states. In search of rare plants he penetrated the swamps of Florida, camping out without cover of any sort, and consequently was smitten with malarial fever, which prevented him from going on to South America, to explore the head-waters of the Amazon, as he had planned. After partially recovering, he spent a month in Cuba and then crossed the Isthmus of Panama and proceeded to California, where he arrived in April, 1868; visited the Yosemite valley, for the purpose of examining its flora, and finally was enabled to make the valley his home, being put in charge of a mill there, which he built to saw fallen pines. He thus earned enough to support himself for a long time, his habits being frugal, and now began a systematic exploration of the mountain region in which the great valley is situated. Emerson, whom he guided through the Yosemite, said of him: "He is more wonderful than Thoreau." For ten years he led an isolated life in the Sierra Nevada, undergoing all manner of hardships, often subjected to great peril, and only when his stock of bread failed did he return to civilization. His winters were devoted to study and to elaborating his notes. The flora and fauna and the meteorology of that region were minutely studied, but his labors as a geologist were far more important. The effects of the glacial period constituted the main subject of his investigation for many years, and he discovered sixty-five small residual glaciers on the High Sierra. His first article on these glaciers appeared in the New York "Tribune" in 1871. Mr. Muir was offered many flattering inducements to prepare himself for professorships in colleges, but declined them, declaring that he wanted "to be more than a professor, whether noticed in the world or not, and that there were already far too many professors as compared with students in the field." From 1876 until 1878 he was a member of an exploring party connected with the geodetic survey in the Great Basin. Several trips to Oregon, Washington and Alaska were next made. The first to Alaska was made in 1879, the year in which he discovered what is now called Glacier Bay and the enormous glacier that bears his name. The head-waters of the Yukon and the MacKenzie were also reached by this undaunted scientist. In 1881, he pushed still farther north, being connected with one of the search expeditions for the lost Jeannette expedition. He has published only one book as yet, "The Mountains of California" (1894). "This book," said the New York "Witness," "should take high rank among the productions of American naturalists for the information which it contains; and yet it reads like a novel." The San Francisco "Call" declared that "no man since Thoreau ever had keener sympathy with nature, a quicker vision for her mysteries, or a surer speech for their interpretation than Mr. Muir." His publications, about 150 in number in 1897, are chiefly in the form of articles contributed to the "Overland Monthly," "Harper's," the "Century," the San Francisco "Bulletin," and other magazines and newspapers, describing the magnificent scenery of the west side of the continent, its mountain ranges,

*John Muir*

glaciers, forests, rivers, wild gardens, animals, etc., among which may be mentioned: "On the Formation of Mountains in the Sierra"; "On the Post-Glacial History of Sequoia Gigantea"; "Glaciation of Arctic and Sub-Arctic Regions"; "Alaska Glaciers"; "Alaska Rivers"; "Ancient Glaciers of the Sierra"; "Forests of Alaska"; "Origin of Yosemite Valley"; "American Forests"; "Forest Reservations and National Parks." As a forest wanderer he is, of course, a friend of trees, and for twenty years or more has been crying in the wilderness, "Save the forests!" The establishment of the Yosemite and Sequoia national parks and the great Sierra forest reservation was effected by his writings, and the work of his forest-loving friends; especially R. U. Johnson, of the "Century Magazine." He was the editor of "Picturesque California," and the author of most of the text describing mountain scenery. In 1879, Mr. Muir was married to the daughter of Dr. John Strentzel, of California, and since that time has given considerable attention to the management of a fine fruit ranch, inherited by his wife; but he has never allowed it to stand in the way of his scientific pursuits. He is now (1899) writing a book on the national parks and forest reservations. In 1896, the honorary degree of A.M. was conferred on him by Harvard University, and the following year that of LL.D. by the Wisconsin State University.

**HOWELL, James B.**, senator, was born at Morristown, N. J., July 4, 1816, son of Elias and Eliza Howell. In 1819, his father moved to Ohio, where he became state senator in 1830, and representative to congress in 1834. James Howell received his education at the high school in Newark, O., and at Miami University, where he was graduated in 1837. He spent two years as a law student with Judge Hocking H. Hunter, of Lancaster, O., and, being admitted to the bar in 1839, he settled in practice at Newark. Failing health, in 1841, determined him to make a lengthy horseback trip, and, starting from Sandusky, O., he journeyed to Chicago, and thence to Keosauqua, Van Buren co., Ia., where, charmed with the place and people, he finally settled. In his new home he rapidly became conspicuous at the bar and in politics as one of the Whig leaders of the territory. His interest in politics led to the purchase of the "Des Moines Valley Whig," in order that his party might have an efficient organ; and the paper absorbed his time.

He therefore relinquished his law practice for the arduous, active and exciting life of a political editor. Owing to the admission of Iowa to statehood, and the consequent growth of Keokuk, Mr. Howell removed his newspaper to that city in 1849, and changed its name to the "Gate City Daily." As has been well said, he was always more than his paper, rather giving than deriving influence, and from the start he was never without governmental indorsement. As long as the Whig party kept its organization, he worked with it and for it; and through the anti-slavery agitation, the Know-nothing frenzy, the Nebraska-Kansas struggle, the incipient disintegration of the old Democratic party and the organization of the anti-slavery elements into the powerful Republican party, he labored zealously and continuously to unite the elements working in opposition to the pro-slavery cause. In 1855-56, he strenuously advocated the adoption of the name Republican for the

new anti-slavery party; signed the call for the convention which organized the party in Iowa, in which he also took an important part, and in 1856 was a delegate from Iowa to the Fremont convention in Philadelphia. The redemption of the nation from slave-rule had been one of the cherished hopes of his life, and his well-known hostility to slavery had caused him to be denounced as one of the leaders of the abolitionists long before he definitely sided with them. He was thus an enthusiastic worker in the first Lincoln campaign, although an accident, crippling him for life, prevented his enlistment on the outbreak of the civil war. He advocated Lincoln's renomination, opposed the policy of Johnson, and was one of the first to assert Grant's claim to the presidency. In January, 1870, he was chosen to the U. S. senate to fill the unexpired term of Hon. James W. Grimes; and, assuming his seat Jan. 26th, soon took a prominent and influential position by virtue of the wide and varied experience he brought to bear on the questions of the day. Shortly after his entrance, he delivered a speech on land grants in aid of railroads, in which he advocated a wise economy in the disposition of the land, and the imposition of the conditions that the railroad companies should sell their land within limited periods and at a limited price. During the next session, commencing in December, 1870, as a member of the committee on pensions, he advocated the house bill granting pensions to the soldiers of the war of 1812, which, notwithstanding the opposition of the chairman of the committee, was carried and became a law. His senatorial term expired March 3, 1871. Shortly after the expiration of his term, in March, 1871, Pres. Grant appointed him one of three commissioners to examine and report on stores and supplies taken or furnished by loyal southerners for the use of the army during the civil war. His nomination was confirmed without the formality of reference to the usual committee,—a deserved compliment to his character and record,—and he continued to discharge his duties until the commission expired by limitation, March 10, 1880. The personnel of this commission was unexceptionable, its record distinguished alike for ability and high integrity of purpose, and to Judge Howell justly belongs the credit, as its most forceful and dominant member. At the close of his service on the southern claims commission, he returned to his home in Keokuk, worn out by increasing complications of disease, which had their commencement in the breaking of his leg in 1860. Through all those years he had borne his pain with heroic patience and courage. Judge Howell's reading was wide and accurate, and his acquaintance with American politics was encyclopedic in its extent and exactness; he was also a profound student of literature, science and theology. He died in Keokuk, Ia., June 17, 1880.

**DUFFIELD, Samuel Augustus Willoughby**, clergyman and hymnologist, was born in Brooklyn, N. Y., Sept. 24, 1843, son of Rev. George Duffield, the hymn-writer, and great-grandson of George Duffield, of Lancaster county, Pa., chaplain in the revolutionary army. He was of Huguenot and Scotch-Irish descent. He was graduated at Yale College in 1863, then studied theology, and in 1866 was ordained to the ministry of the Presbyterian church. In 1867 he was settled over the Tioga Street Presbyterian Church in Philadelphia, subsequently holding charges in Jersey City, Chicago, and lastly, from 1882 until his death, at Bloomfield, N. J. Under the pseudonym of Anselmus, he contributed to the New York "Evangelist." He published a number of volumes; "The Heavenly Land," a translation of Bernard of Cluny's "De Contemptu Mundi" (1867); "Warp and Woof: A Book of Verse" (1868), together with his father; a funeral memorial, "The

Burial of the Dead" (1882); "English Hymns, Their Authors and History" (1886); "Latin Hymn-writers and Their Hymns" (1887), the last work completed by Prof. R. E. Thompson (1889). He died at Bloomfield, N. J., May 12, 1887.

**CARR, Sir Robert**, commissioner to New England, was born in Northumberland, and first appears in history in 1664. In that year, as a result of complaints made by Samuel Maverick, of Boston, the British government appointed a commission to sit in judgment upon matters affecting the interests of the colonies, Carr, Maverick, Sir George Cartwright and Col. Richard Nicolls being its members. They were given "full authority to provide for the peace of the country, according to the royal instructions and their own discretion," and their coming produced great indignation in Massachusetts as an unconstitutional usurpation. "The nature of the government of Rhode Island," says Bancroft, "its habitual policy of relying on England for protection, secured to the royal agents in that province a less unfavorable reception." The commissioners were likewise instructed to reduce the Dutch settlements on the Hudson. The fleet, commanded by Col. Nicolls, numbered four ships, and late in July it reached Boston, where attempts were made to secure the cooperation of Massachusetts and Connecticut. New Amsterdam surrendered to Nicolls and Carr on Sept. 8th, and a little later in the month Carr was sent with three ships and a body of troops to New Amstel, the Dutch and Swede settlement on the Delaware. On Oct. 1st, Fort Casimir, at that place, surrendered without resistance, and the estate of the governor of New Amstel was confiscated to Carr's use. In January, 1665, the commissioners sailed for New England, and on the 23d reached Newport, R. I., where they were amicably received, and made ineffectual attempts to settle the boundary dispute between Rhode Island and Plymouth colony. In February they arrived in Boston, and used all their diplomacy to persuade the general court of Massachusetts to acknowledge their authority, but were baffled, and met with no better success in New Hampshire. The people of Maine, who feared incorporation with Massachusetts, welcomed the commissioners, and a new government was constituted in that colony, which endured until 1668. In 1667 Sir Robert Carr returned to England, and on June 1st, not long after his arrival, died at Bristol.

**GARDENER, Helen Hamilton**, scientist and author, was born near Winchester, Va., Jan. 21, 1853, daughter of Rev. Alfred Griffith and Katherine A. (Peel) Chenoweth, who were both natives of Virginia. Her earliest paternal ancestor in this country was Arthur Chenoweth, who came from England, in 1635, to Maryland, where he had a grant of land, for honorable service, from Lord Baltimore. Her grandfather, John Chenoweth, was married to Hannah Cromwell, a great-granddaughter of Oliver Cromwell. Her paternal grandmother was a daughter of Judge John Davenport, of Maryland, and through this branch of her ancestry she descends from Lord Baltimore. Her father was a cousin of Gen. Strother (Porte Crayon); her great-grandmother Davenport was a sister of Richard Malcolm Johnston's mother. Her mother descended from the Peels, of England. In her childhood she was associated with persons much older than herself, and much of her youthful entertainment was derived from books of a character not usually interesting to or understood by children. Her parents inherited slaves; but having conscientious objection to slavery, and desiring to educate their family away from its influence, they manumitted them, against many difficulties, and moved to Washington, D. C., where Helen was educated in the best schools. She early developed a liking for biological and sociological studies. Helen

H. Gardener first became known to the public as a writer in 1885, through a series of lectures or addresses bearing such titles as "Men, Women and Gods," "Vicarious Atonement," "Historical Facts and Theological Fictions," "By Divine Right," "Pulpit, Pew and Cradle," and "Rome or Reason." Her first book, entitled "Men, Women and Gods," was published in 1885. From 1885 to 1890 she published many stories, essays and sketches in the various magazines. Her first book of stories, "A Thoughtless Yes," was published in 1890, and was soon followed by another book of short stories entitled "Pushed by Unseen Hands." These stories were generally based on some suggestion or theory or law of heredity, and dealt with this natural but little known or understood subject in new and scientific ways. Her first novel, "Is This Your Son, My Lord?" (1891), was followed by "Pray You, Sir, Whose Daughter?" (1892); both books of tremendous power, dealing with the double standard of morals. The sales of these books have reached many thousands, and they have wielded an influence for good throughout this country. "Facts and Fictions of Life," a book of brilliant essays, among which is one well and extensively known, entitled "Sex in Brain," appeared in 1893. "An Unofficial Patriot" (1898), is an historical and sociological story of the civil war, very dramatic and full of descriptions true to life, and, though a novel, gives many historical facts not hitherto known except to those who have had access to the secret archives of the war records of the U. S. army. A play adapted from this work, and entitled "Rev. Griffith Davenport," was produced in 1899. Most of Helen Gardener's books, essays and stories have been translated and brought out in Berlin and Vienna, and some of them have been translated into French, Russian and Japanese, and at least one into Icelandic. Her scientific essays and the stories that are based on heredity have been copied in medical and scientific journals in this country and in Europe, and have brought her into correspondence with the leading biologists and anthropologists of both continents. Her versatility is demonstrated by her eminent success as an essayist and novelist and as an orator, and she has won well-deserved recognition in scientific and sociological schools. Since the publication of "An Unofficial Patriot" she has been engaged in editorial work and in writing a book of historical sketches and art criticisms relating to the marine history of America, suggested by a series of paintings by Edward Moran. The English critic, Charles Watts, writes of her: "Her command of strong, terse English is great, and whether or not she at all times conforms to the pedantic and inflexible rules of the mere book-learned rhetorician, what she writes is clear, forcible, direct, interesting, intelligible and instructive, and is therefore good literature. Her sarcasm, when used, is keen; but it is always employed on the side of truth and virtue." And Dr. John Clark Ridpath wrote of "An Unofficial Patriot": "She has gone fearlessly afield. Her appearance before the public was in the character of an assailant. She has attacked the abuses of the existing order with a vehemence strangely compounded of argument and sarcasm. Her assault has seemed like rashness, for who is strong enough to touch the existing order and live?" In 1875, Miss Gardener was married to Col. A. C. Smart, of New York city, where she now resides.

*Helen H. Gardener*

**WILLIAMS, John Joseph**, mayor of Memphis, was born at Somerville, Fayette co., Tenn., Sept. 20, 1852, son of Dr. John Joseph and Anna M. (Sneed) Williams. His father was born in Maury county, Tenn., and removed to Memphis in 1855. His grandfather was Duke Williams, of a South Carolina family prominent in revolutionary times, who removed to Tennessee and became a merchant and planter. Mr. Williams' maternal grandfather, Stephen K. Sneed, was descended from a number of men who were conspicuous in the struggle with Great Britain and subsequently in civil affairs and at the bar in North Carolina and other southern states. John J. Williams, Jr., was educated in the public and private schools of Memphis; studied medicine under his father and attended a course of lectures in the Memphis Medical College, where his father was a professor. His father's death, in 1873, prevented him from going to college, and changed his course in life. He was engaged in the drug business for a number of years, and in 1880 entered a public office as bookkeeper and accountant to disentangle and wind up the affairs of the county trustee, then in an unfortunate condition. His adaptability was quickly manifested, and he received great praise for the skill with which he performed his allotted task. In 1892 he was employed as cashier, and six years after was made trustee and was re-elected at three subsequent elections by overwhelming majorities over his competi-

*J. J. Williams*

tors. From this position he rose to that of president of the Shelby County Bank, which had been involved before he took charge. At the Democratic primaries in 1896 he was nominated for county trustee and was elected, receiving a majority of more than 1,000 votes over both his Democratic opponents. His capacity for business, suavity of manners, fine appearance, and genial nature unite to make a charming personality, that necessarily make its possessor a favorite in society and in business circles. In January, 1898, Mr. Williams was elected mayor of Memphis, receiving a majority of 509 votes over W. L. Clapp, and a few days later resigned his position as county trustee. Mr. Williams has ever been a Democrat, and has attended many state and national conventions; although differing with the rest of the party in 1896 on the money question, he cast his vote for Bryan and Sewall. By religious affiliation he is a Presbyterian, his parents and his ancestors for generations having belonged to that church. Mr. Williams was married, at Nashville, February, 1883, to Mattie C., daughter of Col. Edward S. and Charlotte (Wall) Cheatham, and cousin of Gen. Frank Cheatham of Confederate fame. Three sons, John Joseph, Gordon and Edward S., and two daughters, Charlotte C. and Martha, have been born of this union. Mr. Williams seems to have inherited the best traits of a long and worthy line of ancestors, and it is certain that in whatever station in life he is placed he will adorn and honor it.

**MORGAN, Appleton**, author, was born in Portland, Me., Oct. 2, 1846, son of Peyton Randolph and Joanna Dodge (Appleton) Morgan. He is of Welsh-English descent, and of Massachusetts lineage on both sides; his paternal ancestor, Miles Morgan, namesake of the Capt. Miles Morgan who sailed with Sir Humphrey Gilbert, was one of the original settlers of Springfield, Mass., in 1636, having sailed from Bristol, England, for Boston in April of

that year. He is a grandson of Brigade-Maj. Abner Morgan, who was with Gen. Montgomery at Quebec in 1775. His father, Peyton Randolph Morgan, was a lawyer of Brimfield, Mass., who afterwards settled at Racine, Wis., where he died Jan. 10, 1871. His maternal ancestors founded the town of Ipswich, Mass., in 1632. One of them, Maj. Samuel Appleton, was imprisoned in Boston in 1686, by Sir Edmund Andros, for refusing to pay taxes levied by him as governor of the province of Massachusetts Bay, without an assembly. He was thus the first person to suffer in behalf of the principle of no taxation without representation upon which the war of the revolution was fought and won. Maj. Samuel Appleton was commander of the forces of Massachusetts Bay during King Philip's war (1675). Gen. James Appleton, Mr. Morgan's grandfather on his mother's side was a brigadier general of militia in the war of 1812. Appleton Morgan was graduated at Racine College, in 1867, and at Columbia College Law School, New York, in the class of 1869. Although inheriting ample means, life without occupation was so distasteful that he entered on practice at the New York bar. He was, however, soon appointed to an office in the legal department of the Erie railway, and in this service continued with but two interruptions, until 1883, when he accepted a corresponding position with the Northern Pacific railroad. In 1886 he was elected president of the New York and Palisade railroad. For twelve years he was president of the New York Shakespeare Society (1885-1897). While in college he published "Selections of Macaronic Poetry," with introduction (1872), and at twenty-two years of age was author of American editions of "De Colyar on the Law of Guaranty" (1874); "Addison on Contracts," and Best's "Principles of Evidence." His "Law of Literature," a comprehensive work in three volumes of 400 pages each (1875), may be said to have codified the law of literary property in the United States. In 1881 Mr. Morgan published "The Shakespearean Myth; William Shakespeare and Circumstantial Evidence," which was a discussion of the anti-Shakespearean authorship theories, and the offer of a "growth" or "editorial" theory (viz. that Shakespeare did stage-editorial, as well as original work in preparing plays for his theatre), in compromise therefor. The work attracted very wide attention, and went through three American, one English and one German edition, and the attacks upon it moved Mr. Morgan to publish "Some Shakespearean Commentators" (1882), and "Shakespeare in Fact and in Criticism" (1887). To further demonstrate his "growth" theory of the Shakespeare plays, Mr. Morgan projected and became general editor of the "Bankside Shakespeare," in twenty volumes (New York, Shakespeare Society, 1888-1892), on an entirely novel plan, being the text of the earliest version of each play, printed in the lifetime of William Shakespeare, paralld with the 1623 or first folio text, both texts being numbered line by line and scrupulously collated with both the folio and quarto texts, in three distinct tables, each folio being referred to a quarto, line. The typography reproduced all the antique and pedantic ornaments of the quartos, and folios, numbered consecutively every line, whether speech, stage direction, exit or entrance, and copied every typographical slip, misplaced punctuation, error in orthography, or inverted letter of the early printers in both texts, in order that readers might judge for themselves as to the value of conjectural readings or corrections based upon these inaccuracies. Of this edition, Mr. Morgan himself furnished introductions to the "Merry Wives of Windsor," "Troilus and Cressida," "Titus Andronicus," "Pericles," "King John," and "The Third Henry the Sixth," which read together, dem-

onstrate (in Mr. Morgan's opinion) that Shakespeare was an alert, consummate and successful playwright, as well as an incomparable genius. Besides being president of the New York Shakespeare Society, Mr. Morgan has been identified with the Medico-Legal Society and the Genealogical and Biographical Society, the Society of Colonial Wars, and the Sons of the Revolution of New York city. He is vice-president of the Society of the War of 1812, and is honorary member of nineteen Shakespeare societies. In 1889 Mr. Morgan also published "The People and the Railways," which has been esteemed an exhaustive vindication of American railway management from the adverse charges of popular criticism.

**THAYER, Stephen Henry**, banker and poet, was born in New Ipswich, N. H., Dec. 16, 1839, son of Stephen Thayer, who was for more than a quarter of a century extensively engaged in manufacture at New Ipswich and in Boston. Mr. Thayer received his education at the Appleton Academy, New Ipswich, an institution established over a century ago, and for many years famous among New England preparatory schools, and was there graduated in 1858 valedictorian of his class. He then spent a year in a counting-house in Boston, and in 1859 entered a banking-office on Wall street, New York city. In 1864 he was elected to membership in the New York stock exchange; and one year later organized the banking-house of Stout & Thayer, which is one of the oldest if not the oldest of the firms represented on the exchange. He is a director of several railway and steamship companies, and a member of the executive committee of the Oregon Improvement Co., which owns the Pacific Coast steamship line, where various lines traverse in the aggregate 5,000 miles of the Pacific coast waters, from Alaska to Mexico, and also includes among its properties four Pacific coast railway lines, three coal mines, and vast property holdings in several of the large cities on the coast. Though occupied with such vast business interests, Mr. Thayer has found time to cultivate his taste for literature. In his ideal home, "Edgewood," on an eminence in the heart of the classic grounds of "Sleepy Hollow," Tarrytown on the Hudson river, he has written critical papers for magazines and reviews; also "Songs of Sleepy Hollow," many of which have from time to time been published in the magazines, being later collected and published by G. P. Putnam & Sons, in 1886. A second collection of poems will soon be published, also a volume of critical and other essays. His poems have been favorably received by the press and public, both at home and abroad. He is a prominent member of the Author's Club, of New York city, and served as its treasurer (1888-91), and as a member of its executive council in 1888. He also belongs to the Century Club. A great lover of the forest solitudes, he tramps or rides almost daily through leagues of these untamed stretches, and from this heart life has largely drawn the inspiration for his poems, many of which are interpretative of nature and of its deeper spiritual meanings. Mr. Thayer was married in 1863 to Emma F., only daughter of James W. Halstead, a leading merchant of New York city. They have four children.

**HUDSON, Henry**, navigator, was born in England in the latter half of the sixteenth century. His Christian name is sometimes given Hendrik. The date of his birth is unknown, and it is doubtful whether his birthplace was Bristol or London, though he was certainly a resident of the latter city. He was very probably a descendant of the Henry Hudson who, with Sebastian Cabot, founded the Muscovy company, the object of which was to discover a northerly passage to China, and the last expedition sent out by the company was the ill-fated

one from which Henry Hudson never returned. He was familiar with all the Englishmen who had been interested in explorations in the world, and had studied the maps prepared by them, before he himself attempted to find the wished-for passage. His first voyage was undertaken under the auspices of the Muscovy company, in the Hopewell, a small vessel of sixty tons. With ten sailors, and accompanied by his young son, he sailed from England, April 23, 1607, and steering northwest, first saw land off Greenland. Following the coast and the ice barrier which prevented him from penetrating farther north, he reached Spitzbergen, and then endeavoring to enter Davis' strait by the north of Greenland, was again frustrated in his efforts by the impenetrable barrier of ice. On this voyage he made observations which led him to originate the theory of an open sea, free from ice, which he supposed to surround the pole. He returned to England in September, and reported the failure of his expedition, but his achievements had been great enough to arouse hope of future success in himself and his friends, and in April, 1608, he made a second attempt. This time he went no farther than Nova Zembla, and then returned, to the great disappointment of the Muscovy company, who then gave up the quest for a time. Hudson was, however, invited to continue his efforts under the patronage of the Dutch East India company, and going to Holland to complete arrangements for the expedition, the French ambassador at the Hague, Pres. Jeannin, intrigued to obtain his services for a similar expedition under French control. This alarmed the Dutch, and they hastened to fit out an expedition, as commander of which Hudson received written orders to steer "around by the north side of Nova Zembla," and "to think of discovering no other routes or passages, except the route around by the north and northeast above Nova Zembla." Subsequent historians of the Netherlands declare that even before starting on the expedition Hudson contemplated disregarding his orders, and showed the geographer, Plantius, a map made by Capt. John Smith, on which was indicated a sea leading into the western ocean, north of the English colony. The exact reward Hudson was to receive if he discovered the desired passage was not specified, but the Dutch company agreed to pay his widow £80 if he did not return. He sailed from Amsterdam on Saturday, April 4, 1609, on the

Half Moon, a vessel of eighty tons, with a crew of sixteen, or perhaps twenty men, some Dutch and others English. His clerk, Robert Juet, who had formerly been his mate, kept a diary which is the authority for the events of the expedition, as Hudson's record has been lost. They steered for Nova Zembla, and on May 5th passed the northern extremity of the mainland, but after that the ice prevented their progress in that direction. The crew, who were continually quarreling because of national differences, became united in discontent against their commander, and constrained him to give up the dangerous exploration in the northern waters. To please them, he then sailed towards the west, and searched for the passage indicated by

Capt. Smith. The Half Moon touched at the Faroe Islands, at Newfoundland, and at Maine, where she stopped for repairs, and the crew became involved in quarrels with the Indians. They also explored the mouth of Delaware Bay, but having encountered the shoals on the New Jersey shore, did not attempt to go farther. On Sept. 4th the vessel entered what is now known as the lower harbor of New York, and for a week rode at anchor in the bay of Sandy Hook. While lingering there, one of the crew, an Englishman named Coleman, was killed by Indians, whose hostility the men had wantonly aroused. About Sept. 12th they discovered the Hudson river, which they followed up for eight days in the hope that it would prove to be a passage-way to the South Sea. Judging from the computed distances of each day's progress as set down in Hudson's journal, it appears that they went as far as the present site of Albany and the ship's boats, as far as where Troy now stands, but then abandoned their hopes, and on the 20th turned back towards the river's mouth. Hudson and his Dutch mate wished to winter at Newfoundland and to explore Davis' straits in the following spring, but the rebellious crew would not agree, and insisted on returning home. They sailed for England, intending to touch there before proceeding to Holland, and on Nov. 7th they landed at Dartmouth. Upon his arrival in England, Hudson found that his efforts to aid a foreign power had given offense there, and the government detained both ship and commander until, in the following July, the Half Moon was sent back to her owners. Hudson, however, was prevented from returning to his Dutch employers, and commanded to use his talents in the interests of his own country. He sent a report of his discoveries to the Netherlands, and although he was severely criticised for the course he had taken, the Dutch were not slow to discern and utilize to the utmost the mercantile advantages thus acquired by them. Hitherto they had attempted to carry on a fur trade in North America, largely by bribing certain French colonial authorities at Acadia and along the St. Lawrence, but the discoveries of Hudson gave them a territory of their own quite unoccupied by any other nation. Moreover, since this region lay largely within the hundred-mile space, which King James' charters to the companies of Virginia and the northern colonies had declared should

be always maintained between the settlements, they were quite certain to pursue their schemes of trade and colonization undisturbed. Accordingly, within four years from the return of Hudson, a Dutch fort and trading house was established upon the present site of Albany, and the settlement at New Amsterdam effected. Some authorities state that Hudson offered his service to his Dutch employers, to pursue further searches for the northwest passage, but in vain. He therefore returned to the employ of the Muscovy company, and under their auspices undertook his last voyage. He sailed April 22, 1610, with twenty-three men and his young son on the *Discoverie*, a ship of seventy tons. Rounding the north of Scotland, they sailed through the Orkney

and Faroe islands; they touched at Iceland early in May. Here the continued dissatisfaction of the crew grew into serious dissensions, which he could appease only with great difficulty. This violence and disorder increased as the voyage continued, several ill-judged acts of discipline on Hudson's part only serving to aggravate the dissatisfaction. None the less, he was determined to continue his way and, having doubled the southern coast of Greenland in June, he proceeded to steer northwest toward the American continent. The entire summer was spent in exploring the extensive bay since known by his name, and winter having come upon them before the work was completed, they were obliged to remain there. Their provisions were rapidly being exhausted, and their daily subsistence was derived almost entirely from the wild fowl which congregated thither in great flocks. These disappeared with the return of spring, and Hudson injudiciously divided the small remnant of provisions brought from England into equal parts and distributed it to the crew. When the ship was once more freed from the ice, the malecontents in the crew, headed by the former mate and boatswain, whom Hudson had displaced, mutinied and took command of the ship. Placing Hudson with his son, two officers and five sick sailors in a small boat, they abandoned them to their fate. Years afterward, Abacue Pricket, one of the conspirators, confessed the crime, and an expedition was sent from England to search for Hudson and his companions, but no trace of them was ever found. Hudson left a wife and several children in England.

**ELLIOTT, James**, lawyer and author, was born at Gloucester, Mass., Aug. 18, 1775. He was a descendant of Andrew Eliot of Beverly, Mass., who died in 1703. His father, who was a sailor, was drowned during the infancy of his son, and the family removed to New Salem. There from the age of seven the boy supported himself, and for eight years worked as a servant on a farm, meantime acquiring a scanty education, and becoming extremely fond of reading. In 1790 he obtained employment at Guilford, Vt., where he made the acquaintance of a number of literary people, who encouraged him to publish writings of his own. Three years later he enlisted at Springfield, Mass., and served during three years as a non-commissioned officer under Capt. Cornelius Lyman. Returning to Guilford, he continued his literary work, took part in local politics, and studied law, being admitted to the bar in 1803. He then established himself in legal practice at Brattleboro, Vt. He was a supporter of Nathaniel Niles, and warmly advocated Republican principles. He succeeded Lewis Morris in the U. S. congress; his term expiring in 1809. During the early part of the war of 1812 he served as a captain in the army, but soon retired and resumed his law practice in Brattleboro. He represented that town in the legislature in 1818-19, and was returned by Newfane, where he had subsequently settled, for the session of 1837-38. He also filled at various times the offices of county clerk, register of probate, and state attorney, holding this last position at the time of his death. In 1798 he published a volume entitled "The Poetical and Miscellaneous Works of James Elliott," including a diary kept during the Indian war, in which he took the then unusual stand of an advocate for Indian rights. Many of the poetical pieces had appeared first in the New England "Galaxy" and the Greenfield "Gazette," notably translations from Horace, and patriotic effusions. He was married to a daughter of Gen. Dow. His death occurred at Newfane, Vt., Nov. 10, 1839.

**LINDLEY, Jacob**, educator, was born in Pennsylvania, June 13, 1774. He was graduated at the College of New Jersey in 1798, studied theology,

and in 1803 became pastor of the Presbyterian Church at Waterford, O. In 1805 he was made a trustee of Ohio University, the first college in the United States founded upon a land endowment from the national government, and the oldest college in the northwest territory. In 1787, when first the land was appropriated for the settlement of a colony is what is now the state of Ohio, the national congress, seated at New York, stipulated for a land endowment for the maintenance of an institution of learning in the new district. The lands to be devoted to the support of the university were set apart in 1795, being the townships now called Athens and Alexander, in Athens county. During the early years of the colony's existence the local government passed a number of ordinances concerning the administration of these lands, and in 1800 an appointed committee laid out the college grounds, and lots for the residences of the university faculty. The name first chosen for the new institution was American University, but this was changed to Ohio University in 1804, immediately after the admission of Ohio as a state. In this year the final charter of the university was drawn up, arranging for the management of the land endowment, and appointing a board of trustees. By subsequent acts of the legislature the university was deprived of its chief endowment, and was, to a large degree, brought under state control, thus inaugurating in the northwest territory the principle whereby the state assumes a care for higher educational interests. In 1808 Mr. Lindley was appointed president of the board of trustees, and in the same year the first building, called the academy, was erected. This continued for ten years to be the only building belonging to the institution. It was opened for instruction in 1809, and Mr. Lindley acted as sole preceptor of the three pupils who presented themselves for instruction. The first class, consisting of two members, Thomas Ewing and John Hunter, was graduated in 1815. In 1817 what is still known as the "central building" was erected. It contains most of the recitation and lecture rooms of the institution, and is now the oldest college building northwest of the Ohio river. Mr. Lindley continued his services as preceptor until 1822, when he was appointed professor of rhetoric and moral philosophy. In 1824 he was transferred to the chair of mathematics, and fulfilled the duties thus devolving upon him until 1838, when he severed his connection with the university, and removed to Mississippi. He died in Pennsylvania, Jan. 29, 1857.

**SCULL, Nicholas**, surveyor, was born near Philadelphia, Pa., in 1687. His professional services were employed in one of the earliest surveys of Pennsylvania, and in 1748 he succeeded William Parsons as surveyor general of the province. He also served the government as interpreter of the Delaware Indians, and as sheriff of Philadelphia county from 1744 to 1746 and of Northampton county in 1753-55. A map made by him of the improved parts of Pennsylvania was published by act of parliament in January, 1759. Nicholas Scull's chief claim to remembrance was a satire in verse which he called "Kawano Che Keeteru," but probably he is better known to posterity by reason of a chance mention made of him by his friend Franklin, in whose "Autobiography" he is enumerated as one of the members of the "punts," formerly known as the "Leather Apron Club." He died in Philadelphia in 1762, leaving three sons, all of whom followed the profession of their father.

**LITTLE, William Myers**, diplomat, was born at Little's Mills, Richmond co., N. C., March 25, 1867, son of John Phillips and Fannie (Myers) Little. The former, a planter by occupation, was a native of Richmond county, N. C.; the latter, of Anson county, N. C. Mr. Little's paternal grandfather,

Thomas Little, came to this country from England about the beginning of the nineteenth century, and after residing in South Carolina for a time, removed to North Carolina, where he cultivated a large plantation on the Great Pee Dee river, and was a large slave-owner. He was married to Elizabeth Le Grand, of a Virginia family, descended from Huguenots who came to the Old Dominion at the beginning of the eighteenth century. William Little's grandfather, on his mother's side, was Absalom Myers, a prominent planter, and for many years a member of the state senate of North Carolina, whose ancestors came to that state from the eastern shores of Maryland. His maternal grandmother, Adaline Boggan, was the daughter of Capt. Patrick Boggan, an officer in the revolutionary war and commander of the Whigs at the "massacre of Piney Bottom," and the grand daughter of Col. George Davidson, a field officer in the revolutionary war and a member of the provincial congress of North Carolina (1776) which framed the constitution of the state. Col. Davidson was the grandfather of the late Sen. Isham G. and Judge William H. Harris, of Tennessee. Mr. Little was graduated at the University of North Carolina in 1888, delivering the valedictory and obtaining other honors; was tutor in English at the university, and studied law there. He was admitted to the bar in 1891, and settling at Charlotte, N. C., practiced his profession, also serving during part of the years 1893-94 as editor of the literary column of the Charlotte (N. C.) "Observer." In July, 1894, Mr. Little was appointed U. S. consul at Tegucigalpa, Honduras, and on account of his efforts to promote trade between the United States and that country, leading export associations and business men have used their influence to keep him at his post. He has made a special study of Spanish literature, under direction of Prof. A. M. Elliott, of Johns Hopkins University; is able to read and write the Spanish language with ease, and also has some practical knowledge of French. He has written for the New York "Evening Post" and other newspapers articles descriptive of Honduras, its people and its social customs. He is a charter member of the Mecklenburg Historical Society of North Carolina.

**WELCH, Philip Henry**, humorist, was born at Angelica, Allegany co., N. Y., March 1, 1849. He first engaged in mercantile pursuits and was thus occupied for a number of years, until he was accidentally led to write a series of articles while on a visit to Oil City, Pa., during the petroleum excitement. These were so well received that he determined to devote his whole attention to writing. In 1882 he joined the staff of the Rochester, N. Y., "Post Express," and contributed to it a humorous column entitled "The Present Hour." From there he went to Philadelphia, and wrote the column "Accidently Overboard" for the "Call," a journal of that city. After 1884 he was a member of the New York "Sun" staff, writing "Queer Wrinkles." For a number of years he was also a regular contributor of jokes to "Puck," "Judge," "Life," "Epoch" and "Harper's Bazar," and he became widely known and popular throughout the country as a humorist. He published two humorous works, "The Tailor-made Girl," in 1888, and "Said in Fun," in 1889. He died at Brooklyn, N. Y., Feb. 24, 1889, leaving a widow and several children.

Wm. Little

**THOMAS, Edith Matilda**, poet, was born at Clatham, O., Aug. 12, 1854, daughter of Frederick J. and Jane (Sturges) Thomas, the former a teacher by profession. She is of New England ancestry on both sides of the house, and her mother's grandfather served in the revolutionary war. A few years after her birth, the family removed to Kenton, O., and then to Bowling Green in the same state, where in 1861 her father died. Soon after this event, Mrs. Thomas removed to Geneva, O., with her two daughters, and this last-named town continued to be their place of residence until 1889. Miss Thomas' life as an author may be said to have begun when she was but a few years of age. Her early efforts had a quality and merit seldom found

*Edith M. Thomas*

in the rhymes produced by children, and her aspirations were encouraged by her parents. She was educated at the Normal School in Geneva, where she was graduated in 1872, and then after a brief experience as a teacher—two terms—she adopted literature as a profession. While a student, she had contributed verses to various Ohio newspapers, and these had been widely copied; the marks of inspiration they bore being quickly recognized by lovers of genuine poetry. The freshness of expression, the buoyant tone, and the exquisite finish of her lines set them in strong contrast with those produced by most writers of the time, and among the first to call attention to these qualities and to give the new singer a welcome

was Helen Hunt Jackson, who introduced her to the editors of the "Atlantic Monthly" and the "Century," and thus to a larger circle of readers than she had yet addressed. In the pages of these and other periodicals her work has appeared from time to time ever since; but not put forth with careless frequency, for she is too conscientious a writer. She has published "A New Year's Masque" (1885); "The Round Year" (1886), prose; "Lyrics and Sonnets" (1887); "The Inverted Torch" (1890); "Fair Shadowland" (1893); "In Sunshineland" (1894); "In the Young World" (1895); and "A Winter Swallow" (1896); the last two for young people. In 1888 Miss Thomas removed to New York city, and now resides in one of its suburbs.

**BLODGETT, Constantine**, clergyman, was born in Randolph, Vt., Nov. 17, 1802, son of Benjamin and Mary Blodgett, and was a graduate of Dartmouth College in the class of 1826. Soon after graduation he went to South Carolina as a tutor, and spent a few years there. At this time the doctrine of nullification was being proclaimed throughout the South, and Mr. Blodgett, foreseeing the evils to result therefrom, became an earnest advocate of loyalty and law. In support of his views, he carried on a vigorous newspaper correspondence, and his articles were so pungent that he narrowly escaped a personal assault. While in South Carolina, he was set apart to the Christian ministry, and, in 1830, was ordained by the Harmony presbytery of that state. Soon afterwards he returned North, and, in 1833, was settled over the Congregational church in Newmarket, N. H. Here he remained for only three years, and then removed to Pawtucket, R. I., to take charge of the Congregational church in that town. He was installed Jul. 27, 1836, and retained an unbroken pastorate for thirty-five years, resigning in June, 1871. He continued to maintain an intimate relationship with his church, however, and accepted the designation of pastor emeritus. Until failing health

compelled him to desist, he preached to destitute societies in Rhode Island and Massachusetts, and performed parochial duties in the neighborhood. He also took an active interest in the cause of education, and was an earnest advocate of temperance and of every other cause advancing the moral and religious welfare of the community. Such was the consistency of his life, the energy of his zeal, and his kindness of spirit, that he exerted a powerful influence. In 1860 Dartmouth College conferred on him the degree of D. D., and he not only occupied a high rank in his denomination, but was held in the highest esteem by the community at large. During his residence in Pawtucket, Dr. Blodgett attended 1,300 funerals, officiated at more than 600 weddings, and attended 170 ecclesiastical councils. He was married, Dec. 8, 1831, at Rice Creek, S. C., to Hannah M. Dana, born in Sharon, Vt., in 1806. Their children were, Maria, Sarah, George D., Charles C., Edward G., and Lucy W. He died Dec. 29, 1879.

**ANGELL, Joseph Kinnicutt**, author, was born in Providence, R. I., Apr. 30, 1794, son of Nathan and Amey (Kinnicutt) Angell. Among the original companions of Roger Williams was a lad who, according to tradition, was Thomas Angel or Angell. His name appears in the original compact signed by the thirteen associates of the founders of Rhode Island, who became proprietors of the soil of which they had become possessors. Joseph Angell entered Brown University in 1809, was graduated in 1813, and then became a student in the famous law school at Litchfield, Conn. He completed his studies in the office of Judge Thomas Burgess, and in the month of March, 1816, was admitted to the bar in his native city. So far as appears he was regarded rather as a counsellor than as an advocate during the early years of his practice. The first production of his pen was a treatise on the law relating to watercourses. The volume was issued from the press in 1824, and had an extensive circulation. In 1826 appeared a second volume entitled "The Right of Property in Tide Waters and in the Soil and Shores thereof." Both these works became standard authority upon the subjects of which they treat. Eleven years elapsed and Mr. Angell once more appeared before the public as an author. His third work was "An Inquiry into the Rule of Law which Creates a Right to an Incorporal Hereditament by an Adverse Enjoyment of Twenty Years, with Remarks on the Application of the Rule to Light, and in Certain Cases to a Water Privilege." The same year, 1837, was published "An Essay on the Right of a State to Tax a Body Corporate, considered in relation to the Bank Tax in Rhode Island." Mr. Angell commenced, in 1829, the publication of the "United States Law Intelligencer and Review." After being published in Providence for one year it was transferred to Philadelphia, its editor having charge of it for two years longer. Three volumes only were published. Amid the pressure of all his other work he found time, in 1829, to put to the press another volume, "A Treatise on the Limitations of Actions at Law and Suits in Equity." Six editions of this valuable work were published. A copy of this work was sent to Lord Brougham, who in acknowledging its receipt said he had "found it to be by much the best treatise on this very important subject." Jointly with Judge Samuel Ames he published in 1832 a "Treatise on the Law of Private Corporations Aggregate." More than twelve thousand copies, embraced in ten editions of this work, have been sold. Not far from three years later appeared his "Practical Summary of the Law of Assignment in Trust for the Benefit of Creditors." In 1849 was printed an octavo of more than eight hundred pages on the "Law of Carriers of Goods and Passengers

by Land and Water," a volume which he dedicated to his friend, John Carter Brown. For a short time he acted as reporter of the decisions of the supreme court of Rhode Island. Two more works were prepared by him, one in 1854, a "Treatise on the Law of Fire and Life Insurance," and the other in 1857, a "Treatise on the Law of Highways." In 1842 appeared an article in one of the daily papers of Providence which awakened much interest in the community. It was published in the "Daily Express" of March 16th, and is now preserved in a more permanent form at the close of No. 11 of the Rhode Island Historical Tracts, in which number may be found a more extended sketch of the life of Mr. Angell, written by S. S. Rider, A.M. The article bears the title of "Right of the People to form a Constitution," and is known in Rhode Island history as "The Nine Lawyers' Opinion." This document was signed by nine lawyers, Messrs. Atwell, Angell, Carpenter, Daniels, Thomas W. Dorr, Eaton, Knowles, Dutee J. Pearce, and White. Although the document carried with it weight, as the carefully prepared opinion of gentlemen distinguished in the legal profession, it failed to secure the end aimed at, and the Dorr Rebellion, so called, was not a success. Mr. Angell was never married. His death occurred suddenly, in Boston, May 1, 1857.

**CHILD, Shubael**, merchant, was born in Rehoboth, Mass., Sept. 28, 1779, son of Caleb and Mary (Cole) Child. His father, a native of Warren, R. I., was for many years a noted ship-builder of that town, and at the time Warren was destroyed by British troops, had just completed a new house, which was burned. The family fled to Rehoboth, where they remained for a short time, and returned to Warren soon after the birth of the subject of this sketch. He was educated in the schools of Warren, and at an early age was apprenticed to Nathan Phillips, a printer, with whom he remained eight years. After learning his trade he began a sea-faring life, and by rapid promotion soon became a ship-master. In this capacity he sailed many years for the celebrated shipping-house of William Wilson, of Baltimore, Md. He followed the sea constantly until 1812, when he established himself in Baltimore as a job printer. At the close of the war of 1812, he resumed his position as ship-master, in which he continued until 1825. After giving up the positions of captain and marine merchant, he returned to Warren and engaged in the whaling business. His former employers having unbounded confidence in his integrity and business capacity, took a large interest in the ships with him. He retained an interest in the shipping business for many years after retiring from active life. During his career as captain he visited nearly all parts of the world, and at the time of the great famine in Ireland conveyed the first ship-load of provisions to the starving people. For several years he held the office of president of the Warren Marine Insurance Co., and was also for a time president of the Warren Bank. In 1834 he became a member of the Warren Baptist church, of which he was ever after an earnest and liberal supporter, and of which he was for many years auditor. He married, May 7, 1807, Priscilla B. Child, daughter of Sylvester and Priscilla (Bradford) Child, who died Dec. 26, 1840. On May 21, 1843, Capt. Child married Adaline, daughter of John Croade, of Warren, who died May 16, 1875. Capt. Child died Jan. 4, 1876.

**ARNOLD, Oliver**, attorney-general of Rhode Island (1766-70), was born in Gloucester, Providence co., R. I., in 1726, son of Israel Arnold. His father was a wealthy landholder, and was much in public life. Desirous that his son should receive a good education, he placed him under the care of Rev. Nathan Webb, the first minister of Uxbridge, Mass. Under

his training, he made good progress in his studies. The exact date of his admission to the bar is not known, but he soon acquired eminence in his profession. In 1762 Mr. Arnold removed to Providence and opened a law-office; and, in May, 1766, he was elected attorney-general of Rhode Island. Several cases, of more than usual importance, were tried by him while he was attorney-general, and were said to be conducted with great ability. He was a diligent student in his profession, and was blessed with a most retentive memory. He was much interested in the cause of education, and took an active part in procuring the charter for the establishment of what is now Brown University, and in the welfare of the college he always felt a lively concern. In 1754 he married Elizabeth, the daughter of Daniel Brown, of Sandisfield, Mass.; several children were the fruit of this union. He died Oct. 9, 1770.

**MOORE, Bartholomew Figures**, lawyer and legislator, was born in Halifax county, N. C., Jan. 29, 1801, fifth son of Sally Lowe and James Moore, a revolutionary soldier. He received his early education at Vine Hill Academy, and was prepared for college at Louisburgh, under Prof. John B. Bobbitt. In 1818 he entered the University of North Carolina, where he was graduated with honors in 1820. He then studied law with Hon. Thomas N. Mann of Nash county, and was admitted to the bar in 1823. He began the practice of his profession at Nashville, N. C., in the latter part of that year, and continued with indifferent success for several years. Later he removed to Halifax county, settling upon a farm, and while diligently pursuing the practice of his profession there was elected a member of the house of commons, as the state legislature was then called. He served in 1836-40-42 and 1844, but in 1838 he was defeated by one vote, by reason of having supported the state subscription to the Wilmington and Weldon R. R. Co. In May, 1848, he was appointed by Gov. Graham, attorney-general of the state, and served until 1851, when he resigned and accepted a commission to revise the statute law of the state. In 1854 the "Revised Code" was reported to the legislature and became a law. This monumental work is the greatest indication he left of the excellent and rare endowments of his mind, especially of his profound knowledge of the written and unwritten law of North Carolina at the date of its preparation. After Mr. Moore's removal to Halifax, abundant success crowned the arduous labors necessary to the conduct of a large and varied practice in all the courts within his circuit. In 1848 he removed to Raleigh, where he resided until his death. His son-in-law, John Gatling, became associated with him in practice in 1874. Strongly opposed to the secession of the Southern states, he supported his views openly by letter to the press, to private individuals and in conversation at all times and under all circumstances, for which he was much abused and often threatened with punishment. In 1865 he was invited to Washington to confer with Pres. Johnson on the best method for restoring North Carolina to the Union, and advised that the state be immediately restored with such changes only as the circumstances demanded, and that these be made in the regular constitutional way and by her own people. He was a prominent member of the constitutional convention of 1865-66, but this convention met with no success. Mr. Moore was

*B. F. Moore*

revered as the father of the bar in North Carolina. His most celebrated case was the State vs. Will, reported in 1st Devereux & Battle's North Carolina reports. That brief stands without a superior in the annals of legal arguments in the state. It settled then and for all time to come the true relations between master and slave in North Carolina, and established the right of a slave to protect himself against the unlawful violence even of his own master. Respect for authority had been the habit of his life, but in 1868, believing it to be his duty to take a bold stand against judicial partizanship, he drew up the protest signed by so many members of the bar throughout the state, which was the foundation of the so-called contempt proceedings, that attracted attention from one end of the state to the other. Mr. Moore's ability, learning, great legal acumen, personal purity and integrity, his sturdy candor, unparalleled courage of opinion and unflinching devotion to the principles of civil liberty, gave him a strong hold upon the respect, and a warm place in the affections of the people of his state. On Dec. 2, 1828, he married Louisa, daughter of George Boddie of Nash county, who died Nov. 4, 1829. He married again on Apr. 19, 1835, Lucy W. Boddie. Mr. Moore died at his home in Raleigh, N. C., Nov. 27, 1878.

**BROWN, Bedford**, senator, was born in Caswell county, N. C., in 1791, son of Jethro Brown. His ancestors emigrated from Bedfordshire, England, to Virginia, about 1700, settling in Prince Edward county. His grandfather, John Edmunds Brown, removed to South Carolina before the war of the revolution, and settled on the Pedee river. He was unable to enter the revolutionary army, but was an ardent patriot and staunch supporter of Marion, for which the Tories destroyed his property and forced him to flee the state. He subsequently resided in North Carolina, where he died. Bedford Brown was educated at the University of North Carolina, and upon graduating in the law course was admitted to the bar, before reaching his twenty-first year. Just at

the completion of manhood he was elected to the legislature of his state, where he soon became prominent by reason of his power as a debater and orator. He was an earnest advocate of Pres. Madison's course with respect to the war of 1812, his eloquence and tact defeating the active opposition of many of his Federal associates in that regard. He was twice elected speaker of the house of commons, and upon being sent to the state senate was chosen speaker of that body. In 1828 he was elected to the U. S. senate, taking his seat March 4, 1829, the date of the inauguration of Pres. Jackson, with whom he always maintained the most friendly relations, both

personally and politically. Mr. Brown was present at the memorable state banquet when Pres. Jackson uttered the since famous phrase, "the Federal Union: it must and shall be preserved." He supported the policy of Pres. Jackson most fearlessly and earnestly, taking exception only to the celebrated "Force Bill," which measure was abhorrent to his strict state-right principles, and which he opposed in the ablest speech of his life. In all, Mr. Brown served twelve years in the U. S. senate, in one of the most stirring periods of the country's history. His colleagues comprised such illustrious men as Clay, Webster, Calhoun, Benton, James Buchanan, Franklin Pierce, Silas Wright, Felix Grundy, James Forsythe, Geo. M. Dallas and Martin Van Buren.

Upon Mr. Brown's retirement from the senate in 1841, he for many years was absent from political life. During the turbulent years preceding the civil war, however, he was persuaded to return to the state senate, his known opposition to secession, coupled with his long political experience, leading the people to hope that he might help to stay the tide of threatened revolution. In confirmation of this he opposed the question of secession, introduced into the legislature in 1860, so vigorously and fervently, that when, in January, 1861, it was submitted to the popular vote, it was defeated by 30,000 majority. In his numerous speeches against secession, Mr. Brown predicted most clearly the inevitable results of such a step. When Pres. Lincoln issued the call for troops, however, Mr. Brown was elected a member of the southern states convention, at which time, although most reluctantly, he gave his vote for secession. He then retired permanently from political life to his old family homestead in Caswell county, N. C. Mr. Brown was from his early manhood a consistent Jeffersonian Democrat. In early life Mr. Brown was married to Mary Lumpkin Glenn, daughter of a wealthy Scotchman of Halifax county, Va. Four children were born to them: William, Livingston Brown of North Carolina, Dr. Bedford Brown of Alexandria, Va., and Laura Glenn Winn of Georgia. He died Dec. 10, 1871.

**COOPER, William**, clergyman, was born in Boston, Mass., in 1692. Living at a time when the religious sentiment of New England turned to stern and sombre doctrines, his own mind followed the prevailing opinions. In his youth he was an earnest searcher of the Scriptures, and throughout his college course at Harvard, and after his graduation there in 1712, he zealously continued his religious studies. He was not ordained until 1716, but in the meantime he had often preached, and had attracted such attention that he was invited to join Dr. Benjamin Colman, as colleague pastor, in the Brattle Street Congregational Church. This he did in 1716, and continued until his death, preaching before that body with such zeal and severity, that his hearers were frequently moved to tears, and many of them rendered deeply anxious about the welfare of their souls. "Death, judgment, and eternity" were the subjects of his sermons, and in his mouth they lost nothing of their impressiveness and horror. In 1737 he was offered the presidency of Harvard College, but his heart was in his religious work, and he declined to lay it aside for the more remunerative office. In 1742 he became involved in a controversy with the Rev. Jonathan Ashley of Deerfield, on account of a sermon he had preached on charity, and wrote a number of tracts maintaining his position. A number of his sermons were published during his lifetime, and amongst other tracts, an interesting one defending inoculation for smallpox. He died in Boston, Dec. 13, 1743.

**CORSON, Robert Rodgers**, humanitarian, was born at New Hope, Bucks co., Pa., May 3, 1831. He was of Huguenot descent, his ancestors having fled from France upon the revocation of the Edict of Nantes. They settled in Bucks and Montgomery, and, with few exceptions, the descendants have been "cultivated in mind and notorious for their love of free thought; the deadly foes of slavery, and most of them life-long teetotalers." His father, Dr. Richard D. Corson, was a leading physician of the place of his birth, and his mother the daughter of Thomas P. Johnson, a distinguished lawyer of New Jersey. Mr. Corson's early education was received in the schools of New Hope, and at sixteen he was sent to Treemount Seminary, Norristown; spending three years under the tuition of Rev. Samuel Aaron. He lived for several years in Schuylkill county, near Pottsville, his health being far from strong,

*B. Brown*

but in 1856 he removed to Philadelphia, and until the war was engaged in the business of shipping coal to eastern markets, occupying at one time three wharves on the Schuylkill river, and leasing a coal mine near Pottsville. During the war he was corresponding secretary for the Union volunteer refreshment committee, which through its two saloons supplied 600,000 soldiers on their way through the city for defence of the national capital. Having voluntarily undertaken the task of visiting wounded and sick soldiers in the hospitals in and adjacent to Philadelphia, ascertaining their names and homes, and sending lists of such to the governors of their respective states, for publication in the papers of the towns and counties from which they came, he was appointed, first by Gov. Buckingham of Connecticut, and afterwards by twelve other executives, military agent to carry on the services, which grew to proportions requiring the aid of four or five assistants, especially after a great battle. The value of these labors was officially recognized, beginning with Gov. Andrew of Massachusetts, who, as early as December, 1864, appointed him quarter-master-general of that state, with rank of lieutenant-colonel. He was also made aid-de-camp of Govs. Smith and Gilmore, of Rhode Island and New Hampshire, and thanks were voted him by the legislature of the first named state. After Gettysburgh the main work of organizing colored regiments was intrusted him by Maj. Stearns, who came to Philadelphia from Boston for the purpose, and by his labors and the supervisory committee of sixty prominent citizens, 14,000 men were raised without expense to the government. For five or six years after the war he was corresponding secretary of the Freedmen's Relief Association of Pennsylvania, supervising at one time 120 schools for the education of freedmen and colored children, in Virginia and other states, and he took prominent part in the establishment of a school in Philadelphia for orphans of colored soldiers. In 1871 he was one of twelve leading citizens who organized the Municipal Reform Association, and later was one of the secretaries of the committee of one hundred. In 1881, in connection with a syndicate of which he was made general manager and afterwards president, he purchased the Luray caverns at Luray, Va., into which he introduced electric lights, the first application of electricity to purposes of the kind, and erected the Luray inn. In 1867 he aided in the organization of the Pennsylvania Society for the Prevention of Cruelty to Animals, and was its first treasurer. In 1885 he was made one of the inspectors of Moyamensing prison, and of late years his attention has been given to prison management, to the question of municipal reform, and to prohibition. He is a member of the board of directors of the "Citizen's Municipal Association," and of the "Citizen's Municipal League" and an officer in several of the charitable organizations of Philadelphia. In 1857 he married Rebecca J., daughter of Edward Foulke, of Gwynedd, a descendant of the early settler of the name who piloted Welsh emigrants to Montgomery (then Philadelphia) county, Pa. Having no children, Mrs. Corson lent herself to her husband's benevolent efforts during the war, frequently accompanying him to the battle-fields, and displayed a patriotism that rivaled his own.

**SHERBURNE, Henry**, soldier, whose name is intimately connected with the history of Rhode Island from the opening of the revolution until long after the war, was commissioned as major of the 15th regiment, commanded by Col. Thomas Church, Jul. 1, 1775, his commission being signed by John Hancock, president. Almost immediately he marched to Boston, and his detachment of troops was one of the first to invest that town. There he was attached to Col. John Patterson's command,

and he remained in that vicinity until the following spring, when he was ordered to Canada to reinforce the garrison at the Cedars, in the neighborhood of Montreal; but before reaching the point of destination, the commanding officer of the garrison ingloriously surrendered. Maj. Sherburne was then but a few miles from the Cedars with one hundred men. The enemy having no longer to contend with the garrison, turned upon his command, and soon he was surrounded by British troops and Indians, to the number of 500 men. After fighting them gallantly for forty minutes, Sherburne was forced to surrender. The prisoners were turned over to the Indians, who subjected them to every indignity. Many of the men did not live to return. After his return Col. Sherburne was ordered to join the commander-in-chief, who was with the shattered remnant of the army in New Jersey. The day after the arrival of his regiment all the forces present combined and made the memorable attack on the Hessians at Trenton, which was followed up with equal success at Princeton. A few days later congress ordered sixteen new regiments to be raised, Col. Sherburne was given the command of one of these regiments, and he at once entered upon the duty of recruiting.

His letter of instructions over the signature of Washington, and a long letter to him on the same subject, in Washington's own hand, are preserved in the cabinet of the Newport Historical Society, where may also be seen Col. Sherburne's belt and cartridge box. The above regiment was commanded by Col. Sherburne until 1781, when the time for which the men had enlisted expired. During the war Col. Sherburne lost everything that he possessed, and he accepted the appointment of commissioner, to adjust the accounts between the state of Rhode Island and the United States. While holding this office he received the appointment of commissioner to settle the accounts of the state of New York with the government, but was forced to decline it. In 1796 he was made general treasurer of the state of Rhode Island, and he occupied this position until 1808. He died in Newport, R. I., May 31, 1824.

**MIDDLETON, Henry**, author, was born in Paris, France, March 16, 1797, son of Gov. Henry Middleton of South Carolina. He was educated at his father's home, Middleton Place, in South Carolina, and at West Point, where he was graduated in 1815. After serving in an engineers' corps, constructing defences along the Savannah river, he resigned from the army in July, 1816. In 1819-20 he studied at the celebrated law school at Litchfield, Conn., and then continued his studies at Edinburgh, Scotland, returning to the United States in 1822 and being admitted to the bars of Charleston and Philadelphia. He never practiced, however, but devoted himself to the study of philosophy and political economy and to authorship. He was the author of "Prospects of Disunion," an essay opposing nullification; "The Government and the Currency" (1850); "Economic Causes of Slavery in the United States and Obstacles to Abolition" (London, 1857); "The Government in India" (1858); "Universal Suffrage," and of contributions to the press in favor of free trade. He died in Washington, D. C., March 15, 1876.

**WHEELER, Nathaniel**, manufacturer and legislator, was born at Watertown, Litchfield co., Conn., Sept. 7, 1820, son of David and Sarah (De Forest) Wheeler and grandson of Deacon James and Mary (Clark) Wheeler. The founder of his branch of the family, Moses Wheeler, born in Kent, England, was in New Haven, Conn., as early as 1641, and probably was one of the founders of that town. He removed, in 1648, to Stratford, Conn., where he carried on his trade of ship-carpenter; also farmed, and kept the ferry across the Housatonic; became an extensive landholder, and died in 1698, aged 100 years. Sarah De Forest was descended from a Huguenot family, of Avesnes, France, some of whose members fled to Leyden, Holland, to escape persecution. In 1636 Isaac, son of Jessen and Marie (Du Cloux) De Forest, emigrated from Leyden to New Amsterdam, and there married Sarah DuTrieux, who bore him fourteen children. One of them, David, settled at Stratford. David Wheeler, father of Nathaniel, was a carriage manufacturer, and the son, after receiving a common school education, learned the trade, first taking up the ornamental part of the work; but at the age of twenty-one took charge of the whole establishment, to relieve

*N. Wheeler*

his father, who had been carrying on a farm at the same time. He conducted the business successfully for about five years, and then began the manufacture of metallic articles, especially buckles and slides, using hand labor at first, but gradually introducing machinery. In 1848 he formed a partnership with Messrs. Warren & Woodruff, manufacturers of the same kind of articles, and the firm erected a building for the business, of which Mr. Wheeler took entire charge. During a business trip to New York Mr. Wheeler saw the recently patented sewing machine of Allen B. Wilson, and contracting with the firm controlling the patent to build 500 of these machines, he engaged the services of Mr. Wilson as superintendent. The latter was admitted to the firm of Warren, Wheeler & Woodruff, which in 1851 was reorganized as Wheeler, Wilson & Co., and in October, 1853, as the Wheeler & Wilson Manufacturing Co., with a capital of \$160,000. For lack of adequate facilities, the business having increased largely, the firm, in 1856, removed to Bridgeport, Conn., occupying the old Jerome Clock Co. building, to which additions were made from time to time, until now the works cover about eight acres. Mr. Wheeler was made general manager on the organization of the company, and in 1855 was elected president, retaining his old office. Nearly \$500,000 have been expended upon experiments toward the perfecting of the machines, and since 1850 more than 2,000,000 have been manufactured. Mr. Wheeler took an important part in forming the combination, in 1856, of the principal sewing machine companies, the Singer and the Grover & Baker having begun business about the same time as the Wheeler & Wilson. Mr. Wilson represented his district in the state legislature and state senate of Connecticut, and was one of the commissioners for the building of the state capitol at Hartford. He was a director of the New York, New Haven and Hartford railroad and of the City National Bank; an incorporator of the People's Bank; vice-president of the board of trade and of the board of education in 1885-86. He favored every project to benefit Bridgeport, and in every way was an honor to the city. Mr. Wheeler was twice married: first, at Watertown, Nov. 7, 1842,

to Huldah Bradley, who bore him four children and died in 1857, leaving a son, Samuel, and a daughter, Ellen B., wife of Edward Harral; second, to Mary E. Crissey, who bore him four sons, two of whom, Archer and William Bishop, with their mother, survive. Mr. Wheeler died at his residence on Golden Hill, Bridgeport, Dec. 31, 1893.

**WILSON, Allen Benjamin**, inventor, was born at Willet, Cortland co., N. Y., Oct. 18, 1824, and was the son of a wheelwright. At the age of eleven he was indentured to a farmer, remaining only a year; but he continued to work on a farm until he was sixteen, meanwhile learning the blacksmith's trade. He was next apprenticed to a cabinet-maker at Cincinnati in the same county, but soon left the place, returning to his regular trade, as a journeyman, and found his way to Adrian, Mich. While there, and early in 1847, he conceived the idea of a sewing-machine, never having heard of one, though in this country Elias Howe had already patented an invention, as had Bartholomy Thimonnier in France. Owing to an illness of several months duration, Mr. Wilson was not able to develop his ideas, although he had the various devices and adjustments clearly defined in his mind. In August, 1848, he removed to Pittsfield, Mass., where he had obtained work, and soon began to put his ideas on paper in the form of full-size drawings. The firm with which he was connected dissolved in February, 1849, but Mr. Wilson remained with Amos Barnes, who continued the business, with the privilege of working evenings in the shop. On Feb. 3d he began the construction of his first machine, and about April 1st completed it, making with it dress waists and other articles requiring fine sewing. His machine differed from those invented by Elias Howe, in the fact that, having a double-pointed shuttle, combined with the needle, it made two stitches instead of one with each complete movement; that is, one stitch on the forward movement and one on the return. In 1849 he removed to North Adams, Mass., and induced Joseph N. Chapin, of that place, to purchase one-half of the invention for \$200; and with this money Mr. Wilson secured a patent, Nov. 12, 1850, which covered also the device of a two-motion feed bar, his being the fifteenth patent recorded for an improved sewing machine. While his application was pending, parties owning an interest in a machine patented in 1848 by John A. Bradshaw, of Lowell, Mass., claimed that the latter's patent covered a double-pointed shuttle, and threatened to oppose Mr. Wilson. A compromise was made by which Mr. Wilson conveyed to Kline & Lee, of New York city, one-half of the patent. He also agreed to go into the manufacture and sale of the machines with those parties, but on Nov. 25th sold them his interest in the patent, except the right for New Jersey, and that to sew leather in Massachusetts, for \$2,000. Before the end of the year, Nathaniel Wheeler, of the firm of Warren, Wheeler & Woodruff, of Watertown, Conn., saw one of the machines in New York city, contracted with E. Lee & Co. to make 500, and induced Mr. Wilson to remove to Watertown to superintend the work. Mr. Wilson soon became a partner in the firm, which had obtained the sole right to manufacture his machines, and on Aug. 12, 1851,

*A. B. Wilson*

patented a new machine, in which a rotary hook and bobbin, making an improved lock-stitch, were substituted for the shuttle. Later, to avoid litigation, he contrived a stationary bobbin, which became the permanent feature of the Wheeler & Wilson sewing-machine. On the same day, Aug. 12th, Isaac M. Singer received his first patent on a machine that became a formidable competitor. A new copartnership was now formed, under the name of Wheeler, Wilson & Co., and in 1853 the Wheeler & Wilson Manufacturing Co. was organized. On Dec. 19, 1854, Mr. Wilson patented his four-motion feed, which the machines of other inventors were forced to adopt. The advantage of his improvements was that the stitching made the strongest possible seam, being exactly even on both sides, with no threads showing above the surface that would be liable to wear off and cause ripping. The first completed machine—that finished in 1851—sold for \$125. In 1856 the firm removed to Bridgeport, Conn. Mr. Wilson retired from active participation in the business in 1853, but received a regular salary and considerable sums of money on the renewal of his patents. In 1863 he became a resident of Waterbury, Conn., where he engaged in other enterprises. Mr. Wilson died at Woodmont, Conn., April 29, 1888.

**JAY, William**, lawyer, was born in New York city, Feb. 12, 1841, son of John and Eleanor (Field) Jay. The family is of Huguenot extraction; the original American representative, Augustus Jay, having settled in New York in 1685. By his marriage with Anna Bayard, also a French Protestant exile, he had one son, Peter. This Peter Jay, a prosperous West Indian merchant, was married to Mary, a daughter of Jacobus Van Cortlandt, by whom he became the father of John Jay, first chief-justice of the U. S. supreme court (1789-95). William Jay was educated at the Columbia Grammar School, under Dr. Charles Anthon, and entering Columbia College, was graduated in 1859. On the outbreak of the civil war he was appointed a volunteer aide-de-camp on the staff of Maj.-Gen. John E. Wool, and in the following August was commissioned captain. Later, he served as aide-de-camp to Maj.-Gen. George Morrell and Maj.-Gen. George G. Meade, commanding the 5th corps, army of the Potomac; to Meade's successor in command of that corps, Maj.-Gen. George Sykes, and again to Gen. Meade, when commanding the army of the Potomac. He was present at the battles of Chancellorsville, Gettysburg, most of the principal engagements of the Wilderness campaign; the siege of Petersburg, and the final campaign which terminated at Appomattox in 1865. Two brevets were awarded him for gallant conduct, and he resigned after the grand review in Washington with the rank of lieutenant-colonel. After the war he began the study of law in the Columbia College

Law School, where he was graduated LL.B. in 1867. On his admission to the bar in the following year he formed a partnership with Edgar S. Van Winkle, which continued until the latter's death in 1882. Col. Jay then formed a partnership with Flamen B. Candler, under the firm name of Jay & Candler, which still continues as one of the foremost in the city. Mr. Jay is counsel for the New York "Herald"; the Continental Trust Co., Trinity Church and other large corporations. Upon the death of his father he came into possession of the ancestral estate, "Bedford House," at Bedford, Westchester co., about forty miles from New

York city, and there resides to the present time (1899). He was an organizer of the Coaching Club in 1875, and its president for twenty years, and is president of the Meadow Brook Hunt Club of Hempstead, L. I. Mr. Jay was married, in 1878, to Lucy, daughter of the late Henry Oedrichs, of New York city, and has one surviving daughter, Eleanor Jay.

**CLOTHIER, Clarkson**, merchant, was born in Philadelphia, Pa., Oct. 5, 1846, son of Caleb and Hannah Fletcher (Hallowell) Clothier and descendant of Henry Clothier, who emigrated to this country from Glastonbury, Somersetshire, England. His father was prominent in the Society of Friends and in the anti-slavery movement, and his mother was descended from Robert Morris, the great financier of the revolution. He received a common school education, mostly at the Friends' Central School, and at an early age was placed in the wholesale dry-goods store of Wilson, Anderson & Cornea. Later he entered the employ of Wood, Marsh, Hayward & Co.; in January, 1872, became a member of the firm of King, Seybert & Clothier, after which he became associated with Strawbridge & Clothier, and since 1889 has been a member of the firm. In the active management of the financial department of this great business and the direction of the many details connected with it Mr. Clothier has shown financial and executive ability of a high order, as well as an exceptional and necessary versatility. He is a member of the Union League; Merion Cricket Club; Manufacturers' Club; Bachelors' Barge Club, and of the Pennsylvania Historical Society. He is one of the managers of the American Sunday-school Union and of the Presbyterian Hospital; a member of Bryn Mawr Presbyterian Church, and treasurer of its board of trustees. While he is closely occupied with the business requirements of the firm in which he has membership and the demands of the social circle in which he moves, Mr. Clothier still finds time to keep fully informed on all public questions of moment, and is frequently called upon to give expression to his views for the benefit of his fellow-citizens. Especially is this true of the vexed monetary question, a subject in which he is much interested and which he has earnestly studied. He is a graceful, witty and forcible speaker, to whom it is a pleasure to give closest attention, and this is always accorded him when he consents to occupy the platform. Mr. Clothier was married in Philadelphia, Oct. 12, 1875, to Agnes, daughter of George Oliver and Martha (MacMullin) Evans. Her father was a member of the firm of Evans & Hassall, for many years prominent in the manufacture of military supplies in Philadelphia. Mr. and Mrs. Clothier have one son and two daughters.

**KIMBALL, William Wallace**, manufacturer, was born in Oxford county, Me., March 22, 1828. The family derives descent from Richard Kimball, who emigrated from Ipswich, England, to Ipswich, Mass., in 1634, and became the progenitor of a family widely represented in the states and notable in peace and war. Several of his descendants participated in the war for independence, among them Moses Kimball, grandfather of the present representative, who on the return of peace located in Maine. Educated in the district and high schools of his native state, William W. Kimball entered on his active career as clerk in a store, and then began teaching.

Clarkson Clothier

William Jay

In 1848 he engaged in commercial business in Boston, presently becoming traveling salesman for his house in nearly every part of the Union. In the autumn of 1857 he located in Chicago, where, contrary to the judgment of many of his friends who feared that the demand was as yet insufficient, he opened a piano and organ warehouse. His success, however, soon proved that he had not miscalculated his opportunities, and by 1864 the trade had so increased that he removed his warerooms to the famous Crosby Opera House on Washington street. There he conducted a growing trade, until evicted by the great fire of 1871; but with scarcely two days interruption, he reopened at his own home, with his billiard-room for an office and his stables as shipping department. Soon after he removed to a new building on Wabash avenue and 13th street, there continuing until 1873, when he took possession of a new and commodious building at State and Adams streets. In 1882 the business was incorporated as the W. W. Kimball Co., the manufacture of organs having been meantime added to his extensive wholesale trade, and in 1887 he again removed to a building on Jackson and State streets, and in 1891 to Wabash avenue and Jackson street. Within five years from the commencement of organ manufacture the Kimball parlor organ was found in every part of the Union, and formed an important item in export

*W. W. Kimball*

trade. In 1887 the manufacture of pianos was first undertaken, and in 1891 the establishment made its final move to its present commodious quarters, 147-157 Wabash avenue. From humble beginnings, under apparently unpropitious conditions, Mr. Kimball's splendid business qualifications and unflinching enterprise have created the largest organ and piano manufactories in the world, his business mounting into the millions of dollars annually, and being rated among the best American products of their kind. Although, latterly, met by keen competition, he has not ceased to strive and prosper—he actually enjoys competition—and in his active career of over forty years duration he has never failed to meet an obligation in full. One of the brightest points in his record has been his equitable treatment of all faithful employes, and the kindly interest with which he has assisted many of them to an independent start in life. Of charming personality and high social qualities, Mr. Kimball enjoys popularity with a wide circle of friends and business associates. In 1865 he was married to Evalyne M., daughter of Hubbell B. Cove, of Chicago.

**YERKES, Charles Tyson**, capitalist, was born in Philadelphia, Pa., June 25, 1837, son of Charles Tyson and Elizabeth Link (Broom) Yerkes. The Yerkes family is of Dutch origin, the first settlers of the name coming to America a few years before the arrival of the Quaker colony under William Penn. The Brooms are also of Dutch descent. Charles T. Yerkes was educated at the Friends' School and the Central High School of his native city, and began his business life as a clerk in the flour and grain commission and forwarding house of James P. Perot & Brother. He worked without salary, as in those days it was a great privilege merely to enter a first-class house; but on account of close attention to business he was presented with \$50 at the end of the first year. In the year 1859 he made his first independent business venture, opening a money and stock-broker's office on Third street, Philadelphia, and three years later purchased a banking-house at No. 20 South

Third street. The negotiation of first-class bonds was his specialty, and during the civil war he dealt heavily in government, state and city bonds. The high premium made city bonds sell low, owing to the fact that the interest was payable in currency; and as under the charter the bonds could not be sold for less than par, everything was brought to a standstill. Mr. Yerkes conceived a plan, however, to raise the price from eighty-five per cent. to par, and carrying his plan into effect with the anticipated results, the city was able to raise sufficient money not only to pay bounties to the soldiers, but for park improvements which were then being made. But this close alliance with the city proved ultimately most disastrous to Mr. Yerkes; for just as his standing in financial circles was assured, the panic occasioned by the Chicago fire caught him carrying a large quantity of securities and heavily in debt to the city for bonds sold for it. The custom being to make payments at the end of every month, the authorities demanded settlement; but knowing that to pay in full would be unfair to the balance of his creditors, he suspended and made an assignment. The fact that the law did not provide for his having possession of the city's money was tortured into a criminal offense, and as he refused to give the city preference over his other creditors, severe measures were resorted to to compel him to do so. He was firm, however, and insisted that as he had given up everything that he possessed, including a large interest in the Seventeenth and Nineteenth Street Railway Co., his assets should be divided pro-rata among his creditors. At the time of the Jay Cook failure, in 1873, Mr. Yerkes commenced the recuperation of his fortune. His business at that period had again begun to grow, and appreciating at once that Mr. Cook's suspension meant a serious decline in everything, he sold stocks heavily before purchasing. Immense and quick profits were the result, and he soon found himself once more established. In 1875 he purchased an interest in the Continental passenger railway of Philadelphia, with the result that the stock has since risen from \$15 to over \$100 per share. His first visit to Chicago was made in 1880. At that time, although gold was coming from Europe by almost every steamer to New York, money was not plentiful in the metropolis, and inquiry proved that it was going West, principally to Chicago. Convinced that a new money centre was being formed, Mr. Yerkes determined to make investigations for himself. Stopping at Fargo, N. D., during a trip through the Northwest, he became so interested in the rapid growth of the country that he joined an improvement syndicate, of which he later became sole owner. When the spring opened he built business blocks, dealt heavily in acre property, and was successful in organizing the first fair held in North Dakota. He subsequently sold most of his Dakota interests, and in the autumn of 1881 went to Chicago and opened a banking-house at the corner of La Salle and Madison streets. In 1886 he opened negotiations for the control of the Chicago street railways, and, in association with some Chicago capitalists and a few of his old friends in the East, soon obtained control of the North Chicago City Railway Co. The company was completely reorganized, with Mr. Yerkes as president, and cables were adopted as motive power. He also succeeded in utilizing the old La Salle street tunnel, which at that time had been unused for many years, thereby overcoming the disadvantage of the swing bridges so long an inconvenience to the people of the north side. Two years later he closed negotiations for the controlling interest of the Chicago West Division Railway Co., which was also reorganized and improved, Mr. Yerkes becoming president. In both undertakings the confidence of his associates was such that they left him to act entirely as his

*Chas. F. Perkins*

judgment should dictate. Mr. Yerkes became a factor in the Chicago elevated railroad systems as leader in the reorganization of the Lake Street Co., whose managers had appealed to him for assistance in their financial straits. Later he undertook to build an elevated railroad on the north side of the city, and in 1897 formed the Union Loop Co., to provide terminal facilities for all the roads in the heart of the city. This project was carried to a successful issue after a long and stubborn contention with the property owners. One result of extending the various lines outside the city limits was the increased demand for land in the suburban districts; and in order to facilitate the growth of enterprise, Mr. Yerkes conceived the plan of a system of suburban roads, connected with the main surface lines and extending clear to the heart of the city. Accordingly, eight different companies were chartered and about 250 miles of track laid. All these corporations were finally united into the Chicago Consolidated Traction Co., whose lines literally gridiron the city. Mr. Yerkes was among the first to become interested in the Columbian exposition; was foremost in the struggle for its location in Chicago, and from the start was generous in contributing to its support. In recognition of his zeal and interest, he was made a member of the board of directors, which position he held throughout the entire fair period. In this responsible capacity his force of character and wisdom of counsel made themselves most evident. During a trip to Europe he accomplished much in the way of attracting the attention of the would-be exhibitors and in inspiring confidence among the foreign nations. As a member of the committee on fine arts his labors were particularly effective, and to his influence was largely due the elaborateness and great success of the exhibit in that department. He inaugurated a thorough search in the art centres of the world for their best and rarest examples, while from his own private gallery, one of the finest in the United States, the loan was both valuable and extensive. Mr. Yerkes is a quick thinker and a keen observer. In business life he is a calm, energetic, pushing business man; in society he is most genial, cordial and gracious. He is a devoted lover of the beautiful, and in his pictures, of which he possesses a unique collection, and in his conservatory he finds his especial delight. In 1881 he was married to Mary Adelaide Moore, of Philadelphia, whose father, Thomas Moore, was for a number of years identified with the famous firm of manufacturing chemists, Powers & Weightman.

**PETERS, John Andrew**, jurist, was born at Ellsworth, Hancock co., Me., Oct. 9, 1822, son of Andrew and Sally (Jordan) Peters. Of English descent on both sides, his maternal ancestors were for many generations residents of Maine, while his paternal ancestors lived in Andover, Mass., and were closely connected with Hugh Peters, the noted Puritan preacher. His grandfather, Melatich Jordan, was appointed collector of customs for the Frenchman's bay district in 1789, and was a descendant of the Rev. Robert Jordan, an Episcopal clergyman, who left England about 1642. John A. Peters was fitted for college at Gorham Academy, and in 1835 entered Yale College, where he was graduated in 1842. While an undergraduate he was enrolled in the Alpha Delta Phi fraternity and the Skull and Bones Association, and also became a member of the Phi Beta Kappa Society. He studied law at the Cambridge Law School, and was admitted to the bar of Maine in 1844 at Ellsworth, beginning practice at Bangor. He served as a member of the state senate in 1862 and 1863, and member of the Maine house of representatives in 1864. He was attorney-general of his native state in 1865-68, and gave so much satisfaction that he was elected as a representative to the

40th, 41st and 42d congresses. On the committees on patents and public expenditures and the judiciary, and as chairman, on the part of the house, upon the joint committee of house and senate on the congressional library, his services were of great importance. In 1873 he was appointed to the bench of the supreme judicial court of Maine, and remained in that office until Aug. 29, 1883, when he was made chief-justice of the same court, over the heads of others entitled to the position by seniority of service and in the face of established custom. Judge Peters is a profound lawyer, possessed of great experience, of a vast fund of humor, and is genial and courtly in manner. He is a member of the Maine Historical Society, of the New England Historic-Genecological Society, and in 1891 became a trustee of Bowdoin College. The degree of LL.D. was conferred on him by Colby University in 1883, by Bowdoin College in 1884, and by Yale in 1893. He was married, Sept. 2, 1846, to Mary Ann, daughter of Judge Joshua W. Hathaway, of Bangor. She died in 1847. He was married again, Sept. 23, 1857, to Fannie E., daughter of Hon. Amos M. Roberts, of Bangor.

**SNEED, Frank William**, clergyman, was born near Sedalia, Mo., April 22, 1862, son of John M. and Mary J. (Stewart) Sneed. His paternal great-grandfather, John Sneed, was a soldier in the revolutionary war and private secretary to Thomas Jefferson. Through his paternal grandmother he descends from Col. Robert Campbell, who commanded a regiment at the battle of King's Mountain, under his uncle, Gen. William Campbell, whose wife was a sister of Patrick Henry. Frank W. Sneed attended a district school in Pettis county until 1877, and was prepared for college in a private academy at Sedalia. He then entered Westminster College, Fulton, Mo., where he distinguished himself throughout his course, winning the William H. Marquess prize for oratory in his junior year, and being graduated with honors in June, 1885. In the following autumn he began study in the McCormick Theological Seminary, Chicago, Ill., and received the degree of B.D. in 1888. Soon after graduation he was chosen a director on the board of the seminary, and held office to the present time. His first pastorate was at the Presbyterian Church of Riverside, Ill., where he remained four years. He then received and accepted the unanimous call of the First Presbyterian Church of Columbia, Mo., another specially gratifying tribute, since no member of the congregation had ever heard him preach. During his three-year pastorate there, a new church building was erected at a cost of \$30,000, and the membership was considerably augmented. In January, 1895, after declining several flattering calls, Dr. Sneed accepted the pastorate of the First Presbyterian Church of Minneapolis, the oldest Protestant organization in the Northwest. He remained in Minneapolis until October, 1897, when he accepted the call of the Washington and Compton Avenue Presbyterian Church, St. Louis, Mo. This is probably the most important charge among the Presbyterian churches of the Southwest. The degree of D.D. was conferred on Dr. Sneed by Westminster College when he was but thirty-three years of age, he being the youngest man who ever received so high an honor from this institution. He is a man of winning personality, frank, unselfish and truly con-

*Frank W. Sneed.*

scientious. His preaching is characterized by great felicity of expression, great earnestness and deep conviction, and a remarkable eloquence. He is considered in all quarters one of the most promising of the younger clergy of the Presbyterian church. Dr. Sneed was married in May, 1895, to Eulalie, daughter of Irvine O. Hoekaday of Columbia, Mo., and a granddaughter of Hon. James S. Rollins.

**BEMISS, Samuel Merrifield**, physician, was born at Bloomfield, Ky., Oct. 15, 1821, seventh son of John and Elizabeth (Bloomer) Bemiss. The family was of Welsh origin, founded in America in the eighteenth century by James Bemiss, a settler in Worthington, Mass. At the age of eighteen he began the study of medicine under his brother-in-law, Dr. Samuel Merrifield, at Bloomfield, and in 1841 he became the first matriculate of the University of New York Medical School. There he studied for one year, then spent one year under the instruction of his father and brother-in-law, and received the degree of M.D. in 1844. On returning to Bloomfield he practiced as partner of his former preceptor, Dr. Merrifield, until 1854, when he associated himself with Dr. Joshua Gore. In 1849 he was appointed registrar of Kentucky. In 1853 he removed to Louisville, Ky., forming a partnership in medical practice with Dr. Benjamin Wible; and in the university of that place he was appointed to the positions successively of professor of clinical medicine, professor of hygiene and medical jurisprudence, and professor

of therapeutics and materia medica. In 1861 he entered the service of the Confederacy as acting surgeon of the provisional army at Tunnel Hill, Ga. In the following year he was commissioned full surgeon, and during the war was successively on the medical examining board, assistant director of hospitals, and finally director. From April, 1865, until the spring of 1866 he was again at Louisville, practicing and holding at the university the chair of physiology and pathology; but at the latter date he removed to New Orleans, La., having been invited to fill the chair of theory and practice of medicine and clinical medicine in the University of Louisiana. The summer of 1866 he spent traveling and visiting the hospitals of Great Britain and France. At the time of the yellow fever epidemic of 1878 Dr. Bemiss was appointed by Pres. Hayes chairman of a committee to investigate the origin and spread of the fever, and, with Dr. Jerome Cockran, prepared a report that was presented to the Public Health Association in Richmond in November. The committee was then merged into a board of experts, and in the following March the national board of health was instituted, with Dr. Bemiss as a member, and chairman of the committee on epidemics. Throughout his career Dr. Bemiss was a constant writer on medical subjects, publishing his articles in the "Reports" and "Transactions" of various bodies and in the "New Orleans Medical and Surgical Journal," of which he was senior editor from 1868 to 1883. He was married to Frances Lockert, and has eight children.

**EVERARD, Sir Richard**, last proprietary governor of North Carolina (1725-31), was probably a native of Much Waltham, county of Essex, England. His earliest ancestor of whom record has been preserved was Ralph Everard, who lived in the reign of Henry III. Sir Anthony Everard was

knighted in 1603, and was succeeded by his brother, Hugh, who held the office of high sheriff in 1626; Hugh's son, Richard, was advanced to the dignity of baronet in 1628; his grandson, Sir Hugh, distinguished himself in the Flemish wars, and was the father of Gov. Everard, fourth baronet. On the removal of George Burrington from office as governor of North Carolina in 1725, Everard was appointed his successor, and took the oath of office at Edenton, N. C., July 17, 1725. His troubles soon began, for he prorogued the assembly, which stood for popular rights as against the king's prerogative, and thus began the hostility which continued through the whole of his administration, and extended not only to the assembly but to many private persons. The most important event of his administration was the survey of the boundary of 36° 30' between Virginia and North Carolina. This line, which had long been in dispute, was finally settled in 1729 by Edward Moseley for North Carolina and William Byrd for Virginia as chief commissioners. Some of the surveyors of this expedition were the first white men to cross the Dismal swamp, and the story of survey is told in a charming, if not very accurate, way by Colonel Byrd in his "History of the Dividing Line" (2 vols., 1841). The transfer of North Carolina to the crown by the proprietors in 1728-29 ended the administration of Everard. Burrington was again appointed governor, but did not qualify until the beginning of 1731, and Everard remained in office until that time. He was probably somewhat advanced in life when he became governor, as he had married, in 1705, Susannah Kidder, daughter of Rt. Rev. Richard Kidder, bishop of Bath and Wells. He had four children. His son, Sir Richard, fifth baronet, was an attorney in North Carolina, and remained there after his father's return to England. He was a representative in the provincial assembly from Beaufort county in 1739 and from Bladen in 1740. He died March 7, 1742. Sir Hugh, a younger son and sixth baronet, removed to Georgia, and was married, but left no issue. Of Gov. Everard's two daughters, Susannah was married to David Meade, and became the ancestor of the Virginia family of that name, including Rt. Rev. William Meade, bishop of Virginia. Gov. Everard returned to England after his term of service, and died in London, Feb. 17, 1733.

**BURGETT, John M. H.**, lawyer, was born at Hartland, Vt., April 28, 1850, son of Daniel A. and Adeline (Myron) Burgett. He is descended from one of the old New England families, his parents having removed to Illinois in 1854, and settled near Lewistown. Young Burgett was educated in the schools of that place, and entered the University of Michigan in 1868, being graduated with the degree of Ph.D. in 1872. Having studied law with Hon. R. B. Stevenson, of Lewistown, and been admitted to the bar in 1875, he removed the same year to Chicago, where he has since been in constant practice, and has gained great distinction by his ability and success. He is noted for the careful preparation of his cases as well as for the force and clearness of his arguments. For eleven years (1877-87) he was associated with Judge Abner Smith. His practice has covered a large range of cases in the state and Federal courts. He is a member of the Illinois and Oak Park clubs. Mr. Burgett was married, in 1892, to Jane Clarke, of Chicago, a descendant of John Clarke, one of the Pilgrim Fathers.

*John M. H. Burgett*

**McDONOGH, John**, philanthropist, was born in Baltimore, Md., Dec. 29, 1779; eldest son of John McDonogh and Elizabeth Wilkins, his second wife. His father, who was of Scotch-Irish ancestry, and a native of York county, Pa., was a soldier under Washington in the unfortunate Braddock expedition (1755), and again served under his old leader throughout the revolutionary war. John McDonogh, Sr., removed to Baltimore about 1774, and engaged in the manufacture of bricks, besides cultivating some land in the suburbs of the city. Young John, at an early age, was placed in the house of William Taylor, a wealthy merchant of Baltimore, and before he obtained his majority, rose to a high place in the confidence of his employer. In 1800 he went to New Orleans as Mr. Taylor's representative. In 1801 he was joined by W. O. Payne another young man from Mr. Taylor's counting-house, and a partnership was formed, under the style of McDonogh & Payne, and by April, 1802, Mr. Taylor had \$234,000 worth of property in the hands of these agents. The business depression of that year led to the dissolution of the co-partnership, and the forming of new ones which did business under the respective names of J. McDonogh, Jr., and Sheppard, Brown & Co. With the sale of Louisiana to the United States, in 1803, trade in New Orleans increased rapidly, bringing great wealth to Mr. McDonogh, much of which he spent in the purchase of large tracts of land in Louisiana and Florida. For a number of years, ending with 1817, he gave himself up to the enjoyment of social life, moving in the most exclusive society of New Orleans, and entertained lavishly. Suddenly, no one ever knew why, he closed his handsome bachelor apartments, sold his carriages and costly furniture and retired to a humble cottage on one of his plantations opposite New Orleans, where is now the suburb called McDonoghville. Here he lived in simple style, giving much attention to the education and moral training of his slaves, and devising a scheme by which they became profit-sharing workmen, and later, Liberian colonists.

But the great object of his life was the education of the poor, and the amassing of wealth was only a means to this end. He was dominated by the idea that he was a steward of the Lord, and had no right to a cent beyond his bare living expenses. He continued to buy real estate up to the time of his death, and at that time was considered to be one of the largest land-owners in the world. He hoped that the revenue accruing from this property would be sufficient to educate all the poor of Maryland and Louisiana, and perhaps of many other states. His secretiveness and his passion for accumulating money caused him to be re-

garded as a selfish miser, and only a few who knew him intimately were aware of the kindly nature of the man, and of the nobility of his ambition. In his will he directed that all his property should be invested in real estate, and the income used for charitable purposes. After certain private bequests he gave \$100,000 to the orphan asylum of New Orleans, \$100,000 to the colonization society, and the remainder of the property to be equally divided between Baltimore and New Orleans for the education of poor boys. Owing to litigation and other causes, the property decreased in value, but the sum divided between the two cities amounted to \$1,500,000. The portion that fell to New Orleans has been used to build free schools, and by Jan. 1, 1899, twenty-eight

had been erected, besides two at McDonoghville. Mr. McDonogh was very fond of children and of flowers, and in his will asked that the pupils of the free schools nearest his place of interment be permitted annually to plant and water a few flowers around his grave. Inasmuch as Baltimore was well supplied with grammar schools, the proceeds of her fund, in accordance with the terms of the will, were devoted to the establishment of a farm-school, for young boys and youths of all castes and color. Mr. McDonogh died at his home Oct. 26, 1850. His remains were removed to Baltimore in 1860, and deposited in Greenmount cemetery, where a handsome monument, surmounted by a statue, was erected to his memory. In 1898, on his birthday, another fine

monument, the work of Attilio Picirilli, of New York city, was unveiled in Lafayette square, New Orleans. It was the gift of the school children, and very appropriately, the figures of a boy and girl bringing flowers to crown their benefactor, ornament the pedestal. McDonogh Institute, situated twelve miles northwest of Baltimore, was opened with twenty-one pupils in 1873. Col. William Allen was its first principal, serving with great acceptance, and on his death, in 1889, was succeeded by Duncan C. Lyle, who had been a member of the faculty. The latter resigned the principalship in 1893, but retained his place as instructor in mathematics and German, and Dr. James T. Edwards took his place. In 1897 there was an attendance of 151 boys, and the school had attained a recognized and honorable place among institutions of learning. It is beautifully situated on an estate of 835 acres, and is equipped with the best modern aids to instruction, and with manual labor departments. Under the wise management of the trustees, the assets of the institute have increased to \$1,250,000.

**EDWARDS, James Thomas**, educator and legislator, was born at Barnegat, Ocean co., N. J., Jan. 6, 1838, son of Job and Susanna (Haywood) Edwards. The father, a well-known and eloquent preacher, served two terms in the state legislature. His great-grandfather, James Edwards, fought with Washington at the time of Braddock's defeat and during the whole of the revolutionary war. Dr. Edwards was graduated at the Wesleyan University, Middletown, Conn., in 1860, and then filled the chair of natural sciences at Amenia Seminary, Amenia, N. Y., and afterwards in East Greenwich Academy, Rhode Island. He devoted himself to his work with an enthusiasm that was contagious and inspiring. Besides training his classes in the lecture-room, he was constantly delivering lectures before institutes and teachers' associations. In 1862, he enlisted as a private in the 11th Rhode Island volunteers, but was immediately commissioned second lieutenant by Gov. Sprague, and was shortly after promoted to first lieutenant, and later to adjutant of the parole camp near Alexandria, Va., where he rendered valuable services to the paroled prisoners. After leaving the army, he was made principal of the East Greenwich Academy, which

*John McDonogh*

had been established for more than sixty years, and had done excellent work. When Prof. Edwards assumed charge, however, it was burdened with a heavy debt, which he raised by subscription in a brief time. While acting as principal there, Prof. Edwards was elected state senator, being only twenty-six years old, the youngest member of that body. During this session he distinguished himself as a ready debater in an exciting discussion on the military record and expenditures of the state during the civil war. He was re-elected in 1866, and again in 1868, and took an active part in the discussion of the fifteenth amendment, which was carried in the senate, but defeated in the house. During his third term, he was chairman of the committee on education;

was an earnest advocate of a prohibitory bill, which was triumphantly carried in the senate, but defeated in the house; made speeches upon "the just limits of the pardoning power," which attracted general attention, and exercised a marked influence in effecting a wholesome reform in the use of that prerogative by the governor. Senator Edwards was chosen presidential elector on the ticket that elected Gen. Grant president for his first term. In 1870 he removed to Randolph, N. Y., and became president of Chamberlain Institute and Female College, a secondary school endowed by the late Hon. Benjamin Chamberlain. Although Dr. Edwards was an incessant worker in his own school, to which his best efforts were given, from 1880 until 1893 he had charge of the department of experimental science at Chautauqua. He has been one of the trustees from the first, a member of the executive board, lecturer and instructor in the College of Liberal Arts. He is a member of several learned scientific societies in this country. In 1891 Dr. Edwards was elected to represent the thirty-second district in the senate of New York state. He was made chairman of the committees on education and railroads. Three important bills bear his name: the university bill, which covers all the higher education of the state; the library bill, which appropriates \$55,000 annually to maintain school and township free libraries; and the school commissioner bill, which allowed women to vote for school commissioners. Since 1893, Dr. Edwards has been principal of McDonough Institute, near Baltimore. This school was founded by John McDonough for the education of poor boys. It has an endowment of \$1,250,000. Dr. Edwards is the author of the following works: "The Grass Family," "The Silva of Chautauqua Lake," "Addresses: Educational, Political, Scientific and Religious," "Pen and Picture: A Chautauqua Sketch Book." He is a prominent public speaker on agriculture, patriotic, scientific and educational topics, and is, besides, an eloquent preacher. In 1876 the degree of D. D. was conferred on him by Allegheny College, Meadville, Pa., and that of LL. D. in 1891. Dr. Edwards was married, in 1862, to Emma A. Baker, who was preceptress of Chamberlain Institute during the twenty-two years of his presidency.

**CAMPBELL, Allan**, railroad president, was born in Albany, N. Y., Oct. 11, 1815; son of Archibald and Mary Campbell. After receiving an ordinary school education, he studied civil engineering, for which he had a peculiar taste and talent; and so great was his proficiency that he was chief-engineer of a railroad at the age of twenty-one years. At first he was employed on the Ithaca and Owego rail-

road, and then on the Erie canal, and subsequently on certain improvements which were being made on the Ohio river. In 1850 Mr. Campbell received a tempting offer from the Chilian government, and having accepted it, went to South America, and built the first railroad ever operated on the continent. He continued there until 1856, when he returned to America and became chief-engineer of the New York and Harlem railroad, from which position he was raised to be president of the same company, remaining in that office for six years. During the civil war, Mr. Campbell was made engineer of the harbor defenses which were at that time constructed for the port of New York. When the Harlem railroad improvement was undertaken by Mr. Vanderbilt, in conjunction with the corporation of the city of New York, Mr. Campbell was made a commissioner in control of the work, and by the splendid engineering skill which characterizes the structure he added greatly to his already enviable reputation as an experienced and remarkably skillful engineer. During all this time, and for nearly twenty years, he remained at the head of the engineering department of the New York and Harlem railroad. He afterwards became president of the Consolidated Coal Co. of Maryland, an office which he held for several years. A life-long Democrat, Mr. Campbell had neither sought nor held public office until, in January, 1874, he was nominated by Mayor Wickham and confirmed to succeed Gen. Fitz-John Porter as commissioner of public works. He took the oath on Jan. 21, 1874, and immediately entered upon the duties of his office. In December, 1880, he was nominated to succeed John Kelly as comptroller of the city of New York. Mr. Campbell's influence among capitalists and business men, derived from their knowledge of his absolute integrity and his excellent skill and judgment, may be illustrated by the case of the Cumberland Coal and Iron Co., which, from being a football for Wall street speculators, became a dividend-paying company. Mr. Campbell was appointed a committee of one to effect a new loan for the company, which was in bad straits, blocks of stock being sold in Wall street at 13, and even lower. Mr. Campbell called upon James Brown, of Brown Bros., and explained to him the extent and value of the property, and the purity of the coal, which Sir Edward Cunard had said was the best ever burned by his steamers, being free from sulphur—which alone saved several thousand pounds a year—and before he had concluded, Mr. Brown said: "It is not worth while, Mr. Campbell, to relate anything further; I am satisfied that every word you told me is the truth; I will take the whole loan at par, for twenty years, at six per cent." Mr. Campbell could have, on that occasion, made a large fortune by buying the stock, being the only possessor of this information. Instead of that, he disclosed his knowledge at a meeting of the directors called for the next day, when the stock ran up to 65. Mr. Campbell is said to have been more esteemed in Chili than any foreigner who had ever established himself there. A leading man of Valparaiso stated that they lost more than \$6,000,000 in the construction of the Valparaiso railroad by letting him go. In 1882 Allan Campbell was made the Citizens' candidate for mayor of New York; he was, however, defeated. He was a

*J. Edwards*

*Allan Campbell*

member of the American Society of Civil Engineers, the Geographical Society and the Century Club. In 1842 Mr. Campbell was married to Julia Fairlie, daughter of Thomas A. Cooper, the tragedian. Their surviving children were Col. John Campbell, U. S. navy, retired; and another son and two daughters. He died in New York city, March 18, 1894.

**BRYAN, William Jennings**, statesman, was born at Salem, Marion co., Ill., March 19, 1860, son of Silas Lillard and Maria Elizabeth (Jennings) Bryan. His father, a native of Culpeper county, Va., removed to Illinois when eighteen years of age, and after his graduation at McKendree College, settled in the practice of law at Salem. For eight years, from 1852, he was a state senator, then (1860-72) a circuit judge, and was a member of the state constitutional convention of 1870, where he introduced a resolution providing that all offices created by the constitution should be filled by popular election. In 1872, he was candidate for congress, being defeated by but 240 vote, and thereafter, until his death in 1880, devoted himself to professional practice. He was a fine speaker and a man of great intellectual ability, firm character and well-defined ideas of right. Being convinced that a country life is the best discipline for growing boys, he located, in 1866, on a farm on the outskirts of Salem, and there his sons were reared amid the pure and healthful surroundings of hard work and rural simplicity. William J. Bryan was taught at home by his mother until he was ten, and then attended the public schools until his fifteenth year; thereafter studying for two years at Whipple Academy, Jacksonville, which he left to enter Illinois College. During his college course he took high standing, being at the same time prominent in literary and debating societies, and on his graduation, in 1881, delivered the valedictory of his class. For the next two years he studied law at the Union Law College and in the office of Lyman Trumbull, and upon his admission to the bar began practice at Jacksonville. In 1887 he removed to Lincoln, Neb., where he formed a law partnership with A. R. Talbot, under the style of Talbot & Bryan. He became active in politics, making his first public reputation in the campaign of 1888. He was also a delegate to the state convention in the same year, and declined the nomination for lieutenant-governor, which was offered him in recognition of his distinguished services in the cause of tariff reform and local Democratic issues, and of his great ability as an orator. In 1890 he was nominated for congress by the first district Democratic convention on a platform written by himself, and embodying, among other planks, demands for free wool, lumber, sugar, coal and iron ore on substantially the same terms as were subsequently first passed by the house of representatives. The platform also contained a free silver plank. Mr. Bryan modestly states that this nomination was given him "because no one else wanted it"; but, contrary to the expectations of many, he was elected by a plurality of 6,713. In the house of representatives he first attained distinction by an able speech in course of the debate on the passage of the Wilson bill. It was so excellent an example of oratory and scholarship that even Mr. Bryan's opponents were enthusiastic in their congratulations, while his friends recognized in him an able champion of the cause of tariff reform and true Democratic principles. In 1892, he was renominated, and making a brilliant campaign against the Republican candidate, Judge Allen W. Field, one of the ablest men in the state, he was again elected. Returning to congress, he duplicated his former brilliant record, making several notable speeches on the tariff, the income tax, and other most important issues; also his famous speech of Aug. 16, 1893, against the unconditional repeal of

the purchasing clause of the Sherman act of 1890. During both terms he was a member of the ways and means committee, and ably assisted some of the most important measures. He declined a third nomination for congress, but was immediately nominated for U. S. senator. The Republicans, however, held the majority in the legislature, and he consequently failed of an election. In the campaign of 1894, Mr. Bryan sent a challenge to John M. Thurston, the Republican candidate for the senate, to a joint debate, which, being accepted, allowed another eminent triumph for Mr. Bryan's polemical abilities, in the Omaha coliseum, before 15,000 people. After retiring from congress, Mr. Bryan devoted much time to national and state politics, making many speeches in favor of the free coinage of silver. His reputation constantly increased, until he came to be recognized as easily the leader of Democracy in Nebraska. In July, 1896, he was a delegate from Nebraska to the national convention of the Democratic party at Chicago, where a brilliant speech in defense of free silver caused his nomination for the office of president of the United States. Although the platform on which he stood excited vigorous opposition from many sources, Mr. Bryan declared that it expressed his convictions, and that he stood ready to defend every plank. Accordingly, he began one of the most memorable campaigns ever undertaken by a candidate for the presidency. His brilliant, magnetic oratory and the intense fervor of his convictions caused him to be listened to with respectful attention wherever he spoke, while his keen logic, perfect dignity and thorough mastery of himself and his subject gave his opponents more than enough to do in conducting a successful campaign against him. Although subjected to ridicule and the inevitable vituperations of a heated political contest, not one word was ever breathed against his personal or public record in any way. Mr. Bryan's defeat at the polls by no means terminated his enthusiastic efforts in behalf of free coinage; for many months thereafter he lectured on the subject in all parts of the country and contributed numerous articles and discussions on political questions to the public press. On the outbreak of the Spanish-American war, he was offered and accepted the colonelcy of the 3d Nebraska volunteers. Owing to the policy of holding large bodies of men in reserve at various camps, he remained with his regiment at Tampa, Fla., until the treaty of peace was signed, Dec. 10, 1898, seeing no active service. Then resigning, he returned to Nebraska, where he resumed political activity. The scheme of colonial expansion introduced by the McKinley administration on the cession of the Philippine islands by Spain called forth Mr. Bryan's earnest opposition, on the ground that it was a dangerous departure from the conservative rule of popular government—"governments derive their just powers from the consent of the governed"—universally recognized from the days of Thomas Jefferson. Mr. Bryan is a strikingly handsome man, and his strong, intellectual face lights up with an enthusiasm which is fascinating as he discusses some issue in which his sympathies are all enlisted. He is a good listener, and puts a difficult person quickly at ease. He was married, in 1884, to Mary E. Baird of Perry, Ill. They have three children.

*W. J. Bryan*

**BENEDICT, David**, clergyman and author, was born at Norwalk, Fairfield co., Conn., Oct. 10, 1779, eldest son of Thomas and Martha (Scudder) Benedict. His father, a revolutionary soldier and an enterprising farmer, removed soon after the birth of his son from Norwalk to Saratoga county, N. Y.; afterwards to New Lisbon, Otsego co., and in 1833 to Rhode Island, where he died. David Benedict spent his early years on his father's farm, with such scant opportunities for education as a country school of the eighteenth century afforded. At the age of fourteen he was apprenticed to a shoemaker at New

Canaan, and for seven years applied himself diligently to this trade, working always with a book on a shelf within reach, and devoting all his spare moments to reading. At the expiration of his apprenticeship, he obtained employment as a journeyman in a large shoe establishment in New York city, where he remained one year. Having determined on a collegiate course as a preparation for the ministry, in 1802 he entered the academy of Rev. Stephen S. Nelson, at Mount Pleasant, on the present site of Sing Sing prison. During his two years there he defrayed his expenses in part by teaching the younger pupils, one of whom was Francis Wayland, afterwards the distinguished president of Brown University.

By the most intense application, he not only prepared himself for college, but was able, in the fall of 1804, to enter the junior class of Brown University, and was graduated two years later, delivering a commencement oration on "Ecclesiastical History," which attracted much attention. Immediately afterwards he was ordained pastor of a Baptist church in Pawtucket, which had been gathered through the instrumentality of his labors while a student in college, and there he continued over a quarter of a century. Numerous and powerful revivals were the result of his preaching, and the church grew to be one of the strongest of the denomination in the state. In the early part of his ministry, Dr. Benedict began to collect materials for his "History of the Baptist Denomination in America." He traveled extensively to gather facts from fireside conversations with aged people, as did Morgan Edwards and Isaac Backus, and collecting here and there what few pamphlets and documents were to be had, traversed nearly 4,000 miles through all the states and territories of the Union. In the work of final revision, he was assisted by Rev. George H. Hough, afterwards missionary to India. It was published by subscription, in 1813, making two octavo volumes of nearly 1,200 pages. An abridgment was published in 1820. Dr. Benedict also published: "The Watery War," a poem; "Conference Hymn-Book"; an abridgment of Robert Robinson's "History of Baptism" (1827); "History of All Religions" (1824); "General History of the Baptists Continued" (1848); "Fifty Years Among the Baptists" (1860), and "History of the Donatists." This last work, upon which he was engaged almost at the time of his decease, was published by his only surviving daughter, Maria M. Benedict, as a memorial of his life and labors. In addition to these, he was a frequent contributor to various papers and periodicals, some of which he edited. He was a member of the corporation of Brown University from 1818 until his death, and, with the exception of a single year, he attended all the annual and special meetings, affording an instance of long-continued punctuality and truly remarkable zeal. He was also a faithful member of the Masonic fraternity, and

during the anti-Masonic excitement, which so convulsed society in New England and the middle states, he remained true to his convictions, regarding the institution as the oldest and best of all human organizations, and a handmaid and helper to Christianity. Dr. Benedict was married, May 4, 1808, to Margaret Hubbel, daughter of the celebrated Dr. Stephen Gano, for thirty six years pastor of the First Baptist Church in Providence. They had twelve children. He died in Pawtucket, R. I., Dec. 5, 1874.

**BRACKENRIDGE, Henry Marie**, author and jurist, was born in Pittsburgh, Pa., May 11, 1786. His father, Hugh Brackenridge, an eminent jurist and a writer of note, having obtained his own education under great difficulties, determined that his son should have the advantages he himself had lacked, and began his education almost in his infancy. At the age of seven he was sent to a school at St. Genevieve, in upper Louisiana, to learn French, returning home three years later to pursue his studies under his father. Caring only for his studies, he made rapid progress in classical and modern languages and in the sciences. When fifteen, he began to study law, at the age of twenty was admitted to the bar, and one year later began to practice in Baltimore, Md.; afterwards removing to Somerset, where he found time to continue his modern language studies and to pursue a course of historical reading. In 1810, he left Somerset for New Orleans, stopping on his way to visit in St. Genevieve and St. Louis, where he delayed to collect the materials for a work on Louisiana, published in 1812. Continuing his course to New Orleans, he was appointed deputy attorney-general for the territory of Orleans, afterwards the state of Louisiana, in 1811, and the next year received the appointment of district judge. This necessitating the study of Spanish law, he drifted from that to Spanish literature and language, becoming deeply versed in both. During the war of 1812 he was able to give important information of the enemy's movements to the general government; and in 1814 he published a history of the war, which was well received both in America and England, and was translated into French and Italian. When Henry Clay was agitating the question of the acknowledgment of the South American republics, Mr. Brackenridge came to his assistance, making numerous translations from South American papers, and writing original contributions on the subject, chief among which was a letter signed "American," which was republished in England, and was replied to by the Spanish minister. It was translated into French by the archbishop of Malines. About this time he supported the views of the American government on the subject of the "boundaries of Louisiana," in a dissertation published in "Walsh's Register," and in recognition of this and of his other services was appointed secretary of a commission to the South American republics in 1817. Mr. Brackenridge published the information collected on this journey in a work entitled "Voyage to South America," which was commended by Humboldt. In 1821, Mr. Brackenridge entered the diplomatic service of Gen. Jackson, then on his way as commissioner to take possession of Florida; and, through Jackson's influence, was appointed U. S. judge for the western district of Florida, which office he filled for ten years. In 1834, he published vol. 1. of "Recollections of Persons and Places in the West." In 1840, he was elected to congress,

*David Benedict*

*H. M. Brackenridge*

and in 1841 received his last public appointment, that of commissioner under the Mexican treaty. Among his works not enumerated above are: "A Eulogy on Jefferson and Adams," delivered at Pensacola in 1820; a series of letters in favor of the cause of the nation in the Mexican war (1847); an "Essay on Trusts and Trustees," and a "History of the Western Insurrection" (1859). Mr. Brackenridge died on Jan. 18, 1871, in Pittsburgh, where he had lived since 1832.

**WOODWARD, Calvin Milton**, educator, was born in Fitchburg, Mass., Aug. 25, 1837, son of Isaac Burnap and Elizabeth (Wetherbee) Woodward. His great grandfather, John Woodward, was a soldier of the Continental army. By the help of the district and high school of his native town, he was able to fit himself for college, and was graduated at Harvard University in 1860, leading his class in mathematics, and winning the Gray prize of \$250. In September following his graduation, he took charge of the Brown High School in Newburyport, Mass.

In the summer of 1862, he enlisted as a private, and

was soon chosen lieutenant and then captain of company A, 48th regiment of Massachusetts volunteers. He held his command one year in Louisiana, taking part in the siege and capture of Port Hudson. In September, 1863, returning to Newburyport, he resumed the position of principal in the high school, but in 1865 was called to take a position in Washington University, St. Louis. His ability was immediately recognized; in 1867 he was promoted assistant-professor of mathematics, and in 1869 became professor of descriptive geometry and topographical drawing. In 1870, he was elected to the Thayer professorship of mathematics and applied mechanics. In 1871, he was made dean of the polytechnic school, and held the office for twenty-five years. In 1879, he organized the manual-training school, and is still its director. But these official positions, much as they have involved in the building up and shaping of a growing university, by no means fully represent the work and activities of Prof. Woodward. During the years 1876-81, he wrote the "History of the St. Louis Bridge," a publication of great labor and of corresponding value to all interested in this branch of engineering. In October, 1880, he took the census of the city of St. Louis, at the request of a citizens' committee and with the approval of the government, the previous official census having been found to be clearly unfaithful and defective. In 1878-79, he was a member of the board of public schools of St. Louis. He has been upon the council of the National Education Association since 1888, and was appointed curator of the State University of Missouri in January, 1891. Prof. Woodward was very early interested in public instruction and methods of teaching. Latterly, the subject of manual training in connection with common school and secondary education has occupied much of his attention. The St. Louis Manual Training-school, of which he is the director, is the pioneer of its kind, and is still an object of unflinching interest to educators. Its success has been so marked and widely known that Prof. Woodward, who is a ready speaker, has been called to most of the large cities of the country to expound and illustrate its principles. In December, 1885, in response to an invitation signed by the governor of

Massachusetts, the mayor of Boston and many others, he addressed the citizens of Boston on that subject, and he has appeared before large conventions of teachers in this country and in England. In 1885, he visited England by special invitation to speak in Manchester on education, and to the address he then delivered the manual training department of the Manchester Technical School ascribes its origin. Besides a pamphlet on "Educational Value of Manual Training," distributed by the bureau of education, and other numerous pamphlets, he has written two books fully illustrating the subject: "The Manual Training-school" and "Manual Training in Education," published in England and America. In 1898, a work on "Applied Mechanics" was in course of preparation by the professor. He has been president of the St. Louis Engineers' Club, and has published in its proceedings the following papers: (1) "The Strength of Fitch-plate Girders"; (2) "The Efficiency of Compressed Air"; (3) "The Theory of Ammonia Refrigerators." A fellow of the American Association for the Advancement of Science and a member of the St. Louis Academy of Science, he has contributed many papers on different subjects. He is at present (1899) a member of the board of education of the city of St. Louis, at the head of the department committee on instruction. He was married, at Newburyport, Mass., Sept. 30, 1863, to Fanny Stone, daughter of William and Hannah (Stone) Balch.

**GODON, Sylvanus William**, naval officer, was born in Philadelphia, Pa., June 18, 1809. He entered the navy as midshipman in 1819, and was promoted to be passed midshipman in 1827. Between the latter year and 1836, with the exception of a year spent at the national school in Norfolk, he was attached at different times to the Brazilian, Mediterranean and Pacific squadrons. He was commissioned as lieutenant in December, 1836, served with the East Indian and Mediterranean squadrons, and in 1847 as an officer of the bomb-brig *Vesuvius*, participated in the siege and capture of Vera Cruz. He performed special duty in 1850, and from 1851 until 1853 was executive officer of the *Susquehanna*. He was made commander in September, 1855, and until 1860 commanded the *Mohican*, of the Pacific squadron. He was promoted to be captain in 1861, and assigned to the command of the *Powhatan*, with which, in November, 1861, he took part in Dupont's expedition to Port Royal, where he was conspicuous for his skill and gallantry. He was advanced to the rank of commodore in January, 1863, and in the early part of 1864 was on special duty. Later, he was ordered to the command of the *Susquehanna*, and led the fourth division of Porter's squadron at the two battles of Fort Fisher in December, 1864, and January, 1865. For his services at Fort Fisher he was warmly praised in the official reports, and on July 25, 1866, was commissioned rear-admiral. In 1866 and 1867 he commanded the South Atlantic squadron, and from 1868 until 1870, was commandant of the New York navy yard. On June 18, 1871, he was placed on the retired list. Of Adm. Godon's forty-one years of active service, twenty-four were spent at sea—more than were spent by any other officer of his grade. He died at Blois, France, May 10, 1879.

**SHAW, Albert**, journalist, was born at Shandon, Butler co., O., July 23, 1857, son of Dr. Griffin

*C. M. Woodward*

M. Shaw, who for some years practiced medicine in Indiana, where he was also a member of the legislature and active in business and politics. Two of his great-grandfathers were early settlers of the Miami valley, a few miles from Cincinnati, after the revolutionary war, and Albert Shaw is a representative of the third generation of his family born in that immediate neighborhood. He was carefully educated by an excellent tutor, and at Iowa College, Grinnell, Ia., where he was graduated in 1879. He had shown in college a marked aptitude for literary and political studies, and a leaning towards journalism, being one of the active editors of the college weekly, and also contributing to the leading paper of the town of Grinnell. After graduation he became one of the owners of this semi-weekly Grinnell paper, the "Herald," and threw himself with much energy into the work of mastering everything pertaining to the editorial, mechanical, and business phases of the conduct of a country newspaper office. Meanwhile he was continuing his studies in constitutional history and economic science under the direction of Prof. Macy, of Iowa College. At the beginning of 1881 he entered Johns Hopkins University as a post-graduate student in the department of history and political science. His work at Baltimore at once attracted the attention of Prof. James Bryce, who was at that time preparing his great work,

Albert Shaw.

"The American Commonwealth," and to him Mr. Shaw's knowledge of western political and social conditions was of service. Mr. Bryce, in turn, procured for Mr. Shaw an access to the great English periodicals, such as the "Contemporary" and "Fortnightly" reviews, for which he has since written numerous articles. In the summer of 1883 Mr. Shaw became connected with the Minneapolis "Tribune" as an editorial writer, but returned to Baltimore and Washington on leave of absence for the university year 1883-84, at the end of which he took his degree of Ph.D., returning immediately thereafter to Minneapolis to enter upon his work on the "Tribune." While at Johns Hopkins, besides various articles in the domain of political and economic science, Mr. Shaw wrote a book entitled "Icaria: A Chapter in the History of Communism," which was accepted as his thesis for the doctor's degree, and was later published in New York. It was soon afterwards translated and published in Germany, where it won for its author an enviable reputation as a student of social movements in the United States. His editorial work in the Northwest covered a wide range of subjects, and gave him an opportunity for a thorough study of the forces that were making for the rapid development and progress of the great Northwest. He became conversant with the industrial and agricultural developments of the Mississippi valley, and also, through constant observation of the practical problems faced by the rapidly growing cities of the West, he became an ardent student of municipal government and of the problems of city life. In 1888 he went to Europe to spend a year and a half in travel, observation and study. His study of municipal government became well known in the United States, and upon his return in the fall of 1889 he was invited to give courses of lectures at Cornell, Johns Hopkins, Michigan and other universities, while the "Century Magazine" published a series of widely read articles from his pen on municipal administra-

tion in foreign cities. In 1895 he published "Municipal Government in Great Britain" and "Municipal Government in Continental Europe." In the autumn of 1890 he was elected professor of international law and political institutions at Cornell University, and was simultaneously invited to establish in New York, as editor and general manager, a periodical to be known as the "American Review of Reviews," and to be conducted on the same general plan as the "English Review of Reviews," which had been founded a few months before by Mr. W. T. Stead; the plan being that the English and American periodicals should be conducted upon a basis of co-operation, in order to give both a broad international character. The professorship was resigned, and the editorial work in New York was entered upon early in the year 1891. Mr. Shaw has continued to edit the "American Review of Reviews," and under his conduct it has attained a great circulation, a remarkable influence, and a high degree of prosperity. Perhaps the most characteristic feature of the magazine is the opening department, entitled "The Progress of the World," which usually occupies from sixteen to twenty pages, and is Mr. Shaw's personal editorial work. This department reviews each month the principal events of the preceding four weeks, both American and foreign, and it endeavors to interpret the larger movements of the day in the spirit of the impartial historian. Occasional visits to Europe and travels throughout North America have enabled him to gather materials for economic and political writing, and to keep himself in touch with the life of the present day. He has published numerous magazine articles and monographic publications, and has delivered many lectures in universities and colleges. During the latter part of 1898, in addition to his regular editorial work, Dr. Shaw was engaged in preparing a detailed history of the Spanish-American war (1898), also, a history of the United States from the civil war to the close of the nineteenth century. He has been a member of the American Economic Association and the American Historical Association from the founding of those bodies, is a fellow of the American Statistical Society, a member of the American Antiquarian Society, and a fellow of the New York Academy of Political Science (Columbia University). A writer in the "Outlook" credits Dr. Shaw with "a catholicity of feeling and knowledge which very few Americans possess," and calls attention to the lucidity and directness of his writings. "He is," adds this biographer, "one of the very few journalists in this country who treat their work from the professional standpoint, who are thoroughly equipped for it, and who regard themselves as standing in a responsible relation to a great and intelligent public. Dr. Shaw's presentation of news is pre-eminently full, candid and unpartisan; his discussion of principles broad-minded, rational and persuasive. He is entirely free from the short-sighted partisanship of the great majority of newspaper editors. He appreciates to the full the power of intelligent, judicial statement. His opinions, for this reason, carry great weight, and it is not too much to say that he has not his superior in the field of American journalism." Dr. Shaw was married, Sept. 5, 1893, to Elizabeth Leonard Bacon, of Reading, Pa.

**ANDREWS, James J.**, Federal spy, was born in Hancock county, W. Va., about 1829. Nothing is known of his family or early history. His parents are said to have removed to southwestern Missouri, where he spent his boyhood and was educated. In the spring of 1859, he left home and settled at Flemingsburg, Ky. because, it has been hinted, of losses and disappointment at home, but more probably to see the world and earn a livelihood. He began work

as a house and ornamental painter, with the intention of teaching school as soon as a position could be found. On the outbreak of the civil war, he joined a volunteer organization of Fleming county; but, not long after, for the purpose of either trafficking goods across the blockaded lines, which was a very lucrative though hazardous business, or of obtaining information for the Federal officers, he went to Nashville and represented that he had joined the Confederate cause. He there formed a business partnership with a Mr. Whiteman, a well-known merchant, and won universal confidence by his tact and pleasing address. Later, he became known as a successful blockade-runner, and in this way was able to render considerable aid to the Union. Having succeeded in obtaining the plans of Fort Donelson, with a complete account of the Confederate forces there, he rode sixty miles in one night to carry the information across the lines. About the same time he conceived a plan which, for boldness and daring, is unparalleled in our history; viz., the capture of a railway train, in the heart of the Confederacy. As has been well said: "The mind and heart sink back appalled at the bare contemplation of the consequences which would have followed the success of this act," as in all probability it would speedily have ended the war. The principal Confederate armies in Virginia and Mississippi were united by a chain of railroads running from Memphis, Huntsville, Chattanooga, Knoxville and Lynchburg, to Richmond, which constituted a strong line of defenses, and enabled them to concentrate reinforcements rapidly, as they might be needed. It was the object of the Federal generals to break this line, and Andrews proposed to Gen. Buell to capture a locomotive on the Georgia State railroad, which connected Atlanta with Chattanooga, and run on to the latter place, burning the bridges behind him, especially the large one at Bridgeport, thus effectually breaking the connection between the enemy's forces. The necessary arrangements being made, about April 1, 1862, Andrews took eight men south, but the expedition failed through the non-appearance of the only engineer of the party, and the expedition returned to the Federal lines. Undismayed by the first failure, he made a second attempt with a larger force, including engineers from the Federal army; and a party of twenty-four men, acting in small groups on April 7, 1862, met at Marietta, Ga., on the 11th. The following morning they boarded a train going to Chattanooga, buying tickets to various points to allay suspicion, and at Big Shanty (Kenesaw), Ga., while the passengers and train hands were eating breakfast, they uncoupled the locomotive and three box-cars, and succeeded in riding off in full view of several regiments of Confederate soldiers encamped at the station, before there was time to realize the significance of the act. Believing that another engine could not be obtained within thirty miles, he cut the telegraph wires at the first opportunity, and reaching the next station (Kingston) on about the regular schedule time, he gave the plausible explanation that the train was impressed to carry ammunition through to Beauregard, who needed it at once. This was quite acceptable, a tank-tender remarking that he would have given the shirt off his back for Beauregard if he had asked for it. Only once was Andrews suspected, and he met the situation with the quiet firmness so characteristic of his nature. Having been side-tracked here over an hour to let two extra freight-trains pass, the switch-tender, when at length the road was cleared, declared he would not open the switch until Andrews showed his authority. With a short laugh, saying, "I have no more time to talk with you," Andrews changed the switch himself, and, signaling to his engine, jumped on as it ran to

the main track. These special freight-trains were unforeseen, and the delay proved fatal. Immediately when the alarm was given at Big Shanty, the conductor, the engineer, the foreman of the car-shops, who happened to be on the train, and several others started in pursuit, at first on foot, then with a hand-car, and lastly with another engine which they found at a junction up the road. Andrews placed obstructions on the track, which the pursuers as speedily removed. He even tore up the rails; but that impediment was overcome by taking up the rails behind the second engine and laying them down before it; and finally the box-cars were uncoupled, only to be caught up by the pursuing engine and side-tracked at the next switch. Andrews endeavored to fire the bridges, but, as it had been raining heavily, the wood would not burn, even with the aid of oil. The pursuers, having obtained another and more powerful engine, were slowly and steadily gaining; but the goal, Chattanooga, was almost won. The adventurer had passed five trains, all but one either an extra or behind time; and now the road was open ahead, with, as they thought, miles of obstructed and broken track behind. Their engine was crowded to the utmost, but the fuel and oil began to give out, and when within twenty miles of their destination they were forced to abandon their train and take to the woods. There they separated, but all were captured finally, Andrews himself

spending several dayson Lookout mountain, where, with his usual skill and address, he would have escaped but for the employment of bloodhounds. When caught, he was identified by persons who had known him in the South, and, with the others, was taken to Chattanooga, where he was court-martialed on May 25th. His sentence was reserved; but meantime, Gen. Ormsby M. Mitchel having menaced Chattanooga, the prisoners were removed, and the next month Andrews was hanged at Atlanta. True to his daring, adventurous spirit, he did not die without a dash for freedom. On learning his sentence, he planned with his comrades to escape. They made a hole in the brick wall, and, with the aid of a rope, were to crawl out when the guard was away—Andrews first, the others following. Only Andrews and one other succeeded, however. His liberty was short-lived. Being closely pursued with hounds, he was driven several times into a deep and rapid river, through a dense thicket, and finally was discovered hiding in a tree. On his return to prison, he was placed in a dungeon and heavy chains riveted to his feet, which, it is said, were never removed. Seven of his companions were tried and executed shortly after; the remainder were exchanged the next year. Although Andrews failed in his audacious undertaking, his greatness is none the less real, and he should be remembered for this act of personal bravery and daring, that is unequaled in the history of our country, not excepting Cushing's bold attack on the Albemarle or the wildest raid of the intrepid Morgan. Judge Joseph Holt, in his report, says: "The expedition thus failed from causes which reflected neither upon the genius by which it was planned nor upon the intrepidity and discretion of those engaged in conducting it. But for the accident of meeting those extra trains, which could not have been anticipated, the movement would have been a complete success, and the whole aspect of the war in the South and Southwest would have been at once changed." The date of Andrews' execution was June 7, 1862.

**BULL, Richard Harrison**, mathematician, was born in New York city, Sept. 28, 1817, son of Benjamin and Eliza Bull. He was educated in the private schools of his native city, and then entered the University of the City of New York, where he was graduated with honors in 1837. Immediately afterward he matriculated at the Union Theological Seminary. During his college course he evinced great talent in mathematics, and after one year in the seminary he relinquished his intention of entering the ministry, and on the invitation of his alma mater became adjunct-professor of mathematics. In 1852 he was appointed professor of civil engineering, and filled the chair for thirty-three years, being at the time of his resignation, in 1885, dean of the School of Civil Engineering. He then received the title of professor emeritus. Prof. Bull always devoted considerable attention to astronomical research, and for many years determined the standard time for the port of New York and railroads having termini in that city. He was also well known and highly respected in the financial world, and was for many years president of the New York Savings Bank, which, upon his retirement from active business in 1885, was reputed one of the most prosperous and successful institutions of its character in the country. Prof. Bull received the degree of Ph.D. from the New York University in 1885. He published but little, although his ideas upon many subjects connected with mathematics were bold, brilliant, and oftentimes highly valuable to his students. Among his notable discoveries was a system of calculating by a duodecimal instead of the usual decimal notation, and accordingly he invented signs to extend the units of numeration two places. By this method Prof. Bull claimed that calculations of all descriptions were much facilitated. He had also conceived a brilliant theory for reconciling the conflicting cosmogonies of Genesis and modern theorists on an astronomical and mathematical basis, and at the time of his death was actively engaged in preparing a book to set forth his ideas. Dr. Bull was married, in 1847, to Mary A., daughter of Abraham Schouten, of New York city, and had two sons, both lawyers. The elder, Charles C. Bull, is a prominent member of the New York bar, and the other, J. Edgar Bull, has acquired a national reputation in the trial of patent cases involving large interests before the several circuit courts throughout the country and the U. S. supreme court at Washington. He died at his home in New York city, Feb. 1, 1892. A memorial window, painted by Maitland Armstrong, has been placed by his widow and sons in the First Presbyterian Church of New York, of which he was presiding elder at the time of his death.

**HOWLAND, Henry Elias**, jurist, was born in Walpole, N. H., June 30, 1835, son of Aaron P. and Huldah (Burke) Howland. His earliest American ancestor was John Howland, who came over in the Mayflower, and from whom he is the sixth in descent. His mother was a descendant of the family of which Silas Wright was a member. He was educated in the schools at Walpole and at Kimball Union Academy, Meriden, N. H., and from there went to Yale College, where he was graduated in 1854. He then read law with Judge Frederick Vose, of Walpole, and continuing his legal studies at Harvard Law School, was graduated there in 1857. Removing to New York, he continued his studies in the law office of John Sherwood, and in October,

1857, he was admitted to the New York bar. He was a partner of Mr. Sherwood until 1878, when he became associated with Henry H. Anderson in the firm of Anderson & Howland, which continued until Mr. Anderson's death, in 1896. Mr. Howland was appointed judge of the marine (now city) court by Gov. Dix in 1873; in 1875 he was appointed alderman of New York, and has since held many other offices of honor and trust. He is president of the board of managers of the Manhattan State Hospital; a member of the corporation of Yale University; secretary of the Century Club, and has been a member of the council of the University Club since it was formed, and is now its vice-president. He is president of the Society of the Mayflower Descendants; president of the New England Society; trustee of the New York Free Circulating Library; has been connected with the State Charities Aid Association for many years; is trustee of the old Marion Street Maternity Hospital; president of the Society for the Relief of Destitute Blind, and vestryman in the Ascension Church, Tenth street and Fifth avenue. He is a member of nearly all the prominent clubs of New York city, including the Metropolitan, University, Century, Union League, Players', Downtown, Republican, Shinnecock Hills, Golf, Meadow Club of Southampton (of which he is president), Adirondack League and the City Bar Association. In 1865 he was married to Louise, daughter of Jonathan and Sarah R. Miller, of New York city. She died in 1884, leaving three children, and in 1894 Judge Howland was married to Mrs. Thomas B. Curtis, of Boston, Mass.

**WADDELL, Hugh**, revolutionary soldier, was born at Lisburn, county Down, Ireland, in 1734 or 1735, son of Hugh and Isabella (Brown) Waddell. The father was a friend of Arthur Dobbs, a member of the Irish parliament, and on his appointment as governor of North Carolina, young Waddell resolved to remove to that province. He arrived in 1753 or 1754, and in advance of Gov. Dobbs, who did not take the oath of office until Nov. 1, 1754, in Newbern. Waddell took a high stand in the colony at once. In 1754 an expedition was planned to aid Virginia to repel French invasion and to maintain the rights of Great Britain on the Ohio, and he joined it as a lieutenant, being promoted soon after to a captaincy. In 1756 he built Fort Dobbs, where he was stationed as captain with forty-six officers and men under his command, and he was chosen to treat with the Cherokee and Catawba Indians on the western frontiers. In 1757 he was ordered to march to the relief of Capt. Paul Demere, who was in command of Fort Loudon on the Tennessee river, and accomplished a journey of more than 200 miles through a wilderness and among savages. It is probable also that Waddell led an expedition this year to the aid of South Carolina against the French and Indians. He became a member of the assembly from Rowan in 1757; returned to his command after the session closed, and in May, 1758, was promoted major, and put in command of the three companies raised for the final expedition against Fort Duquesne. He was employed on all the reconnoitering parties, was promoted colonel, and in 1759 was ordered to rendezvous at Fort Prince George in South Carolina, with all the provincial troops and the militia of Orange, Anson and Rowan counties in anticipation of a Cherokee outbreak. Waddell next regarrisoned Fort Dobbs, and put 500 militia on duty to guard the frontiers. The Indians attacked Fort Dobbs on Feb. 27, 1760, but were repulsed. In the following fall he was sent to Virginia to aid Col. Byrd in striking the upper Cherokees. During the next five years he was active as a leading member of the assembly, and was interested in mercantile

*Richard H. Bull*

affairs as a member of the firm of John Burgwin & Co. In 1765 the Stamp Act troubles began. Waddell was one of the first to take the lead at Wilmington in denouncing the act, and with John Ashe, resisted the landing of the stamps at Brunswick on Nov. 28th. In 1766, two vessels being seized for lack of clearance papers duly stamped, a body of 580 armed men was organized for their rescue, and Waddell was chosen their commander. Gov. Tryon wisely surrendered the vessels. Waddell was in command of the military escort which accompanied Gov. Tryon while running the boundary line between North Carolina and the Cherokees in May and June, 1767. As early as 1766 troubles began to develop, which culminated in the regulation war and the battle of Allamance. Many of the inhabitants of Granville, Orange, Randolph and neighboring counties complained of the exorbitant charges of the county officials. As Gov. Martin put it a few years later, the people were provoked by insolence and cruel advantage was taken of their ignorance "by mercenary, tricking attorneys, clerks and little officers who have practiced upon them every sort of rapine and extortion." But it must be admitted that while their organization may have been at first justified, it degenerated into many indefensible attacks on the whole system of government. The troubles culminated in a skirmish fought on Allamance creek, May 16, 1771, in which a number were killed on each side, while after the battle six were hanged by Gov. Tryon. Waddell, now made a brigadier-general, was in command of one division of the troops sent against the Regulators. Preparatory to the expedition he had been sent to Salisbury to take command of troops which were to join the division under Tryon, but the wagon-train of ammunition sent up from South Carolina was captured and destroyed by Regulator sympathizers near the present town of Concord, and when Gen. Waddell reached the Yadkin river he found himself with insufficient ammunition and opposed by a superior force. He was therefore compelled to retreat, and hence was not present at the battle of Allamance. This service ended his military career. The sentiment of North Carolinians has generally been favorable to the cause of the Regulators. They have been hailed as patriots and as forerunners of the revolution, but the biographer of Waddell claims that they were: 1. but a small minority of the people of North Carolina; 2. that they contended for no great principle; 3. that with a few exceptions there were no men prominent for virtue or intellect in their organization; 4. that they were not Republicans; 5. that they were Tories in the revolution. The truth is no doubt to be found between these extremes. Gen. Waddell was married, in 1762, to Mary Haynes. He left three sons, and the family has since his time been always prominent in the state. He was in the assembly in 1757 and 1760, from Rowan; in 1762 from Bladen, and again in 1766 and 1771. He was a justice of the peace, and in 1764 one of the justices who presided over the county court of New Hanover. He was nominated as a member of the governor's council by Dobbs in 1762 and by Tryon in 1771. He died in Bladen county, N. C., April 9, 1773. His biography was written by his great-grandson, Hon. A. M. Waddell (1890).

**MOORE, Clara (Jessup)**, poet, novelist and philanthropist, was born in Philadelphia, Pa., Feb. 16, 1824, daughter of Augustus E. and Lydia (Moseley) Jessup. Her father, Augustus E. Jessup, was the scientist on an expedition under Maj. Stephen H. Long, which visited the Yellowstone region in 1816. He was a native of Berkshire county, Mass., and a descendant of John Jessup, who in 1635 settled in Long Island. The Moseley's are an ancient English family, mentioned in "Domesday Book," and

have several branches in the United States, including that in Massachusetts, founded by Mrs. Moore's ancestor, John Moseley, of Dorchester, 1630. A son of the emigrant was married to Mary Newbury, of Boston, and removed to Westfield, Mass.; was a lieutenant in King Philip's war, and held other public offices. Clara Jessup was educated partly at home, partly at Westfield Academy, and at the school of Mrs. Merrick, New Haven, Conn. On Oct. 27, 1842, she was married at her father's old home, in Massachusetts, to Bloomfield Haines Moore, of Philadelphia, and took a prominent place among the leaders of society, literary as well as fashionable, of that city. Having much leisure time at her command, she began to write for the press, contributing to newspapers and magazines verse and prose purporting to be the work of Clara Moreton. One of her early stories, "The Estranged Hearts," received the first prize in a competition, where 400 manuscripts were submitted. Later novelettes, such as "Compensation" and "Emma Dudley's Secret," were similarly successful. Three books, "The Hasty Marriage," "The House of Huntley and Raymond" and "Mabel's Mission," were published without any name on the title page. When the civil war broke out, Dr. Bellows, of New York, president of the sanitary commission, named Mrs. Moore for president of the woman's Pennsylvania branch, which she had aided in organizing. She declined, but accepted the position of corresponding secretary, and with this important work upon her hands gave up literature for a time. She created and organized the special relief committee for aiding hospital work, and with Mrs. George Plitt organized the committees of women which conducted the great sanitary fair in Philadelphia. She also projected and aided in founding the Union Temperance Home for children. After the war she returned to literary work, using, as a rule, her own name. In 1873 an anonymous article by her on etiquette, published in "Lippincott's Magazine," attracted much attention and provoked much unreasonable criticism. In that year, also, she published a revised edition of one of her popular works, "The Young Ladies' Friend"; in 1875, "Miscellaneous Poems"; in 1876, a romance, "On Dangerous Ground," which passed through seven editions, and in 1878 her famous work, "Sensible Etiquette." Among other works were: "Gondalieu's Lessons and Other Poems" (1881); "Slander and Gossip," privately printed (1882); "The Warden's Tale, San Moritz, Magdalena and Other Poems" (1883); "Social Ethics and Social Duties" (1892), and several books for children, of one of which, "Master Jacky's Holiday," more than twenty editions were published. The proceeds of the sales of Mrs. Moore's works were spent in aiding philanthropic institutions and individuals who were engaged in literary or scientific pursuits. Among these individuals was John W. Keely, the inventor, who for many years was supported by her gifts. Much of Mrs. Moore's life was passed in London, especially after the death of her husband in 1878, and there, as in Philadelphia, her house was a resort for artists, musicians and authors. Mrs. Moore had three children: Clarence B. Moore, of Philadelphia; Ella, wife of Count Carl Gustaf von Rosen, first lord in waiting to King Oscar of Sweden and Norway, and Lillian, wife of Baron Carl de Bildt, Swedish and Norwegian minister in Rome. She died in London, England, Jan. 5, 1899.

*Clara Moore*

**ALDRICH, James**, poet, was born at Mattituck, Suffolk co., N. Y., July 14, 1810. He began life as a business man, and gradually withdrew from his mercantile pursuits to engage in journalistic and other literary work. In 1840 he established in New York city the "Literary Gazette." Previous to this he had been connected with a number of other publications, notably with the "New World," a weekly journal, published by Park Benjamin, in which the current magazine literature of England was reproduced in cheap form. Epes Sargent and Rufus W. Griswold were among his collaborators on it. His poems were widely popular and found a place in several literary collections, although the author never collected them in a separate volume. A small volume of the "Poems" was published by his daughter in 1884. He died in New York city, Sept. 9, 1866.

**ALLEN, George**, educator, was born at Milton, Vt., Dec. 17, 1808, son of Heman and Sarah (Prentiss) Allen. His father was a lawyer, legislator and congressman (1826-27, 1832-38), and a vigorous worker in behalf of the Whig party in his state; his mother was a daughter of Dr. John Prentiss, of St. Albans. He was graduated at the University of Vermont in 1827, and then served as professor of languages there for two years (1828-30). Meantime, he studied law, and was admitted to the bar in 1831. Subsequently, while serving as teacher in the Vermont

Episcopal Institute, he studied theology, was ordained to the ministry of the Episcopal church in 1834, and was rector of St. Luke's Church, St. Albans, Vt., for three years. He began contributions to the New York "Review" with an article on "The Study of Works of Genius," and defended Dr. James Marsh against the attacks of Prof. John McViekar, in the introduction to his edition of Coleridge's "Aids to Reflection." In 1837 he accepted the chair of ancient languages at Delaware College, Newark, Del., and in 1845 was elected professor of the Greek and Latin languages in the University of Pennsylvania, a position he held until his death. In 1847 he became a Roman Catholic, and for several

years was counsel for Pope Pius IX. in Philadelphia; also writing a work entitled "Novena of St. Anthony of Padua." He took a notable interest in chess, and gradually acquired the finest library on that subject in America, now the property of the Library Co. of Philadelphia. He supplied "Chapters on Chess in Philadelphia" and "The History of the Automaton Chess-Player in America" for "The Book of the First American Chess Congress," published in 1859. Being also a musician, in 1863 he wrote "The Life of Philidor," two copies of which were printed on vellum, the first book printed on vellum in America. He made a special study of military science, and contributed to the "United States Service Magazine," edited by his colleague, Prof. Henry Coppée, and was an active member of the Shakespeare Society of Philadelphia. "As a professor," says one of his pupils and associates in the faculty of the university, "his greatness was that of genius. He filled not his chair only, but his room, by diffusing around him a subtle atmosphere of culture and devotion to study, which molded the minds of the most unpromising students. He combined a certain courteous warmth of manner with great evenness of temper and a perfect control of his class. He infected his pupils with his own enthusiasm, and led them to adopt his own high

standard of attainment. As a student and a scholar, he was both a complete master of his own branch of knowledge and a man of the widest and most general accomplishments." Prof. Allen was married, July 7, 1831, to Mary Hancock Withington, of Boston, a grand-niece of John Hancock, president of the Continental congress and first state governor of Massachusetts. She survived him, with their two sons, Heman and George, noted as musicians, and two unmarried daughters. He died in Worcester, Mass., May 28, 1876, and was buried in the Cathedral cemetery, Philadelphia.

**LLOYD, Edward**, acting (seventh royal) governor of the province of Maryland (1709-14), was born at the family seat, "Wye House," Talbot county, in 1668, eldest son of Col. Philemon Lloyd and his wife, Henrietta Maria Neale, widow of Richard Bennett, the Puritan leader of Providence. His mother was a daughter of Capt. James Neale, agent of the Duke of York in Spain, whose wife, Anna, was maid of honor to Queen Henrietta Maria of France, wife of Charles I. Richard Bennett, Jr., son of Henrietta Maria (Neale) Bennett, was the "rich man" of that time. She was "the good Roman Catholic" wife of two staunch Puritans, and left her impress upon more than one thousand descendants. She died in 1699, aged fifty years, and lies buried at "Wye House." Her husband, Col. Philemon Lloyd, was the son of Edward Lloyd, a Welshman, who came up from Virginia in 1650 and settled at Greenberry Point, opposite Annapolis. He was a Puritan and companion of Richard Bennett, who "received protection" in Maryland when Virginia had refused it. Conspicuous in ability, he was made commander of Anne Arundel, and many of the early grants of Maryland rent-rolls were secured from him. He was, with Philip Thomas, a commissioner to return the proprietary records after the collapse of Bennett's rebellion. He removed to the eastern shore, to Talbot county, where he had a large landed estate, but returned to England in 1668. His wife, Alice Crouch, the mother of Col. Philemon, having died, he was married to Mrs. Grace Backerfield, and resided in London until his death. His will of 1695 describes him as "Edward Lloyd, of the parish of St. Mary's, White Chappel, county of Middlesex, merchant, and late planter of Maryland." He devised "Wye House" to his grandson, Edward Lloyd, son of Col. Philemon. It is now held by the seventh Edward Lloyd, of "Wye House." Col. Philemon Lloyd was in the legislature of 1671 and 1674; was colonel of militia, justice of the peace, deputy speaker and commissioner of the lord-proprietary to negotiate a treaty with the Five Nations at Albany. In 1699 his son, Philemon, Jr., was in the house of burgesses and secretary of the province; deputy secretary and judge of the land court. In 1721 he was a member of the council; in 1728-32 was again secretary of the province. He died in 1732. Col. Edward Lloyd, heir of "Wye House," was one of the worshipful justices of the peace or judge of Talbot county; member of the lower house from 1698 until 1702, when he was raised to the provincial council. As president of the council, in 1709, he was acting-governor from the death of John Seymour until 1714, when John Hart was appointed by the Protestant proprietary. During his term as governor the Church of England was established in America, and McMahon, in his record of that period of legislation, wrote: "It is (was) as conspicuous in our statute-books, even at this day, as the blessed parliament in that of England. A body of permanent laws was then adopted, which for their comprehensiveness and arrangement are almost entitled to the name of a code. They formed the substructure of the statute law of the province even down to the revolution, and the subsequent legislation of the

*Geo. Allen*  
C. V. S.

colony effected no very material change, for several of the important statutes are in force to-day." Sec. Calvert, in his correspondence with Gov. Lloyd, touched upon all of the subjects under discussion at that time; viz.: bills of exchange, abuse of his lordship's manors, rent rolls, town lands, the king's temporary line, advancement in the value of lands, arrears of rents, the Ohio territory and French encroachments. After his term as governor he returned to the council, and was involved in a discussion upon his right to claim salary as councillor while receiving half-salary as governor. The right to receive both was doubted. In 1708 he was made major-general of militia. Gov. Lloyd was married, Feb. 1, 1703, to Sarah Covington, a beautiful Quakeress. Their first son, Edward, died early; their second son, Edward, was born May 8, 1711. He was both colonel and honorable; a member of the council for a number of years, from 1744 until 1769, with his kinsman, Samuel Chamberlaine, as coadjutor. He was also a member of the legislature in 1739, and during that year was married to Ann Rousby, of Putuxent, sister of Gov. Plater's wife. Their daughter, Elizabeth, became the wife of Gen. Cadwalader, of the revolutionary army, whose daughter was married to Gen. Samuel Ringgold, of Fountain Rock, now the site of St. James' College, Maryland. Henrietta Maria Lloyd, next daughter, became the wife of the distinguished Joseph Hopper Nicholson, and his son, Richard Bennett Lloyd, of the English guards, was married to the beautiful Joanna Leigh, of the Isle of Wight; Edward Lloyd, the fourth, of "Wye House," was married to Elizabeth Taylor. In 1760 Edward Lloyd, the third, was made a commissioner to carry into effect the decision of the high court of chancery of England respecting the long-disputed boundary between Maryland and Pennsylvania. Gov. Lloyd, of the province, died March 20, 1719, and was buried at "Wye House." His widow became the wife of James Holliday, of Readbourne, Queen Anne co. She died in London, April 9, 1755. "The letter that records her death," says the historian Hanson, "is stained with tears, and her character through life justified such expression."

**DARLING, John Adams**, merchant and manufacturer, was born in Providence, R. I., May 16, 1802, son of Ziba and Vienna (Ballou) Darling. His father was a native of Bellingham, Mass., and his mother, a daughter of Levi Ballou, of Cumberland, R. I. He received a common-school education, and at the age of eighteen was employed by his brother-in-law, Thaddeus Curtis, of Providence, in the manufacture of brushes. In September, 1822, he became associated with Mr. Curtis, under the firm-name of Thaddeus Curtis & Co., and they continued the business at different places until 1869, when they removed to No. 10 Peck street, where the business is still carried on, under the old firm-name, by George H. Darling, who became a member of the firm Jan. 1, 1850. Mr. Curtis sold his entire interest to his partners in April, 1870, and John A. Darling continued in the business until his death, having then been successfully engaged in the manufacture of brushes for more than fifty-eight years. Although closely devoted to his business, he was ever deeply interested in the public welfare. He was a director of the Jackson Bank for one year (1854); a director of the Mechanics' Savings Bank (1858-67); of the Westminster Bank from 1858, and of the Providence Mutual Fire Insurance Co. from 1854 until his death, and a trustee of the latter from 1866 to 1873. He represented the city of Providence in the state legislature in 1854, and for several years was an active and influential member of the Mechanics' Association of Providence. In politics he began as a Whig, but was a Republican from the formation of

that party. He was a member of the First Universalist Society, and with his family was a regular attendant at its services. Mr. Darling was an energetic and enterprising citizen, whose liberal aid could always be relied on in furtherance of benevolent objects. He was married, Aug. 9, 1824, to Eliza, daughter of Henry Potter, of South Kingston, R. I. He died in Providence, July 14, 1879.

**STANWOOD, Edward**, editor and author, was born in Augusta, Me., Sept. 16, 1841. He is eighth in descent from Philip Stanwood, who was in Gloucester, Mass., as early as 1652, where he served as selectman in 1658. Philip's great-great grandson, Isaac Stanwood, of Ipswich, was a soldier in the revolution. Two of his sons, Jacob and Isaac, married daughters of Ebenezer Caldwell, a public-spirited citizen of Ipswich. Jacob's daughter, Harriet, was the wife of Hon. James G. Blaine. Isaac's son, Daniel C. Stanwood, city clerk of Augusta for many years, had a family of eleven children, among whom were the present representative, and Arthur G. Stanwood, assistant treasurer of the Chicago, Burlington and Quincy railroad. Edward Stanwood, the third son, was graduated at Bowdoin College in 1861. While still a college student, he began to report the proceedings of the Maine legislature for the "Augusta Age," and continued the work until his graduation. The following year he became assistant-editor of the "Kennebec Journal," acting also as the Augusta correspondent of the Boston "Daily Advertiser." In 1867 he went to Boston as an assistant on the editorial staff of the "Advertiser," and after the death of Mr. Goddard, in 1882, he occupied the editor's chair for two years. During the two decades immediately following the civil war the "Advertiser" was conspicuous for the high standard which it maintained. Mr. Stanwood left the "Advertiser" in November, 1883, and the January following joined the staff of the "Youth's Companion" as an assistant. A few years later he was advanced to his present position of managing editor. He has long been a vigorous writer on political and economical subjects, and has contributed many articles to various magazines. His "History of Presidential Elections," since its first appearance, in 1884, has come to be the recognized authority on the subject at Harvard and at other leading colleges. The "Nation" spoke of it as "most timely in its appearance, and full of instruction for those who will read between the lines." The Springfield "Republican" characterized the narrative as "graphic, rapid, clear and unclouded by prejudice." A natural outgrowth of this work was the course of six lectures which Mr. Stanwood gave before the Lowell Institute in Boston, in 1885, on "Early Party Contests." As special agent of the eleventh census, he collected the statistics of and prepared a report upon the cotton manufactures of the United States. In 1897 he wrote a "History of the Cotton Manufacture in New England," for "The New England States." He is now (1899) secretary of the Arkwright Club, a member of the Statistical Society and of the New England Historic Genealogical Society, and a trustee of the public library of Brookline, where he lives. In 1886, Mr. Stanwood became an overseer of Bowdoin College, which, in 1894, conferred upon him the degree of Lit.D. He was married, Nov. 16, 1870, to Eliza, daughter of Samuel Topliff, who es-

Edward Stanwood

established the first news-room in Boston. They have one daughter, Ethel, the wife of Charles Knowles Bolton, librarian of the Boston Athenæum; and a son, Edward Stanwood.

**BALDWIN, Matthias William**, inventor and manufacturer, was born in Elizabethtown, N. J., Dec. 10, 1795. His father, William Baldwin, had accumulated a comfortable property as a carriage-builder; but this was subsequently dissipated by the bad management of his executors, leaving his widow and children in dependent circumstances. Matthias Baldwin received a good common school education; but from early youth the bent of his mind was more toward mechanical contrivance than books. He would take his toys to pieces to learn their construction, and turn his mother's rooms into workshops for the manufacture of his devices, which were always finished with marvelous neatness and skill. At the age of sixteen he was apprenticed to the trade of a jeweler with Woolworth Bros., of Frankford, Philadelphia co., Pa., and in 1817, shortly after the expiration of his term of indenture, removed with his mother to Philadelphia. Here he was employed by Fletcher & Gardener, extensive manufacturers of jewelry on Chestnut street, and soon became one of the most useful men in the shop. He was never content with mere blind imitation, and loved to produce work as perfect as possible.

*M. Baldwin*

Soon, orders demanding taste, thought and invention began to pass into his hands, and he rose rapidly in the esteem of his employers and fellow-workmen. After two years of journeyman work, he had saved sufficient to enable him to commence the manufacture of jewelry on his own account, and his reputation as a skillful workman immediately attracted custom, and seemed to promise flattering success. In the meantime, he was making constant improvements in the machinery and methods of his trade, inventing, among other things, a new process of gold-plating,

now very generally employed, consisting in soldering the gold plate to the base metal, and rolling the two until compressed to the required thinness. Owing to a sudden and unaccountable decrease in the demand for jewelry, he was obliged to think of some new field of operations, and in 1825 formed a partnership with David Mason, a machinist, for the manufacture of bookbinding tools, machinery and dies, which had hitherto been exclusively imported. They afterward added the manufacture of cylinders for printing calicoes, and shortly completed the great improvement of etching devices on the steel mills, which transferred them to the cylinder. The rapid growth of their business necessitated removal to larger quarters, and then the employment of improved power. To supply the latter need, Mr. Baldwin constructed, in 1828, a small stationary engine of about five horse-power, which was used continuously in his shop for over forty years. This engine was not only more complete and powerful than any then in use, but contained an original improvement in the method of imparting rotary motion, which proved the germ of the ponderous marine engines now in use. By degrees, the manufacture of steam-engines became the most important department of his business, until in about ten years he was reckoned the foremost engine-builder in the country. In the fall of 1830, the Camden and Amboy Railroad Co. imported a locomotive from England, which, after a

careful examination, Mr. Baldwin reproduced in a working model for the Philadelphia museum. Encouraged by this achievement, he directed his attention boldly to introducing upon American railroads a better locomotive than the rude and unmanageable machines then in use, being particularly interested in contrivances for generating and economizing steam. The first locomotive from his shops was completed after overcoming numerous obstacles, and tested at a grand public trial, held Nov. 23, 1832. During the next three years he completed some ten locomotives, containing, among other improvements made by him, devices for the adjustment of the crank, the insertion of the steam-pipe and the construction of the driving-wheels. With the steady growth and extension of railroad traffic arose numerous problems, which he met and grappled with successfully. The great difficulty involved by the original clumsy rigid-frame patterns of locomotives in turning curves with a heavy train was met by him: first, with his invention of the six-wheel gear locomotive, patented in 1841; and later, by his "flexible truck." Although there were several competitors in the field when he first began the manufacture, his work in reality made possible the heavy freight traffic of the present day; and in other respects the science of railroading has been advanced by the inventions of his fertile brain. To his latest day, Mr. Baldwin found his best loved recreation in repairing watches and constructing small mechanical devices. But the master machinist and inventor was noted also for his philanthropy and earnest piety. He was one of the most active founders of the Franklin Institute in 1824, and in after-life a prominent supporter of its educational enterprises. A devoted member of the Presbyterian church, he was widely known as a builder of churches and missions. His heart and purse seemed always ready to respond to appeals from deserving sources. He opened a school for colored children in Philadelphia, and for years paid the salaries of its teachers. When, in 1835, an appeal was made for the support of Pompey Hunt, a negro evangelist, he himself guaranteed a generous sum to enable him to continue preaching the Gospel. Mr. Baldwin's interest in the cause of the negro race and his earnest advocacy of abolition were of life-long duration, and during the stormy times before the civil war, were very often quoted to his disadvantage by business competitors. But his life was governed by the convictions of his conscience, and, come what might, he could not be moved. He was a member of the Pennsylvania state constitutional convention of 1837, and voted earnestly against the exclusion of negro property-holders from the right of the franchise. He died, at his country home at Wissinoming, near Philadelphia, Pa., Sept. 7, 1866.

**BOEHLER, Peter**, Moravian bishop, was born at Frankfort on the Main, Dec. 31, 1772. He was associated with the *Unitas Fratrum* while at Jena, (1731-36), and entered their ministry in December, 1737, being destined to the southern colonies in America. In London, early in 1738, he met the Wesleys, and exerted a vital and well-known influence on the founders of Methodism. After two years' nearly fruitless labor on the Atlantic coast and a brief association with Whitefield, he returned to England early in 1741, but the next year conducted a party of fifty-six to Philadelphia. Banished from New York as a "Papist" in January, 1743, he had charge at Bethlehem for nearly two years, and then remained in Europe for eight years, having been consecrated a bishop in 1748. In 1753 he was again at Bethlehem, and succeeded in saving the lands of the church, which had been endangered by mortgages. After many wanderings and a year in Europe, he came back in 1756 as vice-superintendent of the

American province and assistant to Bishop Spangenberg, and remained until 1764. His last years were spent in Germany as a member of the directory and of the elders' conference, with frequent sojourns in England. "Memorials" of his life, by T. P. Lockwood, appeared in 1868. (See also the "Transactions" of the Moravian Historical Society, series II.) The Wesleyans have named a chapel after him in London, England, where he died, April 29, 1774. —7

**BLACK-HAWK**, or **Kara-zhoussept-hah**, Indian chief, was born in the present limits of Randolph county, Ill., in 1767. He was the adopted brother of the chief of the Foxes, and although by birth a Pottawattomic, was brought up by the Sacs. He bore several names; at the time of the treaty at Prairie du Chien his name was Hay-ray-tshoan-sharp, but later, when he was taken prisoner, it was Muscata-mish-kiak-kiak. He was a leader among his people at the age of fifteen, being already rated as a warrior, and at twenty-one became head chief of the Sacs. His course from the start was one of opposition to the whites, and the assertion of the rights of his people even to lands sold by them. It is probable that his policy was shaped by the false information that the Americans were few and could not fight. In 1804 the Sacs and Foxes signed a treaty at St. Louis with Gen. Harrison, whereby, for an annuity of \$1,000, they transferred to the United States their lands along the Mississippi river, but Black-Hawk, alleging that the chiefs were drunk at the time of signing, for several years successfully resisted the ratification of its provisions. A second treaty was made, however, in 1816, he himself being a party, by which the cession of lands was completed. Seven years later the main body of both tribes migrated to their new reservation under the leadership of Keokuk, but Black-Hawk still remained behind. In 1830 the chiefs of the Foxes were invited to a treaty at Prairie du Chien for a settlement of their difficulties with the Sioux. On the way to attend the treaty meeting nine Foxes were killed by the Sioux, and next year a band of Sioux, within a mile of Prairie du Chien, were attacked by Black-Hawk's party and twenty-eight were killed. The Americans demanded the murderers, but Black-Hawk refused to deliver them up. By the treaty of 1830 the Sacs and Foxes had sold their country to the U. S. government. Black-Hawk had nothing to do with this sale, and the attempt to ratify it displeased him. When he heard, next year, of his people having to remove from his village, by the advice of the trader, to take up an abode elsewhere, he became the leader of those who were opposed to removal. The Sacs were then on Rock river, and Black-Hawk agreed to deliver up their lead mines if allowed to hold their village. Their women and children, dispossessed, were on the banks of the Mississippi, without lodges, while the Sacs were encamped on the west bank of that river. They determined to repossess their lands. The whites agreed to let them plant together, but had secured the best grounds. The women were badly treated, but still no retaliation was resorted to until the Indians were cheated out of their guns. Finally they were told not to come to the east side of the river, but Black-Hawk, refusing to obey, recrossed and took possession. Gov. Reynolds declared Illinois invaded by hostile Indians, although they were only upon U. S. lands, and six companies of regulars and 700 militia were ordered there under Gen. Gaines. Black-Hawk met the general in council and declared he would not remove, but when all the troops had arrived the Indians fled, returning only to steal corn from their own lands. Gen. Atkinson met them at Fort Madison, but they retreated up Rock river to plant on the lands of Black-Hawk's son, the Prophet. Maj. Stillman followed them; a flag of truce was

sent in but its bearers were taken prisoners; five messengers were sent by Black-Hawk, and they were pursued and killed. The war cry was then raised, and the Indians rushed on with guns, knives and tomahawks. Stillman ordered a retreat, which became a rout. Black-Hawk, with seventy men, had put to flight a detachment of 270. The chief then proceeded to Four Lakes, at the head of Rock river, Atkinson pursuing, and 3,000 whites being brought face to face with 500 Indians, on June 18th, were defeated after a fierce contest. Gen. Scott was then ordered to the frontier with nine companies of artillery, but his troops were smitten with cholera. Gen. Dodge fell upon Black-Hawk's trail on Ouiskonsin, and he, deceived in his support, was forced to retreat, crossing the river in the night with much suffering and disaster. At Blue Mounds, Dodge and Atkinson united forces in pursuit. Black-Hawk's forces, in descending the Ouiskonsin, were upset in their boats and many were drowned and others captured. A steamboat overtook his forces on Aug. 1st, and he sent two white flags for surrender. A company of 150 of his men, without arms, approached the river, but the captain of the boat fired his six pounders into them, and next morning Gen. Atkinson's whole army was upon them, defeating and driving them into the river, to their total destruction. Black-Hawk again escaped, but this contest ended the war. The Sioux, with 100 men, pursued the flying Sacs, and murdered another 120 of them. Two young Winnebagoes brought Black-Hawk into camp, dressed in white deer skin clothes made for him by squaws. When taken before the commander he said: "You have taken me prisoner; I am grieved. I tried to bring you into ambush. Your guns were well aimed. I saw my evil day was at hand. Black-Hawk's heart is dead, but he can stand torture; he is no coward—he is an Indian who fought for his squaws, against those who came to cheat. You know the cause of this war, and you ought to be ashamed of it. We looked up to the Great Spirit. Farewell, my nation." Black-Hawk, with eleven chiefs and fifty warriors, was lauded at the lower rapids. His two sons, Prophet and Naopope, and five principal warriors, were given up as hostages to be held during the pleasure of the president, at Jefferson barracks, Mo. They were men of gigantic and symmetrical figures of statuesque proportion; Jack, the eldest, being an embodiment of ideal manly beauty. Black-Hawk was then about sixty-three years of age. His disposition was amiable, and he had always displayed the strictest integrity. He was not a chief by birth, but acquired his position by bravery and wisdom. In his interview with Pres. Jackson, he said, with true dignity: "I am a man; and you are another." The president directed that articles of dress intended for his party be exhibited and distributed, and commanded him to go to Fort Monroe and remain contented. Black-Hawk replied: "If I had not struck for my people they would have said I was a woman. Black-Hawk expects to return to his people." The president replied: "When all is quiet you may return," and assured him that his women should be protected. On June 5, 1833, they were set free. Pres. Jackson again meeting him in Baltimore, and all along the return route crowds greeted him. In New York he visited the Seneca reservation. He arrived at Fort

Armstrong in August, 1833, and was met by Indians with bands of music. Keokuk was then the acknowledged chief of his tribe, and Black Hawk, declaring that he would not conform to any one, departed in silence, downcast and broken. In person he was of magnificent physique and rare beauty. His head was the envy of the phrenologist; his face of a classic Roman type. One writer thinks he resembled Sir Walter Scott; another saw in him the face of Stephen Girard, and a third saw a marked likeness to Pres. Monroe. Black Hawk died at Des Moines, Ia., Oct. 3, 1838. He was buried according to the custom of the Sacs; his body seated on the ground; his cane between his knees, grasped in his hands, with slabs of rails then piled about him. Later his bones were stolen, but being found in possession of a surgeon of Quincy, Ill., were restored to his friends.

**ENGLIS, John**, shipbuilder, was born in Brooklyn, N. Y., Nov. 25, 1808, the son of a Scotchman who came to America in 1795. He attended public schools in New York, and on completing his schooling, was apprenticed to learn marine construction in the shipyard of Smith & Dimond, of that city. There he rose to be a journeyman, and was then appointed foreman for Bishop & Dimondson, another conspicuous firm of builders. In 1837 he went to Lake Erie, and constructed under contract two steamboats for the northern trade—the Milwaukee and Red Jacket—which were among the first steamers used on the great lakes. Returning then to New York, he opened a shipyard on the East river, and devoted his energies entirely to steamboat building—an industry then in its infancy, and presenting many difficult problems to the marine architect. These Mr. Englis set to work to solve, and gradually, from modest beginnings, he came to be

considered the leading steamboat constructor in New York. In the fifty years of his active business life nearly all the great side-wheel steamers for the trade and travel of Long Island Sound, and the finest river steamboats in the world, were launched from his yard; and he also constructed vessels for ocean and lake traffic. He built in all eighty-nine vessels, among which were seven designed for service in China—the Plymouth Rock and Western World, constructed in 1853 for service on the great lakes, which for years were unequalled either for speed or beauty; the St. John, which, when launched on the

Hudson river, was the greatest triumph of the kind, and marked a new era in marine construction and river navigation; and such others as the Richmond, C. H. Northam, Tremont, Palmyra, Columbia, City of Troy and Grand Republic, for river and sound service; and the ocean steamers City of Mexico, City of Merida, City of Havana, City of Vera Cruz, City of Atlanta, City of Columbia, Villa Clara, Gloria and Trinidad. During the civil war the Englis shipyard was kept especially busy supplying the demands of the army of the North, and the first of the gunboats delivered to the Federal government, the Unadilla, was built in 1864, within a period of forty-eight days. Mr. Englis constructed for use on the Long Island sound the Newport, 340 feet in length, 44 feet beam, and 14 feet depth of hold, which made the trip to Newport in eight hours, a record not beaten even by the gigantic vessels now on that route. Another notable achieve-

ment was the building and launching of the steamboat Columbia in forty-two days. Mr. Englis acquired a large fortune by his industry, and invested it mainly in navigation enterprises. He was a member of the General Society of Mechanics and Tradesmen, and promoted every movement for the welfare

of the working classes. He was married, in February, 1832, to Mary A., daughter of Abram Quackenbush, of New York, and had one son, who succeeded in the management of the shipyard. He died in Brooklyn, N. Y., Oct. 25, 1888.

**ENGLIS, John, Jr.**, shipbuilder, was born in New York city, Feb. 17, 1833, son of John and Mary A. (Quackenbush) Englis. He attended the public schools in New York, but, being in poor health, discontinued his studies at seventeen years of age, and began his career in his father's shipyard. In 1852 he went to Whitehall, N. Y., and there constructed the first steamer (the Canada) for Lake Champ-

lain. The next year he went to Buffalo, and constructed the Western World's Plymouth Rock. In 1854 he joined his father, the firm name being John Englis & Son, and continued business at the yards at the foot of Tenth street, East river, New York city, at which place he assisted in building many steamers, both for the rivers of this country, China, Cuba, South America and the coast trade with Canada. In 1872 the firm moved its yards to their present location at Greenpoint, Brooklyn. Among the steamers constructed by John Englis & Son were the St. John, Daniel Drew, Dean Richmond, Newport, Old Colony, Saratoga, City of Troy, C. H. Northam, Columbia, Grand Republic, Tremont, Forest City, Star of the East, Katahdin, Cambridge, Palmyra, John Brooks; the steamships City of Mexico, City of Merida, City of Havana, City of New York, City of Atlanta and City of Columbia. The steamer Adirondack was constructed under his supervision in 1896. In 1882 the two sons of John Englis, Jr., were admitted to the firm, which took the name of John Englis & Sons; thus three genera-

tions were in business together. After the death of John Englis and William F. Englis the business of shipbuilding underwent a great change, the use of wooden vessels, except for shoal-river navigation, being done away with. John Englis, Jr., retired from the firm in 1892, and has devoted his time to

*John Englis*

*John Englis, Jr.*

the operation of the various lines in which he has held a large interest, as well as various financial institutions and corporations. He is a vice-president and general manager of the Maine Steamship Co., between New York and Portland, Me.; vice-president of the Portland Steamship Co., between Boston and Portland; vice-president of the New Jersey Steamboat (People's) Line, between New York and Albany; vice-president and managing director of the Brooklyn Ferry Co., of New York, operating the ferries at the foot of Broadway, Brooklyn, and Greenpoint avenue, Brooklyn. He has been a director of the 11th Ward Bank of New York for many years; a director of the Brooklyn Heights Railroad Co., Norwalk Steamboat Co. and Eighth and Ninth Avenue Railroad Co.,

New York city; a trustee of the Homeopathic Hospital; a member of the Society of Mechanics and Tradesmen and New York Metropolitan Museum of Art. In 1854 he was married to Jeannette A., daughter of John Carrick, one of the oldest shipbuilders on Lake Erie. He had two sons, one of whom died in 1891, and four daughters.

**ENGLIS, Charles Mortimer**, shipbuilder, was born at Ravenswood, Long Island City, N. Y., Dec. 14, 1857, son of John and Jeannette A. (Carrick) Englis. He attended school at Mt. Washington Institute, New York city, where he was graduated in 1873, and entered New York University in the class

of 1877; but having in view the shipbuilding business, remained in the university but one year, entering his father's shipyard (John Englis, Jr.) in 1874, at the age of seventeen. He soon became so proficient in all branches of the business that, in 1882, he became a member of the firm, composed of his father and grandfather, under the firm name of John Englis & Sons. John Englis, Sr.'s death in 1887 and the retirement of John Englis, Jr., in 1892, left him the sole remaining member of the firm, and the business of shipbuilding was conducted by him under the old firm name of John Englis & Sons. Among the vessels constructed after the reorganization of the firm in 1882 were: the C. H. Northam, City of Columbia, Tremont and Adirondack. The steamer Adirondack was constructed by Charles M. Englis in 1896, with all her fittings, decorations and outfit complete. In addition to the shipbuilding interest, Charles M. Englis has been identified with numerous financial institutions and enterprises. He is president of the Wallabout Bank of Brooklyn; of the Citizens' Steamboat Co., of Troy, N. Y., and of the Brooklyn and Queen's County Suburban Railroad Co., of Brooklyn. He is director in the New Jersey (People's Line) Steamboat Co.; Maine Steamship

Society of Mechanics and Tradesmen; St. Nicholas Society of Brooklyn; trustee of the Homeopathic Hospital of Brooklyn; member of the Metropolitan and Union League clubs and Down Town Association, of New York; of the Hamilton, Oxford, Crescent, Riding and Driving clubs, of Brooklyn; of the Troy Club, of Troy, N. Y.; the Century Club, of Ogdensburg, N. Y., and of the Thousand Islands Club, of Alexandria Bay. He is president of Oak Island Fishing and Gunning Club, of St. Lawrence river, and is commodore of Chippewa Bay Yacht Club. Mr. Englis was married, in 1895, to Maude Louise, daughter of Horace Pratt, of Minneapolis, Minn., who at the time of his death was president of the Minneapolis Mills. They have one son, John Englis, 3d.

**HARDING, Amos Joseph**, underwriter, was born in Morrow county, O., May 2, 1839, son of Chauncey Commodore and Rachel (Story) Harding. He is a descendant of John Harding, who emigrated from England in 1623, and settled at Weymouth, Mass., later joining Roger Williams at Providence, R. I., where he became prominent in the Baptist church. His great-grandfather, Abraham Harding, removed to Orange county, N. Y.; thence to the Wyoming valley, Pennsylvania. His son, Amos, settled at Clifford, Susquehanna co., Pa., in 1800, removing to what is now Morrow county, O., in 1817, and was the father of Chauncey Commodore Harding. Mr. Harding's mother, Rachel Story, was descended from William Story, who emigrated from Norwich, Norfolk co., England, in 1638, and settled at Ipswich, Mass. Her grandfather, Joseph Story, removed from Essex county to Oxford county, Me., late in life, and died there in 1826. Her father, Nehemiah Story, born at Billerica, Essex co., Mass., in 1782, was married to Rachel, daughter of William Low, of Hopkinton, N. H., in 1801. Amos Joseph Harding was educated at Ohio Central College, and removing

to Nebraska City, Neb., was for four years engaged chiefly as a surveyor of government lands; his winters being passed in clerical work and in the study of law. He served in the civil war as judge-advocate of the districts of St. Louis and of North Missouri, and for six months as solicitor for freedmen's courts in the district of Kentucky, Tennessee and North Alabama, during which he established and held in Nashville the first court ever held in Tennessee wherein the black man could testify against the white. The principal battles in which he was engaged were Fort Donelson, Shiloh and Cape Girardeau. He was twice promoted and brevetted for gallant and meritorious service during the war. Mr. Harding built up one of the most successful local agencies for fire and life insurance in the West. In 1868 he accepted a field position with the Home Insurance Co. of New York, and continued with this company in connection with his local business for about four years. In 1872 he accepted the western special agency of the Phoenix of Brooklyn. During the four years he remained with this company its business increased over 400 per cent. in his territory, with a loss ratio of not exceeding forty per cent. Later he became western manager of the Springfield Fire and Marine Insurance Co., whose cash capital at that time, January, 1876, was \$750,000, with total assets

Co.; the Portland Steamship Co.; New York and Norwalk Steamboat Co.; Union Ferry Co., and Brooklyn and New York Ferry Co. He served twelve years in the 7th regiment, N. G. S. N. Y.; is a member of the chamber of commerce; New York

of \$1,390,000; premium receipts amounting to \$605,775. At the present time its capital is \$1,500,000; total assets nearly \$5,000,000, and net premiums over \$2,000,000. To this remarkable growth the western department, under Mr. Harding's management, has very largely contributed. As an underwriter he is conservative, aggressive, and a firm believer in organized coöperation. He was one of the founders of the Union of Western Managers, organized in 1879, and has been vice-president and president of that organization. He took a prominent part in the political affairs of his county and state while residing in Nebraska, and was a delegate to every Republican state convention from 1867 to 1875; was president of the State Soldiers' and Sailors' convention in 1868; was a delegate to the Republican national convention of that year, which nominated Gen. Grant for the presidency, and was commissioner of registration (1868-71). He was a member of the Grand Lodge of the Order of Good Templars in both states, also a representative from Nebraska to the Grand Lodge of North America in May, 1867, at Richmond, Ind., and Baltimore, in 1872. He is a member of the A. F. and A. M.; the Military Order of the Loyal Legion; a life member of the Society of the Army of the Tennessee, of which he has been vice-president; the Illinois Society of the Sons of the American Revolution, and a Knight Templar. Mr. Harding was married at St. Joseph, Mo., Nov. 20, 1864, to Eliza Helen, daughter of James H. and Margaret (Wallace) Cowden. They have three sons and one daughter.

**MILLER, Albion Kendall**, merchant and navigator, was born at Thomaston, Me., April 30, 1835, son of George and Julia (Robinson) Miller, of Scotch-Irish descent. His earliest American ancestor was Noah Miller, who moved from the Massachusetts colony to Maine early in the present century, and served as a major in the revolutionary war. His son, Joel Miller (1774-1849), was long warden of the state prison; state senator (1828), and judge of probate (1836).

Albion K. Miller was six years of age when his father died, and his educational advantages were slight. At the age of thirteen years he shipped as cabin boy on the bark Nimrod, commanded by his uncle, George W. Robinson. On returning, he entered an academy at Thomaston, and later became a student at Comer's Commercial College, Boston, where he completed the course in navigation with honors in 1853. He next shipped on the bark Eglantine for Liverpool, making his return voyage in the Edward Stanley, at its close being promoted third officer. Landing at New Orleans in September, 1854, he was ill for several weeks with yellow fever,

and then working his passage to New York, he shipped as second officer of the Georges, bound for Sydney, Australia. On this voyage they touched at many ports in the south Pacific, China sea and Indian ocean, and after his return to Boston he shipped as first officer on the N. Boynton, in which he made two trips to New Orleans. Later he commanded the same vessel for four years (1858-62); was then commander of the John O. Baker, in the East Indian trade, until 1869. In that year he retired from the sea and joined the commission firm of Ross, Skolfield & Miller, of Liverpool. In 1871 he located in New Orleans, and organized the firm of A. K. Miller & Co., the most extensive shipping agents of that city. Mr. Miller is president of the

New Orleans chamber of commerce; president of the Maritime Association and of the American Shipping and Industrial League, as well as permanent vice-president of the national board of trade. He is a member of the Pickwick and Commercial clubs and an honorary member of the Continental guards and the Washington artillery of New Orleans. On July 2, 1862, he was married to Mary Ellen Leonard, of South Braintree, Mass., who for seven years accompanied him on his voyages. They have one son, George A. Miller, born on the ship John O. Baker in the Indian ocean.

**LYTTON, Henry Charles**, merchant, was born in New York city, July 13, 1846, of English parents. He received his early education in the public schools of New York, and at the age of fourteen was graduated at the Free Academy (College of the City of New York), and entered at once upon a business career. He spent nine months in a law office; then became entry clerk in a wholesale dry-goods house, afterwards occupying the position of book-keeper in a manufacturing concern. He next spent three years in St. Louis with a large retail house, and returning to New York, remained in that city until he was twenty-one years of age, when he went to Michigan, and spent ten years in a retail business in partnership with his brother. After this he returned to New York, where he remained three years more, until he was offered a partnership and sole management of a large retail business in Indianapolis. In 1887 he opened in Chicago what is called

"The Hub," a store devoted entirely to men's and boys' attire, which, after the short period of eleven and a half years, has developed into the largest store of the kind in this country, if not in the world. Although starting this business in what then seemed a poor location, as a proof of Mr. Lytton's foresight it is now the center of the business part of Chicago. He has built up his enormous business by his unique and judicious methods of advertising and modern progressive business methods. Mr. Lytton is a philanthropic and public-spirited man, each summer distributing among the poor large quantities of ice, and for ten years every winter he has given to each of 1,000 of Chicago's poorest families one half ton of coal. He was the first person who offered to subscribe to the World's Columbian exposition of Chicago, taking a large amount of stock in the company. He is a member of the Union League, Washington Park, Hamilton and other clubs of Chicago, and of the National Arts and Lotus clubs of New York city. He is vice-president of the bureau of justice and a life member of the Chicago Art Institute. His only daughter was married to a famous Swiss artist, August Rensiger, who made fine portraits of Pres. McKinley, Vice-pres. Hobart, Pope Leo XIII., and many other celebrities.

**COPELAND, Lucius Frederick**, lawyer, author and lecturer, was born in Rochester, Monroe co., N. Y., July 20, 1841, son of Lloyd and Olive (Rowley) Copeland. His first American ancestor was Lawrence Copeland (1589-1699), whose son William, married Mary Bass, granddaughter of John Alden and Priscilla Mullens, who came to America in the Mayflower. The family has been remarkable for longevity and physical and in-

*Henry C. Lytton*

*A. K. Miller*

L. F. Copeland

lectual vigor. It is recorded that Joseph, son of William, was the father of twelve children, whose united ages at death aggregated 1,032 years. Several of the family won revolutionary fame. Mr. Copeland's father was a soldier in the Mexican war, and was killed at the battle of Buena Vista; his mother was the daughter of Jeduthan Rowley, whose father was one of the earliest settlers of western New York. He was "bound out" when nine years old to a distant relative, who proved to be a severe and tyrannical master, and until 16 years of age led a life of toil and bitter privation, with only three months' schooling in each year. Unable longer to endure the hard life he was leading, he ran away, walking over 200 miles to the

plantation of a maternal great uncle, where he remained, working days and studying nights, in his eagerness to acquire an education. In two years, by incessant toil, he was able to enter the University of Virginia. The civil war intervening, he left the university and at the wish and through the liberality of his uncle and patron, he went abroad, traveling for two years and a half through all parts of Europe, China, Japan and other Oriental countries. Returning to America in 1863, he entered the Union army,

serving on the staff of the military governor of the District of Columbia. In 1865 he removed to St. Louis, Mo., and engaged in business for a year. In 1866 he went to New Mexico with a party of explorers, from which he returned without a dollar. In 1871 he went to New York, and engaged in journalism. He was for a time special correspondent of the New York "Post," New York "Sun" and Chicago "Times," traveling through the South, writing letters on "Reconstruction" events and other topics. Meanwhile having studied law, he was admitted to the bar in 1874, and in a marvelously short time found himself possessed of a lucrative practice. In 1876 he opened a law office in Berrien county, Mich., and began an active career as lawyer and politician, soon becoming a recognized leader of his party. His activity in the campaign of 1876, making over eighty speeches, and controlling and directing conventions, drew to him the notice of several leading Indiana politicians, and in 1878 he removed to South Bend, Ind. Here, as elsewhere, he at once became prominent, gaining a remunerative law practice, and attracting attention as one of the ablest stump speakers of the state, his speeches being models of conciseness, powerful logic and fascinating eloquence. During the prevalence of the yellow fever in 1879, being desirous of aiding in the work of sending relief to the stricken people of the South, he delivered a series of lectures in southern Michigan and northern Indiana for their benefit. This drew attention to him as a most captivating platform orator and lecturer, and in 1880, at the solicitation of Schuyler Colfax, his friend, and others, he was induced to abandon the law for the lyceum. His success was instantaneous and pronounced, and within a year he found himself among the most famous of the lecture guild, having more calls to lecture than he could possibly answer, and for the many years since has never been able to fill all the engagements asked for by lecture associations and committees throughout the country. Col. Copeland is

Vol. IX—31.

considered one of the most popular, witty and instructive lecturers in America, and is known from the Atlantic to the Pacific to all lecture-going people. In his nineteen years of lecturing, ending in 1899, he had delivered 3,964 paid lectures, not to mention hundreds of addresses besides. His style is at once logical and convincing, and yet vastly entertaining; of wide and varied experience, of ripe scholarship and vast information, familiar with social life and customs of peoples of all lands, his subjects are well chosen; he instructs as well as entertains. What conduces largely to his popularity besides, no doubt, is his great and rich fund of humor and anecdote, enlivening his discourses, while in no wise detracting from their usefulness. His lectures are of high moral tone as well. He is the author of many valuable newspaper articles, widely read in former years; also of several choice productions, both of prose and poetry, among them, "Observations of a Talking Pilgrim"; "Sic Transit Gloria Mundi"; "Centennial Hymn"; "The Tribe of Samuel," and others. He was married to a daughter of William Mead, of Berrien county, Mich., and since 1883 has resided in Harrisburg, Pa. They have one son and one daughter.

**SOUER, Louis Joseph**, soldier and merchant, was born in New York city, Nov. 22, 1844, son of Conrad and Maria (Stater) Souer. He was educated at a public school, and began business life as a clerk in New York. On the outbreak of the civil war he enlisted in the 13th New York regiment, and saw service in Virginia and West Virginia. On the return of peace, he settled in New Orleans, and engaged in the general produce business. He has been a delegate to all Republican state conventions and nearly all the national conventions since 1870, and is now the oldest surviving member of the state central committee, on which he has served continuously since 1868. He represented the parish of Avoyelles in the general assembly for eight years (1870-78). In 1872 he was appointed a brigadier-general and commanded the 3d brigade of the Louisiana S. N. G. during the turbulent outbreaks and rioting of that period. In 1874 the governor of the state appointed him a commissioner to the Vienna exposition. In 1878 Pres. Hayes appointed him appraiser at the port of New Orleans. He was re-appointed by Pres. Arthur in 1882, and filled the office until 1886, then resigning on the accession of Pres. Cleveland's appointee. In 1893 he was selected during the Harrison administration as chief deputy collector of internal revenue to carry out the provisions of the sugar bounty law. Upon the repeal of this law, the planters, believing it to be retroactive, so far as the standing crop was concerned, employed Gen. Souer as their attorney to work up the necessary data to secure from congress the amount due them. He established the sugar bounty bureau, a stupendous undertaking, but the result was highly successful. Since 1896 Gen. Souer has been president of the Sugar Bureau Weighing and Testing Co., Ltd., and was among the first to find a market for the residuum of centrifugal molasses, which is now so extensively used throughout the North and West, in the manufacture of vinegar and canned goods. In 1898 Pres. McKinley appointed him collector of internal revenue, which position he now holds. He was married, in 1869, to Susan, daughter of Capt. Charles Foster of Mobile, Ala.

**ROBINSON, Charles Seymour**, clergyman and author, was born at Bennington, Bennington co., Vt., March 31, 1829. His grandfather was one of several brothers, natives of Massachusetts, who aided in founding Bennington, and the family claimed descent from John Robinson, of Leyden, pastor of the Pilgrims when in Holland. He prepared for college at Union Academy, East Bennington, was graduated at Williams in 1849, then taught school for a year at Holyoke, Mass., and was principal of Washington Academy, Cambridge, N. Y., for another year. He spent a year in study at Union Theological Seminary, New York city; two years at Princeton Theological Seminary, and on June 14, 1855, was ordained by the presbytery of Troy, N. Y.,

and installed pastor of the Park Presbyterian Church of that city. In 1860-68 he was pastor of the First New School Presbyterian Church, Brooklyn, N. Y., formerly under the charge of Dr. Semmel H. Cox. He served his flock with great acceptance until 1868, when the pastoral relation was dissolved in order that he might go to Europe with his wife, whose health was impaired. He was invited to take charge of the American Chapel in Paris, and to organize its congregation into a church, and he left this post of duty only when the city was besieged by the German army. Returning to New York city, he became pastor of the Eleventh Pres-

byterian Church. The congregation, originally worshipping in Fourth street, removed to Fifty-fifth street, and finally located on the corner of Madison avenue and Fifty-third street, where it erected a handsome building, to commemorate the union of the old and new school branches of the Presbyterian church. The edifice, dedicated in 1872, cost \$160,000. Thereafter it was known as the Memorial Presbyterian Church. Although its pastor was poor in his youth, and obtained his education with difficulty, he gave, during his pastorate, fully \$70,000 toward defraying the debt incurred by his congregation, while his gifts to other religious and charitable purposes during that period were twice as great. In 1871 he returned to Paris to reorganize the American Church, and spent three months in this service. In 1887 he resigned the pastorate of the Memorial Church, but preached nearly every week in different churches and edited a journal called "Every Thursday." He soon received a call to the pastorate of the Thirteenth Street Presbyterian Church, and was installed April 26, 1891. As the congregation was financially weak he would accept no salary. "Every Thursday" was united with the "Christian at Work," but Dr. Robinson continued in the editorial chair. In 1892 he became pastor of the New York Presbyterian Church, at 128th street and Seventh avenue, and ministered there until 1898. Dr. Robinson's preaching, like his writing, was both graceful and vigorous. In the department of homiletics he won as high praise as in that of hymnology. He was strong as a pastor as well as a preacher, his genial, inspiring manners making him universally welcome. Through extended tours in Egypt and the Holy Land he acquired a thorough and varied amount of information that was worked up into lectures. In 1876-77 he was editor of the "Illustrated Christian Weekly." He was known to the church at large by his many compilations of hymns for church use. The first collection for his congregation

in Brooklyn was "Songs for the Church" (1862). Of "Songs for the Sanctuary" (1865) more than 500,000 copies were sold. Among others were: "Psalms and Hymns" (1875); "Calvary Songs for Sunday Schools" (1875); "Spiritual Songs for Church and Choir" (1878); "Spiritual Songs for Social Meetings" (1881); "Spiritual Songs for Sunday Schools" (1881); "Laudes Domini" (1884); "New Laudes Domini" (1892). He also published "Short Studies for Sunday-School Teachers" (1868); "Bethel and Pennel" (1873); "Studies in the New Testament" (1880); "Studies of Neglected Texts" (1883); "Sermons in Songs" (1885); "Sabbath Evening Sermons" (1887); "The Pharaohs of the Bondage and the Exodus" (1887); "Simon Peter, His Life and Times" (2 vols., 1888). In 1867 Hamilton College conferred on him the degree of D.D., and Lafayette College honored him with the degree of LL.D. in 1885. Dr. Robinson was married at Troy, N. Y., in 1858, to Harriet Read Church, who died in 1896. One of his daughters is the wife of Rev. Franklin Gaylord, pastor of Trinity Congregational Church, Tremont, N. Y. He died in New York city, Feb. 1, 1899, and was buried at Bennington, Vt.

**GALES, Joseph**, editor, was born at Eckington, Yorkshire, England, in 1761. He came of poor, but honest and respected parents, and at the age of thirteen was apprenticed for a term of seven years to learn the trade of bookbinding and printing. On account of the cruelty of his master he ran away, and later apprenticed himself in Newark. Having mastered the trade he established himself at Sheffield, Yorkshire, as a printer and publisher, and in 1787 issued the first number of the Sheffield "Register," a weekly journal, which soon won esteem and a wide circulation in the West Riding of Yorkshire. He was aided in his editorial work by James Montgomery, the poet, then a young man. When in 1782 parliamentary reform became an issue in English politics, Gales espoused the cause with great enthusiasm, advocating by tongue and pen annual instead of septennial parliaments and manhood suffrage. Serious riots occurred, as a result of which many of the agitators were exiled or imprisoned; some fled to America and others were executed. An insurrectionary letter, written by one of his printers, having been traced to his office, Gales found it necessary, in 1794, to take refuge on the Continent. He went first to Amsterdam and thence to Hamburg. The English establishment was sold to Montgomery, and although the paper reappeared in a milder form as "The Iris," it did not escape the odium attached to the "Register," nor its editor a state prosecution. Sailing for America in 1795, Gales was captured by privateers, but released through the address of his wife and landed in Philadelphia. There he obtained employment as a printer, and his skill in making shorthand reports of the congressional debates, previously but poorly reported, created a sensation and made him prominent. He purchased the "Independent Gazeteer" from the widow of Col. John Oswald, and conducted it successfully until in 1799 he removed to Raleigh, N. C. His Philadelphia paper was sold to Samuel Harrison Smith, who in 1800 followed the federal government to Washington, and there continued it as the "National Intelligencer." Immediately on his removal to Raleigh, Gales founded the Raleigh "Register," the first number of which appeared Oct. 22, 1799. By constant merit, sober sense and moderation he soon won public confidence and respect, and his paper remained for two generations a power in the state. About 1834 he removed to Washington, D. C., where he was chief manager of the affairs of the American Colonization Society. Gales was married in 1784 to Winifred, daughter of John Marshall, of

*Chas. S. Robinson*

Newark-on-Trent. Their eldest son, Joseph Gales, Jr. (1786-1860) was editor of the "National Intelligencer" for fifty years. His third son, Weston R. Gales, succeeded to the management of the Raleigh "Register," which passed at his death, in 1848, to his son, Seaton Gales (1828-1878). It survived the civil war, but was suspended about 1868. Joseph Gales died in Raleigh, N. C., Aug. 21, 1841.

**HOPPIN, Augustus**, caricaturist and illustrator, was born in Providence, R. I., July 13, 1828, son of Thomas Coles and Harriet Dunn (Jones) Hoppin. His father, a leading merchant of Providence, was the son of Capt. Benjamin Hoppin, of the Continental army; his mother was a daughter of Capt. William Jones, also of the Continental army, of the marine corps of the Continental navy and governor of Rhode Island (1811-17). His was an artistic family; his brother, William J. Hoppin, was one of the founders of the Century Association of New York, an author on art subjects, and (1876-86) secretary of the U. S. legation in London; another brother, Thomas Frederick, designed the chancel window of Trinity Church, New York, and modeled the first piece of sculpture ever cast in bronze in the United States; a third brother, Washington, possessed great power as a caricaturist, but turning his attention to medicine, became a noted physician of Providence. Augustus Hoppin received his early training in the schools of Providence, and was graduated at Brown University in 1848. He at once entered the Harvard Law School, and after completing the course was admitted to the Rhode Island bar. He soon abandoned practice, however, and devoted himself to caricature drawing, for which, from an early age, he had shown marked talent. Visiting Europe in 1854 and 1855, he broadened and developed his artistic tastes, and gathered material for delightful books of travel with original illustrations. Thereafter he devoted his attention to illustration, producing drawings which at once attracted the attention of artists. He had known George William Curtis from childhood, and when the "Potiphar Papers" were published, the portraits of Mr. and Mrs. P. and Kurze Pascha, with the rest of those delightful character sketches, were drawn by Mr. Hoppin, who afterwards illustrated others of this series. For "Young America," the first attempt in this country at a rival of London "Punch," Mr. Hoppin furnished some of the most powerful illustrations; as also to its successor, "Yankee Notions." He was a frequent contributor to "Putnam's" and other magazines. When "Putnam's Monthly" was merged into "Emerson's Magazine," he designed what was then considered one of the most beautiful title pages ever produced in an American book. His peculiar outline drawings are best seen in the "Autocrat of the Breakfast Table," and Lowell's "Zeke's Courtship." He was also one of the earliest contributors to "Harper's Weekly," and much of his best work is found there. He illustrated the "Life and Sayings of Mrs. Partington," "Knitting Work by Ruth Partington," and "Jubilee Days," which was published during the great Gilmore peace jubilee in Boston. As an author, his first effort was "Carrot Pomade," with illustrations (1864). His European sketch books bore the titles: "On the Nile" (1871); "Ups and Downs by Land and Water," (1871), and "Crossing the Atlantic" (1872), and he was also the author of an anonymous romance, entitled "Married for Fun," and of some books for children, including "Two Compton Boys" and "Recollections of Auton House." Perhaps one of his most characteristic works was his illustrations to "Old Grimes,"

in which the humorous and chivalrous tenderness of his personality were finely blended. Mr. Hoppin was a gentleman of exquisite refinement, his bearing

marked by a courtliness and rare grace of manner. He died in Providence, R. I., April 1, 1896.

**GUINEY, Louise Imogen**, poet and essayist, was born in Boston, Mass., Jan. 7, 1861, only child of Patrick Robert and Janet M. (Doyle) Guiney. Her father, who was a lawyer by profession, served gallantly in the Federal army through the civil war, and in 1864 was brevetted brigadier-general of volunteers. At the time of his death (1877), caused by a terrible wound in the forehead received at the battle of the Wilderness, he was register of probate and insolvency for the county of Suffolk, Mass. Miss Guiney's education was obtained in public and private schools in Boston; she was graduated at Elmhurst Convent of the Sacred Heart in Providence, R. I., and continued her studies under tutors at home. From childhood old English literature has had a peculiar fascination for her, and her own writings exhibit in their buoyant, healthful tone the influence of the Elizabethan authors, although far from being imitations. Long before the age when aspirants for literary honors begin to publish she had produced essays and verse of marked originality, and as soon as she chose to send out her work for publication it was accepted by such periodicals as "The Atlantic Monthly" and "Harper's Magazine." With the exception of a few years spent in England, Miss Guiney has passed most of her life in Boston and its suburb, Auburndale, and during 1894 she had charge of the post-office at the latter place. She has published "Songs at the Start" (1884); "Goose-quill Papers" (1885); "The White Sail and Other Poems" (1887); "Brownies and Bogies" (1888); "Monsieur Henri: a Foot Note to French History," a memoir of the Vendean hero, Henri de la Roche-Jacquelin (1892); "A Roadside Harp" (1893); "A Little English Gallery" (1894); "Lovers, St. Ruth's, and Three Other Tales" (1896); "Patrim" (1897); "England and Yesterday"; "A Book of Short Poems" (issued in London only, 1899), and "The Martyrs' Idol," a collection of poems (1899). She has edited "The Divine Comedy" of Dante, translated by T. W. Parsons (1893); "James Clarence Mangan: His Selected Poems, with a Study by the Editor" (1897); Matthew Arnold's poems in the Riverside Literature series, and has made one translation: "The Secret of Fougereuse" (1898). "This variable poet has many moods," writes one of her friends. "Her songs change with the impulse swaying her heart. She is a marvelous mixture of tenderness and tremendous power of gaiety and gravity. She is changeable as a chameleon, keeping her admiring public always on the qui vive as to what will be her next mood, for no matter what it may be, Miss Guiney has always the 'courage of her convictions.'"

"A Roadside Harp" is full of delightful surprises, full of flashing sunshine and passionate tears, betraying her effervescent Irish blood. She is all 'fire and dew.' Her poems are alive with feeling, betraying every heart beat of the writer, awakening a quick reply in the soul of the reader." Miss Guiney is fond of outdoor recreation and sports, long walks with a friend or a dog, canoeing, snowshoeing, in short, of anything that brings her into touch with nature. She is familiar with several languages, and has unusual gifts as a letter writer.

**ABBOT, Theophilus Capen**, educator, was born in Vassalboro, Me., in 1826. He received his early educational training in the public schools of his na-

Louise Imogen Guiney.

tive state, and at the age of fifteen entered Waterville College, Waterville, Me. (now known as Colby University). When he was graduated, in 1845, he took a course at Bangor Theological Seminary, but afterward relinquished his intention of preaching. For a short period he taught in an academy, then for several years in a seminary in northern Maine, spending his vacations usually at Waterville in graduate study. After this he went abroad for a year, and in 1856 returned to Michigan, where he taught for a few months at Berrien Springs, Berrien co., afterwards accepting the principalship of the Ann Arbor

*J. C. Abbot*

high school, one of the important educational institutions in Michigan. During his first year at Ann Arbor he was chosen to the chair of English literature at the Agricultural College, founded in 1857, in Lansing, Mich.; and in the following year he entered upon his duties in this college, where the remainder of his great work, extending over nearly thirty years, was to be done. In 1866 he was transferred to the chair of logic and mental philosophy, which he held until his death. During 1858-61 he was the treasurer of the college, and during 1861-63 was the secretary of the board of control. In 1863

he was unanimously elected to the presidency of the college, which place had been left vacant by the resignation of its first president, Joseph R. Williams, in 1859, and for more than twenty-five years Mr. Abbot, through all the struggles of the college from poverty to wealth and influence, controlled its policy and guided its fortunes. His college work was most confining and arduous, and for the much needed rest he took his family to Europe, in 1874. In 1885 failing health compelled him to withdraw from the presidency, retaining only the position of professor of logic and mental philosophy. To him more than to any other man belongs the honor of placing this institution in the foremost rank of the schools of its day, and his name will always be identified with the college as its molding spirit. Dr. Abbot was married, in 1860, to Sarah Merrylees, who, in 1858, was preceptress of the Ann Arbor High School. They had one son and one daughter. He died, Nov. 7, 1892.

**MADOCKAWANDO**, Penobscot chief, was born in Maine about 1630, and was an adopted son of Assuminsqua, a chief of the Kennebecs, whose territory lay east of the Penobscot river, within the limits of the colony of Acadia. His tribe was at peace with the English colonists until exasperated by depredations wrought on their lands. Then envoys dispatched to confer on the matter were imprisoned and their arms confiscated, an action which still further aggravated the ill feeling. At a council of his chiefs with the English, the father said: "It is not our custom, when messengers come to treat of peace, to seize upon their persons, as the English have done with fourteen of our men, setting guard over them and taking away their guns. This was the cause of our leaving both our fort and our corn, to our great loss." The act was disclaimed by the English, who said the perpetrators were not of them; but though the English proclaimed peace with the Penobscots, the first chief scarcely understood as much. Madockawando asked: "What are we to do for powder and shot when our corn is consumed? What are we to do for winter supplies? Are we to perish, or abandon them and fly to the French?"

The English commissioners replied: "We will do what we can with the governor. Some might be allowed for necessity." Madockawando replied: "We have waited, and now expect yes or no." The English were afraid to sell them powder, for they suspected it would go to the western Indians, and as it was not in their power to give it, the council was ended, and hostilities followed. At the close of the war of 1675 the Penobscots had taken sixty English captives. As Madockawando's ambassador was in captivity the war was continued, though his prisoners were treated well. During the war between the French and English he was urged on to hostilities by the former. In 1691 he went on an expedition to York with 250 men, some of whom were Canadians. He laid York in ashes, killed seventy-five, among them Rev. Mr. Dummer, and took eighty-five prisoners. Some escaped to the garrison, but the captives were taken to the wilderness. Madockawando then made an attack on the garrison, charged it, but lost many. He then sent a flag demanding capitulation. This was refused, and the Indians, having spent all their powder, retired at night. In 1736 an attempt was made to prove that Madockawando was not the chief sachem of the Penobscots, which during his lifetime no one questioned. One of his daughters became the wife of Baron de St. Castine. After Madockawando's death and the war between the French and English had ceased the eastern chiefs submitted. No warrior was ever more humane than Madockawando when he commanded. His enemies have been his biographers, and their accounts of him show that he entered into the war with the English with great reluctance; but, once at war, proved to be no common foe. It was the repeated depredations of the whites that brought him to the front. His preservation and liberation of Thomas Cobbet were humane. He also saved the life of Mrs. Dummer, the wife of Rev. Mr. Dummer, at York. Judging from the amount of money paid him for sundry tracts of land, he seems to have had control of the entire Penobscot territory. The fierce Moxus, his successor, though another chief, Wmoggonet, was named, became the war chief of the nation. Madockawando died in 1698.

**ROBERTS, Robert Richford**, M. E. bishop, was born in Frederick county, Md., Aug. 2, 1778. His father, of Welsh ancestry, was a poor farmer, who left the plough to fight in the revolutionary war, and was with Lafayette at the battle of Brandywine and with Washington at White Plains. His mother was of Irish descent, and owing to various causes, chiefly financial, young Roberts' education was derived mainly through her, though he had some eight months' regular schooling. In 1785 the family removed to Ligonier valley, Westmoreland co., Pa., and there, at the age of fourteen, he was seriously affected by the preaching of a Methodist exhorter, although he had been taught to regard the sect with disapprobation, his parents being members of the Church of England. He was his father's chief dependence in the cultivation of the farm, but his work was accompanied by serious meditations and study. Following the promptings of the Spirit, he became a class leader, and not long after began to exhort. At the age of twenty he was profoundly affected by the remarkable vision of a local exhorter concerning him, the preacher having beheld a divine Presence, which declared that Roberts was chosen to proclaim the Gospel. The young man was obedient to the heavenly vision, and, clad as he was in the garb of a backwoodsman, journeyed a number of miles to preach his trial sermon. This amazed his hearers by its eloquent language, and was said to be worthy "of gray hairs and broadcloth." From that time on he was popular wherever he appeared. In 1802 he was licensed to preach at Holmes' meeting-

house, near Cadiz, O., and about that time was admitted to the Baltimore conference and put in charge of a circuit, including Carlisle, Pa. He continued his efforts at self-culture, and in 1804 a friend said of him: "His moral character is perfect and his head a complete magazine." He was elected bishop May 14, 1816, and then emigrated with his family—he had married at the age of twenty—to the wilds of Indiana, where a log cabin had been erected for him. When not journeying from place to place, he devoted himself to the cultivation of the soil, and, because of his industry and frugality, was able to some extent to enjoy the luxury of giving. At the time the movement for lay representation in the general conference began to make headway, resulting in the formation of the Methodist Protestant church, there was much bitter denunciation of the bishops as autocratic and usurping; but no railing accusation was brought against Bishop Roberts, whose good sense and deep piety disarmed all prejudice. He was called by the Indians "the grandfather of all the missionaries." In his simplicity, dignity and earnestness he was equally at home in the wigwags of savages and in the pulpits of metropolitan cities. He died in Laurence county, Ind., March 26, 1843, and was buried on the grounds of De Pauw University. A "Life," by Rev. Charles Elliott, appeared in 1853.

**TERRILL, William Rufus**, soldier, was born in Covington, Va., April 21, 1831. He was appointed to the U. S. Military Academy in 1849, entering in July of that year, and was graduated in the class of 1853. Although assigned to the 3d artillery, he remained at the academy, serving as assistant professor of mathematics until July, 1854. He was on duty in Kansas, under Col. E. V. Sumner, during the troubles of 1854-55, and from 1855 to 1861 was assistant in the U. S. coast survey. On the outbreak of the civil war he was promoted captain, and assigned to the 5th artillery, Aug. 14, 1861. His first battle was Shiloh, where his battery, part of the 6th brigade, Col. W. H. Gibson, 2d division, Gen. A. D. McCook, in the army of Ohio, under Gen. Buell, occupied the extreme left of the line. The success of the Federal forces was only assured when Terrill's battery of 24-pound howitzers, which had just arrived from Savannah, Tenn., dashed up to the support of Grant's faltering line, and with two other batteries turned the Confederate right, thus saving the day. This gained for him a promotion as brigadier-general of volunteers on Sept. 9, 1862. His next battle was Perryville, Oct. 8, 1862, when he commanded a brigade in Gen. James S. Jackson's 3d division of Gen. McCook's corps, a command largely made up of raw troops. He was opposed by Gen. B. F. Cheatham's division, which opened fire and followed every advantage, soon driving Jackson's division from the field; but not until Gen. Jackson had fallen at the head of his troops, while vainly endeavoring to rally them, and Gen. Terrill was mortally wounded. His brother, Gen. James Barber Terrill, fought on the Confederate side in the civil war, and was killed at Bethesda Church, Va., May 31, 1864. Gen. William R. Terrill died at Perryville Ky., Oct. 8, 1862.

**ROCHESTER, Nathaniel**, patriot and pioneer, was born in Westmoreland county, Va., Feb. 21, 1752, of English descent. His ancestors had lived for three generations in Virginia, but his parents removed to Granville county, N. C., in 1763. There in 1768 the son became a clerk in Hillsboro, and at the age of twenty formed a business association with John Hamilton, who was afterwards British consul in the Middle States. He was in 1775 a member of the committee of safety of Orange county, N. C., where it was his business to encourage the revolutionary spirit, procure arms and ammunition, make collections for Boston, which was

then blockaded, and prevent the use of East India teas. In August, 1775, he was a member of the provincial congress at Hillsboro, and was appointed major of militia, paymaster to the minute men and militia and a justice of the peace. He was major and paymaster in February, 1776, in the Moore's creek campaign, which resulted in the defeat and capture of Gen. Alexander McDonald, the royalist champion among the Scotch Highlanders of the upper Cape Fear, thus crushing the Tory element until the state was invaded by Cornwallis in 1780-81. In April, 1776, Rochester was chosen a member of the provincial congress, which met in Halifax to form a constitution for the state, but, as is well known, this work was transferred to the congress at the same place in November following. He was also a member of this body, and served on several committees. In May, 1776, he presented a report with bills of indictment against the Tory leaders of the state, including those captured at Moore's creek. By legislative appointment, in 1777 he became a member of the committee to manage the iron works, that had then passed into the state, and earnest efforts were made to manufacture arms for the state troops. Rochester journeyed by wagon to Pennsylvania to get bar iron for the factory, and a report made the same year depicts the difficulties under which the patriots labored. He was deputy commissary general in 1776; commissioner to buy provisions in 1776 and 1779, and as such visited most of the seaport towns in Virginia and North Carolina to procure military stores and clothing for the army; was treasurer of the Hillsboro district in 1779; clerk of the court of Orange county in 1778, and a member of the assembly in 1777 and 1779. Meantime, in 1778, he had entered into a business partnership with Col. Thomas Hart, father-in-law of Henry Clay, but on the British invasion of the Carolinas in 1780 they removed to Hagerstown, Md. Later a business establishment was opened in Philadelphia, but the partnership being dissolved, Rochester settled in Hagerstown, where he established nail and rope factories, served in the Maryland assembly, and as postmaster, judge of the county court, and as presidential elector in 1808. In September, 1800,

with Col. William Fitzhugh, Maj. Charles Carroll and Col. Hilton, he made a horseback tour of the Genesee country, of western New York, where the party made large purchases of land near Dansville, in Livingston county. In 1802 Col. Rochester purchased the Allan Mill tract, covering a part of the site of the present city of Rochester, and in May, 1810, closed his business in Hagerstown and removed to Dansville, N. Y. There he built and conducted saw, flour and paper mills and cultivated an extensive farm. He removed in 1815 to Bloomfield, in Ontario county, and in 1818 took up his residence on the site of the present city of Rochester, then known as Falls Town. He was a presidential elector in 1816 and in January, 1817, was secretary to a convention held in Canandaigua which urged the construction of the Erie canal; was the first clerk of Monroe county, which he had been instrumental in forming; was a member of the assembly, and in June, 1824, became president of the first bank in Rochester. In 1788 he was married to Sophia daughter of William Beatty, of Maryland. He died in Rochester, N. Y., May 17, 1831.

**BEAUMONT, John G.**, naval officer, was born in Pennsylvania, Aug. 27, 1821. He entered the navy as midshipman, March 1, 1838, at the age of seventeen. By his diligence and prominent abilities he was advanced, until at the end of thirteen years (1851) he had risen to be master; was promoted lieutenant, Aug. 29, 1855; commander, in July, 1862, and captain, in 1872. He commanded the *Arcoostook*, of the North Atlantic blockading squadron, in the terrific encounter with the Confederate batteries at Fort Darling; was attached to the South Atlantic squadron in 1862-63, and engaged, as commander of a monitor, in attacking the fortifications in Charleston harbor. He also took a prominent part in the capture of Fort Wagner. He was then appointed to command the steamer *Mackinaw*, of the North Atlantic squadron, in both the attacks on Fort Fisher, and his vessel suffered severe injuries from the enemy's shot and shell. Captain Beaumont died Aug. 2, 1882.

**HASWELL, Charles Haynes**, engineer and author, was born in New York city, May 22, 1809, son of Charles and Dorothea (Haynes) Haswell. His father was a native of Dublin, by profession in the diplomatic service; his mother was a daughter of Richard Haynes, of Barbadoes. The Haynes family had been royalist gentry, adherents to the cause of Charles I., and, after the battle of Worcester, settled in Barbadoes, where they distinguished themselves in the leading social and political circles. Mrs. Haswell had three brothers—Hon. Robert Haynes, speaker of the house of assembly of Barbadoes and lieutenant-general of the royal forces on the island; Edmund Haynes, a planter; and Capt. Henry Haynes, of the royal navy. Charles Haynes Haswell received a classical education at academies of Jamaica, L. I., and New York city, before entering upon a course of training which fitted him for the profession of a marine engineer. He entered the service of the U. S. navy as its chief engineer in

1836; was on active duty at home, on the seas, and in Europe, Africa and South America, and designed and superintended the construction of some of the first steam vessels ever used in the U. S. naval service. The first steam launch ever completed was designed and constructed by him in 1837. In 1845, he was commissioned engineer-in-chief. He remained in the naval service for fifteen years; then retired in 1851, and in New York city entered upon a successful career in the profession of marine engineer, to which he added, in 1852, that of civil engineer. In originality of conception and thorough knowledge of his difficult profession he has excelled, and his many achievements have brought him recognition from European as well as American sources. He served as engineer on the New York city board of health, and as a trustee of the Brooklyn bridge. In 1844, he introduced an important innovation by first applying zinc to prevent oxidization in marine boilers and in the holds of iron vessels. In recognition of his scientific achievements, Emperor Nicholas of Russia presented him, in 1853, with a diamond ring. He took part in civil politics in New York, serving on the common council from 1854 until 1858, the last year as president. During the civil war he re-entered the naval service; was attached to the expedition of Gen. Burnside to North Carolina, in 1862, as chief engineer, and was present at the bombardment and capture of Roanoke Island and at other

naval events of this campaign. Mr. Haswell published, in 1843, an "Engineer's Pocket Book," which acquired a reputation in America and Europe, and in 1898 had run through sixty-two editions. It was followed by "Mensuration" (1860); "Mechanics' Tables" (1862), and "Reminiscences of an Octogenarian" (1897). He was one of the earliest members of the American Society of Civil Engineers; the Institution of Civil Engineers and of Naval Architects, of England; the Engineers' Club, of Philadelphia; of the New York Academy of Sciences; is an honorary member of the Boston Society of Civil Engineers and the American Society of Naval Engineers, and corresponding member of the Society of American Institute of Architects and the New York Microscopical Society. He is now consulting engineer of the board of public improvements of New York. He has taken an active interest in yachting, and served for many years as chairman of the regatta committee of the New York Yacht Club. He is also a member of several social and political clubs. He was married, in 1829, to Ann Elizabeth Burns, of New York, and has three daughters and three sons.

**HOLT, Dan**, manufacturer and merchant, was born in East Haven, Conn., in 1802, son of Philemon and Desire (Smith) Holt. His father was a farmer, and his mother a daughter of Benjamin Smith, of East Haven. He was of Puritan and revolutionary stock, being of the sixth generation from William Holt, who settled in New Haven in 1644. His grandfather, Dan, from whom he got his singular name, bore arms in the revolution. Dan Holt was educated in the schools of his native town, and about 1820 entered active life as a dealer in hardware. He went to Baltimore about 1838, and bought the then secret of hermetically sealing provisions in cans for long voyages, by the process now universally carried on. With this secret, he came into the possession of a small cannery employing a score of men; but soon, recognizing that there was a wider field for the trade in oysters, began shipping them, packed in ice, to the West. Thus he became the pioneer in the great industry which has so enormously developed in Baltimore. His business rapidly grew to large proportions, employing several hundred men in the Baltimore works; in the wagon express across the Alleghenies, between the termini where the mountains then interrupted the Baltimore and Ohio railroad, and at various distributing points throughout the West. The industry Mr. Holt founded was an important factor in effecting the extension of the railroad over the mountains; but, within a year after that result had been accomplished, an accident on the railroad brought him to his death in the very region his wagons had often safely traversed. He was but fifty years old, and just entering upon the enjoyment of enviable results from the great industry he had built up, and of the respect of the community it has so much benefited. One peculiarity of his business genius was that it required no time for reflection. His answer to any proposition concerning his large and varied interests was immediate, and generally correct. Like many men of large enterprise, he had a large heart—was very charitable and public-spirited, and was greatly beloved by his many employees. Mr. Holt was married, in 1838, to Ann Eve, daughter of Christopher Siebold, of New Berlin, Pa. They had seven children, four sons and three daughters. One of the former is Henry Holt, the widely known publisher and writer of New York city. Mr. Holt died, March 27, 1853.

**HOLT, Henry**, publisher and author, was born in Baltimore, Md., Jan. 3, 1840, son of Dan and Ann Eve (Siebold) Holt. His father, a man of rare enterprise and ability, was the founder of the Balti-

*Chas. Haswell*

more business of canning and transporting oysters to the West, now such a vast industry in that city and its immediate suburbs. Henry Holt was educated for a few years in schools near his native city, but longer at Gen. Russell's in New Haven, and, entering Yale College, was graduated A. B. in 1862. He then read law in the Columbia Law School, New York city, being graduated in 1864. His intention of coming to the bar seems, however, to have been relinquished before the completion of his course of study, for, while still a student, he embarked in the publishing business as part owner with George P. Putnam in the "Artist's Edition" of Irving's "Sketch Book." Later, he purchased a part interest with Mr. Putnam in the "Rebellion Record," a book which enjoyed wide popularity, and was the first to bear Mr. Holt's name as publisher. In 1866, he formed a partnership with Frederick Leyboldt, which continued for five years, under the style of Leyboldt & Holt, being succeeded by Leyboldt, Holt & Williams, then by Holt & Williams, until 1873, when it assumed its present form, Henry Holt & Co. Meantime, Mr. Holt has been continuously active as a writer, editor and translator. His first work was a translation of Edmond About's "The Man with a Broken Ear" (1867). He has since written considerably on social and economic matters for the "Forum" and other magazines, and is also author of some anonymous work which has passed through several editions. He was very active in promoting international copyright, by addressing the senate committee and publishing several articles in the periodicals. He is a member of the Century, University, City and Yale clubs, the Sons of the Revolution, and the leading art and scientific associations of New York. He organized the important library of the University Club, and is a trustee of the Geographical Society and the University Settlement Society, of which he was chairman during its first four years. Mr. Holt is a gentleman of great charm of manner and scholarly tastes, and has a deep appreciation of literary and artistic excellence. At his home in New York and his country residences at New Rochelle, N. Y., and Burlington, Vt., he has entertained some of the most prominent authors, artists and educators of the day. In 1863, he was married to Mary Florence, daughter of James Selby West, of New York, of which marriage a son and two daughters survive. Mrs. Holt died in 1879, and in 1886 Mr. Holt was married to Florence, daughter of Charles Corey Taber, of New York. Of this marriage, there survive two sons and one daughter. His eldest son, Roland Holt, a graduate of Yale College (1890), is now associated with him in business.

**PENNYPACKER, Samuel Whitaker**, jurist, was born at Phoenixville, Chester co., Pa., April 9, 1843, son of Isaac Anderson and Anna Maria (Whitaker) Pennypacker. His father was an eminent physician of Philadelphia, and professor of practice in the Philadelphia College of Medicine, and his grandfather, Matthias Pennypacker, was a member of the state assembly and of the constitutional convention of 1837; his mother was a daughter of Joseph Whitaker, a Pennsylvania iron-master. The family is of Holland-Dutch extraction, and he is descended from Hendrick Pannbecker (1674-1754), an educated man, surveyor of lands for the Penns, and a conspicuous figure in the early days of the province. Among other ancestors of Judge Pennypacker were Abraham Opden Graeff, Hermannus Kuster, Hendrick Sellen, Peter Conrad, Cornelius Tyson, Hans Peter Umstat, Dutch and German settlers of Germantown; Samuel Richardson, judge and provincial counselor of Pennsylvania, prior to 1700; John Bevan, another provincial jurist; Benjamin Scott, provincial counselor, of New

Jersey, and Maj. Patrick Anderson, of the Continental army. He also traces descent from John of Gaunt, and Edward III. of England. Samuel W. Pennypacker was educated at the Grovemont Seminary, Phoenixville, and the West Philadelphia Institute, where he was prepared for Yale College. In 1863, he went to the front as a member of the 26th Pennsylvania emergency regiment, which met the first onslaught of the Confederate forces at Gettysburg, and earned the distinction of a monument on the battle-field. Having read law in the office of Hon. Peter McCall, and in the law department of the University of Pennsylvania, he was admitted to the bar in 1866, and immediately entered active practice. In 1868, he was elected president of the Law Academy of Philadelphia. Together with E. G. Platt and Samuel S. Hollingsworth, he edited a "Digest of the English Common Law Reports"; he prepared four volumes of much importance, known as "Pennypacker's Supreme Court Cases," a volume of Pennsylvania colonial cases, and has aided in the preparation of forty volumes of "Weekly Notes of Cases." During 1886-89 he was a member of the board of public education of Philadelphia, and was controller of public schools for the 29th ward. In 1887, he was admitted to practice in the U. S. supreme court. In June, 1889, he was appointed by Gov. Beaver to fill a vacancy on the bench of the court of common pleas caused by the elevation of Judge James T. Mitchell to the supreme court, and in the following autumn was elected to the same office by the practically unanimous vote of both parties, for a term of ten years. During two years of his service he has been president judge of the court. Judge Pennypacker has made extensive investigations into the early history of Philadelphia and vicinity, and is author of thirty-seven different books and papers on related subjects, several of which have been translated into Dutch and German. His library contains about 7,000 printed books of early Pennsylvania, of which 260 are from the press of Benjamin Franklin, while his collection relating to the German colonization of Pennsylvania is unexcelled. In 1883, at the celebration of the bi-centennial of the beginning of German emigration to America, at the American Academy of Music, Philadelphia, he delivered an historic address, for which he received the official acknowledgment of the German emperor, through Prince Bismarek. Judge Pennypacker has been a trustee of the University of Pennsylvania for several years. He is also state commissioner for Valley Forge reservation. He is connected with the Pennsylvania Historical Society as vice-president and member of the council; he has been president of the Pennsylvania German Society; president of the Netherlands Society of Philadelphia; vice-president of the Colonial Society; president of the Philobiblon Club, and a member of the American Philosophical Society. He is also identified with the Pennsylvania Society, Sons of the Revolution, as founder and manager; with the Society of Colonial Wars; the Society of the War of 1812; the Deutsche Pionier Verein; Deutsche Gesellschaft; Canstatter Volksfest Verein; the Union League Club; he has been post commander of

*Sam W. Pennypacker*

Fred Taylor Post, No. 49, G. A. R., and president of the 26th Pennsylvania Emergency Regiment Association. He is one of the vice-provosts of the Philadelphia Law Academy, and one of the supervisory committee on the restoration of Independence Hall. He received the degree of LL.D. from Franklin and Marshall College.

**PAIGE, Lucius Robinson**, author and business man, was born at Hardwick, Worcester co., Mass., March 8, 1802, ninth and youngest child of Timothy and Mary (Robinson) Paige. On his father's side, he was a lineal descendant of Elder William Brewster and Gov. Prince, of Plymouth colony; on his mother's, of Gov. Thomas Dudley. His great-grandfather, Nathaniel Paige, was one of the original proprietors of Hardwick, owning one-fourth of its territory. His grandfather, Col. Timothy Paige, was a member of the committee of correspondence and an officer in the militia; was in command at Bennington, and also served at West Point in 1780. Timothy Paige, Jr., father of Lucius, was one of the militia men who responded to the first call to arms in 1775, and joined the army at Cambridge. He was a representative to the general court for seventeen years. Lucius Robinson Paige made diligent use of the opportunities afforded by the common schools in his native town, supplementing them by a few terms in Hopkins Academy at Hadley. He commenced preaching June 1, 1823, and on the tenth day of the same month received the fellowship of the Southern Association of Universalists. After successive pastorates in Springfield, Rockport and Cambridge, he retired, in 1839, from

pastoral service, but continued to preach occasionally for many years, until the precarious condition of his health compelled him to desist. In addition to numerous publications, in various periodicals and otherwise, he published: "Selections from Eminent Commentators" (1833); "Questions on Select Portions of the Gospels, Designed for the Use of Sabbath Schools and Bible Classes" (1838); and in the same year a "Centennial Address" at Hardwick; a "Commentary on the New Testament," in six volumes, the first of which was published in 1844 and the last in 1870; a "History of Cambridge" (1877); and a "History of Hardwick" (1883). In 1850, he received the degree of A. M. from Harvard College, and in 1861 that of D. C. from Tufts College, of which he had been a founder. He was elected member of the Massachusetts Historical Society in 1844, of the New England Historic Genealogical Society in 1845, of the Worcester Society of Antiquity in 1876, of the Phi Beta Kappa Society in 1877, of the American Antiquarian Society in 1878, and at sundry times corresponding or honorary member of historical societies in many places. Mr. Paige became a Freemason in 1824, and a little later an Oddfellow, and passed through all the grades of office, from the lowest to the highest. From time to time he rendered his fellow-citizens some service as an assessor of taxes, auditor, city clerk, treasurer of a savings-bank (sixteen years), cashier, and afterwards president, of a bank of discount, justice of the peace and representative. Mr. Paige was married four times: first, to Clarinda, daughter of Ezekiel Richardson, of Brookfield; second, to Abby R., daughter of Joseph Whittemore, of Charlestown; third, to a daughter of Barnabas Comins, of Charlestown, and widow of Solomon Richardson, of Brook

field; fourth, to Ann M., a daughter of Robert W. Peck, and widow of Hon. David T. Brigham, of Keokuk, Ia. Mr. Paige died at Cambridge, Mass., Sept. 2, 1896.

**DUNN, Robinson Potter**, clergyman and educator, was born in Newport, R. I., May 31, 1825, son of Dr. Theophilus C. and Elizabeth (Potter) Dunn. His mother was a descendant of Martin Potter, who settled at South Kingston about 1660. Robinson Dunn was prepared for college in the schools of Newport, and then entered Brown, where he was graduated in 1843, at the head of his class. He continued his relations with the university as librarian and as instructor in French until December, 1845, when he entered Princeton Theological Seminary. One of his classmates there, Dr. William M. Paxton, of New York, has borne witness to his character and attainments, as follows: "He was greatly beloved for his kind, genial fellowship, whilst he was admired for his fine talents and scholarly culture. He was, beyond question, the most finished, accurate scholar at that time in the institution. . . . In his fidelity to all the duties of a student, he was a model." He finished his theological course in May, 1848, and on Nov. 1st was settled over the Presbyterian church at Camden, N. J., which reluctantly parted with him four years later, when he returned to Providence. The chair of rhetoric and English literature in Brown University was held by him from 1852 until his death, a call to fill the chair of English literature and elocution being declined in 1860. Soon after he removed to Providence the Central Congregational Church was formed, and, as there was no Presbyterian church in the city, he connected himself with the Central Church, where he taught a Bible-class of young ladies for years. Dr. Dunn contributed to the "Presbyterian Quarterly Review," and several of his discourses were published. He was twice married: first, in 1848, to Maria, daughter of John Stillé of Philadelphia, who died June 23, 1849; and, second, in 1855, to Mary Stiles, daughter of Hon. Alfred Dwight Foster of Worcester, Mass., who, with one son, survived him. Dr. Dunn died in Providence, R. I., Aug. 28, 1867.

**BALLARD, Harlan Hoge**, educator and founder of the Agassiz Association, was born at Athens, O., May 26, 1853, son of Addison Ballard, professor of logic in the University of New York, and Julia Perkins (Pratt) Ballard, the author. He is a direct descendant of William Ballard, of Andover, Mass., who came to America in the ship James in 1636, and of many ancestors of a later generation, who distinguished themselves in the revolutionary army, among them of Joseph Bennett, who fought at Lexington. Mr. Ballard studied at Williams College, becoming there a member of the Phi Beta Kappa fraternity, and was graduated in 1874. For the following six years he was principal of the high school at Lenox, Mass.; then he revived the old Lenox Academy, and conducted it until 1886, when he gave up teaching. Later he became librarian of the Berkshire Athenaeum at Pittsfield, Mass. Inheriting from his mother a taste for the study of natural science, Mr. Ballard founded and established, in 1875, a society the object of which should be to promote such study, giving it the name of the Agassiz Association. It was incorporated in 1892, and in the "Hand-book" which he prepared the purpose of the association is defined as "the promotion of scientific education; the advancement of science; the collection in museums of natural and scientific specimens; the employment of observers and teachers in the different departments of science, and the general diffusion of knowledge." Chapters of the association have been formed in about a thousand towns and cities throughout the United States and Canada, and there are several affiliated

Lucius R. Paige

branches in England, Australia, Russia, Tasmania and New Zealand, all united with one name and one purpose,—exchanging specimens and corresponding with one another on matters of common interest,—and other chapters are invited to affiliate. Mr. Ballard has been president of the society since its foundation, and its increasing importance is largely due to his labors. As president, he is one of the editors of the literary organ of the society, "The Popular Science News," and he has also edited, at various periods in his career, the "Swiss Cross," "Santa Claus" and "Observer," and for six years a department in "St. Nicholas." He is the author of "Pieces to Speak" and "Model Composition Cards"; joint author with Hon. S. Proctor Thayer of "American Plant Book" and "Barnes' Readers"; and author of "One Thousand Blunders in English Corrected"; "Three Kingdoms"; "Words, and How to Put Them Together"; "The World of Matter: A Guide to the Study of Chemistry and Mineralogy"; "Open, Sesame"; and "Reopen, Sesame." Mr. Ballard is the inventor of the so-called "Klip Binder." He is a fellow of the American Association for the Advancement of Science, secretary of the Berkshire Historical and Scientific Society, and a member of many other associations, both learned and social. He was married, at Lenox, Mass., Aug. 20, 1879, to Lucy Bishop, daughter of John N. and Lucy (Bishop) Pike, and granddaughter of Hon. Henry W. Bishop.

**FINK, Albert**, civil engineer, was born at Lauterbach, Germany, Oct. 27, 1827, son of Andreas and Margaret (Jacob) Fink. He was educated as an engineer at the Polytechnic School at Darmstadt. In 1849 he came to America, and entered the service of the Baltimore and Ohio railroad, in the engineering department. He was active and ambitious, and under the direction of the distinguished engineer, Benjamin H. Latrobe, made rapid progress. Within three years he had advanced to the position of chief assistant-engineer. At this period the art of bridge-building in this country was in its infancy. Mr. Fink was one of the pioneers in the construction of iron bridges, and led the way to the present perfection in that art. He introduced iron on a large scale into the construction of bridges and viaducts on the Baltimore and Ohio railroad, which still stand as a witness to his skill as an engineer. Among his more important works is the bridge over the Ohio river at Louisville, Ky., one of the largest in the country, which was completed in 1872. In 1857 he became connected with the Louisville and Nashville railroad, first as assistant engineer, and upon its completion to Nashville, in 1859, as chief engineer and superintendent of the road and mechanical department, in which capacity he served until 1865, when he was made general-manager, and later vice-president of the company, occupying the office until 1875. During the four years of the civil war the Louisville and Nashville railroad, which was the only road in the West over which the Federal armies and supplies could be transported into the South, was constantly subject to attack by the Confederate armies, and within its territory many of the fiercest conflicts of the struggle were fought, the road being alternately in the hands of the Federal and Confederate troops, the latter frequently destroying the company's rolling-stock, bridges and other property. Mr. Fink's resources were severely taxed during this trying period to maintain communication between the North and its armies in the South. As vice-president and general-manager of the Louisville and Nashville Railroad Co., after the war Mr. Fink undertook a minute investigation into the cost of railway transportation, and made a report, which was regarded as a complete and masterly analysis of

the subject. Realizing the importance of reform in the management of railway freight and passenger departments, and deeming it imperative that greater harmony should exist between railroad companies, that reform might be brought about, he considered the solution of the problem of sufficient importance to devote his whole time to the subject, and was largely instrumental in organizing, in 1875, the Southern Railway and Steamship Association, which has been in successful operation ever since. He became commissioner of that association in October, 1875, and retained the office for six months. The object of the association was to establish tariffs over the whole system of southern transportation lines whose rates were interdependent, and to see that these tariffs were maintained alike to all shippers without the payment of rebate or resort to secret devices. Prior to that time it had been the practice to hold meetings of the officers of the various companies from time to time, for the purpose of agreeing upon tariffs; but before these meetings dispersed, no one was charged with the responsibility of seeing that such agreements were carried into effect. Mr. Fink established a permanent bureau in Atlanta, Ga., which practically united twenty-five transportation lines, with one executive officer called commissioner, a position which he held for six months, in order to put the association in full working order. He was authorized to see that the agreements were properly observed and carried out. If any questions arose upon which the various companies could not agree, they were submitted to his decision as arbitrator, so that all questions which might arise between the railroad companies and possibly lead to disastrous rate-wars were judiciously settled. These associations of railroad companies now exist all over the country, and are doing a good work, in the interest of both the railroads and the public. Mr. Fink was next called upon by the trunk lines—which had during the years 1875 and 1876 been engaged in violent rate-wars—to establish a bureau in which the four great New York lines were the original principal parties—the New York Central, the Erie, the Pennsylvania and the Baltimore and Ohio railroad companies. This organization was called the Trunk Line Commission. It dealt at the beginning with the traffic from the Atlantic seaboard to the western states only. By degrees it was extended to embrace nearly all the railroad companies east of the Mississippi and north of the Ohio rivers, including the Canadian railways, under the organization which is called the Joint Committee. Their objects were the same—to agree upon tariffs and settle any questions of difference, which might lead to warfare, by arbitration. It took several years of hard work to complete this organization. While rate-wars are not entirely unknown in the territory east of the Mississippi river, there has been a great deal of good accomplished by the organized coöperation of between fifty and sixty railroad companies, which might otherwise be continually at war among themselves. He was a member of the American Society of Civil Engineers, of which he was president in 1878; of the Union Club of New York city, Penderis Club of Louisville, Ky., and other organizations. In 1869 he was married to Sarah, daughter of A. D. Hunt of Louisville, Ky., and they had one daughter, Ellen, the wife of David M. Milton. Mr. Fink died April 3, 1897.

*Albert Fink*

**MERGENTHALER, Ottmar**, inventor, was born in Wurtemberg, Germany, May 11, 1854, third son of J. G. and Rosina (Ackerman) Mergenthaler. His father was a teacher in the public school where he was educated until, at fourteen years of age, he was apprenticed to a watch-maker. He left Germany mainly to escape military duty, and came to America in October, 1872, remaining in Baltimore until he had opportunity of obtaining work in Washington, D. C., with the firm of A. Hehl & Co., on electrical instruments. In 1875 he removed with the firm to Baltimore. He has devoted nearly his whole life to the development of his inventions relating to methods of impressing hand composition of type, and in 1876 he began work on a machine which, eight years later, developed into the linotype, which is regarded from a commercial standpoint as one of the most successful inventions of this age. His patents are numerous and important in their scope, covering broadly the production

of a line of type (hence the name "linotype") from a temporarily assembled and justified line of matrices. By the operation of a keyboard, very similar to the keyboard of the typewriter, matrices of type are delivered one after another into a receiver, and assembled in a line of the desired length, like the ordinary type in a composing-stick. The line is automatically "justified" and transferred to a mold, where an impression is taken from molten type-metal kept in a melting-pot, producing a solid bar of type the length of a line. The machine then automatically withdraws the matrices, removes the mold, places the cast-metal line, ejects and deposits it on a galley in proper

order with those preceding it, and ready for the press. As soon as the line of matrices and spaces is withdrawn from the mold, the machine automatically picks them up, and distributes each matrix to its proper magazine from which it started, ready to repeat the process as often as it is required. The number and variety of the automatic functions which this linotype machine performs is most astonishing, and they proceed in due order with the precision and regularity of clockwork. It has given to the world an entirely new system of composing matter for the press, and the courts have decided that Mr. Mergenthaler must be classed as a pioneer inventor, and his patents interpreted accordingly. In July, 1886, the first linotype was placed in the composing-room of the New York "Tribune," to be used in its regular daily work. This innovation was soon adopted by the Louisville "Courier Journal," the Chicago "News," and later by the Providence "Journal." Although there have been predictions of failures on all sides, the machines have never failed to do their work. To-day over 7,000 of these wonderful machines are in regular operation in various offices of the United States and Great Britain, doing substantially all the work of composition which had previously been done by hand, with great economy of time, labor and cost. In recognition of the great merit of his invention, Mr. Mergenthaler was awarded the Elliott Cresson gold medal by the Franklin Institute of Philadelphia. Mr. Mergenthaler was married, in 1881, to Emma Lachenmayer, of Baltimore, Md. They have four children.

**HUDSON, Henry Norman**, Shakespearian scholar and author, was born on a farm at Cornwall, Vt., Jan. 28, 1814. He attended district schools and

engaged in labors on the farm until he was eighteen years old, and then went to Middlebury, where he spent the following four years, apprenticed to a coachmaker. At the end of that time, determining to pursue an academic course, he resumed his studies, and entering Middlebury College shortly afterwards, was graduated there in 1840. From 1840 to 1843 he was engaged in teaching in Kentucky and Alabama. It was during these years in the South that he read, for the first time, the plays of Shakespeare; and these proved such a fascinating study to him that he prepared a course of lectures on Shakespeare, which he delivered in Huntsville and Mobile, Ala. Encouraged by the success which he there met with, he went to Cincinnati, O., and there his lectures again proved so popular that he subsequently delivered them in Boston, New York and Philadelphia, before publishing them in book form in 1848. While in Boston, he was induced, through the influence of the Rev. Dr. William Crosswell, to become a member of the Episcopal church, and he took orders in 1849. His reputation as a Shakespearian scholar having been established by his lectures, he was invited to prepare a new edition of Shakespeare's plays, which occupied him from 1850 to 1856, and was finally issued in eleven volumes, with a biography and notes. Duyckinck says that "the chief points in the edition are a thorough revision and restoration of the text according to the ancient copies; notes carefully selected and compactly written, and an introduction, historical, bibliographical and critical, to each play." In 1853-54 Mr. Hudson was also engaged on the editorial staff of the New York "Churchman." He also wrote voluminously for other periodicals, and in 1857-58 edited

"The American Church Monthly," writing extensively for its columns. In 1859-60 he was pastor of a church in Litchfield, Conn.; and in the following year delivered a course of lectures on Shakespeare in several cities of the northern states. During the civil war he was a chaplain of the Federal army, first, in South Carolina, and afterwards with Gen. Butler's forces. He published a letter in the New York "Evening Post," derogatory to Gen. Butler, and for that offense was placed under arrest. At the close of the war he published an account of the disagreement, entitled "A Chaplain's Campaign with Gen. Butler" (1865). He was subsequently editor of the "Saturday Evening Gazette" for two years; a chair of Shakespeare, then having been established in Boston University by an admirer of his work, he lectured there for several years. In 1872 he published his most important work, entitled "Shakespeare: His Life, Art and Characters; with a Historical Sketch of the Origin and Growth of the Drama in England." Of this the reviewer in the "Athenæum" said: "It deserves to find a place in every library devoted to Shakespeare. . . . Mr. Hudson, we may add, is so painstaking that we can readily pardon his being rather prosaic in style and expression. . . . Every play is described in this book, and the characters are analyzed at great length." He also published "Studies in Wordsworth" (1874); "Sermons" (1874); "Text-book of Poetry, with Sketches of Authors' Lives" (1875); "The Complete Works of William Shakespeare," Harvard edition (1880-81); "English in Schools: A

Ott. Mergenthaler

H. N. Hudson

Series of Essays" (1881); "Essays on Education, English Studies, and Shakespeare" (1883). He died at Cambridge, Mass., Jan. 16, 1886.

**MOORE, Henry J.**, merchant, was born at Havana, N. Y., Feb. 22, 1802. He began his business career as a furniture manufacturer in Havana, but soon after removed to Ithaca, and then to Troy. In 1833 he located in Texas, where he remained for two years, then returning to New York state, but in 1839 he established a store in Victoria, Tex., and there continued until constant Indian invasions determined him to remove to Cincinnati, O., in 1842. In Cincinnati he engaged in beef-packing for the foreign trade, but having become more and more interested in steamboat transportation, he removed to St. Louis in 1845, and from that city ran some of the largest boats that ever navigated the Mississippi. Among the famous boats of his line were the *Sultana*, *Wyandotte*, *Pocahontas* and *Hannibal*—the last named made the record time, three days, twenty-three hours and three minutes, between St. Louis and New Orleans. In 1859 Mr. Moore joined the firm of John J. Roe & Co., pork packers and general commission merchants, and long one of the most popular and successful houses of the city. For several years previous to his death he was a stockholder in several of the foremost banks of St. Louis. Upon the foundation of the St. Louis Merchants' Exchange, in 1862, Mr. Moore was chosen first president and, according to the constitution, held the office for one year. This organization was particularly notable at the time for its consistent adherence to the Federal government in its efforts to suppress secession. It came into being as a department of the St. Louis chamber of commerce, founded in 1836, and as the first general trading association in the country, naturally absorbed the old Millers' Exchange, founded in 1849. Its first building, erected on Commercial street, was succeeded by the present splendid structure on the block between Pine and Chestnut, Third and Fourth streets. It is now an active, progressive body of over 2,000 members, representing every commercial, manufacturing and financial interest in the city, whose agents congregate daily in the great hall for the transaction of business with city firms, and by means of telegraphic communication, with all the principal cities of

America and Europe. Also, through its board of directors, it exercises a careful supervision of public affairs, both local and national, and exerts its full influence in the promotion of every enterprise looking to the welfare of the city, state, and the Mississippi valley, as well as in matters of national import, and thus voices public sentiment and directs public thought in all matters pertaining to public welfare. The organization still feels the benefit of Mr. Moore's executive ability, which was largely efficient in directing its affairs toward permanence in the days of its inception. Mr. Moore died in St. Louis, Feb. 7, 1875.

**COFFIN, Charles Emmet**, banker and broker, was born at Salem, Washington co., Ind., July 13, 1849, son of Zachariah and Caroline (Armfield)

Coffin, and seventh in descent from Tristram Coffin, who emigrated from England in 1642, and became one of the ten original owners of the island of Nantucket in 1659. William, great-grandson of Tristram, emigrated to North Carolina before the revolution, and his son, Matthew, fought under Gen. Nathanael Greene in his southern campaign. His son, Marmaduke, was one of the pioneers of Indiana, settling in Washington county about the time of the state's admission into the Union. The eldest son of Marmaduke, Zachariah, was born in Indiana, and for a number of years operated a tannery at Salem, and was magistrate of the county. His wife, to whom he was married in 1846, was a niece of Paris C. Dunning, later state governor. Charles Coffin spent his early childhood in Salem, and attended the school founded by the late Hon. John I. Morrison. At the age of twelve he removed to Bloomington, the seat of the state university, and spent nearly four years at school there, serving as drummer-boy in the militia, under Gen. Hughes, during the invasion of the state by the Confederates, under Gen. Morgan, in 1863. In 1865 Mr. Coffin began to work for himself, in order to help his parents, who had lost much of their property in consequence of the financial depression caused by the civil war; and in 1867 went to Indianapolis, where he entered the real estate office of Wiley & Martin, the senior member being Capt. William Y. Wiley, one of the oldest real estate dealers in the city. He remained with them for six years, and during that time studied at a night law school, and in 1871 was admitted to the bar. Finding the outlook more promising in the field he was already in, he continued in the real estate business, putting to good use, however, his legal knowledge. On the death of Capt. Wiley, in 1873, he opened an office and seven years later associated with himself Charles E. Holloway, under the firm-name of C. E. Coffin & Co., whose success is unparalleled in the business annals of the city. Mr. Coffin is a self-made man in all respects, and although not yet old enough to be classed among the "fathers of the city," he is one of the progressive residents of Indianapolis. He is president of the Indianapolis Savings and Investments Co.; a stockholder in the Union Trust Co.; a member of the board of trade and a director of the Commercial Club. He is a trustee of the Meridian Street Methodist Episcopal Church; a director of the Art Association; of the New England Society; of the Indiana Historical Society, of which he is also treasurer; and a member of the Marion, Country and Columbia clubs. Mr. Coffin is a contributor to various newspapers and periodicals, and would be constantly employed if he were to respond to all the demands made upon him. Having made a study of whist for many years, in 1894 he published the "Gist of Whist," intended to supply beginners with simple but complete instructions. It is now in its sixth edition, and has reached a sale of 16,000 copies in four years. Mr. Coffin was married, in 1875, to Elizabeth, daughter of Cornelius B. Holloway, of Danville, Ill. She died, July 8, 1893, leaving one son, Clarence Eugene. He was again married, Sept. 20, 1897, to Mrs. Mary H. Fletcher, daughter of Capt. Richard E. Birch, of Indianapolis.

**WALKER, James Alexander**, soldier and congressman, was born in Augusta county, Va., Aug. 27, 1832, son of Alexander and Hannah (Hinton)

Walker. His father and mother were also born in that county, and spent their lives there, and their remains now lie in the burying-ground near the historic "Stone Church." The first American ancestor of this family, John Walker, went from Wigton, Scotland, to Ulster county, Ireland, and from thence, after a few years, emigrated to Pennsylvania about the year 1730, and a little later, with a number of others, to Rockbridge county, Va. The valley of Virginia was as yet a wilderness, and these Scotch-Irish settlers not only endured all the usual hardships of pioneers, but became a bulwark between the Indians and the more eastern settlements. Alexander Walker, the great-grandfather of James, was the father of twenty-one children, most of whom grew to manhood and womanhood. They settled in Kentucky, Alabama, Missouri, Illinois and other states and territories. James A. Walker attended a neighborhood school until the year 1848, when he entered the Virginia Military Institute at Lexington, remaining four years. For two years after this he worked as a civil engineer on the Covington—now Chesapeake and Ohio—railroad. In 1854 he studied law at the University of Virginia; began the practice of his profession in November, 1855, at the county-seat of Pulaski county, Va., and in 1859 was elected attorney for the commonwealth for Pulaski county. At the beginning of the civil war he was captain of a fine volunteer company, the Pulaski Guards (afterwards company C, 4th Virginia infantry); and in April, 1861, Capt. Walker was promoted to the office of lieutenant-colonel, and was assigned to the 13th Virginia infantry, of which A. P. Hill was colonel. In March, 1862, he was again promoted, becoming colonel of the 13th Virginia infantry, *vice* Hill, promoted brigadier-general. In May, 1863, a third promotion raised him to the rank of brigadier-general, and by Gen. Jackson's dying request, was assigned to the command of the "Stonewall" brigade. At the "Bloody Angle," in May, 1864, he was severely wounded. In July following, his arm yet in a sling,

he was put in command of the reserve troops guarding the line of the Richmond and Southside railroads, which roads were the feeders of Gen. Lee's army. In January, 1865, he reported to Gen. Lee for active service, and was assigned to the command of Early's division, which he surrendered at Appomattox. Gen. Walker was with Jackson in his famous valley campaign, and participated in all the battles of the army of northern Virginia. He was present at Bull Run, Front Royal, Winchester, Cross Keys, Port Republic, Gaines' Mill, Malvern Hill, Cedar Run, second Bull Run or Manassas, Ox Hill,

Fredericksburg, second Winchester, Gettysburg, Payne's Farm, Mine Run, Wilderness, Spottsylvania Court-house, Fort Stedman, Petersburg, Sailor's Creek and Appomattox. After the war Gen. Walker resumed practice in Pulaski county, and rose rapidly to the position of one of the leading lawyers of that section of the state. In 1869 he was nominated by the Conservative party of Virginia for the office of lieutenant-governor. Virginia was at that time under military rule, and was known as military district No. 1; the state ticket nominated, not proving acceptable to the authorities at Washington, was withdrawn. In 1872 Gen. Walker was elected a member of the house of delegates of Virginia, declining re-election at the end of his term. In 1877 he was made lieutenant-

governor on the ticket with Gov. Holliday. In 1892 he was elected to the 54th congress from the ninth district of Virginia, and was re-elected in 1896. Gen. Walker was married, near Staunton, Va., in 1858, to Sarah A., daughter of Maj. William and Margaret Pounce, and has had four sons and two daughters.

**BLOUNT, William Alexander**, lawyer, was born in Clarke county, Ala., Oct. 25, 1851, son of Alexander Clement and Julia (Washington) Blount. His paternal ancestry is of English extraction, the family in America being descended from James Blount, who settled in Virginia in 1669, and his mother descends from Lawrence, cousin of George Washington. Mr. Blount's father, a native of North Carolina, and a well-known lawyer in Alabama and Florida, lost the greater part of his property by the civil war. The son received very meagre educational advantages in the way of regular schooling, being able to attend but one year at St. Louis, Mo. However, by virtue of his native industry and ambition he was able to prepare himself for college, and entered the University of Georgia (Athens, Ga.) in 1870. Here he received the degree of A. B. with first honors in 1872, and amply demonstrated his ability and high scholarship by winning the university medal for essay-writing in his junior year. During 1872-73 he acted as tutor

in mathematics and English to his alma mater, at the same time completing the law course with the degree of LL. B. Returning then to his home in Pensacola, Fla., he began practice in the office of Charles W. Jones, later U. S. senator from Florida, and such was his industry and high professional ability that at the age of thirty-five he was ranked second to none at the bar of the state, and is widely known in the southern states. He has never sought nor accepted political office, nor taken any prominent part in politics; the only public trust he has hitherto consented to hold was as a member of the Florida constitutional convention of 1885, in which he rendered notable services in revising the organic law of the state. He has frequently been offered important judicial positions, among them the chief-justiceship of the supreme court, but has as frequently declined on account of the pressing nature of his professional obligations. He was, however, appointed by the governor in 1888 chairman of the commission which for the first time in the history of the state was called to revise the statute law. In this capacity, despite the engrossing demands of his profession, the accuracy and excellence of the work done by him attested his ability and thoroughness. The work occupied three years. For the last fifteen years he has been city attorney of Pensacola, and has for fourteen years been attorney for the state of Florida of the Louisville and Nashville railroad. He has also for a long time been attorney for all the railroad companies entering Pensacola, as well as for the city street railroad system, water and gas companies, and for most of the large corporate and business interests of western Florida. In 1886 he formed a partnership with his brother, Alexander Clement Blount, Jr., under the style of Blount & Blount, which still continues in the successful practice of law. Mr. Blount has found little time for work not distinctly a part of his profession. In June, 1878, he was married to Cora N., daughter of Fernando J. Moreno, and has six children.

W. A. Blount

John A. Walker

**OLIVER, Robert W.**, first chancellor of the University of Kansas (1865-67). See Index.

**FRASER, John**, second chancellor of the University of Kansas (1868-74), was born in Cromarty, Scotland, about 1823. He was educated at the University of Aberdeen, and before leaving won there the Huttonian prize for proficiency in mathematics, offered every ten years. He also excelled in classical studies, and showed all the earnestness and devotion to intellectual pursuits which characterizes the best of Scotch scholars. After graduation he went to the Bermuda Islands to teach in the Hamilton Institute, passing the time during the long journey by sailing vessel in reading through the Greek and Latin classics. After spending some years in Bermuda, failing health induced him to go to New York, where he had been appointed principal of a private school; but there he became so involved in money difficulties that he was obliged to pawn his library, including the volumes that constituted the Huttonian prize. In 1850 he secured a position in Connellsville, Pa., as private tutor to two boys, and there he organized a private school. In 1855 he was appointed professor of mathematics in Jefferson College. This position he held for seven years, making his influence an inspiration to deeper study not only for his own students but also for those pursuing the classics and other courses. Rev. George W. Chalfant, a former pupil, wrote of Mr. Fraser: "His classical training was simply superb. He not only knew the great authors, but he loved them. Beyond any man the writer ever met he possessed what may be called a 'Greek soul.' Never until meeting him did his younger colleague learn what beauty of style existed in the classic authors, what power of expression in the grammatical forms, what rhetoric in the order of work." Prof. Fraser also delivered a course of lectures on physical geography, showing himself familiar with the methods of scientific research. He raised money for the first telescope used in a western Pennsylvania institution, and himself superintended the erection of an observatory. In 1862 he enlisted as a private at Canonsburg, and served the Federal cause throughout the civil war, winning promotion to the rank of captain of the 140th Pennsylvania volunteers in August, 1862; to that of lieutenant-colonel in the following month, and in July, 1863, to that of colonel. During the charge of Han-

cock at Spotsylvania he was wounded by a shell, and in September, 1864, he was captured and held prisoner at Libby Prison; at Macon, Ga.; Roper's Hospital, Charleston, S. C., and finally at Camp Sorghum, Columbia, S. C. While imprisoned, with many others at Roper's Hospital, under fire of the guns from the northern fleet, he cheered his fellow-prisoners by delivering for their amusement a course of lectures, notably on Shakespeare's plays. He was finally exchanged, and returning to the 140th Pennsylvania volunteers, was made brevet-brigadier general in March, 1865, and was mustered out the following May. He then became president of the State College at Bellefonte, Pa.; from there passed to the head of the Kansas State University, and on June 17, 1868, entered upon his official duties. Robert W. Oliver, whom he succeeded, had been chancellor for two years (1865-67), but had had nothing to do with instruction, his relations to the university having been of a business nature. With the advent of Gen. Fraser, a change in the headship of the institution occurred, and the chancellor became the president of the faculty. Partly owing to political complications, partly to the fact that although possessing executive ability he lacked the power of harmonizing discordant interests, his career was less successful than his friends had hoped. He resigned, April 15, 1874, but remained in charge until the appointment of his successor. During his connection with the university he served as state superintendent of instruction. His last position was in the Western University of Pennsylvania, at that time a somewhat narrow field for a man of his talents and attainments. Only a few in that great industrial community knew what a noble soul was wearing itself out in work far below the capacity of this great teacher. He died at Allegheny, Pa., of small-pox, in June, 1878, leaving a widow but no children.

**MARVIN, James**, clergyman and third chancellor of the University of Kansas (1874-82), was born in Peru, Clinton co., N. Y., Aug. 17, 1820. His boyhood and youth were spent on his father's farm

*John Fraser*

in his native township, and his education was obtained there in the common schools and in Keeseville and Alfred academies. He engaged in teaching during the winter season in rural districts until 1849, and then entered Allegheny College, where he was graduated in 1851. He was chosen professor of mathematics in Alfred Teachers' Seminary, New York, and in 1854 accepted the superintendency of city schools in Warren, O. He returned to Allegheny College, in 1862, as professor of mathematics, and after twelve years' service in his alma mater was appointed chancellor of the University of Kansas, Lawrence, Kan. Eight years and eight months in this responsible position closed nearly thirty-three years of almost continuous duty as an instructor. In the autumn of 1883 Dr. Marvin accepted the superintendency of Haskell Institute, a new school under the U. S. government, and devoted to the education of Indian youth. Eighteen months' work in organizing the school convinced the superintendent that this service required younger blood, and he accordingly resigned. In early life he had united with the Methodist Episcopal church, and was licensed to preach in 1847. After a brief period of rest from his arduous labors in the Indian school, he was called to the pastorate of the First Methodist Episcopal Church of Lawrence, where he had resided since coming to Kansas. This charge was continued with great acceptance over five years, during the last two of which a new church edifice costing \$40,000 was erected. He retired from active service in 1891. In 1865 the degree of D. D. was conferred on him by Alfred University, and in 1883 that of LL. D. by the University of Kansas. He was married to Armina Le Suer, July 14, 1851. They have one son, Prof. F. O. Marvin, and one daughter, Mrs. Prof. Wilcox.

**LIPPINCOTT, Joshua Allen**, clergyman and fourth chancellor of the University of Kansas (1883-89), was born in Burlington county, N. J., Jan. 31, 1835. He is a lineal descendant of Richard Lippincott, who left the family home in Devonshire, England in 1639 to settle in America. He was a Quaker, and many of his descendants continue in the same faith. The family name is one of the oldest of local origin in England, their motto being, "Upright in prosperity or adversity." Joshua Allen Lippincott passed his boyhood and youth in Burlington county, N. J., and his early educational advantages were those of the country school. He was always anxious for a collegiate education, and opportunity unexpectedly offering, he entered Pennington Seminary, where he was prepared for Dickinson College, being graduated with distinction at the age of twenty-three. He immediately began teaching, having been offered the professorship of mathematics and German at Pennington Seminary. Four years later he accepted the position of superintendent of the public schools in Scranton, Pa. His success was so marked that he was soon called to a more important position in the New Jersey state normal and model schools at Trenton. In 1865 he was admitted to the Wyoming conference of the Methodist Episcopal church, and while doing his educational work frequently acted as pastor and answered continued calls to the pulpit. After having filled the pulpit of Asbury Church, Hackensack, N. J., for two years, he accepted the professorship of mathematics and astronomy in Dickinson College. This position he retained until 1883, when he resigned to become chancellor of the University of Kansas. The remarkable development of this institution during his incumbency is a testimonial to his great administrative ability. The position, however, was not wholly to his taste, and he yielded to a desire for closer relations to his church, and in 1889 resigned to accept the pastorate of the First Methodist Episcopal Church of Topeka,

Kan. From this pastoral relation he was called to the Arch Street Methodist Episcopal Church of Philadelphia, Pa. He has since resided in that city. In 1882 Franklin and Marshall College, of Lancaster, Pa., conferred upon him the degree of D. D., and in 1886 the University of Michigan honored him with the degree of LL. D.

**SNOW, Francis Huntington**, fifth chancellor of the University of Kansas (1890- ), was born at Fitchburg, Mass., June 29, 1840, son of Benjamin and Mary B. (Boutelle) Snow. His father was a prosperous merchant and manufacturer, whose first American ancestor, Richard Snow, of Woburn, Mass., came to America in 1645; his mother was the daughter of David and Ruth B. (Huntington) Boutelle. One of his paternal ancestors was Richard Warren, of the Mayflower, and his great-grandfather, Luke Richard, son, fought in the war of the revolution, being a lieutenant of his company. His maternal grandfather, David Boutelle, was a soldier in the war of 1812. Among his maternal ancestors was Gen. Jabez Huntington, of Norwich Conn., a prominent officer in the war of the revolution. Francis H. Snow was graduated at Williams College at the head of his class in 1862, and at the Andover Theological Seminary in 1866. After graduation at Williams, and before attending Andover Seminary, he taught for one year as principal of the high school in his native town. After leaving Andover Seminary he preached for a while, although not regularly installed as pastor of a church. He was elected professor of natural sciences in the University of Kansas at the time of the foundation of the university, in 1866. This position he held until July, 1890, when he was made chancellor and president of the University of Kansas, which position he still holds (1899). In 1881 he received the degree of Ph. D. from Williams College, and in 1890 the degree of LL. D. from Princeton. In 1886 the legislature of Kansas appropriated \$50,000 for the erection of a building for Prof. Snow's department, which building was formally dedicated as the "Snow Hall of Natural History."

Chancellor Snow is the author of many scientific papers, and is a successful lecturer on scientific and educational subjects. To his tireless exertion and intelligent direction the building up of the large natural history collections belonging to the University of Kansas is due. In the entomological collections, which are hardly second to any college collections in the country, are included over 200 new species of insects discovered by Prof. Snow. A score of species have been named in his honor. The scientific work, however, which has given him greatest prominence of late is his experiments with a view to lessening the ravages of the chinch bug by the artificial dissemination among them of a contagious disease. In 1889 he established the fact that certain contagious diseases caused by the growth of parasitic fungi could be artificially spread among chinch bugs in corn and wheat fields. Special appropriations made by the state of Kansas have enabled the experiments to be prosecuted, and the effectiveness of the remedy has been thoroughly substantiated. By estimates made by the farmers of Kansas themselves, a saving of over one half a million dollars was effected in the state in three years by the "chinch bug disease" work of Prof. Snow. Prof. Snow is a member of the Congregational church, but is a thorough believer in the theory of evolution. He sees no inconsistency between

the doctrines of the Christian religion and the principles of evolution, and may be termed a scientific Christian. He is a man of marked perseverance and of singular clearness of intellectual vision. A singleness of purpose, coupled with his characteristic persistence, has resulted in the achieving of much in the face of the obstacles incident to the life of a new college in a new country. Under his administration the University of Kansas has grown rapidly, and stands now among the first of our American state universities. Chancellor Snow was married, in 1868, to Jennie A., daughter of Hon. John Aiken, of Andover, Mass.; granddaughter of Pres. Appleton, of Bowdoin College, and a descendant of Samuel Symonds, lieutenant-governor of Massachusetts Bay colony in 1673. They have five children, the oldest of whom, a son, inherits his father's taste for natural history, and is now (1899) assistant professor of entomology at Leland Stanford University.

**BLACKMAR, Frank Wilson**, educator, was born in Erie county, Pa., Nov. 3, 1854, son of John S. and Rebecca (Mershon) Blackmar. His father, a farmer, was a son of a native Scotchman who emigrated to New England, and afterwards settled in Herkimer county, N. Y.; his mother was the daughter of John Mershon, whose Huguenot ancestors emigrated to New Jersey in the eighteenth century, but removed to Erie county in 1796, and settled in what was then almost a wilderness. The name, originally Marchand, was that of a distinguished French family; but in America the crude French pronunciation of the English settlers was followed in the spelling. There were born to John and Rebecca Blackmar ten children, six daughters and four sons, Frank W. being the youngest son. Charles and Henry, the older sons, served in the civil war. Louise, the oldest daughter, went as a missionary to India, where she now resides at Sironcha; Ellen, the fourth daughter, went to India with her husband, A. J. Maxwell, who, after serving seven years as a missionary, died from the cholera. She returned to America and published several books, including "A Bishop's Conversion," "A Way of Fire" and "Three Old Maids in Hawaii." She was subsequently married to Capt. A. S. Baker, of the U. S. navy, now commander of the battleship Oregon, stationed at Manila (1899). Frank Wilson Blackmar was educated in the public schools of Pennsylvania, the Edinborough (Pa.) State Normal School, the University of the Pacific, California, and Johns Hopkins University, Baltimore. He was professor of mathematics in the University of the Pacific (1882-86); a graduate student of Johns Hopkins University (1886-89); instructor in history (1887-88); fellow in history and politics (1888-89). In 1889 he was elected professor of history and sociology in the University of Kansas, and has been an earnest educator in the school-room and among the people, lecturing and writing on educational, economic and historical topics. He took an active part in the university extension movement, which at one time spread with such vigor over the West. In 1897, in the organization of the graduate school at the University of Kansas, he was elected dean of the school. In 1899 the title of the chair was changed to that of sociology and economics. Among his publications are: "Spanish Institutions in the Southwest"; "Spanish Colonization in the Southwest"; "The Story of Human Progress"; "Federal and State Aid to Higher Education," and "Economics." He is preparing (1899) a work on "History of Higher Education in Kansas." Besides these are numerous pamphlets on economic, social and historical topics. Prof. Blackmar was married at San Jose, Cal., in 1885, to Mary S. Bowman, who died March 4, 1892, leaving one son and two daughters.

**BERNADOU, John Baptiste**, naval officer, was born in Philadelphia, Pa., in November, 1858, son of George W. and Helen (Hay) Bernadou. His grandparents, Jean Baptiste Bernadou and Jeanne Adrienne Hennette Fontaine, both natives of France, emigrated to America early in the nineteenth century and settled in Philadelphia, where they were married. He was appointed to the U. S. Naval Academy, Annapolis, Md., by Pres. Grant, in 1876, becoming midshipman in 1882; ensign, junior grade, in 1883; full ensign in 1884; lieutenant, junior grade, in 1892; and lieutenant in 1896. Through many years of practical observation and experiment he became an expert in torpedo work; and, when the torpedo-boat Winslow was under construction, personally superintended every detail of her building. He was in charge as inspector on her trial trip, and when she was put in commission, was appointed to command her. Being sent to Cardenas, May 11, 1898, to learn the position and strength of the Spanish gun-boats known to be in that harbor, the Winslow, with the gun-boat Wilmington and the converted revenue-cutter Hudson, was speedily discovered by the Spanish gunboats, which rained a shower of shell upon them. One of these striking the Winslow on the starboard beam exploded in the boiler-room, disabling the engine and carrying away the steering-gear. Within five minutes she was struck in twenty places, and, completely disabled, was at the mercy of the enemy. Five men were killed and four wounded; among the former Ensign Worth Bagley, the only American naval officer killed in action in the war. Lieut. Bernadou was wounded in the thigh by a fragment of shell. The Winslow had one boiler pierced and one engine wrecked by the enemy's fire, but managed to work out of the shoal water, then being taken in tow by the Hudson and hauled out of range. On recovering from his wound, Lieut. Bernadou was the recipient of warm praise for the gallantry and coolness which he exhibited in the brief, but destructive, and very one-sided combat. He is the originator and developer of the smokeless powder used by the U. S. navy.

**TRACY, Jeremiah Evarts**, lawyer, was born in Windsor, Vt., Jan. 31, 1835, son of Ebenezer Carter and Martha Sherman (Evarts) Tracy. His first American ancestor was Stephen Tracy, who emigrated from England, settling in Plymouth, Mass., in 1623. His father was the editor and proprietor of the Vermont "Chronicle," a religious newspaper, which for over thirty years wielded a powerful and extensive influence throughout and beyond the state. His son, the subject of this sketch, received his early education in the public schools, and having decided to adopt the legal profession, entered the office of his uncle, Hon. William M. Evarts, of New York city. He continued his studies at Yale College, where he was graduated in 1857 with the degree of LL.B. Being admitted to the bar of New York state, Mr. Tracy at once became an assistant in the office of his uncle, Mr. Evarts, with whom he entered into partnership June 1, 1859, and he has ever since remained a member of his business firm, engaged in the practice of his profession in New York city. Mr. Tracy was one of the founders of the Bar Association of the City of New York, and is a member of the New York State Bar Association and of the New York Law Institute. He was married, Sept. 30, 1863, to Martha Sherman, daughter of Rev. David and Mary (Evarts) Greene, and has nine children.

**SEALY, George**, banker, was born at Kingston, Luzerne co., Pa., Jan. 9, 1835, son of Robert and Mary (McCarty) Sealy, who were devout Presbyterians. At the age of fifteen he became a clerk in a country store, where he remained for three years. When he was twenty years of age his father died, leaving but little property; and he became station agent at Kingston, for the Lackawanna and Bloomsburg railway, his salary being \$50 a month. He remained in this position about four years, and deciding to join a brother in Texas, and in order to qualify himself to take a higher place than he had yet filled, he entered a commercial college in

*Geo Sealy*

Pittsburgh. He next found a place in the employ of Ball, Hutchings & Co., dry-goods and commission merchants in Galveston, his brother, John, being one of the partners, and his rise was rapid. At the outbreak of the civil war he was unwilling to take up arms against the Union, but entered the Confederate army under compulsion, and from the time of his enlistment, in 1862, until the day of his discharge he refused pay for his services, and declined every offer of official preferment. This military period ended, Mr. Sealy resided for a time at Matamoras, Mexico, representing his firm in the transaction of its large volume of trade with European ports. In 1860, through Mr.

Sealy's instrumentality, Ball, Hutchings & Co. became a banking-house, and in 1867 he was admitted to a partnership. Ball, Hutchings & Co. became identified with important railroad transactions, chiefly through his foresight and progressive spirit. In 1877 the Gulf, Colorado and Santa Fé Railway Co., whose line had been extended into Fort Bend county, found itself unable to proceed, being without money or credit. Galveston had subscribed liberally toward the building of the road, and to protect the interests of the merchants of that city, Mr. Sealy organized a syndicate to carry on the work. By 1886 the road was extended to Fort Worth, to San Angelo and to Dallas, and about the same time, by an arrangement with the Atchison, Topeka and Santa Fé Co., the Gulf, Colorado and Santa Fé road completed its road to Paris, Tex., connecting there with the St. Louis and San Francisco road, and to Purcell, I. T., connecting with the Atchison Co., which assumed the management of the Gulf, Colorado and Santa Fé. Mr. Sealy was president of the company until the transfer was made, and is now vice-president. He is also a director of the Southern Kansas and Texas railway; treasurer of the Galveston Cotton Exchange, Galveston Rope and Twine Co., Galveston Maritime Association, Galveston Free School board, Galveston Protestant Orphans' Home and Evening Tribune Publishing Co. He is president of the Wharf Co., and director in the Galveston Gas Co., Cotton and Woolen Mills Co., Cotton Exchange, Texas Land and Loan Association, Rembert Roller Compress Co., Southern Cotton Compress Co., Bluefields Banana Co., Electric Light Co., and of the Galveston agency of the Galveston Meat Exporting Co., besides many other corporations. In the movement for a deep water harbor at Galveston he brought to bear the influence of these great corporations, and did as much as any man, if not more, to secure the needed legislation by congress. In 1872 Mr. Sealy was elected alderman of Galveston, and instituted a number of reforms, which resulted in restoring the city's credit, and were so salutary in

general that they were adopted by other cities in the state. Mr. Sealy was married, at Galveston, May 12, 1875, to Magnolia, daughter of P. J. and Caroline (Womack) Willis. They have five daughters and three sons.

**STUBBS, William Carter**, chemist, agriculturist and educator, was born in Gloucester county, Va., Dec. 7, 1846, son of Jefferson W. and Ann Walker Carter (Baytop) Stubbs, of old English families, which settled in Gloucester in the seventeenth century. His father (1811-97), whose portrait now adorns the walls of the county court house, was presiding justice of Gloucester county for thirty years, and for forty years president of the Gloucester Charity School. All his life he was prominently connected with the Methodist Episcopal church, South. William C. Stubbs was educated in his own home by the best private tutors. He entered William and Mary College in 1860, but this, on account of its nearness to the scenes of the war, was closed in 1861, and he, therefore, continued his studies at Randolph-Macon College, and was graduated in 1862. The following autumn he joined company D, 24th Virginia cavalry, and served as an officer of this company until the surrender at Appomattox Court House, April, 1865. In October of the same year he returned to his studies, and was graduated at the University of Virginia in 1868. With him were his two elder brothers, Maj. James N. Stubbs, state senator and attorney at law of Gloucester county, Va., and Dr. T. Jefferson Stubbs, professor in William and Mary College, Williamsburg, Va. In 1869 he was made a professor in the East Alabama College, and in 1872 professor of chemistry in the Agricultural and Mechanical College of Auburn, Ala. In 1878 he became state chemist of Alabama. In 1885 he assumed the charge of the sugar experiment station in Louisiana, established and endowed by the planters of that state. Soon after he was appointed a professor in Louisiana State University, and director of the state experiment station, Baton Rouge. In 1886 he was appointed by the legislature state chemist of Louisiana, and in 1887 director of the North Louisiana experiment station, at Calhoun. In 1892 the state legislature made appropriations for a geological survey of the state, giving the work into his hands, which he still continues. He also still supervises the "Audubon Sugar School," established in 1892, and placed under his direction. The appreciation by the public of Prof. Stubbs's services and earnest labor is shown by the increasing appropriations made biennially to the cause of agriculture by the legislature of Louisiana; and it has been a service of delight to Prof. Stubbs to watch the growth of agricultural agencies from small beginnings, until to-day it is said that Louisiana is better equipped in facilities for advancing her agricultural interests than any other state in the Union. Prof. Stubbs has published over 100 bulletins upon agricultural subjects, and is quoted everywhere as an authority on southern agriculture; also has published works on sugar cane and the manufacture and chemistry of sugar, and these are considered standards in every tropical country where sugar cane is cultivated. He is an enthusiastic Southerner, and his energies are given to the development of the wonderful natural resources of that section of the country. He is a life member of the Virginia Historical Association, as well as a member of the administration council of the Southern

*Mr. Carter Stubbs*

Historical Association of Washington, D. C. He is a member of camp No. 9 of Confederate Veterans, and also is brigadier-general on the staff of Gen. John B. Gordon, commander-in-chief of Confederate Veterans. Prof. Stubbs was married, in 1875, to Elizabeth Saunders, daughter of Henry D. and Mary Low (Saunders) Blair, of North Alabama. The Blairs were early settlers in South Carolina, and were of Huguenot and Scotch-Irish descent. They have no children. Their home, of historic and traditional interest, is beautifully located under the spreading live oaks of Audubon park, New Orleans, La.

**MACRAE, George Wythe**, banker, was born near Warrenton, Va., May 28, 1838, son of Bailey Washington and Sarah Jane (Stuart) Macrae, of Scottish descent. His father, a man of superior character and education, was a large plantation owner, and his mother was a daughter of William Stuart, of Virginia. George W. Macrae was tutored in schools of his native town until, in 1849, his family removed to the neighborhood of Clarksville, Tenn., where he studied in the Masonic University of Tennessee (1853-54). In 1854 he began active life as clerk in a store at Clarksville, Tenn., and removing, in 1859, to Memphis, became associated with Dr. D. T. Porter in the wholesale grocery business, under the firm name of Porter & Macrae. The business was interrupted by the war of 1862, and during the next nine years Mr. Macrae was variously engaged until, in 1871, he again became associated with Dr. Porter's firm, which, in 1882, again assumed its original name and style. This firm, which was finally dissolved in 1896, was always noted for its prosperity and straightforward business dealing. Mr. Macrae has been president of the Memphis National Bank since 1894; is president of the Chickasaw Cooperage Co. since 1890, and is a stockholder, director and treasurer of the Artesian Water Co. of Memphis. He is a member and an elder of the Presbyterian church, and is an earnest supporter of its doctrines and benevolent activities. Mr. Macrae is one of the foremost business men of Memphis, and is widely noted for sound judgment, great executive ability and unflinching integrity. He has been twice married: first, on Sept. 13, 1866, to Fannie Morris, of Clarksville, Tenn., who died, Feb. 1, 1870, leaving one daughter, now Mrs. Walter White, of Memphis; second, on March 2, 1881, to Blanche, daughter of Dr. B. W. Avent, a prominent physician of Memphis, Tenn., by whom he has had five children.

*G. W. Macrae*

**SEARING, Laura Catherine (Redden)**, author, was born in Somerset county, Md., Feb. 9, 1840. From her earliest years she showed signs of superior mental gifts, but at the age of ten a severe attack of cerebro-spinal meningitis left her both deaf and dumb. She had not, however, lost her memory of sounds or the sense of rhythm, and by degrees recovered the power of speech. When still very young, she began to write both prose and verse, and her productions were published in the local press, attracting much attention by their undeniable merit, as well as by reason of the unusual circumstances under which they were written. On the removal of her parents to St. Louis, Mo., she became a pupil at the State Institution for the Deaf and Dumb. She was a regular contributor to the St. Louis "Republican" in 1860, writing under the pseudonym

Vol. IX.—32.

"Howard Glyndon," and during the civil war resided at Washington, D. C., as special correspondent. The years 1865-68 she spent in Europe, studying the German, French, Spanish and Italian languages, meantime acting as foreign correspondent to the New York "Times." On her return to America, in 1868, she settled in New York city, and became associated with the "Evening Mail," continuing a contributor to its columns until 1876. While in that city she enlisted the interest of Alexander Graham Bell and others who were endeavoring to improve the methods of instruction for deaf-mutes, and with their assistance learned to speak with extraordinary ease. She was married, in 1876, to Edward W. Searing, a prominent New York lawyer. In addition to her contributions to periodical literature, Mrs. Searing has published "Idyls of Battles, and Poems of the Rebellion" (1864); "A Little Boy's Story" (translation from Mme. Julie Govrand, 1869); "Sounds from Secret Chambers" (1873); "Brother and Sister" (1879); and a pamphlet entitled "Notable Men of the Thirty-seventh Congress" (1862). In 1886 she removed to California.

**MILES, William Raphael**, soldier and lawyer, was born near Bardstown, Ky., March 25, 1817, son of John and Sarah (Howard) Miles. His father was a farmer of Nelson county, Ky.; his mother was a daughter of Edward Howard, of Kentucky. His grandparents on both sides were among the pioneers of his native state, having come from Maryland. William R. Miles received his primary education in the schools of Nelson county, Ky., and was graduated at St. Joseph's College, Bardstown, Ky., in 1836. He then studied law under Judge Benjamin Hardin, of Bardstown, and at the same time filled a professorship in the college. On his admission to the bar, in 1839, he removed to Yazoo county, Miss., and began the practice of his profession. Within a few months he formed a partnership with Judge E. C. Wilkinson, whose reputation and professional prestige quickly filled the office with business and laid the foundation of a successful practice for the firm. It fell to Mr. Miles exclusively upon the Judge's retirement within a year's time, and he continued with unabated prosperity until 1853. He also figured considerably in politics, having been, in 1844, a representative from Yazoo county in the Mississippi legislature; in 1846 state senator for Yazoo and Madison counties, and in 1852 elector-at-large on the Whig state ticket. Meantime he had purchased 10,000 acres of land in the Yazoo valley, and, with a force of 250 slaves, conducted a cotton plantation for several years. At the outbreak of the civil war he entered the service of the Confederacy, and raised and organized a legion, composed of infantry, artillery and cavalry, and known as Miles' legion. He used his own means so far as they went, then borrowed a large sum to complete it on the government's guarantee of repayment. His command was mustered into service but performed no important duty until the siege of Port Hudson, where it achieved conspicuous notice for valor and good discipline. It was surrounded five days after the fall of Vicksburg, and Gen. Miles remained a prisoner over a year. Receiving permission to return home he left Johnson's island Oct. 15, 1864, and while passing through Richmond on the way, he received a commission as brigadier-

*W. R. Miles*

general, and re-entered the military service. In April, 1865, he was one of the Confederate commission to arrange the final paroles for the surrendered armies. The return of peace found him without means, his property ruined, and the outlook the blackest, with a debt of \$210,000 at ruinous rates of interest, and no present prospects of earning a livelihood. However, with a courage truly worthy an old soldier, he bravely faced the situation, and in 1865 resumed law practice in Yazoo City, Miss.; completing the education of his sons, and, after a ceaseless struggle of twenty years; completely discharging his immense indebtedness. By force of his continued application, strict integrity and high professional qualifications, he eventually accumulated another fortune, and in 1894 retired to his plantations at Mileston, Miss., where he has since continued to reside. Gen. Miles is highly respected among all classes of the community, and is widely known as a typical gentleman of the old school; frank, courteous and lavishly hospitable. When in the arena of politics before the civil war, it was well said, "even a Democrat found it difficult to vote against William R. Miles, even though a candidate of the Whigs." Gen. Miles has been married twice; first, in 1847, to Fannie M., daughter of John Maynard, of Jackson, Miss.; second, in 1870, to Mary Rebecca, daughter of Col. James J. B. White, of Yazoo City, Miss. By the first marriage he had three sons; William R. Miles, Jr., who became a Jesuit priest and rose to the highest eminence before his early death, in 1890; Theus N. Miles, a cotton planter of Mississippi, and Edward H. Miles, a member of the religious order of the Marist Fathers in Louisiana.

**BENEDICT, William Sommer**, lawyer, was born in Gainesville, Sumter co., Ala., Feb. 11, 1843, son of Philip and Catherine (Sommer) Benedict. His earliest known paternal ancestor was

Philip Benedict, who, early in the seventeenth century, settled in Mannheim township, Lancaster co., Pa. William S. Benedict's great-grandfather, John Leonard Benedict, was a soldier in the revolutionary war. His maternal great-grandfather served under Washington at Gen. Braddock's defeat and also during the revolutionary war. Mr. Benedict received his education in the public schools of New Orleans. After his graduation in 1858 at the high school, he was a clerk for a few months in a book-store, afterwards engaging in business connected with steamboats at New Orleans, until 1863, when he took a clerkship in the U. S. district court for the district of Louisiana. While holding different positions in court he studied law and was admitted to the bar in April, 1865. That year he

became assistant in the law firm of Durant & Hornor, then, by reason of its extensive practice, the most prominent in the state of Louisiana. On the retirement of both the partners, Mr. Benedict became associated with the son of Mr. Hornor, under the firm name of Hornor & Benedict. This firm continued about fourteen years. Mr. Benedict officiated at one time as acting attorney-general of the state of Louisiana. He is a prominent Mason, having held most of the offices in that order, and is past grand high priest of the Grand Chapter of the state of Louisiana. Mr. Benedict was married, Aug. 11, 1870, to Jane West, daughter of Charles W. Hornor. She is related to the celebrated painter, Benjamin West. Their son, Percy S., is a successful lawyer.

**WASHBURN, Edward Abiel**, clergyman and author, was born in Boston, Mass., April 16, 1819, son of Abiel and Paulina (Tucker) Washburn. He was descended from John Washburn, of Evesham, Worcestershire, England, who, in 1631, emigrated to New England, settling at Duxbury, Mass., but about 1665 removing to Bridgewater. Edward A. Washburn studied at the Boston Latin School, and entered Harvard College, where he was graduated in 1838. He then studied theology at Andover, Mass., and New Haven, Conn., and, in 1842, having been licensed to preach by the Worcester association of Congregational ministers, labored acceptably about six months. The following year he entered the Episcopal church, and on July 12, 1844, took orders as a deacon, being ordained in Trinity Church, Boston, by Bishop Eastburn. On Oct. 9, 1845, he was admitted to the priesthood in Grace Church, Boston, by the same bishop. Meantime, in 1844, he had become rector of St. Paul's Church, Newburyport, Mass., one of the oldest in New England, and there remained seven years. After traveling in Egypt, Syria, China and India, in 1851-53, he succeeded Dr. Arthur Cleveland Coxe (later bishop), as rector of St. John's Church, Hartford, Conn., where he remained nine years, also serving as professor of church polity in the Berkeley Divinity School at Middletown. In 1862-65 he was rector of St. Mark's Church, Philadelphia, where he was highly successful, and in April, 1865, became rector of Calvary Church, New York city, again succeeding Dr. Coxe, who had just been elevated to the episcopate. In this charge he continued until his death, and ever held a prominent place among the learned and eloquent clergymen of the metropolis. He was an enthusiastic churchman, and was allied with the liberal or broad school. He had a natural taste for theological studies, yet his researches in other fields were extensive. In 1871 he was a member of the deputation of the American branch of the Evangelical Alliance, whose members personally presented a memorial to Prince Gortschakoff as the representative of the emperor of Russia, in behalf of religious liberty in that empire. During the conference of the Evangelical Alliance in New York city, in October, 1873, Dr. Washburn read an able paper on "Faith and Reason," and before the conference of 1879 one on "Socialism." He was also a member of the committee on revision of the New Testament. His chief published works are: "The Social Law of God; sermons on the Ten Commandments" (1875); "Sermons" (1882); "Epochs in Church History" (1883); "The Beatitudes and other Sermons" (1884). The degree of D.D. was conferred upon him by Trinity College in 1861. Dr. Washburn was married in 1853 to Frances Lindly, daughter of a well-known physician of Washington, D. C. They had one daughter. He died in New York city, Feb. 2, 1881.

**SIMMONS, James Fowler**, manufacturer, was born in Little Compton, R. I., Sept. 10, 1795, son of Davis Simmons. His early years were spent on his father's farm and in Newport. He attended the public schools in winter, and while living in Newport was a pupil for three months in Mr. Tower's private school. In 1812 he went to Providence, and soon after removed to North Scituate, where for a time he was book-keeper for the Scituate Manufacturing Co. Having closed his engagement with this company, he not long after received an appointment as superintendent of the Rockland Factory in Scituate, and subsequently had charge of the Wanskuck Mills in North Providence, and began the manufacture of yarns. After this he went to Manville and to Olneyville. In 1822 he built a mill at Simmonsville, in Johnston township, and there successfully continued the business of manufactur-

W. S. Benedict

ing. Early in life Mr. Simmons became prominently active in politics, and was chosen to represent the town of Johnston in the general assembly every year from 1827 to 1840, with the exception of the years 1830 and 1834. Although among the representatives were some of the ablest men of the state, he took high rank at once, his speeches being listened to with respect, and his judgment on matters which he had made the subject of special examination being deferred to by candid men of all parties. When committees were sent to Washington from manufacturing corporations in New England to look after their interests and to urge the necessity of a protective tariff, Mr. Simmons occupied a prominent place on such delegations. So also in the great financial crisis of 1837, when committees chosen from the large cities were sent from New York to consult on the state of affairs, he was chairman of the committee sent from Providence. In 1841 he was elected U. S. senator from Rhode Island, and remained in office until 1847. He identified himself with those who were in favor of protection as against free trade, and was the warm personal friend of Henry Clay. When his term expired he was a candidate for re-election, but was defeated in consequence of having advocated the liberation of Thomas W. Dorr from prison. Subsequently, in 1851, he was again defeated, but in 1857 was once more a successful candidate. In August, 1862, he resigned his office and returned home to look after his private affairs. Mr. Simmons was twice married: first, on Oct. 21, 1820, to Eliza, daughter of Judge Samuel Randall, of Johnston, by whom he had four sons and one daughter; second, in 1835, to Sarah Scott, daughter of Maj. Simon Whipple, of Smithfield, by whom he had four sons. He died at Johnston, R. I., July 19, 1864.

**ALDEN, Edmund Kimball**, clergyman and secretary, was born at Randolph, Mass., April 11, 1825, son of Ebenezer Alden, and eighth in descent from John Alden. He was graduated at Amherst College in 1844, and studied theology at Andover Theological Seminary, being graduated in 1848. After a pastorate for four years of the Congregational Church at Yarmouth, Me., and of five years at Lenox, Mass., in 1859 he entered upon the pastorate of Phillips Congregational Church, Boston, Mass., and so continued until he was elected corresponding secretary of the American Board of Commissioners for Foreign Missions in 1876. During his last years he was especially prominent before the religious public as the advocate of a policy in the examination of candidates for the missionary service, at the hands of that organization. This necessitated making inquiries of candidates as to their views of the scriptural doctrine of the decisive nature of the earthly life in fixing the destiny of the human soul for eternity, as against the theory known as the "Andover Hypothesis," that there may be a probationary experience for the human soul after the death of the body. So far the views advocated by Rev. Dr. Alden in the matter have been substantially upheld by the board. He received the degree of D.D. in 1866. He died in Boston, Mass., April 30, 1896.

**HEARSEY, Henry James**, soldier and editor, was born near Thompson's creek, in the parish of West Feliciana, La., Nov. 21, 1840, son of James Price and Caroline (Generally) Hearsey. He received his education in private academies at Bayou Sara and St. Francisville, La., and studied law for a while in the office of Mr. C. B. Phillips. He early began his journalistic career, as he was only twenty years of age when he established the Feliciana "Constitutionalist." He was soon invited to go to Woodville, Miss., an important political centre at that time, to become editor of a Democratic paper, then the Woodville "Republican," and in

this position urged the secession of the state of Mississippi. At the breaking out of the civil war he joined the Wilkinson Rifles, which afterwards became a part of the 16th Mississippi regiment, and served first as private, afterwards being promoted to orderly sergeant, as regimental and brigade assistant-quartermaster, and was on the staff of Trimble, Featherstone, Posey and Harris. In 1870 Maj. Hearsey went to Shreveport, where he revived the old Shreveport "News"; later on he established, with Capt. John S. Lewis, the "East Texas Bulletin" of Marshall, Tex., and still later, with Col. A. D. Battle, A. H. Leonard and Charles Lewis, the Shreveport "Times." In 1874 he wrote the first articles in favor of an open and aggressive revolt against negro domination and suffrage, the result of which movement was a great political victory in the Red River valley over the opposing party. In 1876 he became the editor of the New Orleans "Democrat." Mr. Hearsey was strongly in favor of the calling of the constitutional convention in 1879, and advocated the repudiation of the "Carpet Bag" debt of the state. Since 1880 he has been editor of the "Daily States." He has all ways been a strict states' rights, tariff for-revenue-only Democrat. He was a personal friend of Jefferson Davis, having been complimented by him a few months before the latter's

death for his staunch adherence to the principles upon which the southern Confederacy was founded. In 1898 Maj. Hearsey was the candidate for printer of the constitutional convention, and was elected by a practically unanimous vote of the convention, after having received the cordial endorsement of the whole press of Louisiana, without respect to party, though with many of his confreres he had had at different times heated and often violent controversies. He was also warmly indorsed by many of the papers of Mississippi and Texas. He was married, in St. Francisville, in 1878, to Martha Mary Morris, a lady of Irish extraction and granddaughter of an eminent Episcopalian minister.

**GREEN, Rufus Smith**, president of Elmira College (1893- ), was born at Sidney Plains, N. Y., April 1, 1848. He prepared for college at the Gilbertsville Academy, and in his fifteenth year entered the sophomore class at Hamilton College, where, after an interval of teaching in Norwich Academy, he was graduated with honor in 1867. The succeeding three years were spent in teaching at Cooperstown and Penn Yan and in study at the University of Berlin. During 1870-73 he studied at Auburn Theological Seminary, after which he held successive pastorates in Presbyterian churches at Westfield, N. Y.; Morristown, N. J.; Buffalo, N. Y., and Orange, N. J. In 1883 the honorary degree of D.D. was conferred upon him by his alma mater, and in 1893 he accepted the presidency of Elmira College. Dr. Green's usefulness in church affairs was shown by his appointment, in 1891, as chairman of the general assembly's special committee work on systematic beneficence. Here, as in whatever else he has undertaken, he was at once signally successful. Personally, he is a man of noble and dignified bearing, a ready speaker, and possessed of remarkable administrative ability. He is a member of the Sons of the American Revolution. On July 23, 1873, he was married to Lucy Anna, daughter of Rev.

Samuel Robinson, and a former student of Elmira College. They have three daughters and one son living, their eldest son, a most promising youth of seventeen, having been drowned, Aug. 2, 1892. In tribute to his memory, Dr. Green published (1893) "An All round Boy: The Life and Letters of Ralph Robinson Green," which has been called "a fit companion to 'Tom Brown at Rugby.'" Dr. Green is also the author of "Both Sides: Jonathan and Absalom" (1888); "History of Morris County, New Jersey," and many pamphlets.

**SCHADLE, Jacob E.**, physician, was born in Clinton county, Pa., June 23, 1849. He is of German-American parentage, and spent the early years of his life in his native state, having been educated at Millersburg State Normal School. He was superintendent of the public schools of Millersburg in 1875. In 1876 he began the study of medicine, and was graduated at Jefferson Medical College in 1881. He practiced his profession in the coal regions of Pennsylvania, having had a six years' residence in Shenandoah. It was during this time that he successfully treated an epidemic of smallpox, which broke out in the town, an interesting account of which can be found in the "Medical Summary" of 1884. Desiring to work in special medicine, Dr. Schadle, the following year, became a student in

rhinology and laryngology, under Dr. Sajous, of Philadelphia, and later, upon his return to Shenandoah and to general practice, devoted much time to the study and treatment of nose and throat diseases. In 1887 he removed to St. Paul, Minn., and for ten years limited his practice to that chosen specialty. His success was immediate, and has been continuous. Various honors have been bestowed upon him from time to time, beginning with an appointment by the board of health in 1884. He was elected to the vice-presidency of Jefferson Medical College Alumni Association in 1898, and to the chairmanship of the American Laryngological, Rhinological,

Otological Association in 1897. In 1896 he became clinical instructor in laryngology at the University of Minnesota, and clinical professor of the same in 1897. As chief of staff and member of the board of trustees of the St. Paul Free Dispensary, he has generously aided in the upbuilding and maintenance of that institution. His own department therein is unsurpassed in its equipment. The doctor's contributions to medical literature have been both interesting and valuable, and have been very widely quoted. In the "Medical and Surgical Reporter" of December, 1885, will be found his report upon several cases of mushroom poisoning, in which he used atropine successfully in very large doses. This was the first use of the drug as an antidote in mushroom poisoning, and it has since been generally recognized as the remedy *par excellence*. Dr. Schadle was the first to call attention to the remote secondary and terminal effects of cocaine upon the genital tract in an article entitled "The Effects of Cocaine on the Genital Organs," published in the "Philadelphia Medical Register" (1889). Other notable papers are: "A Report of Case of Successful Treatment of Total Adherent Soft Palate," in the "Journal of the American Medical Association" (1895); "Torticollis and Adenoid Growths," in the "Journal of the American Medical Association" of June 6, 1886; "Post nasal Adenoid Hypertrophy," in the "Laryn-

goscope" of July, 1896; "The Etiology and Diagnosis of Empyema of the Accessory Sinuses of the Nose," in the "St. Paul Medical Journal," (January, 1899), and "Accessory Thyroid Tumors at the Base of the Tongue," in the "Laryngoscope" (June, 1889). He wrote "Diseases of the Naso-Pharynx" for "Sajous' Annual," Vol. VI. He is the inventor of several valuable and ingenious instruments for use in nose and throat work; among these are snares for the removal of fibroid and other growths from the nasopharynx and nasal passages, and a very efficient lymphotome for the removal of adenoid vegetations at the vault of the pharynx, an automatic syringe for intratracheal injection. In 1897 he went to Europe to study, spending fifteen months, for the most part in the German centres of medical instruction. Upon his return he added to his specialty diseases of the ear. To the practice of his specialties he has brought a broad training in general medicine, a straightforward adherence to the ethical laws of his profession, great natural powers of accurate observation, quick perception, practical application and a remarkable dexterity, which, combined with business sagacity and a professional enthusiasm born of an ardent love for scientific pursuits, makes his success very easy to understand. Dr. Schadle was married, at Millersburg, Pa., in 1878, to Jane Ray, daughter of Dr. David H. and Sarah Miller. They have no children.

**GRAY, David**, poet and journalist, was born in Edinburgh, Scotland, Nov. 8, 1836. When twelve years of age he came to America with his parents, who settled on a farm on a Wisconsin prairie. Reared there with little schooling, the boy, together with his greatest friend, the son of a neighboring farmer, acquired in leisure moments a knowledge and appreciation of literature by reading a few treasured volumes of classics which they possessed. They also wrote verse, in imitation of their favorite poets, and read these effusions to each other in the leisure granted them in the intervals of farm work. The early verses of David Gray possess a singular charm from the hopefulness and joy in life which they express. When he was twenty years of age he left the farm and went to Buffalo, obtaining there a position as secretary in the library of the Young Men's Christian Union, and afterwards seeking employment of various kinds. After a period of disheartening struggle for a livelihood, he became a reporter on the Buffalo "Courier." This was not congenial work, for his aims were higher; and while conscientiously fulfilling his duties, he gradually lost his early hopefulness, so that the poetry, which he continued to write, became marked by a melancholy tinge of regret. As he rose to important positions on the newspaper he became more and more absorbed in the labors of his office, and, losing his youthful ambitions, by degrees the poet was absorbed in the journalist. From 1865 to 1868 he traveled in Italy, the land of his dreams, and in England, Germany, Sweden, Russia, Switzerland and the East, and described his experiences in a series of letters to the "Courier," which, being written amid congenial surroundings were among the best of his productions. Mr. Gray in time became managing editor, and then editor in chief, of the "Courier," and made it the leading Democratic journal of western New York until his retirement in 1882. He was a strong anti-slavery Democrat, and uncompromisingly opposed political corruption and trickery in his own party as well as in that of the opposition. In Buffalo for many years he enjoyed a peculiar distinction, founded both upon his literary talents and his generous high-mindedness. He was an intimate friend of Samuel J. Tilden, and immediately after the election of 1876 wrote the famous editorial, "Keep Cool," which expressed Mr. Tilden's policy. This

J. E. Schadle

was an address to Democrats, closing with the words: "Remember that the country is greater than party. The thing will come out all right if we only have patience. Justice will be done; the right will triumph. Keep Cool!" Mr. Gray supported Grover Cleveland when he became mayor of Buffalo, and was one of the originators of the movement to nominate him for governor. When Mr. Cleveland became president he was tendered a distinguished diplomatic position, which ill-health made it impracticable to accept. What distinguished Mr. Gray almost as much as his work was his charm of personality. He was well known and sought after by many of the foremost literary men of his time. Col. John Hay dubbed him publicly "the loveliest of his sex." He was an intimate friend of John G. Holland, Bayard Taylor and Hay were his traveling companions in Europe, he was one of the earliest and warmest friends of "Mark Twain." Mr. Gray's poems had a wide circulation in magazines and in the press, and after his death were collected, with others of his writings, and published with a memoir as "Letters, Poems and Selected Prose Writings of David Gray," by Josephus Larned (1888). Of the poems in this volume the "Nation" says: "One can only say of them that they show the spark of poetic feeling, a few of them are much better than the rest, and in those which still glow with the contemporary passion of the war, one feels the pulse of the nation, but the work of unripe years has too large a share in the collection, and even in maturer compositions the verse is too obviously the echo of those poets whom Gray loved." In 1882 Mr. Gray's health broke down, and he spent the next two years in Europe. Returning to Buffalo, he was tendered the secretaryship of the Niagara park commission as a recognition of his efforts in behalf of the Niagara state reservation project. He later became secretary of the Buffalo park commission. In 1869 he was married to Martha Terry Guthrie, of New Orleans. He was fatally injured in a railway accident near Binghamton, N. Y., March 16, 1888, and died on the 18th.

**GREENE, Albert Gorton**, author and jurist, was born in Providence, R. I., Feb. 10, 1802, son of John H. and Elizabeth (Beverly) Greene. His early ancestors were among the first settlers of Warwick, R. I., and succeeding generations produced many men of prominence. His middle name was derived from that distinguished member of his family, Samuel Gorton, founder of a peculiar sect known as Nothingarians. He studied at the University Grammar School, Providence, and in 1817 entered the sophomore class of Brown University. After his graduation, in 1820, he studied law in the office of Hon. John Whipple, was admitted to the Rhode Island bar in 1823, and practiced his profession until 1832, though at the same time devoting his leisure hours to the indulgence of his scholarly and literary tastes and taking a deep interest in the intellectual welfare of his native state. In 1832 he was elected clerk of the city council and clerk of the municipal court, and it therefore became necessary for him to relinquish his legal practice. During the first year of his tenure of office he issued a quarterly magazine entitled the "Literary Journal," but this venture was not successful, and was soon discontinued. He was chosen judge of the municipal court in 1858, and administered the duties appertaining to the position until failing health compelled him to retire from active life in 1867. Judge Greene was by predilection a scholar, and not only delighted in accumulating learning himself, but was always interested in any movement for the advancement of general knowledge. His zeal for the educational interests of the state took practical shape in the original school bill of Rhode Island, which he con-

ceived and drafted, and he aided in founding both the Providence Athenaeum and the Rhode Island Historical Society, the latter of which he afterward served as president for fourteen years, until his death. His private library grew until it contained about 20,000 volumes, and he began the collection of American poetry, now known as the Harris collection, in Brown University. His fugitive poems have never been collected, and a number of them remain in manuscript, among the best known of them being, "Old Grimes is Dead," "The Baron's Last Banquet," "The Militia Muster," "Adelheid," "Ah, Think Not that the Bosom's Light." His only prose work of note was a history of the "Jersey Prison Ship." Judge Greene was married, in 1824, to Mary Ann, daughter of Benjamin Clifford, of Providence. Three of his four daughters survived him. The closing months of his life were spent with his daughter, the wife of Rev. Dr. Samuel White Duncan, at Cleveland, O., where he died Jan. 3, 1868.

**BARROW, Pope**, lawyer, was born in Oglethorpe county, Ga., Aug. 1, 1839, son of David Crenshaw and Sarah Eliza (Pope) Barrow. His father, a planter, was for many years a trustee of the University of Georgia, and a member of the state senate. His grandfather, James Barrow, was a soldier in the revolution and took part in the battles of Brandywine and Germantown, the fighting near New York, and later in the campaign in the South. His last wife and the mother of his children was Patience Crenshaw, of Virginia. The grandfather of James Barrow, Thomas Barrow, was born in Lancashire, England, and emigrated to Virginia in 1680, settling in what was then known as the Northern Neck of Virginia, he afterwards removed to what is now Southampton county. Pope Barrow, after a good elementary education in the schools of his native county, attended the University of Georgia. He entered the Confederate army as a lieutenant, and was taken prisoner near the close of the war, when he was a captain and aide on the staff of Maj. Gen. Howell Cobb. He has been a member of the legislature of Georgia, a member of the constitutional convention of Georgia of 1877 and of the U. S. senate, having been elected to the senate by the Georgia legislature to fill the unexpired term of Hon. B. H. Hill. His interest in public questions has been shown in various state and national conventions of importance. Mr. Barrow has been twice married, first, in March, 1867, to Sarah Church, daughter of Colonel Lewis Stevenson Craig, of the U. S. army; she died, in 1881, leaving five children, second, in 1884, to Cornelia Augusta, daughter of Henry Rootes Jackson; they have four children.

**EDDY, Daniel Clarke**, clergyman, was born in Salem, Mass., May 21, 1823. He was graduated at the New Hampton Theological Institute in New Hampshire in 1845, and was called to the pastorate of the First Baptist Church in Lowell, Jan. 2, 1846, being ordained in the same month. In 1854 he was elected on the Know nothing ticket representative to the Massachusetts legislature, and was unexpectedly chosen speaker of the house. Although without previous experience in presiding over deliberative assemblies, he discharged the duties of his office so satisfactorily that a unanimous vote was passed thanking him for "the promptness, ability and urbanity with which he had performed the duties of presiding officer." In 1856 he was installed as

pastor of the Harvard Street Church, Boston, and in 1862 accepted a call to the Tabernacle Church, Philadelphia, Pa. After two years there he returned to Boston on the invitation of the Baldwin Place Church, which was subsequently removed to Warren avenue, and an almost entirely new congregation gathered. He occupied a pulpit in Fall River, Mass., for a short period, and was afterwards settled in Hyde Park and Brooklyn, N. Y. Dr. Eddy wrote a large number of books, some of which have had a very extended circulation. Among them are: "Young Man's Friend" (1849); "The Barnum Apostle; a Life of Judson" (1850); "Roger Williams and the Baptists"; "Unitarian Apostasy"; "Europa; or, Scenes in the Old World" (1851); "The Percy Family" (1853); "Angel Whispers" (1853); "Heroines of the Missionary Enterprise" (1854); "City Side" (1854); "Young Woman's Friend" (1855); "Waiting at the Cross" (1859); "Walter's Tour in the East" (1861). Dr. Eddy made an extended tour of Europe in 1850, and going abroad again in 1861, traveled through Turkey and the Holy Land. He died in Brooklyn, N. Y., in 1896.

**STRICKLAND, Peter**, U. S. consul, was born in Montville, Conn., Aug. 1, 1837, son of Peter and Laura (White) Strickland. His ancestors on both sides of the house were among the earliest settlers near New London, Conn.; the Stricklands having been established as one of the most reputable families in that vicinity since 1670. Both families were originally English, and both preserve traditions of descent from noble lines, although no efforts have been made to establish their claims. With the exception of one year spent in New London, where he attended school, Mr. Strickland lived on a farm in Montville with his parents until he was nearly fifteen years of age. Then, after teaching a district school for a winter term, he chose a seafaring life, and in the course of the next few years passed through all the grades in the merchant service; was second mate of a large ship while yet under twenty;

chief mate at the age of twenty, and master only a short time later. When the Paraguay expedition was being fitted out, he was desirous of going with it; but an accident by which, at the age of seventeen, he lost the forefinger of his right hand, prevented him from being accepted in the navy then and also later during the civil war. He was, however, much at sea during the civil war, and on one occasion was only saved from capture by the Alabama by the stormy weather and the approach of night. Mr. Strickland became inter-

ested in business in Africa at the close of the civil war. Previous to that time he had been sailing mostly in large ships to Europe, the West Indies and to South America. He made, as master and supercargo, between 1865 and 1878, more than forty voyages from Boston to the coast of Africa, and only once met with any disaster, and that was comparatively slight. Having commenced business after 1878 in Africa as a merchant, he was solicited by the government during the administration of Pres. Arthur to establish a consulate at Goree Dakar, the chief seaport of the flourishing French colony of Senegal, and he has continued to hold the position ever since, being still engaged in the promotion of American interests in that part of Africa. Mr. Strickland has written

occasionally for the press, and was the author of a book called "A Voice from the Deep," written in behalf of seamen. He was married, in 1861, to Mary L. Rogers, of New London, Conn., by whom he has had four children, two sons and two daughters. The two daughters are still living. One of the sons died in infancy and the other, George, was accidentally drowned at the age of twenty-two, near Cape de Verde, while on his way to Saint Louis, the capital of the colony, where he had been vice-consul for more than a year.

**HALL, Christopher Webber**, geologist, was born in Wardsboro, Windham co. Vt., Feb. 28, 1845, son of Lewis and Louise (Wildler) Hall. His father, who was a farmer, was born in Halifax, Vt., and his grandfather, Justus Hall, removed from Enfield, Conn., to Vermont about the beginning of the nineteenth century. Christopher W. Hall was educated at Leland and Gray Seminary and at Chester (Vt.) Academy, and in 1871 entered Middlebury College. By teaching winters and working in his summer vacations, he was graduated with his class, having taken during his course a botanical prize, several appointments on the Waldo foundation, and a commencement honor. His future career was largely determined by his tastes and successes in college in the line of mathematics and natural history. For the first year after his graduation he was principal of Glens Falls Academy, Glens Falls, N. Y. In 1872 he went west and for one year occupied the position of principal of the high school at Mankato, Minn. After this, until 1875, he was superintendent of the city schools of Owatonna, Minn. During 1875-77 he pursued a course of study at the University of Leipzig, and in 1878, after his return to America, devoted several months to lecturing on general zoölogy and geology in Middlebury College. The same year he returned to Minnesota, where he became instructor in geology at the University of Minnesota, afterwards being promoted to the professorship of geology, mineralogy and biology. He was afterwards relieved of the chair of biology by the establishment of new departments, and has ever since been identified with the phenomenal growth of the institution. In 1892 the resignation of Prof. William A. Pike, dean of the College of Mechanic Arts, necessitated a reorganization of the technical work of the university, and Prof. Hall was appointed dean of the work reorganized under the name of College of Engineering, Metallurgy and the Mechanic Arts. This position was held until 1897. Then a year's leave of absence in Europe enabled him to devote himself to literary work. He has been the author of various papers, chiefly upon educational and geological subjects. He has had an extensive field experience as an assistant geologist on the geological and natural history survey of Minnesota (1878-81) and as assistant U. S. geologist from 1883 until the present time (1899). He has done most exhaustive and thorough work in his explorations within the area of the crystalline rocks of central and southwestern Minnesota. He has been the secretary for the past twelve years of the Minnesota Academy of Natural Sciences; has for several years edited its "Bulletins," and contributed many scientific papers to their pages. Prof. Hall has been twice married: first, July 27, 1875, to Ellen A., daughter of Hon. Mark H. Dunnell, of Owatonna, Minn., who died in Leipzig, Feb. 27, 1876; and, second, Dec. 26, 1883, to Mrs. Sophia L. Haight, daughter of Eli Seely, of Oshtosh, Wis., who died July 12, 1891, leaving an infant daughter, Sophia.

**GUILD, Curtis**, editor, was born in Boston, Jan. 13, 1827. His father, Curtis Guild, of South Dedham, Mass., was a graduate of Harvard Univer-

*Peter Strickland*

sity and a well-known merchant of Boston; his mother was a daughter of Ezra Hodges, of Maine, a revolutionary soldier. His father's business reverses prevented his contemplated course at Harvard, and at the age of sixteen he became a clerk in the mercantile house of Barnard, Adams & Co., of Commercial wharf, Boston. In 1847 he secured a position in the office of the Boston "Journal," where his ability as a writer soon caused his transference to the reportorial staff. He also became a regular contributor to the "Knickerbocker Magazine" of New York, then edited by Lewis Gaylord Clark, and to several other literary periodicals. At the end of two years he joined the staff of the "Evening Traveller," and in 1856 he was admitted to partnership in the firm. Soon afterwards the "Traveller" endeavored to establish regular morning and evening editions, to be similar in character to the New York "Tribune," and, in order to accomplish this result, the "Daily Atlas" and "Chronicle" were purchased and consolidated. The costly and complicated experiment was, however, in advance of the times, and ended unhappily in the financial crisis of 1857-58. Guild extricated himself from the embarrassment, and on Jan. 1, 1859, began to issue the Boston "Commercial Bulletin," a journal of entirely new features of his own invention. In his travels through the West he had observed that none but New York papers had reached the hotels and offices of western cities, and the idea of a commercial paper, to be issued from Boston and advocating New England interests, then first occurred to him. His paper contained extended and special reports of merchandise markets, a record of the business changes of the United States, departments relating to the insurance business, manufacturing interests, and other matters to which comparatively little attention was given by other journals. It was well received from its first appearance, and unwearied zeal made it a permanent success. During the copper mining excitement of 1861 and the petroleum excitement of 1864 he visited the regions in question, and by his thorough examinations made himself a recognized authority, whose opinions were accepted throughout the country. On Jan. 1, 1866, the paper was enlarged from four pages of eight columns to four pages of nine columns each, and, enlarged for the second time in 1886, it became a broad sheet of forty columns, which was changed to an eight-page sheet April 12, 1890. His letters to the "Bulletin" during a European tour in 1867 were afterward published, under the title of "Over the Ocean," and met with immediate success; and his descriptions of another tour in 1873 were published under the title of "Abroad Again." Later on, in 1888, a third volume, entitled "Britons and Muscovites," giving the writer's experience in Russia, was published. Since then Mr. Guild's publishers have collected and issued his poems, under the title of "From Sunrise to Sunset"; also a volume entitled "A Chat About Celebrities." He was a member of the Boston common council (1875-76), and of the board of aldermen in 1879. He is a graceful public speaker, as was proved by his public oration at the anniversary of the battle of Lexington in 1892, and his address to Charlotte Cushman, on her final retirement from the stage, at the Globe Theatre, Boston. Mr. Guild was, in 1882 and 1883, president of the Commercial Club of Boston, and has been president of the Bostonian Society since 1882. His library contains several valuable sets of "extra illustrated" works, notably "Irving's Life of Washington," extended to twelve large volumes by the insertion of original autograph letters, broadsides, proclamations, etc.; "Parton's Life of Franklin," similarly treated, and a copy of "The Court of Napoleon," interleaved with many rare prints and autograph letters of Napoleon, Josephine, others of the

Bonaparte family, and many distinguished marshals, generals and public men of the first empire. Mr. Guild was married, in September, 1858, to Sarah C., granddaughter of Gen. David Cobb, aide to Gen. Washington. He has two sons, Curtis, Jr., and Courtenay, both graduates of Harvard University.

**EATON, Thomas Treadwell**, clergyman and editor, was born at Murfreesboro, Tenn., Nov. 16, 1845, son of Joseph H. and Esther (Treadwell) Eaton. He was in the sixth generation from John Eaton, who emigrated from Wales in 1686. His father was president of Union University, at Murfreesboro, Tenn., and there he pursued his studies until his father's death, in 1859. In the following year he entered Madison University, now Colgate University, at Hamilton, N. Y., of which institution his uncle, Dr. George W. Eaton, was president. The outbreak of the civil war, in 1861, interrupted his studies. He returned home, trusting that the fratricidal contest would be of short duration, but being disappointed in this hope, he deemed it his duty, in 1864, to take up arms, and entered the Confederate army in the 7th Tennessee cavalry. After the surrender at Gainesville, Ala., May 7, 1865, he taught school for a year in Rutherford county, Tenn., prior to entering Washington and Lee University, Lexington, Va., where he was graduated in 1867, taking the Washington Literary Society's medal, and being chosen to deliver the college oration. Returning home, Mr. Eaton became professor of mathematics and natural science in Union University. In the meanwhile he studied law, and was admitted to the bar in 1869. Shortly afterwards, however, feeling called to the ministry, he abandoned law, returned to his professional duties and devoted all his leisure to the study of theology. On Feb. 13, 1870, he was ordained in Murfreesboro, and in the fall of 1872 became pastor of the Baptist church at Chattahoochee. Three years later he removed to Petersburg, Va., to take charge of the First Baptist Church. After six years' successful ministration, he went to Louisville, and became pastor of the Walnut Street Baptist Church there. During Dr. Eaton's eighteen years of pastoral labors over 3,000 new members joined the church, the present congregation of which numbers some 1,600 souls, being the largest white church of any denomination in the South. Over \$500,000 has been contributed during this period to religious and benevolent objects, while four colonies have been sent out. Dr. Eaton's record is one of constant activity and successful work. He has preached during revivals in various places; has, through his efforts, saved three colored churches from ruin, and secured the cooperation of all Baptists north and south in work among the colored people; has settled difficulties of long standing in more than one white community, and has found time to pen various literary productions on doctrinal subjects, marriage and missions, besides contributing to periodicals. Dr. Eaton is a very rapid thinker and speaker, and it is said of him that no reporter has ever been able to take down one of his sermons or lectures. In 1880 the degree of D. D. was conferred upon him by Washington and Lee University, and in 1886 that of LL. D. by the Southwestern Baptist University. In October, 1887, he became editor-in-chief of the "Western Recorder." In June, 1872, he was married to Alice, daughter of Judge William Roberts, of Nashville, Tenn., and has two children.

*T. T. Eaton*

**STICKNEY, Edward Swan**, banker, was born in Newburyport, Mass., Oct. 7, 1824, son of Enoch and Sarah W. (Knapp) Stickney. He was a descendant of William Stickney, of Hampton, Lincolnshire, England, who emigrated to New England in 1637. When his father died, the care and support of his

mother and a younger brother and sister devolved upon him, and his studies were cut short. Before he was twenty-one years of age he had held positions of trust and responsibility in the offices of the Boston, Concord and Montreal railroad and in the old Mechanics' Bank of Concord. In 1855 he went to Chicago, where he entered the establishment of John S. Wright, a manufacturer of agricultural implements, remaining there until 1859, when he became manager of the clearing-house, then newly established to correct the unstable currency in circulation in the West. After a service of several years at the head of that institution, he became a member

of the banking-house of Drexel & Co., in which he assumed important responsibilities, and with which he continued to be connected until 1868, when the Stock Yards National Bank was organized. Of this bank he was cashier, and in 1873 president, speedily making it one of the recognized great banking institutions of the city. In 1869 he was married to Elizabeth, daughter of A. W. Hammond, of Massachusetts, and of Puritan descent. Mr. Stickney possessed one of the rarest and largest collections of etchings and engravings in this country, which now adorns the walls of the Art Institute of Chicago. His large library was bequeathed to the Chicago Historical Society by his widow, who died in 1897. Mr. Stickney was a member of the Chicago Historical Society, the Commercial Club and other organizations. He died in Chicago, Ill., March 20, 1880.

**HULL, Alexander C.**, journalist and statesman, was born in Marion county, Ark., April 20, 1858, son of John E. and Matilda A. (Killough) Hull. His paternal great-grandfather, Thomas Hull, inherited an estate called Free Hall in Londonderry, Ireland, from his father, John Hull; but becoming involved in the rebellion of 1798 was obliged to leave the country. Accompanied by his family he emigrated to America, settling in Maryland, and after twelve years went west, where he died. His son, John C. Hull, was married to a grandniece of Charles Thomson, the secretary of the Continental congress; his son, Hon. John E. Hull, became one of the prominent and wealthy men of Marion county, Ark., and was killed while in the Confederate service in 1863. At the age of eighteen Alexander C. Hull engaged in business pursuits, and in 1878 was appointed deputy clerk of Boone county. From 1880 to 1883 he edited the Baxter county "Citizen," and then during Cleveland's first administration he discharged the duties of chief clerk of the U. S. land office at Harrison. Upon retiring from this position he resumed the journalistic profession, and for ten

years acted as editor and proprietor of the Democratic journal known as the Boone "Banner." He served for years in the Arkansas Press Association as historian, executive committeeman and recording secretary, and in 1893 he attended as state delegate the National Editorial Association assembled at Chicago. In October, 1893, he was appointed state expert accountant to examine and report on the condition of the state treasurer's office, and he discharged the responsible duties of the position with marked ability. In June, 1896, he was nominated by a large majority for secretary of state and was elected in September of that year. Since his installation in office, Mr. Hull has come to be considered one of the most efficient and satisfactory officials of the state. He was married, in 1884, to Lucy M., daughter of A. B. Cory, a prominent journalist, of Harrison, Ark., and has four children.

**BLANDY, Charles**, lawyer, was born at Knock, county Clare, Ireland, Aug. 18, 1847, son of Edmund Francis and Jane (Faviell) Blandy. At that time his father was in charge of important government interests temporarily stationed in that part of Ireland. When still very young he removed with his parents to Worcester, England, where he commenced his education at the public schools, and later at the Worcester College, and later when the family removed to Manchester, England, he completed his education at the public school, at Owen's College of that city, and by private tutors. Having visited America he determined to make it his home, and in 1867 he entered upon the study of law in New York city. In 1872 he was admitted to the bar, and at once entered into active practice, making a specialty of court business, and during the first five years was to be seen almost daily engaged in trying every description of *nisiprius* litigation. In 1882 he attracted the attention of William C. Whitney, then corporation counsel, who invited Mr. Blandy to become one of his assistants, and accepting the office, he held it during

Mr. Whitney's term, as well that of his successor, George P. Andrews, afterwards judge of the supreme court. In 1885 he resigned to resume private practice; formed the firm of Blandy & Hatch, and rapidly built up a large and profitable business. In 1890 William H. Clark was appointed corporation counsel, when Mr. Blandy again became an assistant to try the more important jury cases and to conduct dock department litigations. Later on he was intrusted with prospective legislation affecting the city's interests. He continued in office until the passage of the first power of removal bill in 1895, when his chief, Mr. Clark, was legislated out of office, and Mr. Blandy again resumed private practice, forming the firm of Blandy, Mooney & Shipman. When the Greater New York charter went into effect in 1898, Tammany Hall again came to the front, and on Jan. 1, 1898, as assistant to Corporation Counsel Whalen, Mr. Blandy was given charge of all causes affecting the city to the point of their decision, when they pass into other hands. In all positions Mr. Blandy has been a most conscientious, courteous public servant. Exact in the details of his cases, he is formidable as an antagonist, and regarded by both bench and bar as one

Edw. S. Stickney

Charles Blandy

Alex. C. Hull

of the best equipped lawyers in the city. He has always been a Democrat and a loyal adherent of Tammany Hall. In religious faith he is an Episcopalian, and an attendant of St. Andrew's Church, Harlem. He is a member of the Democratic, Harlem, Arkwright, Sagamore and Lawyers' clubs; of the Thirteen Club; the Medico Legal Society, and of the State Bar Association. During his active practice he has been identified with a large number of most important cases, and the literature of the profession bears abundant evidence of his industry. Mr. Blandy was married, Oct. 22, 1885, to Lila May, daughter of William Hardy, of this city, an old dry-goods merchant, by whom he has three sons and a daughter.

**LATHAM, John Campbell**, banker, was born at Hopkinsville, Christian co., Ky., Oct. 22, 1841, son of John Campbell and Virginia (Glass) Latham. His father, a native of Russellville, Ky., was for some years president of the Hopkinsville Bank and a man of superior business capacity, filling many positions of trust; his mother was a daughter of David Glass, of Richmond, Va., a physician of standing and an officer in the war of 1812. The first American representative of the Latham family was James Latham, who came from England and settled in Culpepper county, Va. John C. Latham, 3d, was educated at private schools in his native county. Upon the outbreak of the civil war, although but seventeen years of age, he enlisted in the Confederate

*John C. Latham*

army, and participated in all the early movements of the army of Tennessee. In November, 1862, he was detached for duty on the staff of Gen. Beauregard, and served in various capacities, principally as secretary, in all his campaigns until the close of the war. Mr. Latham returned home and engaged in the dry-goods business until 1870, when he removed to New York city. The next year he formed the banking firm of Latham, Alexander & Co., still (1899) one of the most active and successful in Wall street. To Mr. Latham's indefatigable energy and far-sighted

wisdom is due the excellent name and signal success of the banking house over which he presides. Besides general banking, the firm has for years done a very large cotton commission and investment business. Mr. Latham is a man of forceful personality and unalterable fixedness of purpose, quick of judgment and uncompromisingly loyal to his convictions. He has done much for the material improvement of his native town, and takes great pride in its advancement. In 1887 he erected, at Hopkinsville, Ky., a magnificent monument to the unknown Confederate dead, which is one of the handsomest in the South. He was married, Nov. 19, 1874, to Mary L., daughter of Thomas H. Allen, of Memphis, Tenn.

**RAINER, Joseph**, president of the Provincial Seminary of St. Francis de Sales, was born at Kaltern, in southern Tyrol, Austria, Feb. 10, 1845, son of Joseph and Genevieve (Pernstich) Rainer, tenants of the domain of Baron Peter Giovanelli. He took an eight years' course, under Franciscan instructors, at the gymnasium of Bozen, and during the same period studied at the Johanneum, an institution founded by Tschiedlerer, the prince-bishop of Trent. In 1864 he entered the University of Innsbruck, where he studied theology for two years under Hur-

ter, Nilles and Jungman, professors of the Jesuit order, who enjoy a national reputation as eminent writers and instructors. In 1866 he accepted an invitation to come to America, from Rev. Dr. Joseph Salzmunn, founder of the Provincial Seminary of St. Francis de Sales, Milwaukee, who had visited Innsbruck to secure workers for the missions in this country. Arriving in New York, he proceeded at once to St. Francis, Wis., his new home, where he completed his theological studies in the Salesianum, and being ordained priest, Sept. 4, 1867, was at once appointed to the chair of languages in the institution presided over by Dr. Salzmunn. He was instructor in Greek, Latin, German and French, and later in Hebrew, English and liturgy. In 1887, on the promotion of his predecessor, Very Rev. Augustine Zeiminger, to the office of chancellor of the archdiocese of Milwaukee, he was chosen president of the seminary where he had labored so long and so faithfully. While performing the arduous duties of teacher and rector Father Rainer has found time to write various books, which are highly appreciated in Catholic circles. In 1876 he wrote the "Life and Times of the Very Rev. Dr. Joseph Salzmunn"; in 1878, "Greek and English Exercise-Book," which is used as a text-book in several American colleges; in 1889, a little work of a devotional character, "Short Conferences on the Office of the Immaculate Conception," and on the occasion of the golden jubilee of Pope Leo XIII. a collection of his Latin and German poems, entitled "Jubilee Songs," was published in Freiburg, Germany. He has also written Latin poems on Columbus, Washington and other notables.

*Joseph Rainer*

**BARRET, Thomas Charles**, senator and planter, was born in Nacogdoches, Tex., March 20, 1860, son of William W. and Mary Catherine (Smith) Barret. His father, a merchant and extensive land-owner of Texas, became a captain in the Confederate army during the civil war; his mother was a daughter of Leander T. Smith, one of the earliest settlers of Texas, and niece of Thomas J. Rush, who was a conspicuous figure in the early history of Texas. Thomas C. Barret was educated in the schools of Shreveport, La., where his parents had settled after the war, and in 1880 he entered the University of the South, Sewanee, Tenn., there remaining as pupil and teacher for five years, and attaining high rank. After finishing his collegiate course, he returned to Shreveport, La., and entered on the study of law in the office of Alexander & Blanchard, leading lawyers of that part of the state. After his admission to the bar, Mr. Barret settled in Shreveport, where he has achieved great success in his profession. He has also devoted some time to politics, being now (1899) a prominent and influential Democratic leader in state and national politics. In 1896 he

*Thos. C. Barret*

was the nominee of his party for state senator, was elected, and now occupies that office with great credit to himself and most acceptably to his constituency. He has shown himself to be a legislator and statesman of a high order. In the senate of Louisiana he is chairman of the committee on elections, qualifications, registration and constitution; is a member of the committee on the judiciary; that of agriculture, commerce and levees, and that of health, quarantine, drainage and charitable institutions. Before his election he was for eight years treasurer of Caddo parish (county) of which Shreveport is the county seat, and treasurer at the same time of the school board, in which position he inaugurated a new system in the management of parochial finances. Mr. Barret is one of the largest planters on the Red river in Louisiana, and is vice-president of the Cotton Growers' Association of the state. As a campaign speaker he is graceful, fluent and logical. He was married, Jan. 27, 1887, to Lillian Quarles, only daughter of Col. James M. Hollingsworth, one of Louisiana's greatest Democratic leaders.

**LEE, James Wideman**, clergyman, was born in Gwinnett county, Ga., Nov. 28, 1849, son of Zachry J. and Emily H. (Wideman) Lee. His parents, members of the Methodist church, were deeply religious, and brought up their children with a quiet but rigid discipline. James W. Lee spent his early life in the quiet and seclusion of his father's plantation, securing his elementary education in the district schools of the neighborhood, afterwards gaining a higher training in the Methodist college of his state, Emory College, Oxford, Ga., where he took a creditable stand, and allowed the peculiar bent of his mind to manifest itself. He very early showed a decided taste for metaphysical studies, in which he laid the foundation for the remarkable power of generalization displayed afterwards in his published works. In 1874 he was admitted to membership in the North Georgia conference, and soon showed unusual qualifications for pulpit work. His unquestioned piety, his great simplicity of nature, his evident conviction upon the great fundamental doctrines of Christianity, gave him an enviable place in the hearts of his

people. His unique personality declared itself in his studies and in his pulpit efforts. From the very beginning he discarded conventional methods in thinking, writing and practicing, and he also showed to a remarkable degree a knowledge of affairs. His home for the past six years has been in St. Louis, Mo., whither he was transferred by his bishop in 1893. For four years he was pastor of St. John's Church, St. Louis, and is now the presiding elder of the St. Louis district of the M. E. church, South. Dr. Lee has made valuable contributions to literature, notably his "The Making of a Man;" "Earthly Footsteps of the Man of Galilee," and "Romance of

Palestine," the last the result of observations during a tour in the East. He is always in demand on the platform or in the pulpit at the most prominent "Chautauquan" and philosophical schools of this country. He is whole-souled, patriotic and broadly catholic, generous and sympathetic. He is now (1899) editor of the "American Illustrated Methodist Magazine." Dr. Lee was married, in 1875, to Emma Ledbetter, of Cedartown, Ga. They have six children.

**LEOVY, Henry Jefferson**, lawyer, was born in Augusta, Ga., May 17, 1826, son of George and

Hannah (Jackson) Leovy. His father, a native of England, who came to America when sixteen years of age and served with the U. S. army in South Carolina in the war of 1812, was for many years a large rice planter in South Carolina. On the outbreak of the Mexican war, in 1846, Henry J. Leovy joined a volunteer force for service under Gen. Taylor in the army of the Rio Grande; but it was not accepted, and he served the government in a civil capacity until the close of the war. He then began law studies, under Judge Thomas B. Monroe, at Frankfort, Ky., and at the end of two years, having been graduated in common law, took a course of lectures in civil law in the University of Louisiana, where he was graduated in 1849. Shortly after his admission to practice in New Orleans, La., where his family had resided for many years, he formed a partnership with Judge Robert N. Ogden, one of the leaders of the state bar. He immediately built up an extensive and profitable practice, and attained wide reputation as a well equipped and skillful lawyer. In 1856, on the formation of the present municipality of New Orleans through the consolidation of the numerous separate suburban districts, he was selected by the city council to codify the city laws. This work involved much research through official newspapers and court reports, and when completed included also a history of Louisiana law. Meanwhile, he made a brilliant reputation as manager of the New Orleans "Delta," one of the leading journals of the state, which in 1857 he had purchased, with Paul E. Bonford and others. Early in the civil war he entered the service of the Confederacy, and served, first, on the staff of Gen. J. Patton Anderson; then, going to Richmond, Va., he accepted Pres. Davis' appointment as commissioner to adjust disputes between civil and army authorities in southwestern Virginia. Later, he was assigned to duty as judge of the military court of that district, with the rank of colonel of cavalry. After Gen. Lee's surrender, he accompanied Pres. Davis' party on their escape into Georgia, whence he accompanied Judah P. Benjamin, secretary of state, to Florida. He was finally paroled at Tallahassee. The war over, he resumed practice in New Orleans, and has since devoted himself to his profession. During 1870-72 he was city attorney, and since 1872 has served as attorney for a number of railroad, express and insurance companies. In 1854 he was married to Elizabeth Adair, daughter of Thomas B. Monroe, of Frankfort, Ky., long U. S. district judge, and later member of the Confederate congress, and at one time professor of law in the University of Louisiana. Her grandfather, Gov. John Adair, of Kentucky, commanded the Kentucky troops at the battle of New Orleans, and served in the U. S. senate. Mr. Leovy has three sons and one daughter.

Henry J. Leovy

**WRIGHT, George Edward**, journalist and author, was born in Perrysburg, O., April 15, 1851, son of Albert D. and Clarinda (Snow) Wright. His father was a noted educator in the state of New York, the founder of the well-known teachers' institutes and the author of various school-books. One of his ancestors, George Wright, served as lieutenant in the Continental army, and his mother was a grandchild of Sparrow Snow, who was lineally descended from Elder Brewster, leader of the Mayflower party. George E. Wright was educated in Rockford, Ill., where his mother had gone a year

after her husband's death, and later he attended Beloit College and Cornell University. Having acquired the trade of type-setting in the office of the University Press, in addition to his regular class studies, he engaged in newspaper work at Kilburn City, Wis., in 1870. In 1871 he secured a position as reporter on the Chicago "Times," and during the following winter he served as editor and manager of the Rockford (Ill.) "Daily Register," although but twenty years of age. In 1874 he became connected with the Chicago "Tribune" as descriptive and general reporter, and soon achieved such popularity

*Lewis E. Wright*

that in 1876 he was sent by the "Tribune" as special correspondent to the Centennial exhibition in Philadelphia. The following year he was dispatched to Europe as special correspondent of the "Tribune" during the Russo-Turkish war. Returning to Chicago in 1878 he became one of the regular editorial staff of the "Tribune." He relinquished journalism the next year to enter the stock and bond business, and in 1882 founded the present Chicago stock exchange, being elected its first secretary, and has served continuously up to the present time (1899) on its governing committee, being also chairman of the stock

list committee. In 1888 he became impressed with the ideas promulgated by the Theosophical Society, and was elected president of the Chicago branch, which position he has held to the present time. Under his wise and skillful management that branch of the society has flourished and grown to a large membership. He has an extensive library, and has been an indefatigable student of oriental, theosophical and occult literature. In his leisure hours he has studied into many of the occult sciences, especially astrology, having cast over 300 horoscopes, including those of many persons of note and fame. Since 1889 he has edited "Chicago Securities," an annual containing the official statements of the corporations whose interests are largely centred in Chicago, published by the Chicago Directory Co. In addition to his lectures and other literary works, Mr. Wright published in 1897, "On the Outer Rim; Studies in Wider Evolution." He is a member of the Chicago Athletic Association, and of the Society of Descendants of the Mayflower. He was married, in 1879, to Jennie May, daughter of Robert W. Peckham. They have no children.

**HALLOCK, Charles**, editor, author and naturalist, was born in New York city, March 13, 1834, son of Gerard and Eliza (Allen) Hallock. The family was founded in America when Peter Hallock (or Holyoake) became one of thirteen colonists, led by Rev. John Young, of Hingham, Norfolk co., England, who landed in New Haven, Conn., Oct. 21, 1649. He subsequently received from Gov. Dongan, under James II., a part of 40,000 acres of land lying between Southampton and Montauk Point. Through his mother he is descended from Rev. Thomas Mayhew, governor of Nantucket and Martha's Vineyard, under a grant from Lord Sterling in 1614. Of their descendants, one branch became Quakers, and to this Fitz Greene Hallock, the poet, belonged; others comprised among their numbers eminent fighting men, distinguished in the American revolution and since, both on land and sea. During the revolution Joseph Hallock fell as commander of a privateer; William commanded

picket boats on Long Island sound; another William owned and commanded a vessel sunk by the English ship Snow, and had two sons, Jeremiah and Moses, who were also soldiers in the revolution. During the civil war many members of the family fought in support of the Union, notably Maj. Gen. Henry W. Halleck. Charles Hallock was graduated at Amherst College in 1854. He served two years as assistant editor of the New Haven "Register," and from 1856 until the outbreak of the civil war was associated with his father, who for thirty-six years was editor of the "Journal of Commerce." Subsequently he was associated with the "Telegraph," "Humorist" and "Courier" of St. John, N. B., and became engaged in business as a broker in St. John, Halifax and New York city. In 1868 he was the financial editor of "Harper's Weekly"; he was secretary of the Blooming Grove Park Association 1870-72, and director of the Flushing and Queens County Bank in 1873. Meanwhile, being a keen sportsman, and not only enthusiastic but scientific in this pursuit, he had gained, through numerous writings on the subject, a considerable reputation as a traveler, explorer, collector and naturalist, especially in ichthyology, and a reliable authority on all manner of field sports. In 1866, through an article in "Harper's Magazine" on the "salmon river" Restigouche, he introduced anglers to a new area of sport, and incited the Canadians to protect and cultivate their prolific fishing waters. Besides many magazine articles, he has written "Recluse of the Oronce" (1854); "Fishing Tourist" (1873); "Camp Life in Florida" (1876); "The Sportsman's Gazetteer and General Guide: The Game Animals, Birds and Fishes of North America, together with a Directory of the Principal Game Resorts of the Country" (1877); "Vacation Rambles in Michigan" (1877); "American Club List and Glossary" (1878); "Dog Fanciers' Directory and Medical Guide" (1880); "Our New Alaska; or, The Seward Purchase Vindicated" (1886); "Medico-Gymnastic Self-Cure" (1888), and "The Salmon Fisher" (1890). In 1873 he founded a

magazine devoted to field sports — "Forest and Stream" — of which he was editor-in-chief until 1880. He originated the International Association for the Protection of Game in 1874, and what is known as the "Hallock Code" is used as a basis for intelligent legislation in many states, while, by sending out expeditions to Lake Okechobee and the west coast of Florida, under F. A. Ober and Dr. C. G. Kenworthy, in 1874-75, he directed public attention anew to the "Land of Flowers." In 1880 Mr. Hallock built the Hotel Hallock, and laid out the town of Hallock, Minn. Four years later he served as superintendent of the Minnesota exhibit at the World's fair at New Orleans. At as late a period as 1889-90 he was associate editor of "Nature's Realm and American Angler," and of the "Northwestern Field and Stream" (1896-97). Mr. Hallock is a member of the National Geographical and Biological societies and of numerous scientific bodies. He has been associated with many industrial schemes of economic value, including the cultivation of the osier willow and of the sunflower for its oil product;

*Charles Hallock*

the manufacture of shell concrete; southern and western immigration; the establishment of creameries in North Carolina; of summer homes in Massachusetts, and of game preserves in many parts of the country. He was married, in 1855, to Amelia J., daughter of Oliver T. Wardell, of New York city.

**EBERHART, John Frederick**, educator, was born in Hickory township, Mercer co., Pa., Jan. 21, 1829, son of Abraham and Esther (Amand) Eberhart. His father (1797-1880), a man of great intelligence and inventive genius, was one of the early settlers of Mercer county, where he erected the first saw-mill and engaged in agricultural pursuits; his mother was a daughter of Frederick J. and Rebecca (Holder) Amand, descendants of German Mennonite settlers of York county, Pa. The Eberhart family is an ancient and prominent one in Germany, principally in Württemberg, numbering several noble stocks and many names of historic memory. The earliest representatives in America were three brothers, as is commonly reported, Joseph, Peter and Michael, who emigrated from Switzerland or Germany in 1727. The line of descent under present consideration is traced from Michael Eberhart, who settled within the present confines of Lehigh county, Pa., and was a "farmer of no small dimensions"; through his son, Paul Eberhart, born

in 1727, during his parents' voyage to America, a farmer in Northampton and Westmoreland counties, and through his son, Christian Eberhart (1772-1839), a farmer of Westmoreland county, Pa., and his wife, Anna Maria Snyder, parents of Abraham Eberhart. John F. Eberhart was educated at the district school of Big Bend, Venango co., Pa., whither his parents had removed in 1837, and at the age of sixteen began teaching a country school near the present site of Oil City, Franklin co., Pa. Having perfected himself in drawing and penmanship, he found in teaching these branches an additional

source of income. Later he attended for two terms at Cottage Hill Academy, Ellsworth, O., and then entering Allegheny College, Meadville, Pa., was graduated in 1853. He defrayed the expenses of his college course by teaching and farm work during the summer months, and while excelling in scholarship, also developed remarkable physical strength; it is said that he once lifted a brass cannon, weighing 900 pounds, at the Meadville Arsenal. In September following his graduation he became principal of Albright Seminary, Berlin, Pa., an institution conducted by the Evangelical Association. Intense application to his duties so seriously affected his health that he was obliged to relinquish active work for several months. In April, 1855, he arrived in Chicago, but after a short stay went to Dixon, Ill., where he spent the summer in outdoor occupations, shooting and fishing, and later conducted the "Transcript," a local political newspaper, for several months. The winter of 1855-56 was occupied in delivering a course of ten popular illustrated lectures on subjects in chemistry, physics, meteorology and astronomy before schools and colleges, and on the basis of the wide reputation thus acquired, he was enabled to make large profits in the following year as traveling representative of Ivison & Phinney and A. S. Barnes & Co., publishers of school-books and supplies, New York city. His deep interest in edu-

cational matters, however, led him, in 1857, to grasp an opportunity to acquire possession of the "Northwestern Home and School Journal" of Chicago, which he edited ably for the next three years. During the same period he devoted much time to establishing and conducting teachers' institutes and lecturing on educational topics throughout Iowa, Wisconsin and Illinois. His prominence and deep interest in all educational matters led to his election in 1859 as school commissioner of Cook county. This office, however, through his efforts and the able coöperation of Newton Bateman, state superintendent of public instruction, was enlarged in scope and power, and renamed county superintendency of public schools. During the ten years of his incumbency Mr. Eberhart visited every school in his jurisdiction at regular intervals, and such was his interest that the standard of instruction was greatly raised. He established the Cook County Teachers' Institute, still a flourishing organization, and in order to meet the crying need for qualified teachers, founded in 1867 the Normal College of the county, which now (1899) has enrolled nearly 1,000 pupils. In addition to these services he attended all legislative sessions for sixteen years in interest of school laws, many of which he drafted, and was largely instrumental in establishing the Illinois State Teachers' Association and the State Normal University. As president of the Cook county board of education he was the means of introducing kindergarten instruction into the Normal School, and largely advanced the kindergarten movement in Chicago. His unceasing efforts won for him the familiar designation, "father of the Cook county public schools." As superintendent of public schools he examined over 5,000 teachers, among them Bishops Charles H. Fowler and John H. Vincent, Pres. Blanchard of Wheaton College, and Frances E. Willard. Miss Willard used to call him her "literary godfather," as he had supervised her early literary work. Three Illinois state superintendents of education were also once members of his institutes. When Señor Sarmienta became president of the Argentine republic, he offered Mr. Eberhart the post of chief minister of education. He, however, declined this and also several invitations to college professorships, believing that the confinement would be hostile to his health, and in 1869 resigned his office to engage in active business. The field of real estate speculation, in which he had already made some encouraging ventures, appealed to him as the most promising at the time. So rapidly did he achieve success that by 1873 his wealth was estimated as at least \$1,000,000. The great panic of 1873-78 largely decreased his profits, but since then he has steadily progressed, until at the present time he is regarded as one of the most extensive realty operators in Chicago. Among his distinguished friends were Horace Mann, Elihu Burnett, John G. Saxe, and Abraham Lincoln, the last named having been attorney for the Illinois state board of education in the establishment of the State Normal School, and deeply interested in its work. Mr. Eberhart was educated under Methodist influences, and has always been earnest in Christian work, and is now a prominent member of the People's Church of Chicago, whose pastor, Dr. Hiram W. Thomas, is a former pupil and a close friend. Mr. Eberhart is a wide reader and a scholar of no mean proportion in several branches of knowledge. He is a member of the American Institute of Instruction; of the National Teachers' Association, and other organizations, social and literary. On Dec. 25, 1864, he was married to Matilda Charity, daughter of Joseph C. Miller, of Chicago. They have had six children, of whom two sons, John J. and Frank N., and two daughters, Mary E. and Grace J., still survive.

*John F. Eberhart*

*John F. Oberhart*

**MABIE, Charles Elias**, insurance president, was born at Union River, Sheboygan co., Wis., July 1, 1855, son of Daniel K. and Ann Eliza (Hyatt) Mabie. He is a grandson of Libbens Mabie, born in 1796 at Mahopa, N. Y.; a great-grandson of Peter Mabie, born in 1731, and he traces his ancestry back to Seigneur Pierre Mabilite de N'evr, of the province of Angiers, France, who held high rank in the army. The name is an ancient one, and is given as Nely by the writer, Caspar de Nery. One of his ancestors, Serg. Caspar Mabie, took part in the defense with the Protestant party in the massacre of St. Bartholomew, and subsequently, on Aug. 24, 1572, took refuge in Angiers. Peter Caspar Mabie fled from France to Holland in 1584 to escape perse-

cution, and later, sailing for America in the ship *New Netherlands*, landed on Manhattan Island in May, 1623; thus becoming one of the founders of New York city. All the Mabies in the United States are descended from this emigrant, and the first child of the family born in America (Nov. 6, 1650,) was Ivoris Homes Caspar. Daniel K. Mabie (born in 1818) was the eldest of a large family of children. He was a physician of high standing, first in Putnam county, N. Y.; later in Wisconsin, whither he removed in 1855, and finally, after 1871, at Pecatonica and Wilmington, Ill. His son, Charles Elias, acquired his education in the public schools of Pecatonica, and at the age of nineteen began business life

as a fire insurance solicitor, next became a life insurance solicitor, and in 1878 accepted the position of general agent for the Equitable Life Assurance Society, of New York city. In 1881 he organized the Life Indemnity and Investment Co., of Iowa, of which he was elected secretary and manager, with headquarters at Sioux City, and in 1891 became president. In 1894 the company became the Iowa Life Insurance Co. He reorganized the company on its present basis as an old-line insurance company, and his keen business foresight directed the removal of its general offices to Chicago in 1894. The company was greatly benefited by the change, and has had a growth far greater than Mr. Mabie's assistants and the board of directors dared hope for. It has now (1899) \$13,000,000 of insurance in force, and the assets exceed \$500,000. In December, 1898, Mr. Mabie was elected president of the Northwestern Life Assurance Co., of Chicago, thus putting upon his shoulders another heavy burden. This company has \$50,000,000 insurance in force, and its assets exceed \$1,500,000, it is conducted on the "stipulated premium" plan. The business of both companies is rapidly growing under Mr. Mabie's direction. Politically, he is a Republican, with independent tendencies; is a member of the Hyde Park, Hamilton and Marquette clubs, of Chicago; a Free Mason, and enjoys a wide popularity on account of his pleasing manners and recognized graces of character. He is a widower, and has two daughters, Litta and Dorothea.

**TAYLOR, John**, U. S. senator, was born in Orange county, Va., in 1750. He was graduated at William and Mary College in 1770, and then studied law with the famous Chancellor Pendleton. He also served in the revolution. He was several times in the state house of delegates, was an elector in 1797, and filled parts of unexpired terms in the U. S. senate in 1792-94, 1803, and 1822-24. He is

chiefly noted for presenting in the Virginia legislature the memorable resolutions of 1798, drafted by Jefferson and slightly modified by Madison. Jefferson gave the original copy to G. Nicholas, who brought them forward in the Kentucky legislature. They were called forth by the alien and sedition laws, and were directed against the Federalists. They are famous in American history as the earliest formulation of the extreme doctrine of states rights, as asserted by the South Carolina nullifiers in 1831-34 and applied by the secessionists in 1861. Mr. Taylor published "Arator," a series of essays on agriculture, which went through at least six editions; and four political tracts: "An Inquiry into the U. S. Government" (1814); "Construction Construed" (1820); "Tyranny Unmasked" (1822), and "New Views of the Constitution" (1823). Jefferson considered these books "indispensable to the statesman or the philosopher." Mr. Taylor died in Caroline county, Va., Aug. 20, 1824.

**WARVELLE, George William**, jurist and author, was born in Kenosha, Wis., May 3, 1852, son of William and Eliza (Gony) Warvelle. His father was one of the pioneer settlers of Wisconsin, having emigrated to the state from England in 1846. He received an academic education, and at nineteen began the study of law. In 1876 he was admitted to practice, and remained in Kenosha until 1881, when, desiring a wider field for his abilities, he removed to Chicago, Ill., where he has since resided. He is a widely known authority upon the law relating to real property; is a forceful and eloquent speaker, and ranks among the ablest of the jury lawyers of the Illinois bar. He is a member of the American Bar Association and other legal and learned societies. In 1896 he was appointed dean of the Chicago Law School, a position he still retains. In 1879 he established the Kenosha "Courier," which he edited for two years, he has also been connected with the staff of legal and other journals. Besides more or less ephemeral contributions to the press, he has written a number of legal treatises, which have been favorably received. His principal works are: a treatise on "Abstracts and Examinations of Title" (1883); "The Origin and Operation of the Homestead Laws" (1887); the "Law of Vendor and Purchaser" (1890); "Principles of the Law of Real Property" (1896); an elementary work for students, now used as a text-book in many law schools, and "An Introduction to the Principles of Jurisprudence and Legal Procedure" (1899), also for students. His books on "Abstracts" and "Vendors" are pioneers upon those subjects in American legal literature, and cited in all the courts of the country. Soon after attaining his majority he joined the fraternity of Free Masons, and has an international reputation with the craft as a Masonic scholar and writer. He has received all the degrees of the order, and for years has been prominent in its councils. Among his monographs on Masonic history and archaeology are: a "History of the Cryptic Rite" (1895), a "Sketch of the Constantinian Orders" (1896), a "Compendium of Freemasonry in Illinois" (1897); "Notes on the Chivalric Orders" (1898). In the prosecution of his studies and researches in Freemasonry and cognate subjects he has collected one of the largest and most valuable libraries of books relating to these topics to be found in the world. It has lately been placed in charge of

*George Warvelle*

the Masonic authorities of Chicago, who have provided a suitable home for it, and it is now open for free use to the public, under proper restrictions. In organized charitable work he is most active; is one of the founders of the Illinois Masonic Orphans' Home and president of the Illinois Masonic Home for the Aged; he is an active member of the Illinois Club, of Chicago, and of other social organizations; has always avoided participation in politics, and declined all offers of public preferment. He was married, Dec. 30, 1877, to Lydia Bangs, of Kenosha, Wis. They have five children.

**HOWELL, Jeremiah Brown**, senator, was born in Providence, R. I., Aug. 28, 1771, son of David and Mary (Brown) Howell. His father (1747-1824) was a member of the Continental congress (1782-85); U. S. attorney-general (1789); district judge of Rhode Island (1812-24), and professor of law at Brown University (1790-1824). He was fitted for college at the grammar school of William Wilkinson, one of the most distinguished educators of his day, and entering Brown University, was graduated in 1789. Having been admitted to the bar, he practiced in Providence, and being elected to the U. S. senate in 1810, served for six years (1811-17). As a senator in the state legislature, and afterwards as a member in the U. S. senate, he was a vigilant watchman of the rights of the people, and always supported those great Republican principles which he considered best promoted their good and the honor and welfare of his country. He received the degree of A. M. from Dartmouth in 1791. For many years he was brigadier-general, commanding the Rhode Island militia. He was married, Oct. 17, 1793, to Martha Brown, of Providence, by whom he had ten children. He died in Providence, R. I., Feb. 6, 1822.

**HAINES, Charles Delemere**, congressman, was born in Medusa, Albany co., N. Y., June 9, 1856, son of David Tompkins and Emma A. (De Maugh) Haines. The Haines family have for several generations lived in Albany county and been prominent in the local history of the section;

several of them were active participants in the war of the revolution. Ex-Vice-president and Gov. Daniel Tompkins was of this family. At fourteen years of age, young Haines became a telegraph operator in the office of the New York Central and Hudson River railroad at Hudson, N. Y. Four years later he was promoted to be dispatcher on the Eastern railroad; at nineteen years of age he became assistant superintendent, and in 1879 was elected to the superintendency. In 1880 he turned his attention to the construction of street and steam railroads, associating with him in business

his four brothers, David S., John D., Elmer T. and Andrew G., under the firm name of Haines Brothers. David S., after being prominent as one of the great Bell telephone promoters and railway presidents, retired, and now lives at Sandy Hill, N. Y.; John D. died of pneumonia while building the street railway at Newburgh, N. Y., in 1886, and after having built and been president of several short-line street railway companies; Elmer T. is now (1899) of the firm of Haines Brothers, with offices at Kinderhook, N. Y., and in New York city, and is president and treasurer of several corporations. In 1896 he was a candidate for congress from the 19th congressional district, N. Y., as a National gold Democrat, but was defeated. Andrew G., the youngest brother,

owned valuable telephone territory in Mexico, and while a mere boy became president and manager of telephone and railroad companies, now being special partner of his brothers in the railroad business. In 1898 the firm had constructed and owned over forty street and steam railway systems in fifteen states, including the Glens Falls, Sandy Hill and Fort Edward; the Burlington and Winoski; the Rutland; the Seneca Falls and Cayuga Lake; the Seneca Falls and Waterloo; the Newburgh; Ithaca; Schenectady; Rome; Ogdensburgh; Danbury and Bethel; Orlando; Winter Park; Port Jervis; Monticello and New York; Jamestown and Lake Erie; Belleaire; Macon and Sarburban; Hamilton and Kingston; Lockport,

Langdon and Northern; Owosso and Corunna; Ann Arbor and Ypsilanti and Hoosac Valley. In several of these corporations Charles D. Haines was president and active manager. In 1898 he had controlling interest in the Kinderhook and Hudson railroad; owned the St. Catherine's and Niagara Central railroad; the celebrated Lebanon Springs, and the great Columbia Hall at Lebanon Springs; the Hannibal Cave, and the electric railways at Hannibal, Mo., and is one of the largest owners of the Lebanon Springs railroad operating between Chatham, N. Y., and Bennington, Vt. He was presidential elector in 1896, and has been delegate to state and national conventions. In 1892 he received the regular Democratic nomination for representative in congress for the 19th New York district. He was elected, and served throughout the 53d congress. Being again nominated in 1894 he was defeated by Frank S. Black. He is an example of what a young man can accomplish with energy, skill, hard work and executive ability, starting out without money or influence, and pushing his way into the foremost ranks of railroad men. Mr. Haines was married, April 14, 1875, to Lida, daughter of Judson Kingsley, of Sandy Hill, N. Y.

**HARRISON, Joseph Leroy**, librarian, was born in North Adams, Mass., Oct. 12, 1862, son of John LeRoy and Ellen Maria (Hawks) Harrison. On the paternal side, his grandfather, John Harrison, was a native of Yorkshire, England. His great-grandfather, Jacob Van Dyke, served in the war of 1812, and his great-great-grandfather, John Van Dyke, in the war of the revolution. On the maternal side the ancestry dates back to John Hawks, who was known to be in Windsor, Conn., in 1640, and to have moved to Hadley, Mass., in 1659. Col. John Hawks, of Fort Massachusetts fame, was a member of the same family. Joseph L. Harrison received his education at Drury Academy and Drury High School, North Adams; Casadilla School,

Char. D. Haines

Ithaca, N. Y. (1882); Cornell University, Ithaca, N. Y. (class of 1886); University of Heidelberg, Germany (1890), and New York State Library School, Albany, N. Y., where he was graduated B.L.S. in 1893. During 1885-88 he was on the editorial staff of the New York "Commercial Advertiser," and for one year after this was assistant Washington correspondent of the New York "Commercial Advertiser," New York "Commercial Bulletin" and Philadelphia "Evening Telegram." The years 1889-90 he spent in study and travel in Europe. He was sub-librarian of legislation in the New York State Library in Albany, N. Y., until 1894, when he became librarian of the Providence Athenaeum of Providence, R. I. He is the author of "The Great Bore: A Souvenir of the Hoosac Tunnel" (North Adams, 1881); "Guide to the Study of James Abbott McNeill Whistler" (with W. G. Forsyth) (Albany, 1895), and is compiler of "Cap and Gown: Some College Verse" (Boston, 1893); "With Pipe and Book: A Collection of College Verse" (Providence, 1897); "Comparative Summary and Index of State Legislation in 1893" (with W. B. Shaw) (Albany, 1894), and "Comparative Summary and Index of State Legislation in 1894" (in part) (Albany, 1895). He has been a contributor to "The New England Magazine," New York "Tribune," etc. He is a member of the Hope Club, Art Club, Rhode Island School of Design, Rhode Island Historical Society and Psi Upsilon Club, all of Providence; Psi Upsilon Club of New York city; the American Library Association; the Massachusetts Library Club, and of the New York State Library School Association. He was president of the New York State Library School Association during 1895-96 and vice-president of the same during 1897-98; vice-president of the Massachusetts Library Club during 1898-99, and member of the cooperation committee of the American Library Association during 1894-95.

**MAGINNIS, Arthur Ambrose**, manufacturer, was born in Baltimore, Md., in 1815, son of Daniel and Margaret (Reed) Maginnis. He was educated in the public schools of his native city. In 1839 he removed to New Orleans, La., where he established himself in the lumber business, afterwards branching into various other enterprises. He was the first person in New Orleans to start in the manufacture of cotton seed oil on a large scale. With his mechanical skill, great energy and excellent sense, he made this a very successful and profitable enterprise. To him is due the introduction and invention of the many improvements in the ingenious and extensive machinery employed in converting an article that had been previously thrown away or used

as a manure into so many valuable forms and uses. In 1856 he was elected president of the Canal Street Ferry Co., and built the first modern ferry used on the Mississippi river. As a citizen he was greatly esteemed in the community for his liberality, public spirit and for all the social and domestic virtues. Mr. Maginnis was married in Baltimore, Aug. 7, 1839, to Sarah Elizabeth, daughter of John and Sarah (Aflleck) Armstrong, who survived him, with nine children. He built the Maginnis Oil and Soap Works, and after his death the Maginnis Cotton Mills were built by his sons, J. H. and A. Ambrose

Maginnis. He died at Ocean Springs, Miss., Aug. 19, 1877.

**MAGINNIS, Arthur Ambrose, 2d**, manufacturer, was born in New Orleans, La., Aug. 30, 1848, son of Arthur Ambrose and Sarah Elizabeth (Armstrong) Maginnis. He attended the public schools of his native city, until 1862, when he joined the Confederate Guard regiment, state troops, with which he continued in active service until the evacuation of New Orleans in April of that year, when the regiment was sent to Camp Moore, and disbanded. At the time of his enlistment he was but fourteen years of age, and from this fact has been called the "Youngest Confederate." He re-entered the service in 1863 with the Miles Legion, with which he continued until December, 1864, when he was discharged for physical disability. Then returning to New Orleans he entered the employ of the Lafayette Warehouse Co., and in 1867 went to New York city as manager of the cotton seed oil factory at Coscob, Conn. In 1871 he became associated with the firm of A. A. Maginnis & Sons, which was afterwards merged into the Maginnis Oil and Soap Works. He is now (1899) president of the Maginnis Cotton Mills; the Lafayette Warehouse Co.; the Planters' Fertilizer Manufacturing Co.; the Hermitage Planting and Manufacturing Co., and resident vice-president for Louisiana of the American Surety Co. of New York. He was the organizer and is a member of the Southern Yacht Club, and a member of the Pickwick, La Verité and Louisiana Jockey clubs.

**PETTIGREW, James Johnston**, soldier and author, was born in Tyrrell county, N. C., July 4, 1828, son of Ebenezer Pettigrew, a congressman in 1835-37, and grandson of Charles Pettigrew, who was bishop-elect of the Episcopal diocese of North Carolina. He was educated in the schools of his native state, and was graduated in 1847 at the University of North Carolina with the highest honors obtained by any student at that institution. Shortly after this, at the request of Com. Maury, principal of the national observatory, Washington, D. C., he accepted a professorship in that institution. In the following year he resigned and removed to Charleston, S. C., and was admitted to the bar in 1849. In 1850 he went to Berlin, Germany, where he read law in the office of his distinguished kinsman, James L. Petigru, and after two years of study, he traveled extensively over Europe. While in Spain he was for several months secretary of legation to the U. S. minister. He published a volume, entitled "Spain and the Spaniards" (1861), as a result of his study and experience in that country. After his return from Europe in November, 1852, he practiced law in Charleston, S. C., with eminent success. In 1856 he was elected to the legislature, and became conspicuous for his minority report in opposition to the slave trade. Foreseeing the civil war, he went to Italy in 1859, and applied for a position in the Sardinian army, but the speedy termination of the war prevented the granting of his petition. On his return to Charleston, he organized and thoroughly drilled a rifle regiment, and with it took possession of Castle Pinkney, in December, 1860, as soon as South Carolina had seceded. With this command he was shortly afterwards transferred to Morris island, where his remarkable engineering skill

*A. A. Maginnis*

*A. A. Maginnis*

was displayed in the construction of formidable batteries to guard the harbor. He declined the position of adjutant-general of South Carolina, but in the summer of 1861, accepting command of the 22d North Carolina regiment, went into active service in Virginia. During the fall of 1861 and the following winter he was stationed at Evansport, on the Potomac, and his work in constructing and guarding the fortifications, which for many months prevented all communication by water with Washington, were regarded as masterpieces of military engineering by the highest authorities. In consideration of his services, he was urged by Pres. Davis to take the position of brigadier-general, which he finally accepted. He took an active part in the Pennsylvania campaign in the spring of 1862, and at the battle of Seven Pines, in June of that year, was severely wounded and taken prisoner. Being exchanged at the end of two months, he returned to service, and was assigned to the command of a new brigade, composed entirely of North Carolinians. After brilliantly distinguishing himself in the eastern part of North Carolina, early in 1863 he was placed in command in Richmond, which he defended against Gen. Stoneman's raid. Pettigrew's brigade, except one regiment, accompanied Gen. Lee's army into Pennsylvania, and bore a very conspicuous part in the three days' battle at Gettysburg. While engaged in defending the rear of Gen. Lee's army, Gen. Pettigrew was mortally wounded in a skirmish on July 14, 1863, and died near Winchester, Va., three days later.

**HALL, Frank Lorenzo**, lawyer, was born at Bridgeport, Conn., July 4, 1850, son of Lorenzo and Mary Jane (Hubbell) Hall. He is a descendant in the eighth generation on his father's side of Francis Hall, who came from Kent county, England, to the New Haven colony (Conn.), in Rev. Henry Whitfield's company of emigrants. He is a descendant on his mother's side in the eighth generation of Richard Hubbell, who emigrated to the New Haven colony (Conn.), in 1645. In 1685 Richard Hubbell was one of the proprietors of the township of Fairfield, Conn., to whom the Fairfield patent was granted, "being seven miles in breadth along the sea, and in

length from the sea into the wilderness twelve miles." Frank L. Hall removed with his parents to Akron, O., in 1857, and was educated at Harcourt School, Gambier, O. He entered the freshman class of Kenyon College in 1867, and a year later entered the freshman class of Yale College, where he was graduated in 1872. In the autumn of this year he entered Columbia Law School of New York city, and was graduated LL.B. in 1874, being admitted to the bar that same year. He then became a member of the law department of the Central Railroad Co. of New Jersey, and was associated with Hon. Benjamin Williamson, ex-chancellor of the state of New Jersey, and with Robert W. de

Forest, Esq., with the latter of whom, together with his brother, Henry W. de Forest, he afterwards entered into partnership, and continued in this relation until 1890, since which time he has had no partnership connections. The law reports of the courts of the state of New York and of the various United States courts show him to have been prominently connected with much important litigation, involving the interpretation and application of the laws pertaining particularly to corporations and the care and management of estates. He was one of the organizers of the

University Club in 1879, and one of the founders of the Psi Upsilon Club, both of the city of New York; a member of the executive council, the graduate government board of the Psi Upsilon Fraternity; member of the Yale Club of New York city; the Down Town Association; the Bar Association of the city of New York; the American Historical, New England and St. George's societies. He is president of the Baltimore and Delaware Bay Railroad Co., and director in several other companies, and is a member of the South Side Sportsmen's Club of Long Island.

**LILLIE, John Hoyt**, electrician and inventor, was born at Montrose, Susquehanna co., Pa., April 13, 1813, son of Isaac and Julia Anne (Hoyt) Lillie.

His grandfather, Abraham Lillie, a native of England, came to Boston at an early day, and engaged in ship-building. John H. Lillie remained at home until his sixteenth year, when he removed with his parents to Owego, N. Y. In May, 1832, he accompanied an uncle on a tour to the "Far West" (Illinois). They arrived about the time the inhabitants were taking steps to organize Chicago as a town, and Mr. Lillie and Mark Beauvian volunteered as census takers, also making out the list of names, 1,650 in number. After spending several months in the interior of Pennsylvania, he went to Columbus and Cincinnati, O., and having studied medicine under Prof. Locke in the latter city, obtained a license to practice in 1839. It was at this time that his interest in electricity was aroused. He began with some experiments in testing instruments, and made delicate electrometers, with which he verified his belief in the electrical origin of cyclones. He also made investigations in electro-therapeutics and electric lighting and insulation, carrying on his experiments about the time that Morse was developing the electric telegraph. In 1841 Mr. Lillie settled in Joliet, Ill., and there continued his investigations, building a circular railroad twelve feet in diameter, on which an engine was driven by electricity. To have his invention patented was the next step to be taken, and having no money, he decided to exhibit his model and lecture on electricity, which he did in Chicago and Peoria. In the latter place he had as an auditor Sen. Thomas H. Benton, of Missouri, who gave him letters of introduction to Prof. Henry, of the Smithsonian Institution, and others in Washington, and also assisted him financially. Prof. Henry aided him in obtaining his patent, although it was not issued until 1850, and engaged him to make a duplicate model of the engine for the Smithsonian Institution. His claim of "newness" was, first, the employment of induced electricity, including electro magnets to be used as a motive power in connection with the prime mover, and to neutralize the secondary currents of the principal magnets formed by the direct current from the battery. Owing to the expense of generating electricity by the old style of battery, Dr. Lillie saw that a different method of generating the motive power would have to be devised; and as he could get no financial aid from the government, he started out on another lecturing tour, visiting New York, Boston, Philadelphia and New Orleans, where he met P. T. Barnum. Mr. Barnum bought a model of the railroad for his museum in New York city, paying for it \$250; but this transaction proved a mistake, since the public assumed that the invention was simply another "humbug." Unable to carry out his plans, in 1850,

*J. H. Lillie*

*Frank L. Hall*

Dr. Lillie removed from Joliet, Ill., to Hornellsville, N. Y., where he continued his experiments to produce an electric light by using fine platinum wire, which would often burn. This was shown in Rochester and other places in connection with his lectures, in which he predicted that the time would come when our dwelling-houses would be lighted by electricity. His health failing, he retired from the lecture field for a time, returning in 1858, when he traveled with a panorama of New York city, and again in 1862, when he made a trip with a panorama of the civil war. In 1851 he obtained a city charter for Hornellsville. In 1862, selling his realty holdings in that city, he located in Rochester, N. Y.; and in 1868 went to San Francisco, removing in 1873 to Santa Rosa, Cal. In 1876 he conducted a carload of California tourists to the Centennial exhibition in Philadelphia, and in 1878, and again in 1886, he visited Europe; after his return, in the latter year, becoming a resident of Los Angeles. There he invested heavily in real estate, and now (1899) owns several fine pieces of property, including the Hotel Lillie. He has been twice married: first, Sept. 10, 1837, to Charlotte Bradley Curtis, of Montrose, Pa., who died at Rochester, N. Y., June 6, 1869; second, June 12, 1884, to Anna Marie Bardi. By his first wife he had five children, of whom two, a son and a daughter, still survive: Gilbert Belcher Lillie, of Los Angeles, who enlisted at Pres. Lincoln's first call for volunteers, and was discharged June 6, 1865, having received a gun-shot wound at the hands of Mosby's guerillas while scouting in Virginia; and Sarah Jane, wife of Henry Graves Bennett, one of the original settlers of Pasadena, Cal.

**MAHONEY, Joseph P.**, lawyer, was born at Oswego, N. Y., Nov. 1, 1864, son of Michael and Mary (Canty) Mahoney, natives of Ireland. When he was three years of age, his parents removed to Chicago, which ever since has been his home. He was educated in the public schools, and studied law in the office of Jewett & Norton, being admitted to the bar at the early age of twenty, on condition that he would not take out a license until he became of age. From the time he began practice he advanced steadily, having as natural advantages, in addition to fitness for the profession, a pleasing address and fluency as a speaker. In 1887 he was appointed master in chancery by the circuit court, and served eight years as master of that court. Activity in politics as a Democrat, and genuine interest in the welfare of his fellow citizens in the 5th senatorial district led to his election to the state legislature in

1884, three days after becoming of age, and after three consecutive terms in the house, was elected to the state senate, where he is now serving his third term. He was the youngest man ever elected to the legislature, but in the amount of work performed he was not outdone by his elders. He has twice been selected leader by his party in the senate. He was one of the most zealous supporters of the Convict Labor Bill, preventing the competition of prison with outside labor, and was the author of the bill giving the west town of Chicago authority to issue bonds to the amount of \$1,000,000 for park and street improvements preparatory to the World's Columbian exposition. In all respects his course as a legislator has given great satisfaction to his con-

stituents and has reflected credit on them for their good judgment in selecting him as their spokesman. He was appointed to the board of education in 1891 by Mayor Washburn, a Republican, but resigned after being confirmed by the council. Senator Mahoney was married at Dallas, Tex., in 1899, to Nonie, daughter of Capt. B. N. Boren.

**AMERMAN, Lemuel**, congressman and lawyer, was born near Danville, Montour co., Pa., Oct. 29, 1846, son of Jesse Cook and Caroline (Strohm) Amerman. He was sixth in descent from Derick Amerman, a native of Amsterdam, Holland, who emigrated to New York, and for a number of years, from 1695, owned and operated ferries between New York and Hoboken. Albert Amerman, his great-grandfather, removed from New Jersey and settled in Northumberland county, Pa., in 1800, purchasing a tract of land, on which he resided until his death, in 1821. He served in the revolutionary war, participating in several engagements until the battle of Monmouth, where he lost his knee-cap. Henry, son of Albert Amerman, when a small boy accompanied his father to Pennsylvania, where he was married to Susanna Cook, of Montgomery county. Lemuel Amerman was educated in the public schools of Montour county and at Danville Academy, and after two years spent in teaching, entered Bucknell University, Lewisburg, Pa., where he was graduated with highest honors in 1870. For three years thereafter he was professor of ancient languages and English literature in the State Normal School, Mansfield, Pa. He then began to read law in the office of the late Lewis C. Cassidy, ex-attorney-general of Pennsylvania, and Pierre Archer, Jr., of Philadelphia. He was admitted to the bar in 1875, and in 1876 settled in Scranton, where he practiced his profession until the time of his death. From 1878-81 he was solicitor of Lackawanna county, and then for two years represented Scranton in the house of representatives, Harrisburg. While in that position he drafted and secured the passage of several important laws regarding the mining of anthracite coal. In 1886 Gov. Pattison appointed him reporter of the decisions of the state supreme court, and he prepared five volumes of reports, instituting an immediate reform on the current methods by promptly issuing the reports, instead of waiting for a year and upwards after the decrees were delivered. This was of great advantage, and called forth high commendation from many of the most prominent jurists in the state. In 1887 Mr. Amerman was elected comptroller of Scranton, and in 1892 was elected representative for Lackawanna county in the 52d congress, where, among other important services, he aided in securing the passage of the act requiring railroads to equip their cars for freight and passenger service with automatic couplers and air brakes. Mr. Amerman's religious convictions were very strong. He was a life-long member of the Baptist church. For seven years he superintended a large and enthusiastic Sunday-school in connection with the Penn Avenue Baptist Church, Scranton, where for years he was the moving spirit and recognized leader. He became the first superintendent of a new mission chapel, which he was instrumental in founding, and which he had carried on in a private dwelling until it overflowed its confines and demanded enlarged quarters. Just as this work was in process of suc-

Lemuel Amerman

Joseph P. Mahoney

successful accomplishment Mr. Amerman suddenly died. The chapel, now called the Amerman Memorial Tabernacle, is carried on by the munificent generosity of his widow. There to-day a multitude of children are taught life's lessons out of the book he loved. Mr. Amerman was a self-made man. Commencing at the lowest rung of the ladder, he climbed steadily upward to a position of highest influence and honor. His natural ability as a lawyer, combined with his keen foresight as a business man, enabled him to acquire a competence. With the broad views of a philanthropist, he did not allow his wealth to lie idle, but used it in the promotion of public enterprises. His practice was very extensive. In 1888 he received the honorary degree of LL. D. from Bucknell University. Mr. Amerman was thrice married; first, in September, 1879, to Susan, daughter of Laurens Wallace, of Philadelphia; second, in June, 1883, to Mary C. Van Nort, of Scranton; and third, in July, 1890, to her sister, Ella May Van Nort. He died at Blossburg, Pa., Oct. 7, 1897.

**GRAFF, Frederic**, civil engineer, was born in Philadelphia, May 23, 1817, son of Frederic and Judith (Swyer) Graff. His great-grandfather, Jacob Graff, came from Germany to Philadelphia in 1741; his grandfather, Jacob Graff, 2d, was a builder, and his father (1774-1847) designed and constructed the water works of Philadelphia, and was its chief engineer until his death. It was his wish that his son should engage in mercantile pursuits; but a short experience in a large hardware house satisfied the young man that this occupation was not congenial, and entering on the study of engineering, he, on April 6, 1842, became an assistant engineer on the Philadelphia water works. On his father's death, in 1847, he was made chief engineer, and held that position until 1856. He was again elected to the office in 1866, and served for six years, after which he declined re-election. He was the manager of the Port Richmond Iron Works of Philadelphia (1860-63); associated with H. R. Worthington in the

development of pumping machinery for water-works (1875-77), and during the next ten years was frequently called on as an expert in engineering matters connected with the water supply of cities, especially as regarded pumping machinery. In March, 1873, he became a member of the American Society of Civil Engineers, and was president of the society in 1885. He visited Europe twice, making on the second occasion, in 1878, quite an extended tour. The record of Mr. Graff's professional career, embracing as it did the entire reconstruction and enlargement of the water-works of Philadelphia, which in its day was one of the great engineering works of the country, covers but a small portion of the ser-

vices he rendered his native city. In 1851 he presented to the city government the suggestion of establishing a park upon the banks of the Schuylkill river, which resulted in the development of the great Fairmount park system, in which he was actively engaged as one of the park commissioners. He was a member of the Franklin Institute from 1839 until his death, being one of its managers for six years and vice-president for three years; was one of the founders of the Zoological Society and Gardens of Philadelphia, and after 1882 was its president; was president of the Engineers' Club of Philadelphia in 1880, and was for six years president of the Photographic Society, of which he was one of the founders. As a devout adherent of the Protestant Episcopal church

and an earnest worker, many important interests, both religious and civil, were intrusted to his management. Mr. Graff was married to Elizabeth, daughter of Capt. John Mathieu, of Philadelphia, who survived him. He died in Philadelphia, Pa., March 30, 1890.

**KÜHNE, Percival**, banker, was born in New York city, April 6, 1861, son of Frederick and Ellen Josephine (Miller) Kühne. His father, a native of Magdeburg, Germany, was a prominent banker of New York, and for over sixteen years, until the close of the Franco-Prussian war, was representative of most of the German states now forming the empire of Germany; his mother was a daughter of George J. Miller, of New York, and a descendant of an old and aristocratic English family. Percival Kühne was educated in the schools of his native city, and continued in Germany his preparation for a business career. Upon his return home in 1884 he entered the banking house of Knauth, Nachod & Kühne, founded by his father, to whose interest, both in New York and Leipzig, he succeeded in 1893. This connection brought Mr. Kühne prominently before New York's financial circles, and coupled with his exceptional business ability, rapidly determined his important coöperation in the affairs of several large corporations. He is a member of the New York chamber of commerce; was a founder and organizer of the Colonial Trust Co., of which he is a trustee; a member of the executive committee; a member of the finance committee, and a trustee of the Citizen's Savings Bank; also a trustee in the Lincoln Safe Deposit Co. and Colonial Safe Deposit Co., and is closely identified with the affairs of several other prominent institutions. Mr. Kühne has ever been a staunch Republican, believing firmly that the prosperity of the country rests upon the principles of his party and their maintenance in power. He is a veteran of company K, 7th regiment, N. G. N. Y.; a Mason of degree in Holland Lodge, No. 8, F. & A. M., and a member of the Union, Metropolitan, Union League and Calumet clubs of New York city. He is an active supporter of the New York Botanical Garden; New York Zoological Garden; American Academy of Political and Social Science; Metropolitan Museum of Art, and other similar societies for public amusement and instruction. In 1893 Mr. Kühne was married to Lillian Middleton, daughter of Hamilton R. Kerr and granddaughter of John Kerr, founder and first president of the Broadway and Seventh Avenue Railway Co. Through her maternal great-grandmother, Margaret (Worthington) Smith, Mrs. Kühne is a lineal descendant of Nicholas Worthington, who took the oath of allegiance to King Charles in 1678, and whose family is traced back in Burke's "Peerage" to King Henry III.

*Percival Kühne*

**HASKINS, Charles Waldo**, accountant, was born in Brooklyn, N. Y., Jan. 11, 1852, son of Waldo Emerson and Amelia Rowan (Cammeyer) Haskins. His father, a native of Boston, was long a resident of Brooklyn, and by occupation a broker; his mother was a daughter of Charles Cammeyer, a merchant of New York. The Haskins family is of New England colonial stock, the original representative having been Robert Haskins, who settled in Boston, early in the eighteenth century. By his wife, Sarah Cook, he became the father of Capt. John Haskins (1729-1814), familiarly known as "Honest John," who was a captain in the old Boston regiment from 1772, and in association with Samue-

*Fred. Graff*

Adams, Josiah Quincy, Edward Case, Joseph Warren and others an active mover in the Sons of Liberty, and a leader through the revolutionary struggle. His wife was Hannah Upham, of Boston, a descendant of John Upham, founder of the American family; of John Howland, of Mayflower fame; of Rose Dunster, sister of Henry Dunster, first president of Harvard College, and of Thomas Oakes, cousin of Rev. Urian Oakes, its fourth president. By her he had a son, Robert Haskins, who was married to Rebecca, daughter of Rev. William Emerson, chaplain in the patriot army (d. 1776); his sister, Ruth, was married to Rev. William Emerson, 2d (1769-1811), of First Church, Boston, becoming the mother of Ralph Waldo Emerson, and their son, Thomas Haskins, married to Mary Soren, of Boston, was the grandfather of the present representative. Educated in the public schools and the Brooklyn Polytechnic Institute, where he was prepared for the profession of civil engineer, Charles Waldo Haskins, preferring commercial pursuits, in 1869 obtained employment in the accounting department of Frederick Butterfield & Co., of New York city. After five years with this firm he made a two years' trip abroad for study and travel, and on his return entered the brokerage business in the office of his father. In 1886 he opened an office as expert public accountant, and in 1895 formed a copartnership with Elijah W. Sells, under the style of Haskins & Sells, which still (1899) continues. Mr. Haskins is one of the leaders of the modern science of accountancy and a pioneer in its practice in New York. In the earlier part of his career he kept the accounts for the construction of the New York, West Shore and Buffalo railroad by the North River Construction Co., at the same time acting as auditor of the railway company's disbursements. He organized the system of accounts of the Manhattan Trust Co., of which he was secretary for several years, and in the exercise of his profession has occupied many such responsible positions, as comptroller of the Central of Georgia Railroad Co.; of the Ocean Steamship Co., and of the Chesapeake and Western Railroad Co., and as receiver of the Augusta Iron Co. Upon the passage of the New York state law, establishing a commission for the examination of candidates desiring to become certified public accountants, Mr. Haskins was appointed on the board, and elected its first president. He is also president of the New York State Society of Certified Public Accountants. In 1893 he was engaged by a joint commission of congress, in connection with his present partner, E. W. Sells, to investigate the executive departments of the U. S. government, a work which occupied two years, and was, in the

words of the committee's chairman, "in many respects the most important undertaking of the kind in the history of the country." Their reports recommending methods of simplifying and expediting public business were so satisfactory to the government that they were promptly adopted, and laws were passed putting the recommendations into effect. Preparatory to the consolidation of Greater New York, he headed the commission which was appointed to examine the accounts of the city of Brooklyn, a work which he accomplished with characteristic thoroughness. By virtue of his ancestry, Mr. Haskins is a member of the Sons of the American Revolution; the Mayflower descendants; the Society of Colonial Wars; Military Order of Foreign

Wars, and America's Founders and Defenders, and by virtue of his high personal qualities has held several high offices, such as secretary of the New York State Society Sons of the American Revolution (1893-94), and treasurer general of the national society (1892-99). He is also a member of the Manhattan, Riding and Westchester Country clubs of New York city; the Metropolitan of Washington, and the Piedmont of Atlanta, Ga. In 1884 he was married to Henrietta, daughter of Albert Havemeyer, a wealthy New York merchant and brother of William F. Havemeyer, mayor of the city (1848-49, 1873-74). They have two daughters, Ruth, born, 1887, and Noeline, born, 1894.

**NORTON, Frank Henry**, journalist and author, was born at Hingham, Mass., March 20, 1836, fourth son of Maj. B. Hammatt and Augusta (Ware) Norton. His father was for twenty-one years U. S. consul at Pictou, Nova Scotia, and was sixth in direct descent from Nicholas Norton, who emigrated from Somersetshire, England, to the island of Martha's Vineyard in 1632. On his mother's side he is descended from the Wares of Massachusetts, noted Unitarian clergymen, one of whom, William Ware, was the author of "Zenobia," "Aurelian" and "Julian," historical novels. Mr. Norton was educated at the Dwight School, Boston, and at the Pictou Academy, where he took the medal for mathematics. He removed to New York in 1850, and entered the book store of his brother, Charles B. Norton, remaining in that business until 1855, when he entered the Astor Library as assistant librarian under Dr. Joseph G. Cogswell, and with Willard Fiske, afterwards professor in Cornell University, as his associate. He remained in the library until 1865, rising to the grade of assistant superintendent, and resigned to enter the profession of journalism. He was connected editorially with "Noah's Sunday Times"; the New York "Commercial Advertiser"; Frank Leslie's publications, and for ten years was on the editorial staff of the New York "Herald," in New York, London and Paris, at the same time contributing extensively to periodical literature. In 1870 Mr. Norton visited California, Mexico and Central America, and in 1883 traveled for six months through Holland and Belgium as commissioner for the Boston foreign exhibition, which was held in that year. In 1888-89 he was in London and Paris in the service of the New York "Herald." Besides his journalistic work, he has written voluminously for Appleton's "American Cyclopaedia," the "Library of Universal Knowledge" and White's "National Cyclopaedia of American Biography," to which latter work he has contributed over 1,700 biographical sketches. Between 1870 and 1874 he wrote eight plays, which were produced in New York, New Orleans, Philadelphia, St. Louis and other cities, including "Maude's Faith" and "Leonic; or, Love Wins," melodramas; "Alhambra" and "Cupid and Psyche," burlesques, etc. In 1880 he wrote the "Life of Major-General Winfield Scott Hancock," and in 1888 the "Life of Alexander H. Stephens." He is also the author of the "Illustrated Historical Register of the Centennial Exhibition, 1876, and Paris Exposition, 1878"; "Romance of the Life of Daniel Boone" (1883), and "The Malachite Cross" (1894). Mr. Norton retired from active journalism in 1891, and has since devoted himself mainly to study in mathematics and astronomy, for which he has always had a predilection.

**DICKSON, John Fenwick**, railroad manager and manufacturer, was born in Newry, county Armagh, province of Ulster, Ireland, March 14, 1832, second son of William and Sarah (Fenwick) Dickson. His family is of the Scotch-Irish race, than which none other has stamped its impress more indelibly upon the character of our common country, nor has done more for its material wealth and progress. His ancestral line is traced back to Cromwell's time, when (1657) representatives of the family went to Ireland among the invaders who colonized Armagh and other northern counties. There the Dicksons still continue to reside, having been to the present time very largely engaged in agriculture and the manufacture and bleaching of

linens. John F. Dickson received a fair education, but spent his early years on his father's farm. The unhappy political and industrial outlook of his country subsequent to the saddening scenes of 1848 turned his thoughts to the growing opportunities offered in America, and in 1850 he emigrated to New York city. Acting under the advice of the Rev. James Shields, his former pastor in Ireland, who had preceded him to the United States, he became an apprentice in the steam engine business in the novelty works of Stillman, Allen & Co., of New York city, then the most important firm of its kind in the United States. In 1855 he went West, and was prominently connected with the locomotive departments of the Terre Haute and Richmond, Illinois Central and the Chicago and Rock Island railroads, and also with the Kentucky Locomotive Works, in Louisville, Ky. Becoming somewhat weary at last of the monotony of purely mechanical pursuits, he entered commercial business, which he followed with varying fortunes until 1869. He was then induced to go to Texas to take charge of the Southern Pacific railroad, which had recently passed into the hands of some of his friends. The enterprise prospered under his care in a most remarkable manner, and was merged into the Texas Pacific, of which he was also general superintendent, under the presidency of Col. Thomas A. Scott, of Pennsylvania. He resigned the position in 1874 in favor of a nephew of Col. Scott's, leaving over 400 miles of railway, fully equipped with all necessary buildings, engines and rolling stock, together with a large force of well drilled employes, as the outcome of the forty miles with which he commenced in 1869. Meantime, while he still was general superintendent of the Texas Pacific, his attention had been attracted to certain peculiarities of the charcoal pig-iron made from the native brown hematite ores so liberally distributed over the northeastern counties of Texas. The strength and chilling tendency of this iron were so unusual that he was strongly impressed with its adaptability for car wheels, and, after his resignation, he founded the manufacturing enterprise, which he has continued from 1880 until the present time (1899). The wheels made by the Dicksons (father and sons) have gained a national reputation in every way, and occupy a rank second to no other cast wheel made. Mr. Dickson was the pioneer in demonstrating the now recognized superiority of Texas iron for this purpose, and has created an immense source of future profit for his state. The capital stock of the Dickson Car Wheel Co., of Houston, Tex., is owned exclusively by himself and the members of his own household. It is the largest and most successful iron-working institution in Texas, and has a capacity

for casting 50,000 wheels per annum, besides a large tonnage of general castings and machinery. On Sept. 6, 1855, he was married to Louise Owsly McDougall, of Louisville, Ky. Her father, a native of Glasgow, Scotland, was one of the firm of Glover, McDougall & Co., the well-known founders and engine-builders of Louisville, and was thoroughly identified with every movement tending to the moral and intellectual development of his adopted city. Universally respected and beloved, his death by accident, in 1848, shocked and grieved his townsmen as no other death had ever done. Her mother, Huldah Cawthon, was a woman of most lovely disposition and character, far above the average of her sex; she was born in Virginia, and died in Louisville, Ky., in 1864, universally regretted. Their daughter partakes largely of the best elements of character peculiar to each of her parents, and has proved herself a model wife and mother. Mr. Dickson, with his wife and the ancestors of both as far back as known, were and are members of the Scotch Presbyterian church. A large family of children have been born to them, but of these only four survive: Henry Havelock, George Moseby, Sarah Belle and John Fenwick, Jr., five others having died in infancy, and William Lachlan and Marshall Mar in early manhood.

**SCOTT, John Zachary Holladay**, lawyer, was born at Belair, Spottsylvania co., Va., March 14, 1843, son of James McClure and Sarah Travers (Lewis) Scott. His paternal ancestors were Scotch-Irish, and his maternal, English and Welsh. One of his great-grandfathers, Zachary Lewis (third of the name), was a colonel in the Continental army; another, Waddy Thomson, was a captain in the same service. Mr. Scott pursued a classical course through preparatory schools of high grade, and he entered the University of Virginia in 1860; but his studies were interrupted by the outbreak of the civil war, and in June, 1861, he left the university to enter the Confederate army, enlisting, originally, in the cavalry of Wise's legion, and serving in Western Virginia, under Wise, Floyd and Lee. During the campaign of that year he participated in all the cavalry operations and in frequent but unimportant engagements. In the early spring of 1862 his command was sent to reinforce Magruder, then confronting McClellan on the peninsula, and was there organized into the 10th Virginia regiment of cavalry, Scott belonging to company F. As part of the rear guard, it was in close and constant contact with the enemy on Johnston's retreat from Yorktown, and was sharply engaged in the battle of Williamsburgh. Within a few days thereafter Mr. Scott was prostrated with typhoid fever, and disabled from taking part in the seven-days' battles around Richmond. In August he rejoined his command, then permanently incorporated with the cavalry of the army of northern Virginia, and, with the exception of some months spent at Point Lookout, Md., as a prisoner of war, took part in all its operations until a few days before the surrender at Appomattox, April 9, 1865. He was included in Johnston's capitulation at Goldsboro, April 26, 1865, but in the hope that the struggle for independence might be prolonged west of the Mississippi, he went there, only to find that military de-

*J. Z. Scott*

*J. F. Dickson*

partment also surrendered. He then set out for Mexico, with the purpose of engaging with the French forces against anticipated interference from the United States; but all prospects of such a collision disappeared, and in October, 1865, he located at Galveston, Tex., where he has since resided. He first worked as clerk in several cotton commission houses, devoting his spare time to the study of law, and on Jan. 12, 1869, was admitted to the bar. Thereafter he practiced alone until March, 1873, when he entered into a partnership, under the style of Flournoy, Sherwood & Scott. He is now (1899) the senior member of the law firm of Scott & Levi. Mr. Scott was married, at Galveston, Tex., Dec. 18, 1872, to Lucy Prentiss, daughter of Richard Brooke and Helen (Prentiss) Doswell. Of their eight children five still survive.

**BELL, Alexander Melville**, educator, was born in Edinburgh, Scotland, March 1, 1819, son of Alexander Bell, a prominent instructor in elocution in London, and author of several well-known textbooks, plays and poems. The son was largely educated at home, attending school at Dundee for a time. In 1842 he announced the formulation of a new theory of articulation and vocal expression. Although his father did not endorse all his conclusions, he accorded them a general approval. Mr. Bell taught classes in connection with the university, and also with the new college at Edinburgh (1843-65), when the death of his father called him

Alex. Melville Bell

to London. In 1868 Prof. Bell gave his first course of lectures in the United States before the Lowell Institute, Boston, Mass. At that time he held the appointment of lecturer on elocution in University College, London. In 1870 he returned to the United States by invitation from the Lowell Institute and delivered a course of twelve lectures, and in the following year had the honor of supplementing this by a third course. Prof. Bell in 1870 took up his residence at Tutelo Heights, Brantford, Ontario, Canada, and held the professorship of elocution in Queen's College, Kingston; also giving courses of lectures in Montreal, Toronto, London and other Canadian cities. He officiated as a member of the board of instruction in the school of vocal physiology, established in Boston by his distinguished son, Dr. Alexander Graham Bell. In 1881 Prof. Bell permanently located in Washington, D. C., and engaged in literary work. He has justly been designated the "Nestor of elocutionary science," and the profession have frequently sought from him personal advice. His numerous publications treating of elocution, vocal physiology, and defects in speech, dating from 1845 to 1898; also on phonetics and visible speech, 1866 to 1898, and on phonetic shorthand writing, 1852 to 1857, are accepted authorities on these subjects. In 1885 Prof. Bell was elected a fellow of the American Association for the Advancement of Science, and is an active member of the Modern Language Association, and of various scientific and educational organizations in the United States. He also holds a fellowship in the Educational Institute in Scotland and in the Royal Scottish Society of Arts.

**CAMPBELL, Bartley**, dramatist, was born in Allegheny City, Pa., Aug. 12, 1843. He entered a

Pittsburgh law office as a student at the age of thirteen, but his tastes lay in other directions, and in 1858 he became a reporter on the staff of the Pittsburgh "Leader." He founded the Pittsburgh "Mail" in 1868, and the following year removed to New Orleans, La., where he was editor for a time of the "Southern Magazine." In 1870 he was the official reporter of the Louisiana house of representatives. He became a writer of plays in 1871, and "Through Fire," his first play, was acted for four weeks. "Peril," a comedy, was produced in 1872, and was followed by "Fate," "Risks," "Van, the Virginian," "Gran Uale" and "On the Rhine," all of which were more or less successful. "The Big Bonanza," adapted from a German play, produced in San Francisco, in 1875, enjoyed a long and profitable run. "Heroine in Rags" and "How Women Love" were brought out in England in 1876. "Clio" was written in 1878, and "Fairfax" in 1879. In "My Partner," produced in the year last named, Mr. Campbell achieved his most memorable success. It ran for many weeks in New York city, was exceedingly popular wherever produced, and made the fame of the players who personated the leading characters. Other plays written by Mr. Campbell are: "The Galley Slave" (1879); "Matrimony" (1880); "The White Slave," "My Geraldine" and "Paquita." He was for a time the manager of the Fourteenth Street Theatre in New York city, but became insane in 1886. His plays are strong but crude, and lack finish and repose. He was a man of genial disposition and generous impulses. He died in the insane asylum at Middletown, N. Y., July 30, 1888.

**CURTIS, Edward**, physician, was born in Providence, R. I., June 4, 1838, son of George Curtis, a banker, and at one time a member of the Rhode Island legislature, of which body he was three times chosen speaker. The family's first American ancestor was Henry Curtis (or "Cuttris," as then spelled), who emigrated from London, England, to Watertown, Mass., in 1635. His son, Ephraim, was the first settler of the city of Worcester, Mass., and as lieutenant did gallant service in the Brookfield fight, Aug. 2, 1675, in King Philip's war. On the maternal side Edward Curtis is directly descended from Samuel Willard, seventh president (vice-president) of Harvard College. Two of his maternal ancestors were physicians, and a third, Ensign Stephen Paine, served in the revolutionary war. Young Curtis received his collegiate education at Harvard, and was graduated in 1859. His medical studies were begun during the following year in New York city at the College of Physicians and Surgeons, and were completed at the University of Pennsylvania, from which he obtained his degree in 1864. While still a student, in 1861, he first practiced his profession as a medical cadet of the U. S. army. After graduation he pursued his career as assistant surgeon until his resignation from the army in 1870, during which time he served in hospitals in Georgetown, D. C., in West Philadelphia, and in the field with the army of the Potomac, and in the Shenandoah valley. In 1870 Dr. Curtis established himself in New York city. He is an honorary member of the Phi Beta Kappa Society (Harvard) and of the Academy of Natural Sciences, Philadelphia, and a member of the Military Order of the Loyal Legion of the United States; the New York Society of the Sons of the Revolution, and the New York County Medical Society. From 1873 to

Edward Curtis

1886 he was professor of materia medica and therapeutics at the College of Physicians and Surgeons in the city of New York; from 1870 to 1876 he was on the surgical staff of the New York Eye and Ear Infirmary; was honorary microscopist of the board of health, of New York city, from 1874 to 1892; and since 1876 has been one of the medical directors of the Equitable Life Assurance Society of the United States. Among his contributions to medical literature are: "Catalogue of the Microscopical Section, U. S. Army Medical Museum" (1867); "Manual of General Medicinal Technology" (1883); "Report of Pathology of Diphtheria to Board of Health" (1878); with various articles on materia medica, in cyclopedias and hand-books of the medical sciences. On Nov. 16, 1864, Dr. Curtis was married, at Chester, Pa., to Augusta Lawler, daughter of Davis Bevan Stacey and Sara Van Dyke, and great-granddaughter of Capt. Davis Bevan, who served with distinction in the revolutionary war.

**CHURCH, Samuel Harden**, author and historian, was born in Caldwell county, Mo., Jan. 24, 1858, second son of William and Emily (Scott) Church. Both parents were of Scotch descent; his father, a farmer and manufacturer, and afterwards treasurer of the Pittsburgh and Oakland Street Railway Co.; his mother, a daughter of Walter Scott, a kinsman of the novelist, who emigrated from Scotland to Pennsylvania in 1819. Representatives of the Church family removed from Scotland to Ireland in the seventeenth century, and thence, in 1798, Dr. William Church, nephew of Sir William Church, the head of the family, emigrated to Lancaster county, Pa. His father having died in 1863, Samuel H. Church and his brother were obliged to find employment as soon as they were old enough to be useful. He, however, was able to resume his studies after his thirteenth year at the preparatory

*S. H. Church*

school of Bethany College in West Virginia, and there for two years profited by the companionship and intellectual influence of Pres. Pendleton, to whom he attributes the passion for study which here developed. He continued to be an ardent student of history and literature after leaving college, and while following various callings began to write for publications. First engaged in mercantile pursuits in Pittsburgh, he later was clerk of the general solicitor of the Pennsylvania Railroad Co. for four years, and afterwards of its general superintendent. He remained in the employ of various officials of the company, residing alternately at Pittsburgh and Columbus, until he became superintendent of transportation in Columbus, and, later, secretary in Pittsburgh. While living in Columbus, he was aide-de-camp on the military staff of Gov. Hoadly, with the rank of colonel. Meanwhile, after numerous lesser writings had appeared in newspapers and magazines, he at the age of twenty published his first novel, "Horatio Plodgers; a Story of To-day." In a season of industrial strikes he published in the "Century Magazine" for October, 1886, "A Plan for Harmony," containing a practical suggestion for responsible contracts between employers and employed. On frequent occasions he was called upon to address audiences, and became noted as an interesting lecturer—his most popular effort dealing

with "Early English Books and Heroes." Finally, in 1894, he established his position as one of the first of American historians, by publishing his noted work, "Oliver Cromwell: A History." This was at once recognized as authoritative. The "Spectator," reviewing it, said: "On the whole it is one of the safest and one of the most reasonable views of the great protector ever put forward, and we know of no study of Cromwell's work and personality which we can more heartily recommend to those who want to see Cromwell as he really was." The "Horse Guard's Gazette" remarked on the excellent account furnished by Mr. Church of the military side of Cromwell's career. "He appears," writes the critic, "to have neglected no means by which to arrive at the most complete and accurate account of the various conflicts of the prolonged parliamentary war. We doubt whether a better description, on the whole, of the leading battles of the civil war has ever been furnished than in this work. Altogether the production is a thoroughly satisfactory piece of literary work. It will, we predict, hold the field for a long time as the best complete life of the great protector yet published." An immediate effect of the work was to set on foot an agitation for the erection by the English government of a monument to Cromwell. Mr. Church had remarked that he had "no monument in England, nor could have one with the sanction of the government," whereupon Mr. Herbert Gladstone informed him of the existence of a private monument at Manchester; and in August, four months after the appearance of the book, introduced a bill in parliament to erect a public statue at Westminster. The bill was, however, defeated by the Irish vote; Mr. Morley, the home secretary for Ireland, withdrawing the bill and declaring Cromwell's Irish campaign "a blunder and a crime." In 1899, on the 300th anniversary of the Protector's birth, the discussion started by Mr. Church's book culminated in the erection of a statue in the house of parliament. Popular celebrations were held throughout England. In 1895 Mr. Church visited England, and was entertained courteously by the leaders of political, literary and social circles of the United Kingdom. In his own country appreciation was shown for his literary achievement by the honorary degrees Litt.D. and M.A. being conferred upon him by two universities, Yale and Pennsylvania. Mr. Church published in 1897, "John Marmaduke: A Romance of the English Invasion of Ireland in 1649." This work passed through eight editions in the first year and has been most favorably reviewed. His next important work was "Beowulf," an epic poem in heroic style. In 1896 he delivered an address as spokesman of a body of railroad employes to Mr. McKinley on the threatened danger of free silver coinage, and this the president-elect sent to the press for publication. Mr. Church is a trustee of the Carnegie Institute, Pittsburgh, Pa. He was married, in 1898, to Bertha Jean, daughter of James McH. Reinhart, of Pittsburgh, Pa.

**TERRY, Benjamin**, educator, was born at St. Paul, Minn., April 9, 1857, son of John Carlos and Emily (Wakefield) Terry. The Terrys, it is said, are of old crusader stock. The American family descends from three brothers who came from London in 1635 and settled in Springfield, Mass., and at Southold, L. I. Their descendants were prominent during earlier colonial times and through the revolution. When the Northwest Territory was opened several of the name moved into Ohio and located at the present site of Cincinnati, and in 1849 three brothers went from Ohio and settled in the newly-organized territory of Minnesota. The eldest of these, John Carlos, who had followed the army of Taylor through the campaign in northern Mexico as a newspaper

correspondent, began in St. Paul the publication of "The Minnesotian," one of the first newspapers of the state, which has since developed into "The Pioneer Press," to-day perhaps the best known paper in the Northwest. The second brother, Elijah, was a clergyman and missionary to the Indians for the American Baptist Home Mission Society at Pembina, where he was murdered. The third brother, Benjamin, volunteered in the civil war, and accompanied his regiment, the 6th Minnesota, to the frontier to suppress the Sioux rising of 1863, being there killed. Mrs. Emily Wakefield Terry was the daughter of Hon. John A. Wakefield, who bore a part in the founding of three of the great western commonwealths—Illinois, Minnesota and Kansas.

He began his career as a civil engineer, and some of the principal towns of Illinois were laid out and named by him. He served in the Black Hawk war, of which he has left, perhaps, the only history. He was a member of the party sent by the government to the relief of Fort Dearborn, arriving too late to avert the massacre. In Minnesota he was one of the first justices of the territory, and in Kansas was a fearless leader of the Free-soil party, taking an active part in wresting the territory from the hands of the slave power. He was for several terms a member of the state legislature, and at one time a prominent candidate for the U. S. senate. Judge Wake-

field was one of those energetic, unconquerable spirits peculiar to the West—intensely patriotic, and inspired by a profound faith in the future greatness of his country. The grandson, named from the soldier uncle, began his education in the public schools of St. Paul. In 1874 he was graduated at the St. Paul high school, and in the fall entered the freshman class of Colgate University, Hamilton, N. Y. After his graduation, in 1878, he entered the divinity school of the university. The year 1879–80 he spent at the Rochester Theological Seminary; but, returning to Hamilton the following autumn, was graduated with his old class in 1881. On Aug. 31, 1881, he was ordained to the ministry at Perry, N. Y., and regularly installed as pastor of the First Baptist Church. At the end of two years he was called to a larger and more important church at Fairport, N. Y., and in the winter of 1885 succeeded Prof. J. J. Lewis, deceased, as professor of history and literature at Colgate University, his election being based solely upon his college record. Although without experience as a teacher, he promptly accepted, and set about preparing himself for the duties of his new position. He sought first to know what teachers in other universities were doing, and to reorganize his department upon the best ideals. Then, fully accepting the maxim that the best way to learn is to teach, he boldly added to the courses in history, courses in Roman, constitutional and international law, besides Anglo-Saxon and English literature. After six years at Colgate he obtained leave of absence of a year and a half, which he spent in study at Freiburg and Göttingen, and in the spring of 1892 received the degree of Ph.D. from the former institution. While Prof. Terry was abroad the new University of Chicago began to take definite form in the minds of its projectors, and when the first sessions opened, in the fall of 1892, Prof. Terry was installed as a member of the historical

faculty. In 1894 he was made dean of the senior colleges, which position he still holds, in addition to his duties as professor of medieval and English history. During the seven years of service at Chicago he has been much in demand in the West as a lecturer and writer upon educational and historical subjects. Prof. Terry was married, in Troy, N. Y., June 1, 1881, to Mary, daughter of Dr. George C. Baldwin, for forty-one years the eminent pastor of the First Baptist Church of that city, a first cousin of Vice-Pres. Schuyler Colfax and a direct descendant of Col. Colfax and Gen. Schuyler, of revolutionary fame. Prof. and Mrs. Terry have three children.

**MALONE, Sylvester, R. C.** priest, was born at Trim, Ireland, May 8, 1821. His father was a respectable country merchant and his mother was a woman of remarkable force of character, who lived to the age of ninety-four years. One of his brothers became an engineer in his native town, and another a well-known physician in Brooklyn, N. Y. At an early age Sylvester entered an academy presided over by Mathew Carroll, an ex-fellow of Trinity College, Dublin. When in 1838 Rev. Andrew Byrne, afterwards bishop of Little Rock, Ark., went to Ireland to seek aspirants for the priesthood to labor in the American mission, young Sylvester, then under seventeen years of age, accepted the invitation and sailed with him for Philadelphia. From there he went to New York and was introduced to Bishop Hughes, who sent him to the temporary seminary at Le Fargeville, which was removed, in 1840, to Fordham, N. Y. He was ordained priest in 1844, by the late Cardinal McCloskey, at the first ordination ever held by that prelate, and was immediately sent on a mission to Williamsburg, where he labored for two years to clear off a heavy debt from the little wooden chapel where he ministered. This done, he set about erecting a new church, and after much trouble and many trials the corner-stone of St. Peter and St. Paul's was laid on May 11, 1847, by Bishop Hughes.

A year later he dedicated the building which was the first church in the Gothic style erected by the Roman Catholics in New York state. In 1849 Father Malone met with a series of misfortunes sufficient to crush the strongest heart. He was prostrated by cholera, then by ship fever; afterwards a fire bereft him of house, home, books and all his earthly possessions; yet in 1854 he could point to the fact that, during the ten years he had passed with his flock, he had paid off the debt on the old church, built a new one, erected a handsome parochial residence, a parochial school, the Academy of St. Joseph, and established a church library and literary association for the benefit of his young men. He then went to Rome, invited together with the American Catholic bishops, by Pope Pius IX. to celebrate the proclamation of the dogma of the Immaculate Conception. During the civil war Father Malone was an enthusiastic worker in the Federal cause and at its close made a tour of the South. In 1881 he was obliged to seek a change of air and scene on account of the condition of his health. He went to England and traveled over continental Europe, Egypt and the Holy Land. In 1894, his jubilee year, he was chosen by the legislature a regent of the University of the State of New York. He is still engaged in religious and charitable work.

*Benjamin S. Terry*

*Sylvester Malone*

**BURKETT John William Newton**, banker and editor, was born in Woodruff county, Ark., Jan. 26, 1854, son of Madison and Emily (Welch) Burkett, both of Tennessee. He was educated in the public schools of Arkansas, and at the Southwestern Baptist University, where he was graduated with first honors in 1878. He began the study of law under Judge Howell E. Jackson, but his health not permitting its continuance, he engaged in commercial pursuits, only to be obliged to relinquish them also. In 1891 he assisted in organizing the Jackson Banking Co., of which he has since served as president. In 1895 he began his connection with the "Daily and Weekly Sun," soon afterwards becoming proprietor and editor, and under him this newspaper has risen to considerable importance, and become an influential factor in the state. He sold out in the autumn of 1898, and took charge of the Jackson "Dispatch," a weekly paper of great influence, and is now editor and publisher. In 1896 Mr. Burkett was a delegate to the Democratic national convention at Chicago, and has served as chairman of the Democratic congressional executive committee; as treasurer of the city of Jackson; president for several years of the board of trade under

*John Burkett*

der the influence of which Jackson grew from a village to a city of 16,000 inhabitants; and has been identified with all local, educational and financial enterprises. He is an active member of the Southern Methodist Church and a Mason in high standing. For one year he was first vice-president of the Tennessee Press Association, and was chosen its president in June, 1898. In the same year he was temporary chairman of the state Democratic convention at Chattanooga. In 1879 Mr. Burkett was married to Callie W., daughter of John Robbins, of Chester county, Tenn. They have three children.

**HOWE, James Lewis**, chemist, was born in Newburyport, Mass., Aug. 4, 1859, son of Francis A. and Mary Frances (Lewis) Howe. His parents were both natives of Peppercell, Mass., his father being a prominent physician of Newburyport and his mother a daughter of James Lewis, a lawyer by profession. His ancestors on both sides were of Puritan extraction, and settled in Massachusetts early in the seventeenth century. Several of them participated in colonial wars and in the revolution. Having been educated in the common and high schools of his native town, he was graduated at Amherst College in 1880. Then going abroad, he spent two years in scientific study at the universities of Berlin and Göttingen, devoting special attention to chemistry under Wöhler, Huebner, Liebermann and Liebreich, and was graduated Ph.D. at Göttingen in 1882. Returning to America, he taught for one year at Brooks Military Academy, Cleveland, O., and then became professor of chemistry at the Central University of Kentucky, Richmond, Ky. In 1886 he received the honorary degree of M.D. from the Hospital College of Medicine of Louisville, of which he was dean and professor of chemistry for seven years (1887-94), through the same period also filling the position of scientist to the Polytechnic Society of Kentucky. During his residence in Louisville he delivered courses of lectures each winter, under the auspices of the Polytechnic Society,

on scientific subjects and of a popular character, illustrated by experiments, stereoptical views and selected specimens. Since 1894 he has been professor of chemistry at Washington and Lee University, Lexington, Va. Prof. Howe has contributed numerous papers to the "American Chemical Journal," "Journal of the American Chemical Society," "Science" and other scientific and religious periodicals. He is also author of "Bibliography of the Metals of the Platinum Group" (1897), published by the Smithsonian Institution, and co-author with Prof. F. P. Venable of "Inorganic Chemistry According to the Periodic Law" (1898). He is a member of the American Association for the Advancement of Science, in which he has been secretary of the chemical section, secretary of the council and general secretary; a member of the American Chemical Society; of the Chemical Society of London, and of the Deutsche Chemische Gesellschaft of Berlin. On Dec. 27, 1883, he was married to Henrietta L. Marvin, of Scranton, Pa. They have three children.

**LAZARUS, Henry Lawrence**, jurist, was born at Syracuse, Onandaga co., N. Y., July 6, 1853, son of Henry Lawrence and Annie (Isaac) Lazarus, of English descent. In 1868 he went to New Orleans with his mother, but very soon returned to New York state, where he spent three years in study. In 1871 he again moved to New Orleans, and after completing a course of study in the State University he was admitted to the bar of Louisiana. Being under the legal age limit required for admission to practice, he was granted a diploma from the state supreme court, upon his own petition, after passing a remarkably creditable examination, May 6, 1873. He began practice at once, and the next year became associated with James B. Eustis, and later with Judge Henry B. Kelley. In March, 1880, Mr. Lazarus was appointed by Gov. Wiltz one of five judges of the civil district court of the parish of Orleans for a period of four years. With his accession to the bench Judge Lazarus entered upon a period of political and race persecution directed against him which culminated, seven years later, in his resignation, after his removal and reappointment by Gov. McEnery. He immediately resumed the practice of his profession in New Orleans, which included a part of all important litigations of Louisiana. He made the case of the state *ex rel* Lucas C. Moore *vs.* New Orleans, involving the validity of the premium bonds of the city, and won it. His greatest professional triumph, however, was the adjustment of the estates of Steele and Walker, of St. Joseph, Mo., involving millions of dollars. Judge Lazarus has never sought political preferment, though in 1878 he was a standing master in chancery of the U. S. circuit court, appointed by Judge Woods, and in 1880 was made reporter of the same court, and assisted Judge Wood in compiling volume No. IV. of Wood's "Reports." Being then appointed to the state supreme court, he gave up that work. He devotes himself to general practice, except criminal business, and enjoys the patronage of the largest commercial institutions of the South. He was married in New Orleans, June 16, 1875, to Sallie Ella, daughter of Solomon Phineas and Emma (Soloman)

*H. L. Lazarus*

Soloman, who comes of a distinguished South Carolina family. Their children are: Virginia Gleaves, Henry Lawrence, Ellen Spencer, Edgar Farrar, Alice Dale and Stanley Mathews. Judge Lazarus owns the largest law library in Louisiana, public or private, and a very large private library. His hospitality is unbounded, and his charities extend to all creeds and all conditions.

**AYER, Benjamin Franklin**, lawyer, was born at Kingston, Rockingham co., N. H., April 22, 1825, son of Robert and Louisa (Sauborn) Ayer. Through his father he descends from John Ayer, of Norfolk, England, who settled at Haverhill, Mass., in 1645; and through his mother, from Rev. Stephen

*B. F. Ayer*

Batchelder, who emigrated from Hampshire, England, in 1632, and became first minister at Hampton, N. H., in 1638. Benjamin F. Ayer was educated at the Albany Academy, Albany, N. Y., and entering Dartmouth College, was graduated in 1846. He then studied law in the Harvard Law School, and in 1869 began practice at Manchester, N. H., steadily building up a profitable practice and attaining wide reputation. In 1853 he was elected to the state legislature, and then served three years (1854-57) as prosecuting attorney for Hillsborough county. He located in Chicago in 1857, and in 1861 was appointed

corporation counsel to the city. This office he held four years, during which he drafted the revised charter of 1863. Soon after the close of his term he helped organize the firm of Beckwith, Ayer & Kayles, which in 1873 became Ayer & Kayles, and continued in general practice until 1876, when he was offered and accepted the position of general solicitor of the Illinois Central Railroad Co. In the following year he was made a director of the company, and on Jan. 1, 1890, became its general counsel. During his forty years' residence in Chicago he has attained an unusual eminence at the bar on account of his perfect mastery of legal principles and his success in railroad and corporation law. His official relations to the Illinois Central have brought him prominently forward in several historic suits, such as the famous one over the title to the lake front and reclaimed ground occupied by his clients; another, involving the right of the Chicago, Burlington and Northern to condemn eighteen miles of the Illinois Central's right of way between Galena and East Dubuque; and a third, to test the right of the Baltimore and Ohio to retain station grounds in the Illinois Central's yard. In those cases, and many others, Mr. Ayer's practical grasp of the situation involved and eminent fitness as an advocate proved of great advantage to his clients. His unremitting industry, perfect integrity and extraordinary perspicuity of statement have won him the confidence of the entire bench and a wide reputation as one of the ablest lawyers at the Chicago bar. In 1878 he received the degree of LL.D. from Dartmouth College. He is a member of the American Bar Association, vice-president for Illinois in 1875; of the Chicago Bar Association, and president in 1875; a founder of the Sons of New Hampshire, and president in 1889-91, and since 1879 president of the Western Railroad Association. He is also a member of the Chicago Club, the Chicago Literary Club, the Chicago Historical Society, and Chicago Law Institute. In 1868 he was married to Janet A., daughter of James C. Hopkins, of Madison, Wis., former U. S. district

judge for the western district of his state. They have three daughters and one son.

**STENSLAND, Paul O.**, banker, was born at Sandeid, Stavanger, Norway, May 9, 1817, son of Ole and Karen Stensland. His father was a farmer, and the rural homestead on which the boy grew up is situated in a beautiful region, diversified by deep fjords that penetrate into the land from the sea. He attended the schools of his native district, and received such education as they could give, but before attaining majority, he started out in life as a sailor boy. At the end of a year he gave up the sea, and accepted employment with an English house at Bombay, India, as a selector and buyer of cotton. He spent about five years in this occupation, visiting nearly every part of that vast country, and also traveling in Persia, Arabia and Abyssinia. In these travels he acquired an extensive knowledge of the character, customs and peculiarities of the inhabitants of those countries, and continually coming in contact with the most diverse classes and conditions, gained an experience that has been of the greatest value in his subsequent career. In 1871 he returned to Norway, and his parents having died shortly afterwards, he would have set out for the Orient again had it not been for the opposition of his affianced wife. The young couple finally decided to settle in America, and arriving in Chicago a short time before the great fire, have lived there ever since. Before many years he had become recognized as one of the most prominent and influential citizens. He at once engaged in the dry goods trade, in which he was very successful, until 1885, when he took up the real estate and insurance business. Four years later he opened a private bank, which in 1891 was incorporated as the Milwaukee Avenue State Bank, Mr. Stensland becoming president, as he has ever since continued. The bank has been an important factor in developing the manufacturing and business interests of the northwest part of the city. Mr. Stensland is also identified with many other large and important business interests, in which his energy, rare judgment and ability find full scope. During 1889-94 he was publisher of "Norden," a newspaper which has a large circulation among the Norwegians of the West and Northwest. In 1879 he was appointed a member of the board of education by Mayor Harrison, and served three terms—a period of nine years—being, meantime, chairman of several important committees. Later he was appointed to the commission to revise the city charter of Chicago. He was one of the most energetic advocates of the Columbian exposition and a member of its board of managers. Mr. Stensland is a member of the Lutheran church, and generously active in its charitable and missionary enterprises. He is a Democrat in politics, although steadily declining all nominations to elective offices. Generous in his impulses, he enjoys the high regard of a wide circle of personal friends and the confidence of all who know him, and is a member of the Iroquois and the Union League clubs, and several Scandinavian social organizations. He was married in 1871, and has a daughter and a son, the latter a graduate of Harvard College, class of 1898.

*Paul O. Stensland*

**COOLEY, Thomas McIntyre**, jurist and publicist, was born at Attica, Wyoming co., N. Y., Jan. 6, 1824, son of Thomas and Rachel (Hubbard) Cooley. His father, a farmer in moderate circumstances, resided in his native state, Massachusetts, until 1804, then removed to western New York, where he reared a large family. The original representative of the name in America was Benjamin Cooley, who settled in Massachusetts about 1630. The early life of Thomas M. Cooley was spent on his father's farm, and his education was obtained, in the midst of engrossing home duties, in the common schools of his native county. Then for four years (1838-42) he attended private classical schools, meantime himself teaching during several months of each year to obtain the means for continuing study. In 1842 he entered on the study of law in the office of Theron G. Strong, at Palmyra, N. Y., and continuing it after his removal to Adrian, Mich., in the following year, was admitted to the bar in 1846. He began practice at Tecumseh, but in 1848 returned to Adrian, where he combined it with the editorship of a Whig paper, the *Adrian "Watch-tower."* For some time he was associated in partnership with Fernando C. Beaman, who was (1860-70) member of congress, and later with Charles M. Crosswell, twice governor of Michigan (1876-80), and served, meantime, as circuit court commissioner and village recorder of Adrian. In 1857 he was chosen by the legislature to compile the general statutes of Michigan—his work continues monumental of its kind—and in 1858 was appointed reporter of the decisions of the state supreme court, of which he compiled and published eight volumes. When the law department of the University of Michigan was organized, in 1859, he accepted the Jay professorship of law, and removing to Ann Arbor, there resided until his death. In 1864 he was elected a justice of the supreme court of Michigan, continuing in the office for twenty-one years, during that time becoming chief-justice; he wrote opinions, especially on

*Thomas M. Cooley*

constitutional questions, which attracted general attention throughout the country, all of them being included in Vols. IX.-LVIII. of the Michigan state reports. Soon after Judge Cooley's accession to the bench he began the publication of a series of books on legal subjects, which were produced rapidly during the next twelve years. His first was a digest of the decisions of the Michigan supreme court. This work was followed, in 1868, by what is probably his best known book, "The Constitutional Limitations which Rest upon the Legislative Powers of the States of the American Union," which rapidly passed through half a dozen editions, and at once gave him a very high rank among American legal writers. It was followed, in 1870, by an edition of Blackstone's Commentaries, with additional chapters on new amendments; in 1873 by one of Story on the constitution; in 1876 by "The Law of Taxation," and in 1879 by another on "Torts." He has also published a short summary of the constitutional law and history of Michigan, the latter having been written in 1885 for the "American Commonwealth" series edited by Horace E. Scudder. At this time he was also acting as an associate editor of "Appleton's Encyclopedia," and wrote the law articles for the last edition of that work. He has been a prolific writer for the reviews and magazines of the day, and is the author of innumerable shorter articles, mostly

on governmental and occasionally on historical subjects, all of which are of the greatest value. It was he who originated the phrase, "A public office is a public trust," which formed the first sentence of the article written by him for a St. Louis legal journal. In 1889 he wrote an elaborate introduction to an illustrated work, "The American Railway," in which railways and the principles controlling them, as well as the laws for their regulation, were discussed. When James Brice entered upon the preparation for the writing of his great work, "The American Commonwealth," he placed himself in communication with Judge Cooley, and the notes in the completed work show that the reliance placed on his opinion was very considerable throughout. During 1877-79 he lectured on the constitutional law at Johns Hopkins University; in 1884, after having been for some time dean of the law school, he resigned the law professorship in Michigan University; and when, in 1885, Charles Kendall Adams resigned to accept the presidency of Cornell University, he succeeded him in the chair of history, which he occupied for two years following, delivering several courses on constitutional and political history. Meantime, in 1877, he had filled the position of arbitrator for the associated railroads of Tennessee, Kentucky and Alabama. In 1882, there being serious difficulties among the small trunk-line railroads, and also between the Atlantic ports, regarding differential rates made on grain and provisions from the interior, he was invited, with Allen G. Thurman and Elihu B. Washburne, to consider an adjustment. The summer was spent in this labor, and a report made, which was accepted as satisfactory and final. The underlying principles of railroad transportation were well considered in this report, and so presented as to be easily comprehended by the public. In December, 1885, he was appointed by Judge Gresham, of the U. S. circuit court, receiver of the Wabash railroad system to the east of the Mississippi, and administered the affairs of the road until April 1st following. The problem presented in this connection was one of great difficulty, involving the operation of a long and complicated system, both ends of which were under hostile management. Judge Cooley, however, discharged the duty with conspicuous success; within three months completely and effectively organizing every department. Then, at the urgent request of Pres. Cleveland, he accepted an appointment to the commission provided for by the Interstate Commerce Law; he was named first in the commission, and was chosen chairman by his associates. In this important position his course was marked with great patience and fairness toward the roads as well as toward the public, by a thorough comprehension of the technical questions of railroad management, and by a purpose to bring about an energetic enforcement of the law in all directions. He held the office until 1891, when ill health necessitated his resignation. The degree of LL.D. was conferred on Judge Cooley by the University of Michigan in 1873, by Harvard University in 1886, and by Princeton in 1896. In 1895 the law department of the University of Michigan placed a bronze bust of him in the university law library, that event being the occasion of an impressive ceremony, at which Hon. William B. Hornblower, of New York, delivered an oration. As teacher of law and political science, he has probably had a greater number of students under him than any other college professor in the country, and their personal regard for him has always been strong and permanent. Judge Cooley was married, in December, 1846, to Mary Elizabeth Horton, daughter of a prominent citizen of Adrian, Mich., and by her he had six children. He died at his home in Ann Arbor, Mich., after a protracted illness, Sept. 12, 1898.

**EVANS, Britton Duroc**, physician and alienist, was born at Bridgetown, Caroline co., Md., Aug. 1, 1858, son of Louis Walstein and Lucinda (Boone) Evans. His paternal ancestry is Welsh, being of the same family as Christmas Evans (1766-1838), the noted Welsh Baptist minister. His grandfather, Col. Britton Evans, a man of considerable military attainments, was commissioned lieutenant of artillery in the war of 1812, and distinguished himself in several battles; was also in the war with Mexico and the Florida war, and at the time of his death was organizing a company of Americans to assist the Greeks in their struggle against Turkey. His father was a graduate of two medical schools in Philadelphia, where he practiced for many years, and later removing to Maryland, took for his second wife a direct descendant of Col. Daniel Boone, the Kentucky pioneer and hero. Britton D. Evans received his academic education in his native state, and was graduated at the College of Physicians and Surgeons, Baltimore, in 1885. Locating at Millington, Kent co., Md., he practiced nearly two years, after which he was appointed on the surgical staff of the Pennsylvania railroad, and then, without solicitation on his part, was called to be assistant medical superintendent of the Maryland Hospital for the Insane. After nearly five years' incumbency, he resigned to

accept the superintendency of the Maryland Institution for the Feeble-Minded, but shortly after was offered the medical directorship of the New Jersey State Hospital, at Morris Plains, N. J. He entered upon the duties of this office, which he still holds (1899), on June 1, 1892, and since then has done a noble work in elevating the standard of efficiency even in a state which is second to none in its care for the unfortunate insane. Indeed, no better result has been reached in any institution than that achieved at the New Jersey State Hospital under his direction and care. Dr. Evans has attained a prominent reputation in several states as an expert in the medico-legal aspects of insanity, and his thorough knowl-

edge of all phases of the subject makes him an impregnable witness before courts and commissions. His mind quickly grasps complexities, and he possesses the rare ability of stating the conditions of mental competence or incompetence clearly and concisely to both court and jury. His contributions to medical literature on nervous and mental diseases have been numerous and valuable. His monograph on Kceleyism and the Keeley method of treating inebriety, written at the time this fad was at the height of its popularity, attained wide notice both in this country and abroad. He is a member of the Medico-Chirurgical Faculty of the State of Maryland, one of the oldest and most prominent medical organizations in that state; of the American Medical Association; of the Medical Society of New Jersey; of the Medico-Legal Society of New York; of the American Medico-Psychological Association; of the National Conference of Charities and Corrections; of the National Society for the Study of Epilepsy and Insanity; is ex-president of the Morris County Medical Society, and an honorary member of the Temperance Reform League of Boston, a society organized for the scientific study of inebriety. He is a Mason in the Blue Lodge, Royal Arch and Knights Templars; is a noble of the Mystic Shrine; a member of the Royal Arcanum, and a district deputy grand sachen of the Improved Order of Red Men. In 1889 Dr. Evans

was married at Wilmington, Del., to Addie Elizabeth, daughter of Rev. James R. Dill, a Methodist minister. They have three daughters and one son.

**ROSENBERG, Henry**, philanthropist, was born at Bilten, Glarus Canton, Switzerland, June 22, 1824. His parents were industrious and pious people in limited circumstances, although records reaching back over seven hundred years show that the family is of noble Roman origin, and originally bore the name of Ursini or Orsini. An early ancestor, Vitillus Ursini, emigrated from Rome to Corinthia, the "crown land of the Austrian empire," in the year 1150 A. D., and founded the city of Rosenberg, Bohemia, where the family is still resident. Henry Rosenberg's educational opportunities were limited to the local schools of the period, and while still very young he was apprenticed to learn the trade of fabric printing, at which he worked steadily until his eighteenth year. His employer having noted

then his superior business qualifications, transferred him to his mercantile establishment at Glarus. There, shortly after, he made the acquaintance of his employer's son, John Hesley, then a resident in America, and at his invitation went to Galveston, Tex., and entered his employ in February, 1843. Although at that time completely ignorant of the English language, he studied industriously nights and Sundays, making such rapid progress and achieving such success in his business that at the end of three years he had bought out his employer's business. During the thirty years following Mr. Rosenberg continued in active business, and by reason of his foresight, economy and integrity, became the foremost merchant in the state. His house, which for years controlled the dry-goods trade of southern Texas, grew year by year in popular esteem for the faithful adherence to the highest principles of rectitude in all its dealings. In his business, as in other relations in

*H. Rosenberg.*

*Britton D. Evans*

life, Mr. Rosenberg exemplified a consistent adherence to Christian principles and precepts. Not content to be merely a leader of enterprise or an inspiration to duty and right living, he was ambitious to confer lasting and material benefits upon the city and state wherein his vast success had been won. This

aim, quite as much as his tireless activity of mind, the outcome of his life, shows to have been the cause of his intimate and prominent connection with such a multitude of important business and public corporations in the latter years of his life. In 1874 he founded the Rosenberg Bank, which rapidly increased to such proportions as to claim a large portion of his time; and, in addition, was an organizer, director and president (1875-78) of the Gulf, Colorado and Santa Fé Railroad Co., during his term accomplishing the construction of the first fifty miles of road; director, and for three years vice-president, of the Galveston Wharf Co. Although steadily refusing nominations to public office, he was, in 1871-72, and again in 1885-87, an active member of the board of aldermen of the city of Galveston. In his business methods Mr. Rosenberg was exact and positive, giving to his expressions of judgment the force of unquestionable authority and well-digested experience. Notwithstanding the rapid accumulation of vast sums, which many would have considered a sufficient occasion for retiring from all business cares, he never relaxed his activity for a moment nor the firm requirements of the strictest accountability of subordinates for the performance of required duties; also performing his own allotted tasks with the same regularity and thoroughness. In his private life and as a citizen he was a noted example of the highest type of consistent Christian gentleman, and for more than thirty years a vestryman in Trinity and in Grace Protestant Episcopal churches. His manner of living was simple and unostentatious; his daily walk and occupation yielded no sign of his extraordinary character and power; to all who met him he was markedly affable and unreserved, and in spite of his stupendous business cares and responsibilities he made it a rule to give attention to the petitions for advice and personal help directed to him every day of his life. The needs and perplexities of present-day civilization were to him a most absorbing study and interest. Everywhere in the city are to be seen reminders of Mr. Rosenberg's munificent public spirit in the magnificent monuments erected for the inculcation of the highest ideals of thought and action. Perhaps it is not too much to say that no city in America has been the recipient of so much well directed philanthropy as Galveston through the public gifts of this great man. In 1888 he gave the Rosenberg Free School, erected at a cost of \$80,000, and also assisted in building Eaton Memorial Chapel

city of Galveston. The bequests to the Protestant Orphans' Home, \$30,000; Grace Church, \$30,000; Woman's Home, \$30,000, and the Young Men's Christian Association, \$65,000, were for the erection of appropriate structures for each respectively, and which, when completed by Mr. Rosenberg's trustees,

were delivered over to the several beneficiaries. The same rule was observed as to the Heroes' Monument, for which he left \$50,000, and the seventeen public drinking fountains, erected on another bequest of \$30,000. To his native town in Switzerland, where previous to his death he had erected a magnificent church building, he bequeathed the sum of \$80,000 for public charities and improvements. The city of Galveston was made the residuary legatee of the estate, the amount realized, about \$500,000, being devoted to the founding and maintenance of a free circulating library, with annual lecture courses. In carrying out the provisions of his will his widow has shown untiring diligence, coupled with an artistic instinct which has greatly augmented the value of his beneficences. Probably the most imposing creation of Mr. Rosenberg's munificence in Galveston is the famous battle monument commemorating Texas' struggle for independence. It is the work of Louis Amateis, and consists of a lofty shaft of granite surmounted by a heroic figure, Victory, with extended arms holding a laurel wreath. Grouped at the base are figures representing the arts of peace, while the faces of the die contain bas-reliefs in bronze commemorative of the four great battles of the Texan revolution, and on the base is the inscription:

A Tribute from Henry Rosenberg  
To the Heroes of the Texas Revolution of 1836.

The work is further adorned with medallions of Sam. Houston and S. F. Austin, and busts of such other notable heroes as Gov. Henry Smith, Pres. David G. Burnet, Lamar, Sherman, Travis, Crockett, Johnson, Bonham, Hockley, Neill, Rusk, Burleson, Bowie, Milam, "Deaf" Smith, Fannin, Karnes and De Zavella. This monument is undoubtedly the most beautiful in the southern states, and very properly occupies a conspicuous position on the principal residence street of the city. In view of his immense work in building up the commercial and financial interests of the state of Texas, as well as conferring such inestimable benefits on its benevolent enterprises, Mr. Rosenberg's name will ever be cherished among its foremost benefactors. Meantime, the noble monuments his munificence erected will ever remain as reminders of his consistent Christian character and deep devotion to duty and principle. Mr. Rosenberg was twice married: first, in 1851, to Letitia Cooper, a native of the Shenandoah Valley, Va., who died in 1888; second, Nov. 13, 1889, to Mollie Ragan, daughter of Dr. Charles Macgill, of Hagerstown, Md., a descendant of early

Rosenberg  
Orphans Home

of Trinity Protestant Episcopal Church. It was not, however, until after his death, when the provisions of his will were made known, that the splendid generosity of his nature was fully revealed. Nearly two-thirds of his vast fortune was bequeathed to educational and charitable purposes, mostly in the

*H. Rosenberg.*

Scotch colonists of Maryland and a surgeon in the Confederate army. Mr Rosenberg died May 12, 1893, leaving no children.

**SHARPE, Richard**, merchant, was born at Langham, Rutlandshire, England, April 10, 1813, son of Richard and Mary (Swingler) Sharpe. The family comes from the middle and south of England. The name is of Saxon origin, and was originally spelt Scharpe. The Langham records begin with Richard Sharpe, of Langham (1691-1757), who owned land in "free and copy hold," and from him and his wife, Elizabeth Williamson (1690-1765), the line of descent runs through their son, William (1723-53), and his wife, Rachel Wate (1721-51); through their son, Richard (1751-85), and his wife, Sarah Chester (1754-1823), and through their son, Richard (1781-1836), and his wife, Mary Swingler (1787-1822). In 1826, at the age of thirteen, Richard Sharpe accompanied his father and brother to America. They landed at Philadelphia, and afterwards purchased and lived upon a farm in Wyoming valley, Pa. In 1838 he removed to Summit Hill, Carbon co., where he entered upon his active career as one of the pioneers in the anthracite coal trade. He formed a partnership in 1845 with Ira Court-right, George Belford and John Leisenring, the firm being later augmented by the accession of Francis Weiss, and in 1854, on the withdrawal of Mr. Court-right, by Asa Foster. Their first field of enterprise

was in lower Luzerne county, on the lands leased from the Tench Coxe estate, and here they opened the Council Ridge colliery and founded the village of Fillmore (now Eckley). Mr. Sharpe became an authority on almost all matters connected with the business, and his opinion was universally respected. The way to substantial and enduring success was followed along the line laid out by his consistent exercise of justice and generosity toward all with whom he had dealings, and he enjoyed the high regard and confidence of all classes. He was president of the Alden Coal Co.; president of the Wyoming Valley Manufacturing Co., and director of the Vulcan

Iron Works; director of the First National Bank of Wilkes-Barre, and a life member of the Wyoming Valley Geological and Historical Society. He was vice-president of the Wilkes-Barre City Hospital; a trustee of the Home for Friendless Children, and a generous contributor to home and foreign missions. For many years he was senior warden of St. Stephen's Protestant Episcopal Church. Mr. Sharpe's life was an interesting record of early struggles, of unselfishness and of later triumphs, and as has been well said, he was a "rare type of Christian gentleman of refined tastes and feelings." He was married, in 1847, to Sally, daughter of Thomas Patterson, a native of Dublin, Ireland, and his wife, Mary Denison, daughter of Col. Nathan Denison, who was prominent in the early history of Wyoming valley, and one of the commanders in the battle of Wyoming, July 3, 1773. His wife survived him with four daughters and one son, Richard Sharpe, Jr. Mr. Sharpe died at his residence in Wilkes-Barre, April 21, 1895.

**LADD, George Dutton**, physician, was born in Woodstock, Vt., Oct. 7, 1850, son of Edwin O. and Sarah A. (Crandall) Ladd, and a descendant in the seventh generation of David Ladd, who settled in Massachusetts Bay colony in 1633. He was educated in the public schools of Milwaukee, Wis., and at the Markham Academy (now the Milwaukee Academy). In 1871 he began the study of

medicine in the office of Dr. Moses Barrett, and in 1872 entered the office of Drs. Wolcott and Marks. He was graduated at the Rush Medical College in 1875, and returning to Milwaukee, entered the office of his former preceptor, Dr. Marks, as assistant, later being his partner until 1896. He has given special attention to the practice of surgery, and has been remarkably successful in this and in consultation work. Dr. Ladd is surgeon to St. Mary's Hospital, and for many years has been one of the surgical staff of the Chicago, Milwaukee and St. Paul railway. Since the organization of the board of police and fire commissioners of the city of Milwaukee, Dr. Ladd has been medical examiner, being also surgeon for the police and fire departments. He is a member of the State Medical Society of Wisconsin, of which organization he was president in 1891; of the American Medical Association; the Brainard Medical Society, and the Milwaukee Medical Society. He has been a contributor of numerous articles to medical literature. Upon the call for volunteers for the Spanish-American war, Dr. Ladd was appointed one of the board of United States surgeons for the state of Wisconsin, upon the nomination of Gov. Scofield. He spent the summer of 1898 in European travel and study in the hospitals of London and Paris, and the same year was chosen president of the Wisconsin Humane Society, of which he had for many years been a director. He has been at different times identified with many of the institutions of the city. Dr. Ladd was married, Nov. 10, 1885, to Annette Ashley Dutcher, who died in 1892, leaving one daughter.

*G. D. Ladd*

**HARRIOT, Samuel Carman**, capitalist, was born in New York city, Aug. 10, 1863, son of Samuel Carman and Martha Crozier (Dawes) Harriot. He is a lineal descendant of a brother of the noted George Harriot, of Edinburgh, Scotland, who was the founder (1628) of Harriot's Hospital (to the memory of his wife, Alison Primrose, of the family of the earl of Rosebery) for the education of children of Edinburgh citizens. This ancestor was a courtier of the reign of James I., and is one of the characters in Scott's "Fortunes of Nigel." Members of the Harriot family were among the founders of the West Jersey colony. The elder Samuel Carman Harriot was born at Woodbridge, N. J., and was for more than thirty years president of the Greenwich Fire Insurance Co., of New York city, and director in one or more banks and other financial institutions. The maternal great-grandmother of Mr. Harriot was Elizabeth Guy, Rumford Dawes, a prominent shipping merchant of Philadelphia, was his great-grandfather on his mother's side. Mr. Harriot was educated in Paris, France, and by tutors, and is versed in literature, art and music. He has traveled extensively, having been presented at most of the European courts and was honored by a special invitation to the ball given in London to Crown Prince Rudolf, of Austria, during the Queen's jubilee. His real and personal estate occupies much of his

*S. Carman Harriot.*

*Richard Sharpe*

time. Mr. Harriot declined the Republican nomination to congress from his district, but permitted his name to be used by many prominent and influential citizens who petitioned Pres. McKinley to appoint him one of the commissioners to the Paris exposition of 1900. He is a member of the City Club, the Metropolitan Museum of Art, St. Andrew's Society and the Sons of the Revolution. His philanthropy is extensive and unostentatious. Mr. Harriot is unmarried and lives with his mother and sister in New York city.

**HALL, Darwin Scott**, legislator, was born at Wheatland, Kenosha co., Wis., Jan. 23, 1844, son of Erasmus Darwin and Mary Ann (Carson) Hall. His father, a native of Vermont, was the son of Reuben Hall, a prominent physician; his mother, daughter of William Carson, a soldier in the war of 1812, was a native of Genesee, N. Y. At an early age he was thrown upon his own resources, and worked on farms, in lumber camps and on rafts of lumber near Grand Rapids, Wis., attending school at every opportunity. Aside from public schools, he received instruction at the Elgin (Illinois) and Markham (Milwaukee) academies. After serving in the Federal army in company K, 42d Wisconsin volunteer infantry, and being honorably discharged at the close of the war, he, in 1866, settled in Renville county, Minn., where he took up 320 acres of government land and went to farming on his own account, giving particular attention to stock raising. In 1869-72 he served as county auditor, and by his honest dealings with all men and his courtesy as a public officer he found such favor that he remained in public life almost continuously. In 1873-77 he was clerk of the district court, meantime (1876) being elected to the state legislature, and founding the Renville "Times," which he edited for several years. In 1878 Mr. Hall was appointed register of the U. S. land office at Benson, Minn., by Pres. Hayes, and four years later was re-appointed by Pres. Arthur. In 1886 he was removed

from office by Pres. Cleveland, but was elected almost unanimously to the state senate, and served as chairman of the railroad and other committees. In November, 1888, he was elected to the 51st congress from the third district of Minnesota, and served with the greatest credit to himself and his state. He introduced the first resolution which started legislation resulting in the Columbian exposition, and supported the McKinley bill. He was defeated for re-election, but in 1891 was appointed chairman of the Chippewa Indian commission, to succeed ex-U. S. Sen. Henry M. Rice, who had resigned on account of ill-health, and served until March, 1893, when Pres. Cleveland removed him. In 1892 he was elected a delegate to the Republican national convention held at Minneapolis, which nominated Benjamin Harrison for a second term. In November, 1894, Mr. Hall was elected president and general manager of the Keystone Gold Mining Co., and took charge of their stamp mills and mining operations in the Black hills. In one year's time he brought order out of confusion by his business methods; but the strain was too great, and he retired, after selling his mining stock at a profit. He returned to his farm, and remained there until July, 1897, when Pres. McKinley reinstated him as Chippewa commissioner, the commission having been re-

duced by congress to one member. The work of allotting lands to the Chippewas was nearly completed in 1899. Mr. Hall has two residences: one on his farm of 500 acres in Renville county, the other in Minneapolis. He was married, in 1869, to Mary D., daughter of Dougle F. and Lorena (McArthur) McLaren, of Portage-du-forte, Canada.

**HUTCHINGS, John Henry**, banker, was born in North Carolina, Feb. 2, 1822. In his fourteenth year he began his mercantile career as a clerk in a dry-goods store, at Raleigh. At the age of twenty-one he set out to make his way in the world, settling first in New Orleans, La., and two years later removing to Galveston, Tex. In December, 1847, with John Sealy, he formed the dry-goods and commission firm of Hutchings & Sealy, at Sabine, Tex. This business was successfully continued until 1854, when they located in Galveston, and formed a co-partnership with George Ball, under the style of Ball, Hutchings & Co. Their business increased so rapidly that within two years they were able to discontinue the dry-goods department and devote their time to commission and banking business, which was eminently successful from the start. Upon the inauguration of the blockade of Galveston in 1861, they removed to Houston, whence they sent out blockade runners laden with cotton, and imported in the return voyages military stores, arms and munitions. In 1865 the firm returned to Galveston and resumed the banking business in the building erected for their occupation ten years before. Soon after they took into partnership Mr. Sealy's brother, George. The personnel continued the same until the death of Mr. Ball and of John Sealy in 1884, but in 1898 the style became Hutchings, Sealy & Co., John Sealy, 2d, Sealy Hutchings and Herman O. Stein having been associated in the partnership. Mr. Hutchings was prominent in numerous commercial,

*John H. Hutchings.*

*Copyright  
John H. Hutchings*

railroad and financial corporations. As president of the Galveston Wharf Co. he secured an effective settlement of long-disputed wharf title claims, thus enabling the creation of a valuable property and a beautiful water-front for the city. He was first president after the war of the Galveston Gas Co. and has since served as both director and president, as also with the Southern Cotton Press and Manufacturing Co., and is now president of the Galveston City Co. He was the originator and chief promoter of the New York and Texas Steamship Co., known as the

Mallery Line, and is still one of its five directors. With his partner, John Sealy, he built the Factors' Cotton Press, when the concern was merged into the Southern Cotton Press and Manufacturing Co., of which he is now president. Few men have done as much for the prosperity and upbuilding of the state of Texas, and to none other does the city of Galveston owe a larger debt for its pre-eminence as a centre of trade and manufacture. Mr. Hutchings was married, June 18, 1856, to Minnie Knox, niece of Robert Mills, of the once great banking firm of R. & D. G. Mills, of Galveston. They have seven living children, three sons and four daughters.

**WALKER, Henry O.**, physician and surgeon, was born at Leesville, Mich., Dec. 18, 1843, son of Robert E. and Elizabeth (Lee) Walker, both natives of Yorkshire, England. His father came to America in 1837, and settling in Wayne county, Mich., became a farmer and brick manufacturer; his mother came over in 1833, and settled with her parents at Leesville, Mich., which was named in honor of her father, Charles Lee. Henry O. Walker attended the district schools, and in 1861 entered Albion College, Albion, Mich., and until 1865 alternated a year of study with a year of school-teaching, in order to meet the expenses of his college course. He then began the study of medicine in the University of Michigan, but after one year entered the office of Dr. E. W. Jenks, of Detroit. At the same time he entered on a course of practical experience in surgery and medical practice at Harper's Hospital, then being used by the government for invalid soldiers. When the hospital was opened to the public in 1866, Dr. Walker became its first house surgeon. A few months later, however, he entered Bellevue Hospital Medical College, New York city, where he was graduated in February, 1867. Then returning to Detroit, he opened an office, and he has practiced there ever since. In 1869 he was appointed demonstrator in anatomy in the Detroit Medical College, and served until 1873. During the next six years he was lecturer on genito-urinary diseases in the same institution, and in 1881 was elected secretary of the college faculty and member and secretary of the board of trustees. Later in the same year he was appointed professor of orthopedic surgery, genito-urinary diseases and clinical surgery, positions which he retained until the consolidation of the Detroit and Michigan medical colleges into the Detroit College of Medicine. In the new college he was elected a member of and secretary to the faculty and board of trustees, positions which he still retains (1899). Dr. Walker was city physician of Detroit in 1873-74; was county physician and a member of the city

H. O. Walker

board of health. He has served as both president and secretary of the Academy of Medicine; was president of the Detroit Medical and Library Association in 1887; vice-president of the Michigan State Medical Society in 1887-88, and its president in 1895; president of the American Medical Editors' Association; president of the Mississippi Valley Medical Association; vice-president of the American Medical Association in 1893, and is president of the American Association of Medical Colleges (1898-99). He is now attending surgeon to Harper's and St. Mary's hospitals, and was surgeon for several years of the Metropolitan police department. During 1872-74 he was surgeon of the Michigan Central railroad, and has been for a number of

years surgeon of the Wabash railroad. He was married, Nov. 13, 1872, to Gertrude, daughter of Lenry Esselstyn, of Detroit. They have one son, Elton A. Walker, a mining engineer, at the Cabumet and Hecla mines, Calumet, Mich.

**PLIMPTON, George Arthur**, publisher, was born at Walpole, Mass., July 13, 1855, son of Calvin Gay and Priscilla (Lewis) Plimpton. He is a lineal descendant of John Plimpton, one of the founders of Dedham, Medfield and Deerfield, who was captured by the Indians, and in 1677 carried to Canada and burned at the stake. Both the father and grandfather of Mr. Plimpton were engaged in the business of iron manufacture in Walpole. Mr. Plimpton was educated at Phillips Academy, Exeter, N. H., and at Amherst College, where he was graduated in 1876. He afterward entered Harvard Law School, but at the expiration of the first year began his business life with the firm of Ginn Brothers (now Ginn & Co.), educational publishers, becoming later a member of the firm. On his several trips to Europe, Mr. Plimpton spent considerable time in visiting the public schools and universities, and a few years since he gave an illustrated lecture at Cooper Union upon the "Great Public Schools of England." Mr. Plimpton has collected a valuable library, illustrating the growth of education from the text-book standpoint. In arithmetic he has a manuscript by Dr. Rolundus, written about 1424; a book on numbers printed by Faust & Schaeffer in 1460; the famous Treviso arithmetic, printed in 1478, at Treviso, Italy, the oldest dated arithmetic extant; a copy of Philip Calandri's arithmetic, printed in 1491, in the English language. He owns a copy of the first edition of Recorde's "Ground of Arts," and of the other editions for over 150 years. He has a manuscript copy of Euclid, written in 1300, also the first Euclid ever printed (1482). In the department of English Mr. Plimpton has three original horn-books, probably the largest number in any one collection; Martin Luther's primer; one Henry VIII. A-B-C book, and all the early primers; the first rhetoric printed in the English language; the first book on orthoepy; the first logic printed in English, together with all the early English grammars. In Latin grammar there is a manuscript of Donatus, also an illuminated manuscript of Priscian. There is also a copy of the first Greek grammar ever printed in Latin, Bolzanus (Aldus ed., 1497). Mr. Plimpton's collection of geographies is also complete, commencing with Ptolemy's and Strabo's and continuing down to the present time. He has a copy of the grammar of Philip Melancthon, bearing Melancthon's autograph, and the first edition of Roger Ascham's "Schoolmaster." Notwithstanding his extensive business interests, Mr. Plimpton has found leisure to interest himself in various organizations. For five years he was the alumni trustee of Amherst College, and was also one of the original trustees of Barnard College, of which he is now treasurer. He is a member of the American Association for the Advancement of Science; the Academy of Political Science; the Economic Association; the chamber of commerce; the New England Society; the Century, Grolier, D. K. E., University and Ardsley clubs. In 1882 he was married to Frances Taylor, daughter of the late Hon. W. B. C. Pearsons, of Holyoke, Mass.

Geo. A. Plimpton
